which were heroic. A father and son charged side by side. The son fell, pierced by the enemy's bullets. Two privates, advancing through the woods, were separated from the main line, and were confronted by a squad of the enemy. They were called upon to surrender, but, standing shoulder to shoulder, they stood their ground until their assailants went back. Then one of the two fainted from a wound; his comrade took him in his arms, and brought him safely back into our lines. So the combat went on, till a new line of the enemy advanced upon our men, and compelled them to fall back.

Kearny was, at the same time, to have made an attack upon A. P. Hill's division, on Jackson's left, but for some unexplained reason he did not advance until Grover's brigade had been repulsed. General Kearny, the one-armed veteran, led his men in person. His soldiers wore the red square on their caps which was the insignia of "Kearny's men," or, as they were sometimes dubbed, "Phil Kearny's thieves." They went enthusiastically to the charge, supported by the troops of Reno. He doubled back the left of the enemy, and for a short time seemed to have achieved a decisive result. The enemy hurried up two brigades of Ewell's division, acting as reserve, who came down upon Kearny's thin and exhausted line, which was driven from its hard-won position.

McDowell arrived at the scene of action between five and six in the afternoon, bringing up King's division, then commanded by Hatch. The enemy were making movements which were interpreted to mean a retreat, and Hatch was ordered to press them, and a fierce and bloody contest for three-quarters of an hour followed. Thus ended the first day of the second Bull Run, or Groveton. The enemy were readjusting their lines for another day's fighting, and Pope, misinterpreting these movements, conceived that the enemy were running away. It might be said in praise of Pope that he was never discouraged, always sanguine of success, always ready for a fight.

As usual, so soon as the fighting ceased many sought without orders to rescue comrades lying wounded between the opposing lines. There seemed to be a mutual understanding between the men of both armies that such parties were not to be disturbed in their mission of mercy. After the attempt of Grover and Kearny to carry the railroad embankment, the enemy followed them back and formed a line of battle in the edge of the woods. Our artillery sent their main line to the rear. It was replaced

by a line of skirmishers formed in the fringe of this wood. These opened fire upon the wounded Union men who were attempting to creep to the protection of their friends. After this fire had died away along the darkling woods, little groups of men from the Union lines went stealthily about, bringing in the wounded from the exposed positions. Blankets attached to poles or muskets often served as stretchers to bear the wounded to the ambulances and surgeons. There was a great lack of organized effort to care for our wounded. Vehicles of various kinds were pressed into service. The removal of the wounded went on during the entire night, and tired soldiers were roused from their slumbers by the plaintive cries of wounded comrades passing in torturing vehicles. In one instance a Confederate and a Union soldier were found comforting each other on the field. They were put into the same Virginia farm-cart and sent to the rear, talking and groaning in fraternal sympathy.

THE FIGHTING OF SATURDAY, AUGUST 30.

THE condition of Pope's army on Saturday, August 30, was such that a more cautious general would have hesitated before giving battle. His men were exhausted by incessant marching and fighting; thousands had straggled from their commands; the men had had but little to eat for two days previous; the horses of the artillery and cavalry were broken down from being continually in harness for over a week and from want of forage. But Pope believed he had gained a great victory on the day previous, and that the enemy were demoralized, while in fact their lines held the railroad embankment as a fortress, and for thirty-six hours there had been nothing to prevent the union of Longstreet with Jackson.

At an early hour Pope ordered a recon-

SECOND BATTLE OF BULL RUN
POSITIONS OF TROOPS
AUG. 30, 1862.

FIRST AND LAST POSITIONS IN THE FIGHTING OF AUGUST 30.

During the assault by Porter's corps and King's division Jackson's forces were all behind the unfinished railway. When that assault failed the Unionists north of the turnpike were attacked by two of the three brigades indicated as with Wilcox. These were Featherston's and Pryor's, which were acting with some of Jackson's troops and with one brigade of Hood. Wilcox with his own

proper brigade passed far to the right and fought his way to an advanced position, after several brigades under Evans and Jones had by desperate fighting compelled the troops of Sigel and McDowell to loosen their hold on Bald Hill. The last fighting was in the woods where Wilcox's final position is indicated and where troops of D. R. Jones's division had also been fighting.—EDITOR.

noissance made in his front. At this time the enemy, in readjusting their lines, had withdrawn their troops from some of the contested ground of the day previous. Pope interpreted this movement to mean that the enemy were

in full retreat, and at noon assigned McDowell to the pursuit. Porter was ordered to push forward on the Warrenton turnpike, followed by the divisions of King and Reynolds.

At four o'clock in the afternoon the battle

was opened by Porter. With cheers the Union force dashed up the hill, through the intervening woods, and charged the railroad cut and embankment. Hatch, on the right, with King's division, moved to the attack. The fight was most obstinate and determined, and as one line was repulsed another took its place, the Confederates resisting with bayonets and stones after their ammunition gave out, and sticking to the deep cut and embankment as to a fortress. Longstreet opened on the force, assaulting Jackson with a murderous enfilading fire of shells. It was under this cannonade that the lines of Porter were broken and partly put to flight.

On the extreme right, Hooker's, Kearny's, and Rickett's divisions, which were to have attacked by the Sudley Springs road, made no serious demonstration in that quarter.

direction, relying upon Jackson's well-known skill and stubbornness, while he prepared for an attack on our flank. When half of our troops were either in actual conflict or already discomfited, then it was that Longstreet rolled like an irresistible wave upon our left.

It fell to McDowell to defend the line of retreat by the Warrenton turnpike. A strong prejudice existed among the men against this able but unfortunate commander. Nothing was more common during the day than to hear him denounced. He wore a peculiar head-gear which looked like a basket. It was a common remark that Pope had his "head-quarters in the saddle, and McDowell his head in a basket." Such was the moral disadvantage under which McDowell labored with his men, and such elements have more to do with success or defeat than is generally

VIEW FROM THE HENRY HILL DURING THE ATTACK UPON JACKSON, ABOUT FOUR O'CLOCK, AUGUST 30.
(FROM A SKETCH MADE AT THE TIME BY EDWIN FORBES.)

In the foreground Reynolds's division is marching to the defense of the left flank. The stone house on the turnpike is seen in the hollow.—EDITOR.

Reynolds had meantime discovered the enemy in force concealed in the woods south of the turnpike. It was here that Lee had massed for the attack planned upon our left flank. Reynolds, who during the fighting described above occupied a key position protecting Porter's left flank, was ordered by Pope (or by McDowell) to support Porter, thus uncovering the left flank of the force attacking Jackson. Colonel G. K. Warren, in command of one of Porter's brigades, seeing the importance of this vacated position, without orders seized and held it obstinately with only a thousand men, of whom over four hundred were killed, wounded, or captured.

When Lee saw that Pope contemplated an attack north of the turnpike, he allowed the Union army to expend its strength in that

imagined. Since understanding McDowell's character and record better, we soldiers are glad to acknowledge his true worth as a brave, able, and long-headed commander, and to apologize for abuse which was undeserved.

Pope took prompt measures to ward off impending disaster. The officers and privates, as a whole, by their devotion, coolness, and courage, gave steadiness to the wavering lines. Wearied and even wounded men dragged themselves forward to the conflict for the common safety. It was past five o'clock when Longstreet's five fresh divisions, hitherto concealed in the woods, came on, giving the rebel yell, and followed by artillery which took positions from point to point in conformity to the main line of advance. When, however, the Confederates reached the position where

THE RETREAT OVER THE STONE BRIDGE, SATURDAY EVENING, AUGUST 30.

R. F. Z. 1865

they had hoped to intercept our line of retreat, they unexpectedly found it defended. McLean's brigade of Schenck's division, Milroy's independent brigade, and Tower with two brigades of Ricketts's, held the line of Bald Hill. Being severely pressed, Schenck in person brought up reinforcements to McLean's support, including two brigades of Schurz's division, and fell, severely wounded, while at the head of his men. Here it was that Colonel Fletcher Webster, son of Daniel Webster, fell while leading his regiment. Here also the brave Colonel Koltes, commanding Schurz's third brigade, was killed. Then came the struggle for the Henry house hill, the plateau which was the scene of the hardest fighting in the first Bull Run. It was bristling with the guns of Reynolds's and Reno's men, and of Sykes's regulars. The enemy made a vigorous attack. At last darkness, the succor of armies hard pressed, came. The army crossed Bull Run by the stone bridge, and by midnight were all posted on the heights of Centreville.*

Notwithstanding the surprise of Long-

* Captain William H. Powell, of the Fourth Regular Infantry, in a letter to THE CENTURY, dated Fort Omaha, Neb., March 12, 1885, describes as follows the retreat upon Washington and McClellan's reception by his old army:

"The last volley had been fired, and as night fell upon us the division of regulars of Porter's corps was ordered to retire to Centreville. It had fought hard on the extreme left, to preserve the line of retreat by the turnpike and the stone bridge. We were gloomy, despondent, and about 'tired out'; we had not had a change of clothing from the 14th to the 31st of August, and had been living, in the words of the men, on 'salt horse,' 'hard tack,' and 'chicory juice.' As we filed from the battle-field into the turnpike leading over the stone bridge, we came upon a group of mounted officers, one of whom wore a peculiar style of hat which had been seen on the field that day, and which had been the occasion of a great deal of comment in the ranks. As we passed these officers, the one with the peculiar hat called out in a loud voice:

"What troops are these?"

"The regulars," answered somebody.

"Second Division, Fifth Corps," replied another.

"God bless them! they saved the army," added the officer solemnly. We learned that he was General Irvin McDowell.

"As we neared the bridge, we came upon confusion. Men singly and in detachments were mingled with sutlers' wagons, artillery caissons, supply wagons, and ambulances, each striving to get ahead of the other. Vehicles rushed through organized bodies, and broke the columns into fragments. Little detachments gathered by the roadside, after crossing the bridge, crying out the numbers of their regiments as a guide to scattered comrades.

"And what a night it was! Dark, gloomy, and beclouded by the volumes of smoke which had risen from the battle-field. To our disgust with the situation was added the discomfort of a steady rain setting in after nightfall. With many threats to reckless drivers, and through the untiring efforts of our officers,—not knowing how, when, or where we should meet the enemy again,—we managed to preserve our organization intact, keeping out of the road as much as possible, in order to avoid mingling with others. In this way we arrived at Centreville some time before midnight, and on the morning of the 31st of August we were placed in the old Confederate earthworks surrounding that village to await the developments of the enemy.

"It was Sunday. The morning was cold and rainy; everything bore a look of sadness in unison with our feelings. All about were the *disjecta membra* of a shattered army; here were stragglers plodding through the mud, inquiring for their regiments; little squads, just issuing from their shelterless bivouac on the wet ground; wagons wrecked and forlorn; half-formed regiments, part of the men with guns and part without; wanderers driven in by the patrols; while every one you met had an unwashed, sleepy, downcast aspect, and looked as if he would like to hide his head somewhere from all the world.

"During the afternoon of Sept. 1, a council of war was held in the bivouac of the regular division, at which I noticed all the prominent generals of that army. It was a long one, and apparently not over-pleasant, if one might judge of it by the expres-

sions on the faces of the officers when they separated. The information it developed, however, was that the enemy was between the Army of the Potomac and Washington; that Kearny was then engaged with him at Chantilly, and that we must fall back towards the defenses of the city. Dejection disappeared, activity took the place of immobility, and we were ready again to renew the contest. But who was to be our leader? and where were we to fight? Those were the questions that sprang to our lips. We had been ordered to keep our camp-fires burning brightly until 'tattoo'; and then, after the rolls had been called, we stole away—out into a gloomy night, made more desolate by the glare of dying embers. Nothing occurred to disturb our march; we arrived at Fairfax Court House early on the morning of the 2d of September. At this point we were turned off on the road to Washington, and went into bivouac. Here all sorts of rumors reached us; but, tired out from the weary night march, our blankets were soon spread on the ground, and we enjoyed an afternoon and night of comparative repose.

About four o'clock on the next afternoon, from a prominent point, we descried in the distance the dome of the Capitol. We would be there at least in time to defend it. Darkness came upon us, and still we marched. As the night wore on, we found at each halt that it was more and more difficult to arouse the men from the sleep they would fall into apparently as soon as they touched the ground. During one of these halts, while Colonel Buchanan, the brigade commander, was resting a little off the road, some distance in advance of the head of the column, it being starlight, two horsemen came down the road towards us. I thought I observed a familiar form, and, turning to Colonel Buchanan, said:

"Colonel, if I did not know that General McClellan had been relieved of all command, I should say that he was one of that party," adding immediately, 'I do really believe it is he!'

"Nonsense," said the Colonel; 'what would General McClellan be doing out in this lonely place, at this time of night, without an escort?'

"The two horsemen passed on to where the column of troops was lying, standing, or sitting, as pleased each individual, and were lost in the shadowy gloom. But a few moments had elapsed, however, when Captain John D. Wilkins, of the Third Infantry (now colonel of the Fifth), came running towards Colonel Buchanan, crying out:

"Colonel! Colonel! General McClellan is here!'

"The enlisted men caught the sound! Whoever was awake aroused his neighbor. Eyes were rubbed, and those tired fellows, as the news passed down the column, jumped to their feet, and sent up such a hurrah as the Army of the Potomac had never heard before. Shout upon shout went out into the stillness of the night; and as it was taken up along the road and repeated by regiment, brigade, division, and corps, we could hear the roar dying away in the distance. The effect of this man's presence upon the Army of the Potomac—in sunshine or rain, in darkness or in daylight, in victory or defeat—was ever electrical, and too wonderful to make it worth while attempting to give a reason for it. Just two weeks from this time this defeated army, under the leadership of McClellan, won the battles of South Mountain and Antietam, and had to march ten days out of the two weeks in order to do it."

Yanks didn't keep we uns in fixin's." And this was very near the sober truth.

The hardships of the army in this campaign were unparalleled in its experience. The field hospitals contained nearly eight thousand wounded men, and a ghastly army of dead lay on the field. The ambulances, too few for the occasion, were supplemented by hacks and carriages of every description, brought from Washington. The tender hand of woman was there to alleviate distress, and the picture of misery was qualified by the heroic grit of those who suffered.

The greatest losses in a battle are in the wounded, their ratio being as ten to one of the killed; and it seemed as if accident exhausted its combination in the variety of places in which a man could be wounded and yet live. I have seen men die from a trivial scratch, and others live with a fractured skull; others were killed by a shell or shot passing very near them, without leaving a bruise or scratch upon the body, and men shot through the lungs and bowels lived and got well. During the fighting of Saturday an officer put out his foot to stop a cannon-ball, which seemed to be rolling very slowly along the ground. It took off his leg and killed him. Another picked up a shell from the ground, not thinking it was lighted, and it exploded in his hands without doing him any serious injury. Jar and concussion often broke down the nervous system and produced death, while men with frightful wounds often recovered.

After that hard experience the *morale* of the army was much better than might have

been expected, though some, for the first time, began to regard our cause as a losing one. Most of the soldiers believed the Confederate armies were more ably commanded than our own. Said one: "If the rebels have a small force, they manage to get into some strong place like that old railroad cut that Jackson held." Another said: "They always have the most men where the nip comes." This expressed in a nutshell two facts. When weak, the Confederates took strong defensive positions, and at the supreme moment they were superior at the point of contact. Along with stubbornness and confidence, the natural inclination of the soldiers in our ranks was towards cautiousness and economy. Sometimes they ceased the fight before receiving orders because they recognized its uselessness in advance of their commander. The common soldiers represented the average intelligence of the North, and many of them—enough to give tone to the whole—looked upon the cause as peculiarly their own. It was felt that we must keep up the fight because it was a cause that belonged to ourselves and children. This view was deeply impressed upon the great bulk of our army. It supplied a bond of cohesion when discipline failed; and although we had fought and retreated, retreated and fought, we were neither dismayed nor badly disorganized. We were learning the trade of war thoroughly and systematically, and only needed a commander. The regard the private soldiers felt for McClellan arose from a deep conviction that he would not needlessly throw away our lives; that, with all his faults, he understood his trade.

Warren Lee Goss.

TOPICS OF THE TIME.

A Broad View of Art.

MUCH has been said, much has been written of late years, to advocate the cause of art-education in this country; and a great deal also has been done in the way of practical response to such appeals. But Dr. Waldstein's articles in this and in the foregoing number of *THE CENTURY* differ from most of those which have hitherto been devoted to the subject as regards the *kind* of art-education advocated. These essays, it seems to us, are of peculiar value for this very reason. Great stress has hitherto been laid upon the necessity of teaching the processes of art-production, little upon the necessity of cultivating the artist's mind and heart as well as his hand, and still less, perhaps, upon the necessity of educating the public—of inculcating the method and forming the habit of *art-appreciation*; and turning to what has been done in the matter, we find the same mood prevailing. The founding of art-schools has usually preceded the founding of museums, galleries, and collections; and these last have more often

been advocated in the interest of those who may be called the active than of those who may be called the passive students of art.

For these reasons, we repeat, Dr. Waldstein's arguments deserve the most careful perusal; and for the reason, too, that they lift the whole discussion to the very highest and broadest plane, and contain thoughts and suggestions that should interest every member of the community. His suggestions are based chiefly on the lessons of Greek art; but they find a still more indisputable support in the lessons which may be drawn from the condition of our own art at the present moment. No one who looks about him here to-day with open and unprejudiced eyes can be long in doubt as to what our art most needs at this very time. No one can doubt that it needs the cultivation of the artist's mind and heart more than the cultivation of his hand, and more even than this, the cultivation of the appreciative power of the public. The prime necessity is that we should go earnestly and systematically to work to inspire, to develop, to guide and clarify the taste

of the people — either through the mediation of our rulers, as Dr. Waldstein suggests, though this seems impracticable as things now are, or through that multiple private activity which in a state constituted as is ours must often play the part elsewhere assumed by governments and princes. The truth is that the American artist has outstripped the American public, that our supply of art (we speak of *quality*, not of quantity) has grown faster than our demand for it. The fact may seem curious, but it is indisputable none the less; and it is hardly curious if we reflect upon our material conditions — especially upon our isolated position in a new continent far from the accumulated treasures of the splendid past. Given a people of growing artistic instincts situated as are we, it is not unnatural that it should develop those instincts first in its creative artists. Those who are impelled to make art the work and motive of their lives are naturally those who will take most pains and go farthest afield to learn about it. It is for the others we should provide easily accessible instruction. Those others who do not want to be and never could be artists, but who might and gladly would be intelligent appreciators, are the ones who most need inspiration, guidance, and enlightenment. It is idle to say, as has sometimes been said, that the artist alone can profit by definite instruction; that he *must* be taught, while a public which does not appreciate by instinct neither deserves nor could assimilate outside teaching. Has not Mr. Theodore Thomas educated New York in music almost against its will — coaxing, beguiling, actually forcing it to listen to works it did not want to hear and at first could not comprehend? He has won his battle, and the whole nation owes him a debt of gratitude. The latent appreciative power which he rightly believed to exist under the ignorance of his audience is, without the shadow of a doubt, not limited to music, — probably exists in greater breadth and depth for other forms of art. Our best painters and sculptors and architects are to-day appealing to it as confidently as he appealed some years ago. But the conditions under which they speak are so much less favorable that they are in greater need than he was of outside help in the way of definite, formal education. Already, as Dr. Waldstein says, they have done much to win our public to the appreciation of good art in its minor, domestic branches. But they cannot so easily guide it to the appreciation of *great* art. Great art, monumental art, public art, can flourish only in response to a concerted public call. There are already men who could produce it for us, we believe, and their list would grow with astonishing rapidity if only a high grade of work were wanted; and that it may be wanted we must educate ourselves in appreciative power, and in that which is the obverse quality — in critical power. We must learn to know the good when we see it and the bad when we see it; — a mood of irrational, uncritical enthusiasm is not much better than a mood of dull unconcern. What we want is a public such as existed in the Florence of Donatello's day. Writing from Padua he says: "If I remain in this place the praises I hear will cause me to forget everything I know. In Florence, on the contrary, the incessant criticisms of my compatriots force me continually to make new efforts and thereby bring me constantly new glories." We see it is not ignorant praise an artist wants, any more than ignorant criticism or

sheer indifference. When our artists can find in us just what Donatello found in his Florentines, — discriminating appreciation, enlightened criticism, an enthusiasm as wary as impassioned, — then indeed the fault will be all their own if they fail to endow us with a great national art.

If, then, we care for the future of our art, we must educate ourselves as well as and (for the moment) more diligently than our artists. And if, on the other hand, we care for ourselves, for the American people, for that greatest good of the greatest number which is the final test of all things in a republic worthy of the name, how imperatively we are called to the same task!

The New Political Economy.

THE New Chemistry has displaced the old, the New Theology is fighting for its life; and now comes the New Political Economy, and asks that the science of that name sometimes described as "Orthodox" be required to show cause why it should not abdicate in favor of another claimant. It was at Saratoga in September last that this demand was made; and the formal challenge is conveyed in the constitution of "The American Economic Association," then and there adopted by a number of the students and teachers of political economy, gathered for the purpose from various parts of the country. The list of officers, with the council of twenty-one members, includes some strong names, and shows that the association will be able to make a vigorous defense of its purposes.

These purposes, as stated in the constitution, are by no means warlike. "The encouragement of economic research, the publication of economic monographs, the encouragement of perfect freedom in all economic discussion, and the establishment of a bureau of information designed to aid members in their economic studies," are objects with which nobody can quarrel. The first of these purposes indicates, however, to some extent, the peculiarity of the new economy. It professes to follow the Baconian method, — to gather its facts first, and to make its theories conform to them. It insists that this is the right way of studying political economy; that it possesses no scientific character, unless it conforms to this fundamental law of all the sciences. The political economy of former generations followed no consistent method. Adam Smith collected many facts, and commented on them in an interesting way; but his assumptions soon outran his data, and the science under his hand was often more speculative than experimental. Many of those who followed him discarded almost wholly the inductive method; and the complaint brought by the new economists against some of their most distinguished predecessors is that they have dealt too freely in abstractions; that they have occupied themselves chiefly in reasoning about what men must and will do, instead of trying to find out what men have done and are doing; that they have simply started with two or three cardinal facts of human nature, — viz.: that men are selfish and indolent, that they desire wealth, and wish to get it with the least possible exertion, — and out of these cardinal facts have evolved their science by logical inference. This, say the new economists, is not the right way to develop the science. Doubtless, we must recognize the fundamental principles of human nature, and must

be guided by them in our reasonings; but we need to verify and correct our reasonings by the careful study of history and of statistics. Economic research, they would say, quite as much as economic ratiocination, is our business; and by following it diligently we mean to give to political economy a truly scientific character.

Another doctrine of the new school will be more sharply questioned; that is, the doctrine that the sphere of the state in the development of the economic welfare of society may be, and should be, considerably enlarged. It is probable that the new school and the old school would agree in saying that the state ought never to undertake what can best be done by individual enterprise; but they would differ considerably in the application of this principle. Mr. Herbert Spencer, for example, would deny that governmental inspection of commodities offered for sale is in any case admissible; the late Professor Jevons thought that such inspection was in many cases necessary, and that sound principles of common sense would determine when such inspection should be required. Mr. Spencer does not approve of the factory legislation of England; Professor Jevons strongly defended it. The new economy insists that under the "let-alone" policy grievous wrongs are perpetrated, and that many of the precious fruits of civilization are going fast to decay; and it declares that when the weak are obviously suffering from the encroachments of the strong, political economy does not forbid, but commands, the state to interpose for their succor. Doubtless it is assumed in this contention that the government represents the intelligence and conscience of the people; that it is not merely "all of us," as Professor Sumner urges, but the wisest and best of us. If the old economy turn upon the new, demanding, "Is this, indeed, the fact?" the new economy will at once be confronted with its hardest question. For the solemn truth is that the representatives of the state, the people who frame and administer its laws, are not, in Professor Sumner's phrase, "all of us," since a great many of us have but little part in the matter; much less are they always the wisest and best of us; very often, indeed, they are nearly the foolishlest and worst of us, and the expectation that the bad matters now let alone will be greatly mended by their interference is certainly ill-founded. This is the natural and obvious retort of the old economists when they hear the new economists saying: "We regard the state as an agency whose positive assistance is one of the indispensable conditions of human progress."

But the new economists will scarcely admit the conclusiveness of the answer. "If our government," they may say, "were always to be administered by officials chosen from among the least capable and worthy of our citizens, this objection might be final; but we decline to count on such a possibility. The intelligence and virtue of the nation have a right to rule the nation, and they have the power to rule it too. Intelligence and virtue are stronger than ignorance and vice. A government which represents the worst classes is a monstrosity. Nature abhors it, and will not let it propagate its species. A government which represents only the average wisdom and integrity of the land is a solecism. Government means direction, leadership, wise control; if it fail to supply these, it is a hindrance and a burden. The theory of democracy is not that the ruler should be no wiser than the average citizen, the blind leading the blind;—the theory is that when all hereditary rule is abolished, and the people are left free to form their own government, those who are the natural rulers will be chosen; and the natural rulers are the wisest and best of the people. Democracy rests upon the belief that when artificial restraints are removed, the free action of the social forces will bring to the top the elements that belong there. If democracy means anything else than this, it is a delusion, and will speedily abolish itself. We assume that it means this, and this is what we are determined that it shall mean. Civil-service reform and all the other movements toward the purification of government rest on this assumption. We expect the legislatures and the executives of this land to be not only far better than the worst, but considerably above the average of the citizens in intelligence and virtue; and therefore we maintain that we are not irrational when we ask, for the government that we are determined to set up, the right to exercise those functions which naturally belong to it. If any one answer, 'Set up your pure government first, and then ask to have its power enlarged,' we reply that one way to purify it is to lay heavier responsibilities upon it."

We are not authorized to speak for the new economists, and they may decline to adopt our defense of their position respecting the functions of the state; but it is a position which they will be summoned to defend. The questions they raise are of great interest, not only to political economists, but to all students of social science; and the discussions they promise to open, by means of the platform and the press, must aid in the formation of a sound public opinion.

OPEN LETTERS.

Some Recent Experiments in Hybridization.

THE wheat crop of the world is undoubtedly the most valuable commercial product obtained from the soil. The wheat plant is one of the oldest in cultivation. The Chinese recorded its culture as early as 2700 B. C., and it is one of the prehistoric plants, remains of wheat seeds being found in the ruins of the houses of the earliest lake-dwellers. While there are several races of wheat, and while these have been crossed producing hybrids, it has retained its true

character and been entirely independent of other plants since its culture began. Compared with wheat, rye is a modern plant. It is not figured on any Egyptian monuments, and seems to have been first cultivated in the Roman Empire about the beginning of the Christian era, though it may have been known somewhat earlier in Russia and Tartary. While these two commercial plants have been cultivated side by side for centuries, the first plants appearing to be true hybrids between them bore seeds this year in this country. Wheat and rye may have been crossed be-

fore, yet there appears to be no record of anything like the results here obtained. Having made a personal examination of the crossing of these two great plant races, the writer may be prepared to report the history and present aspect of this most interesting experiment.

A very slight examination of a head of wheat shows plainly how and why it has kept its race purity so long. The flowers of the common squash stand wide open. The wind or a wandering bee may carry the pollen from the male to the female, and fertilization be effected in the roughest and most simple manner. It is the same with the strawberry blooms and the flowers of many other plants, and as a result such plants are inclined to "sport" and exhibit many varieties. Wheat, on the other hand, is self-fertilizing, the pistillate and staminate portions of the flower being close together and inclosed in a casing completely protecting them from contact with pollen from any other flowers. The flower is practically shut out from all natural crossing, and the only way in which a cross can be obtained is to open the case protecting the flower and make a purely artificial crossing. In this way all the crossed varieties of wheat have been produced.

The first step in the experiment was to make an artificial crossing between wheat and rye. For the female plant a head of Armstrong's beardless white was selected, and the flowers were carefully opened and the stamens cut out with a pair of scissors while still green. Shortly after, when the pistils were in the best condition, pollen from a head of common rye was dusted over them and the casing carefully closed again upon the wheat pistils, and fastened by means of a paper ring. This was repeated three times on each of the flowers where the stamens had been removed. This was in the summer of 1883, and from one head of wheat ten good seeds were obtained. These were planted on the 29th of the following September, and in due time nine new plants appeared, grew, and lived through the winter of 1883-4. In the summer of 1884 eight of these plants produced good seeds, and one plant produced a few apparently sterile and worthless seeds. The experiment here divides into two sections. The good seeds from the eight plants were planted in September, 1884, and produced many strong and healthy plants that survived the winter and bore this summer the greatest variety of wheats, some beardless, some fully bearded, some of one type and some of another, but all more closely allied to wheat than to rye. The result of this experiment is interesting, and it will in the future be continued, the various kinds being divided and again cultivated to see if the new types will be permanent. This portion of the experiment needs no further discussion, as the other branch, with the plants springing from the apparently sterile or worthless seeds, is of more interest. One of the original nine plants produced fourteen heads giving seventeen shriveled and narrow grains. The plant exhibited some of the features of rye, and this led to the hope that the seeds might germinate. The seventeen seeds were planted September 29, 1884, and fifteen plants grew up and safely passed the winter, two of the plants having been accidentally destroyed. These fifteen plants in July, 1885, presented a most curious appearance and bore heads of wheat closely resembling rye. The average height of all the plants was three feet five inches, the tallest plant being four feet

high. The best plant had thirteen heads, the poorest only two heads. There were one hundred and seven heads in all, or an average of seven and two-fifteenths heads to a plant. All the heads produced more or less seeds, and fifteen seeds selected, one from each plant, appeared to be in every respect good and perfect seeds. Of these, five were larger than the largest wheat, and three were larger than rye and closely resembled rye in shape. As a whole the seeds appeared to be wheat and yet had somewhat the shape of rye. No experiments were made to test the flouring qualities or taste of these seeds. That must come later when more seeds can be obtained. The point of interest lies in the fact that good seeds that resemble wheat were obtained from plants that had all the distinctive features of rye plants. An examination of these fifteen plants showed the following points:

1st, size and strength of stem and glaucous (or blue) color; 2d, tomentose appearance of stem or fuzziness of stem just below the heads; 3d, the heads were larger and narrower than wheat, and had more spikelets, being an average of twenty-six spikelets to each head; 4th, the glumes were marked more like rye than wheat, and the heads were bearded more like rye than wheat. In one head there were sixty-seven glumes, thirty-four on one side and thirty-three on the other. These features of color, bloom, shape, and character of heads seem to indicate that the plants followed their rye or male parent. They were considered by experts to be rye plants. The seed, on the other hand, is more like wheat than rye, and plainly not rye.

The object of this experiment is to see if a hybrid plant can be produced that will give seeds as good as wheat and yet be as a plant like rye; that is, a plant that will grow where wheat will not, or in fields exhausted by wheat, and will be as hardy as rye and ripen its seeds earlier than wheat. The fact that the young plants survived one winter is something, and the seeds certainly ripened earlier by several days than the original Armstrong wheat. At the present stage of the experiment, plants giving good seeds and having all the features of rye have been obtained. In other words, wheat has been produced from plants plainly not wheat. Whether the future plants will retain this combination of plant and seed characteristics remains to be seen. The experiments have been conducted with the greatest care, and the result, even at this point, is both interesting and of the greatest promise. Should the future plants give good flouring wheat, and have the good qualities of the rye plant, it may prove of the greatest benefit to the leading cereal crops of the world.

Charles Barnard.

A National Conservatory of Music.

FROM time to time there have been efforts made by lovers of music and others to establish a National Conservatory of Music in New York. For one reason or another these efforts have failed, and until within a very short time it looked as though there would be no individual, or collection of individuals, with enthusiasm or money enough to carry such a scheme through to successful completion. But while we were regarding the establishment of a national conservatory as a thing in the very distant future, it was nearer realization than it had ever been before, and all through the

energy and liberality of one woman, who made the plan practicable, and, by the time this reaches your readers, will have a school of opera, which is the nucleus of a national conservatory, successfully begun. This school, which owes its existence to the efforts of Mrs. F. B. Thurber, has its present headquarters at No. 128 East Seventeenth street; a modest dwelling-house, which, however, has been remodeled for its new uses, and will admirably serve its purpose for some time to come. Such a school as this must of necessity depend at first on private subscriptions; and a considerable amount has, I believe, been already subscribed or promised. A first meeting of the incorporators was held at Delmonico's on October 27th, for the purpose of completing the organization and appointing officers. Parke Godwin, Esq., was elected president, August Belmont, Esq., vice-president, and Richard Irvin, Jr., Esq., treasurer. The Executive Board consists of a number of prominent ladies and gentlemen of New York and other cities. Madame Fursch-Madi has been chosen directress of the school, and Mons. J. Bouhy, of Brussels, Professor of Opera. To successful applicants instruction will be given free in all the branches of musical art that relate to the production of opera.

Connected with the school, and designed for the fuller instruction of the pupils, a company has been formed for the production of "Opera Sung by Americans." It has been found impracticable at present to render this company as absolutely exclusive in the matter of nationality as its title would indicate, the school having graduated no pupils as yet.

Some people may think that it is putting the cart before the horse to organize the opera before the school has fairly begun; but Mrs. Thurber meets this objection with a pertinent rejoinder in the last paragraph but one of her address, read before the incorporators and trustees, when she says: "It has been strongly felt that the most effective way of impressing upon the minds of our people a thoroughly practical conviction of the extent and character of American musical talent—so inadequately appreciated hitherto, except in special instances—was to put that talent in evidence before them upon a befitting scale, and at the very outset." The opera will be under the musical direction of Theodore Thomas. The singers, though unknown in many instances, have been thoroughly tried and give promise of excellent work. The star system is to be entirely abolished. The orchestra itself is, of course, a tower of strength. There is a very large chorus, composed of young men and women who are in every sense far above the average of opera chorus singers. The Associated Artists, under Mrs. Wheeler, have the oversight of the *mise-en-scène*, and the scenery and costumes are from the hands of well-known artists. The performances will be given at the Academy of Music, the season opening on the 4th of January with Goetz's "Taming of the Shrew." This will be followed by Gluck's "Orpheus and Eurydice," Wagner's "Lohengrin," Mozart's "Magic Flute," Nicolai's "Merry Wives of Windsor," Bizet's "Carmen," Mozart's "Marriage of Figaro," Delibes's "Lakme," "Faust," "The Flying Dutchman," "Oberon," "The Huguenots," and "L'Eclair." An opera by Rubinstein will follow these. This repertoire shows that the management intend to diverge

from the usual routine. There will thus be presented in English operas that have heretofore been confined to the German or Italian stage, and are only known to Americans in those languages.

That in the matter of music there is a great deal of material in this country which has remained hitherto undeveloped, and which is only waiting for such an institution as the School of Opera to afford it the necessary means of attaining development, is admitted on all sides. The progress made by America in music astonishes every one but Americans. Accustomed to their own quick ways of doing everything, in business or art, they are less surprised than others at the rapidity of their own triumphs. The American School of Opera, as the nucleus of a National Conservatory of Music, is certain to meet with the warmest sympathy.

G.

A Brave Candidate.

I HAVE just seen in the October CENTURY your reference to the position of Colonel W. C. P. Breckinridge in regard to the negro problem. Your remarks recall a speech I heard from this gentleman in 1867-8. It was while I was pastor of the Baptist church in Richmond, Kentucky. He was a candidate for commonwealth attorney in that judicial district, and his opponents had used against him the fact that he was in favor of granting the negro the right to testify in the courts of justice. Prejudice was very high and feeling was very bitter on that question, and it was a most effective argument against Colonel Breckinridge. Before a crowded and inflamed audience the wily gentleman had denounced Colonel Breckinridge for his emphatic approval of the hated measure. With eloquence he replied:

"Fellow-citizens, the charge my opponents urge against me is true. I am aware that this avowal will most likely defeat me in this canvass, for you are not ready to view this question calmly and dispassionately. Your prejudices blind your judgment. Nevertheless, the measure is one not only of justice to a down-trodden race, but also of an enlightened public policy. As chivalrous white men, we should be ashamed of our delay in granting this boon to the black man for his protection. In the after days, when the passions of this hour shall have been cooled, when reason shall assert her sway, when the nobler feelings of your nature shall rule your hearts and judgment,—in that hour you will approve though now you condemn me."

The effect was electrical. The vast crowd broke out with the wildest applause, as the bold and eloquent speaker gazed earnestly in their faces. He was warmly complimented on every side, even by the most determined opponents of the measure. Yet prejudice was too strong in the opposite direction, and Colonel Breckinridge (fortunately for him) was defeated.

Very truly yours,

COLUMBUS, MISSISSIPPI.

C. E. W. Dobbs.

Southern Women as Teachers of Colored Children.

THE statement in the letter from a Southern woman signed "A. Z." in the August number of THE CENTURY, that "hundreds of Southern women of fair education are so reduced as to accept gladly a position in the homes of friends or relatives equivalent to that of upper servants without wages, yet not one can be found to fill the useful and honorable position of teaching a colored school because of the social ostracism which would follow," is not true certainly of the whole

South, is misleading to the uninformed, and unjust to the large number of good and noble women in the South who have been in the past and are to-day teachers of colored schools, both public and private.

In South Carolina, perhaps the most conservative of the States of the Old South, there are in one small community a number of ladies, than whom none stand higher socially, who have for many years taught in the public schools exclusively for colored children, for the small salary paid by the State to the teachers of its schools, and who to obtain such positions have passed the rigid examinations required by the school commissioners as a test of proficiency for such teaching. So far from suffering "social ostracism," or the fear of it, these ladies are pointed to with pride by their neighbors as true women who are ready and willing to do whatsoever their hands find to do when the necessity arises.

These I know of personally, and I venture to say many such can be found "to fill the useful and honorable position of teaching a colored school"; nor have they any cause to fear social degradation. In a small town in the mountains of Virginia, four years ago, a daughter of an Episcopal clergyman, the rector of the parish, and a member of one of the oldest families in that State, established through her own exertions a parish school for the religious and literary instruction of colored children, exactly similar in design to the plan mentioned by "A. Z." as being lately "set on foot" in Vicksburg, Mississippi, which was well conducted and encouraging in its results, and has been abandoned with regret on account of the failing health of the lady teacher, and a lack of means with which to rent a suitable school-house and to purchase the necessary books and stationery for the proper conduct of the institution. Nor had this lady any difficulty

in engaging, in the same town, the services of two young ladies who gladly accepted positions as assistants in this colored school.

These are instances, and they might be multiplied, of Southern ladies who teach secular schools for colored children. The Sunday-schools for negro children taught by ladies in the South are too numerous, widely known, and of long standing to be matter of dispute.

Believe me, no lady who undertakes to teach colored children in the South braves "ostracism" to do her noble work.

WASHINGTON, D. C.

Mrs. Helen Jackson's "King Redwald's Altars."

THE editorial note appended to the late Mrs. Helen Jackson's poem in the September number, "King Redwald's Altars," has called forth comments from several correspondents. Doubtless the true explanation of the discrepancies pointed out in the note, and of the prompting motive of the poem, is that furnished by M. C. Lenox, of Plainfield, New Jersey,—namely, that Redwald, King of East Anglia, might by poetic license be called King of Kent, since his kingdom was subordinate to the latter; that Kent, under Eadbald, had relapsed to paganism, while, as related in Green's "Shorter History of the English People," "Redwald of East Anglia resolved to serve Christ and the older gods together, and a pagan and Christian altar confronted one another in the same royal temple," thus going only half-way in his apostasy; and that Edwin, King of Northumbria (by a further poetic license called Britain), had meanwhile "warmly embraced Christ's religion." Thus the groundwork of the poem is historically true, and its excellent point, as intimated in the note, is not affected by the liberties taken with the literal facts.

BRIC-À-BRAC.

MIRTH is short-lived; cheerfulness never tires.

It never was intended that man should be perfect on earth; the great thing is, not never to miss the bull's-eye,—but to get a little nearer to it, every time we shoot.

THOSE who mold and move most the minds and actions of men, are seldom seen. They never head the procession.

RHEUMATISM, like many other things, is easy enough to cure in some one else; but when we undertake to cure our own, then business begins.

MY dear youth, if you must talk about yourself, pray don't mention your good luck; the world doesn't care to listen to such things.

YOU may put the world down as a mob of fools, but don't forget this: it takes a smart man to beat them.

NO man ever did a polite thing yet, without feeling a little prouder for it.

THERE are plenty of people on earth, who are going to be very indignant when they reach the other world, and find there are no reserved seats.

JUSTICE ought to be as cheap as the dew, but half the time it costs more to get it than it is worth.

Uncle Esek.

"WE HAVE SEEN BETTER DAYS."
TIMON OF ATHENS.

Uncle Esek's Wisdom.

IF we expect to be happy we must be busy; it is better to hunt up a hornet's nest, and fight that, than to be out of a job; no idle man ever was happy, and but few idle men are innocent long.

A Protest.

THEY pass me by unnoticed, these well-bred women
and men;
I find no recognition at the hands of the Upper Ten;
They return my hat uplifted and my cordial "How
d'ye do?"

With a stony stare —
A "Well! I declare!" —
Or a "Who the dickens are you?"

And yet I meet them nightly at german, dinner, and
rout,
The men of the clubs, the matrons and "buds" this
season "out."
At wedding and fête and luncheon, I'm always there
to see.

I know them all —
The great and small;
And all of them know me.

There's Jones, of the Knickerbocker — I've helped
him often of late;
At Mrs. van der Velvet's I've polished many a plate;
To Miss Dudette, at Newport, I was all smiles and
respect; —

And yet when we meet
In the park or the street,
They give me the cut direct!

Then what is this vaunted breeding of the boasted
Upper Ten —
This courtesy of women — this chivalry of men?
Do they think that I have no feeling? Do they all
ignore me so

Because I'm a waiter
From the eminent cater-
ing firm of Gobble & Co.?

Arthur Lovell.

In Advance.

Now Winter is fighting his battles
With many an icicle lance,
But I'm writing a "gentle spring" poem
Which the editors wish "in advance."

It is full, as is usual, of "violets,"
It alludes to the "robin's first peep,"
Though a blizzard's a daily occurrence
And the snow-drifts are seven feet deep.

But the editors — singular creatures,
To whom I am bound hand and foot —
Grasp at Father Time's typical forelock,
Till it's nearly pulled out by the root.

For they get 'way ahead of the season,
In a manner most wily and arch;
So that while you are reading December
They finish the number for March.

And he who would hope for acceptance
Must strike up betimes with his tune,
And sing Harvest Home in Mid-Winter
And jingle his sleigh-bells in June.

So when my spring poem is finished,
No rest does my weary pen get;
I must write a review of a novel
Which isn't itself written yet!

Bessie Chandler.

Beneath the Mistletoe.

THE viols played their sweetest tune,
The dancers tripped it to and fro,
And whirling in a giddy round,
We waltzed beneath the mistletoe.

I closer clasped her little hand;
She, blushing, bade me let it go.
"Nay, Nell," I answered, stooping down,
And kissed her 'neath the mistletoe.

We whirled away without a word,
Until I whispered, soft and low,
"Dear Nelly, have you seen my heart?
I lost it 'neath the mistletoe."

She laughed a merry little laugh,
She quavered yes, she quavered no;
And then she said, "We'll go and hunt
Your heart beneath the mistletoe."

The viols played their sweetest tune,
The waltzers tripped it to and fro;
I lost my heart, but hers I found,
A-dancing 'neath the mistletoe.

Jennie E. T. Dowe.

The Uhlan's Return.

"I'VE decked my bodice with ribbons new,
Made ready for song and dance; —
To-morrow morn my lover true
Comes back from the wars of France!

"And flow'rs in my soldier's path I'll strew,
As homeward the squadrons prance; —
He fought where thickest the death-balls flew,
Unharm'd by the guns of France!"

Ay! maid, he showeth to the view
No sign of war's mischance;
Yet got he wound that thou shalt rue
In fair and fickle France!

Under the trim coat's gallant blue
'Tis hid from thy trusting glance —
The heart that was pierced through and through
By a dark-eyed girl of France!

C. E. S.

Two Negatives.

SHE answered "No"; tears rose to fill
Her bonny eyes; yet something still
Bade me stay on — perhaps the slight
Soft pressure of her hand, which might
Have been her heart's own sweet "I will."

But ah! how hope died in the chill
Of that hard word! It dimmed the light
Of moon and stars, as trembling, white,
She answered "No."

Then, loth to leave my love until
Essay'd was all my lover's skill,
Her lily waist encircling quite,
I whispered, "Did I hear aright?"
When, softer than a song-bird's trill,
She answered "No."

MIDWINTER NUMBER.

THE CENTURY MAGAZINE.

VOL. XXXI.

FEBRUARY, 1886.

No. 4.

ANTOINE LOUIS BARYE.

HIS wife dared not tell him Corot was dead, and that another, the power of whose pictures he felt even more,—namely, Millet,—was dangerously ill. It was now too late. One day in June, 1875, there was a quiet bustling to and fro in a small plain house on the Quai des Célestins. Men in dress-coats, with serious faces, forming a kind of deputation, and followed by others in black frocks with the ribbons of the Legion of Honor in the buttonhole, entered the courtyard. Students who affected some garb of Bohemia and students foppish in dress rubbed elbows with workmen in blouses, army officers, foreigners interested in art, and staid friends of the family. The householder and father, a master second to no other of his generation, lay in his coffin surrounded by many of the smaller works of art he had created. The dress-coats were present officially: they represented the School of the Fine Arts. The decorations and the uniforms were there to grace the last ceremonies of a member of the Legion of Honor. The art-students and foreigners came from reverence or curiosity. The blouses testified to the popular esteem for a man whose triumphs in art were reflected back on that great lower middle class of France from which he sprang. For Antoine Louis Barye was not rich ever, and was not noble in the hereditary sense, but when he died he had attained to pretty much everything except fortune which seems to a modest and honorable ambition worth the struggle. When the ceremonies at the house were done and the popular high artists of the day, such as M.M. Carolus Duran and Meissonier, had, with ardent gesticulations, extolled the beauty of the statuettes about the rooms after their generous wont; when, with its military escort, the train of mourners and friends left the courtyard behind the bier, then the worth of the

man and artist in the estimate of the rough people appeared. Moving through a quarter where workshops and forges and factories of all kinds are plenty, workmen still sweaty from their labor came to join the procession or to greet it, to make more motley but still more impressive the funeral of a person who was known to be modesty itself. No man in all Paris could cast bronze as he could; no foreman of a foundry but could take lessons from Barye in the elements of foundry-work. No one ever heard him belittle other artists or try to push himself; many could recall generous words of praise that came with doubled force from a man so quiet, so reserved, so silent. And here was a man of peace accompanied to his grave with military honors; a republican proceeding in pomp. Here he was, a member of that true democracy of the arts which does not deny to men the spiritual glories of an aristocracy provided they have shown their right to preëminence, accorded a funeral that a prince might envy. Here was a man who had seen in his atelier the highest princes of France, and the last king; who had been favored by an emperor and snubbed by envious bureaucrats, regretted and reverently followed by the most irreverent and leveling populace in the world.

Barye was born in Paris four years before that century began whose major part, and in all probability whose most stirring events, fell within his term of life. Still a boy, he was apprenticed to a maker of molds for the brass-work on uniforms. He was hardly through the half of his teens when Napoleon I., robbing for soldiers "the cradle and the grave," took him by way of the conscription. Luckily he was appointed to an inglorious but useful division, that of the military map-makers, so that when the Emperor's last card

was played he became apprentice to a jeweler instead of leaving his bones at Waterloo. He worked on steel with the burin before he was of age, and got some idea of the artistic treatment of objects in metal; then he fashioned medallions large and small, was a pupil in the atelier of Bosio, a mediocre sculptor in the Italian way, and got flattering marks of esteem; studied in oils with Baron Gros, and had serious ambition to become a painter, being at one time encouraged by a faint show of success. Between 1823 and 1827 the jeweler Fauconnier benefited by his designs and took what credit they brought. He felt the tumult of 1830, and listened more than he spoke in the great windy war between classicists and romanticists — needless to say on which side his sympathies were! He had early successes and quick reverses in the exhibitions; so quick, indeed, that they might be fairly taken as warnings from the controlling spirits that it would not do to be overmuch original. Then came the period of indignant withdrawal from the Salon, followed by other and greater successes. Louis Philippe visited his studio and flattered him, but paid him meagerly. A prime minister wished to give him one of the most salient points in the Parisian panorama to decorate — an arch that has played a part in modern French history, been crowned with spoils from other nations, and seen those nations in turn despoil it; an arch which has not yet perhaps received its crowning work of art, though lately it bore a model designed by Falguière. Fifty years ago he brought envy and malice on his head through the erection in the Avenue des Feuillants in the Tuileries gardens of his colossal bronze lion and serpent. It was then the sneer of “animalist” began. “What!” cried an artist, “are the Tuileries to become a menagerie?” He answered detractors by devoting himself to the statuary of animals until, as it is the fashion in the

world, for the same traits he became as much lauded as he had been formerly damned. The Third Napoleon became his patron. Meantime he opened the eyes of people to new beauties in art, widened the sympathies of the connoisseur, and in his own way helped a great work of reformation which will be spoken of later. At the very last, when followers and imitators swarmed, and his fame had spread, with but slender profits to his pocket, into every civilized land, the doors of the French Institute were about to open to him, and he died.

Barye was a sturdy and simple man of few words, quiet manners, and steady habits. Twice married, he was the father of ten children. He dressed like the worthy and respectable burgher he was. His face shows a life of industry and economy; it bears the mark of long hours of solitary thought. “In all French history,” writes an admiring American sculptor, Mr. Truman Bartlett of Boston, “there is no artist who lived in such lofty, isolated strength.” Look in the wood-cut at the massive face with broad forehead, broad, square jaw, straight nose, eyes looking keenly from under pronounced brows such as the phrenologist will have us believe denote unusual powers of observation. It is a face of big masses and planes. A thick-set, short-legged man, with the broad, fleshy, powerful hands of the people, the square tips of the fingers representing, in the lately revived lore of the palmist, a love of movement in the artistic product, whatever it may be. Gravity is felt in his strong shoulders and determined gait. There he stands, a plain, hardworking, patient artist, often so poor that the legend runs (doubtfully enough) how he carried about, like a peddler, his Centaur group for sale; a good husband and father; a professor — without pupils — at the zoölogical buildings in the Jardin des Plantes; one who earned the respect

SLEEPING DOG.

(ETCHED BY JACQUE FROM A BARYE BRONZE IN 1846; ENGRAVED FROM A PRINT IN THE POSSESSION OF S. P. AVERY, ESQ.)

ANTOINE LOUIS BARYE.

of everybody that met him, and whose work stirred deeply many sculptors and painters with reputations wider spread and more glittering than his own. Finally, he was a man conscious of his own worth under all his modesty. During his last illness the smaller bronzes stood about the room. To keep up a cheerful tone his wife said to him, as she busied herself dusting them off:

"My dear, when you are better, see that the signatures are more legible."

"Never fear," answered Barye, raising his head from his hands; "before twenty years have passed people will be using a magnifying glass to my signatures."

VOL. XXXI.—49.

Barye dying in June, 1875, there was an exhibition of his works at the School of Arts in November. People marveled at the quantity of drawings, water-colors, and oil-paintings, and the careful measurements of animals. A beast could not die at the Jardin des Plantes without Barye being on its coroner's jury and at its post-mortem. The thoroughness of his labor and its extent seemed to argue well for the sale at the Hôtel Drouot, which was set down for February of 1876, particularly as the right of reproduction was to go with the object sold. Nevertheless, the prices were not what might have been expected. Only now and then did one overstep the valuation placed

BEAR-HUNT. (DRAWN FROM ONE OF THE CORNER-PIECES IN THE TABLE SERVICE OF THE DUC D'ORLÉANS, NOW IN THE POSSESSION OF MRS. W. T. BLODGETT.)

on it by the experts. Why was this? Partly, no doubt, because very few connoisseurs can tell first castings from later ones. The objects had been in many cases already reproduced, and few people were sufficiently skilled in such matters, and in Barye bronzes particularly, to hazard a mistake. Somewhat similar embarrassment exists in buying etchings, or used to exist, perhaps it is safer to say, since the processes to harden the surface from which etchings are printed have become perfected. But there was another reason. Even Barye could not entirely live down the old sneer against the "animalist," a sneer which became popular and acute during his later years, owing to the aggravated polemic between religionists and evolutionists. Nor could he make headway always against the scoff about paper-weights and clock and parlor ornaments. From pure ignorance

the bulk of buyers must class all small bronzes as paper-weights or some such supposed word of contempt, since they cannot be expected to understand that a two-inch figurine may be a masterpiece while a Colossus of Rhodes is a gigantic botch; and then, in Paris classicism is even to-day powerful, and Barye was a heretic. But while the mass of buyers abstained from the sale at the Hôtel Drouot, the professionals were there, and secured, for the foundries to which Barye disdained to intrust his precious work, a supply of beautiful and original models, which in some instances brought them wealth. The world is full of Barye bronzes now; but those we see are rarely the fine examples. The jewels are those which Barye designed and cast for some friend or patron, over which he lingered lovingly, touching and filing the cast work, and giving it the full benefit of the master's hand. These bring, as he meant to give his wife to understand, fabulous prices, and the magnifying glass does literally explore each stroke in the letters of his name to make sure that he and no other touched it. Yet it is rather a printed name than a signature, and how legible that was appears from one in the possession of Mr. Avery reproduced below. It was a pity that his family should have parted at once with the right to reproduce the groups. The fear of it haunted Barye during his life, and one is at a loss to understand how his executors dared to violate a cherished wish well known to his wife. Alas! he feared not only on account of his family these reproductions "for the trade," but on account of his own fame. He knew that one bronze badly cast would do more harm to his reputation than ten would do it good, though superintended by himself, cast at his own foundry, and touched by his own tools. It is said that false Baryes were cast in New York twenty years ago. It is certain that a parasitical workman who lived on Barye's name in Paris had his shop visited by the police before the sculptor died. The iron lions which one sees in the stores are

*Reçu de Monsieur Durand. Quel
la somme de deux-cents francs pour
quatre bronzes.
Paris ce 29 Janvier 1883 Barye*

often Barye's, the design being stolen without acknowledgment.

Who were Barye's comrades in art? Among the artists of Paris with whom was he in sympathy? With Corot, the poet of atmosphere; with Rousseau, the friend of trees and woodlands, hardly inferior to Corot in aerial subtleties; with Millet, the painter of the sad and grandiose in the life of peasants. And who in art are his spiritual forefathers? Michael Angelo has been suggested by one, Leonardo da Vinci by another. His contemporary Delacroix, though a painter, has been pointed out

member how quaintly Ariosto remarks that while such odd birds come to the Rhipæan mountains across the icy sea, they are rare! The pace at which Barye's hippogriff is going is tremendous. Roger backs him well. It is true that the princess of Cathay is liberal of charms, but of Rubens it is hard to see the trace.

Why, one is often tempted to complain, do critics insist on tracing these godfathers in art? Few things anger artists more; for it is felt by a sensitive person as a slight put on his originality. Yet, after all, the critics only obey a process natural to all minds, and one in which

WALKING LION.

(DRAWN FROM A PHOTOGRAPH FROM THE PLASTER CAST, BY PERMISSION OF F. BARBEDIEENNE, PARIS.)

by an enthusiastic sculptor, a competent judge. Certainly the water-color animals of Barye are like the animals painted by his friend Delacroix, and the passionate creative nature of that great prototype of the Impressionists must have been specially welcome to a kindred but very different genius in another branch of the fine arts. M. Genevay says that Barye passionately admired Rubens, and in the group of Roger the Paladin bearing away Angelica on the hippogriff sees in the swelling bosom and hips of Angelica the influence of the mighty Fleming. The statuette group embodies two strong traits in Barye—movement, and love of transition forms in animals; for it is Ariosto's hippogriff on which the enamored couple drive through the air, and in accordance with the poet's description, the bird-beast is not a fictitious creation of magic, but a real horse-griffin, with the head, claws, and plumed wings of its father and the hind-quarters of its mother. Re-

artists, when they criticise, indulge more than others. We regard with distrust an idea we cannot classify, for the reason that it is by simplification of masses, categories, classification, that we have what knowledge exists. Therefore the artist who cannot be assigned to a predecessor or made one of a school is apt to be thought no artist at all. Until he is affiliated with others, forcibly or otherwise, or at least placed historically in some connection with the men before or after him, he is an outcast. It is of small use for the victim to cry loudly meanness, timidity, ignorance! Not these are to blame so much as the love of system; the need, in fact, of cataloguing and disposing in groups that go by the name of "schools" the various artists of a country. The coördinating necessity accounts for the efforts made to button the mantle of one painter to that of a follower, to find the germ of this sculptor's art in the work of that. Per-

haps we have gone too far in that direction. It is certain that some artists decline to be indexed so simply, for there are points in their work not to be explained in this way. Nor does it follow that a painter gets the spur in the beginning of his career from a painter, or a sculptor from a sculptor. Another art often shows him truth much more clearly, because his trained faculty of observation is not so much trammelled by the prejudices and habits of mind acquired in the study of his specialty. Looking at France to-day and seeing how many sculptors have had inspiration from Jean François Millet, looking at France earlier in the century and noting the painters that were influenced by the classical sculptor Pradier, one questions the ordinary easy fashion of explaining the origin of methods, or germination of genius, by naming the actual person in whose atelier an old master began. Exceptions are too many to "prove the rule." Let us give over the search for the master to whom to assign the peculiar genius of Barye; let us drop all sculptors and painters of his day and the past, and consider quite another field for the likelier source of his ideas.

Our age has seen the gaps wonderfully narrowed between nation and nation, between race and race, between the human animal and the beast. The cry has been that man is in danger of being degraded to the brutes. It is juster and more godlike to say that the brutes have been steadily raised nearer to man. For, with it all, has there been any diminution in the wonders discovered and the further pow-

ers suspected in man himself? Man is more marvelous than ever; but the brute is no longer separated from him by a gulf that excused any cruelty from the higher to the lower form of creation. Before our century opened Buffon, Goethe, Erasmus Darwin, stirred men to be natural historians, to be naturalists, as the word is still broadly used. On the threshold Lamarck and Cuvier made their lasting effect, carrying men on, the one by profounder theorizing, the other by more careful collection of facts, toward a far more thorough and exhaustive examination of life now and formerly on the globe. While Barye was in his impressionable years the foundations were laid by these and other masters for that surprising building of science which now seems to be revolutionizing church and state, or at any rate recasting men's views of society and morality. He had still sixteen years to live when the great English elaborator Charles Darwin and his brilliant rival Wallace set the world agog with the results of their generalizations. It is true that at first Barye's practice was mastered by classicism, or what might better be termed pseudo-classicism. He did not as a scholar revolt from the school of the day, but in maturer years came slowly to change his views according to the bidding of a sober, reflective temperament. It may be also allowed that with the human figure he never wholly departed from classical patterns in art. But during his strongest years, when he was doing his most original work, he was dominated by the scientific spirit of

STAG ATTACKED BY PANTHER. (FROM AN ORIGINAL ETCHING BY BARYE, FROM A PRINT IN POSSESSION OF S. P. AVERY, ESQ. ACCORDING TO MR. AVERY, THIS IS THE ONLY ETCHING BARYE EVER EXECUTED.)

BRONZE LION AND SERPENT OF THE TUILERIES GARDENS. (FROM A PHOTOGRAPH, BY PERMISSION OF A. GIRAUDON.)

the advanced minds of his nation. It was not Darwinism exactly; it was not evolution; but it partook of it. The idea was latent; it had occurred partially to a French botanist in the middle of the last century, and to a German observer of flowers toward the close. Lamarck almost told it; Darwin finally modeled it as we now see it. Not that Barye was a scientific man, but that Barye sympathetically expressed in art, or forecast if you will, the idea of a gradually unrolling creation at which the Maker sits sublime, with folded arms, needing to give but one First Impulse to matter and no more. It was the artistic form of science that turned him toward the study of wild beasts; him, the respectable, hard-working citizen of a town whose sons are renowned for their ignorance of field sports and of foreign lands. It was science that bade him examine animals near at hand, become intimate with them, instead of accepting the conventions decreed by the art of the past. Science made him haunt the *Jardin des Plantes* and tabulate the measures of all beasts he could lay his hands on; Science urged him to lecture to empty benches; Science upheld him in penury; Science allowed him to stay content, though he was leaving to his family little more than a great name. He felt himself in the stir of new views of the world of men and beasts, in the current of a great

age, and foresaw that what he had done would some day, and that not far off, be recognized at its full worth.

The master of Barye, let us then believe, was not Michael Angelo, or Leonardo, or Delacroix, or poor Bosio, but the spirit of his age. For that reason was he the creator, the opener of a new line of work, the widener of our enjoyment in the plastic arts. But as such he inevitably mixed the novel with the hackneyed in a way that sometimes perplexes admirers. Had he done otherwise, could he have succeeded at all? He would have been cast aside as an eccentric; he would have starved. Moreover, it is evident that the two strains of classicism and modern realism were not incompatible in his mind. His effort was to appropriate the best in each and fuse them in his work. In this way he aided the cause of evolution not less powerfully because on a side-issue, bringing people to consider the claims of brutes by making them admire their beauty and recognize their dramatic character. He, too, was an evolutionist, artistically speaking. Like Millet, he had a mission, and, as usually happens, was only half conscious of its bearing and scope. It was not to reach what some artists consider the apex of art, and which, if done well, is indeed art of a high order; it was not to bring back animal statuary to those conventional but vivid forms which obtained

JAGUAR ATTACKING CROCODILE. (DRAWN FROM THE BRONZE IN THE POSSESSION OF CYRUS J. LAWRENCE, ESQ.)

to some extent in Italy during the renaissance, but had their bloom in Greece during the great epoch, and their magnificent roots in Asia Minor during pre-Athenian times. His mission was to raise animal statuary from the contemptible situation in which it lay by pursuing quite another plan. Preliminary sketches were made in pencil and water-color for outline and pose. The animal was then examined close at hand and measured. Next the model was constructed, measurement by measurement, from figures and from studies of the dead beast, of the skeleton and the flayed body. Nothing was left to chance. Had Barye stopped there, he would have been a common realist such as we hear much of today in the arts and in letters. But with him this drudgery did not preclude the synthetic effort in addition to the analytic. "The magnificent lion of Barye," said the painter Rousseau to his pupil Letronne, "which is in the Tuileries, has all his fur much more truly than if the sculptor had modeled it hair by hair." Having built his figure as accurately as possible, he then felt it safe, and only then, to let imagination have its way. He was master of that wonderful organism and knew it inside and out; he could take liberties with it, make a wild beast more than wild, thicken the thick

paws of a lion, make more sinuous the winding back of a tigress, broaden the planes on the muscular shoulders of a jaguar, until they look like the broad protecting sheath-plates of an antediluvian lizard, a cousin of that very alligator with which the big cat is fighting; wind the neck of a tall wading-bird until it is forced to show how near is the relationship between reptiles, the crawlers, and birds, the flyers; unite in one horse the best points of heavy chargers and high-bred Arab steeds,—in this way calling attention to the beauties in animal forms, and often showing their desperate struggles for existence. What was Barye doing so very different from Millet? It was another field. The latter called to the passer to note the somber lot of the peasant, that man who before the Revolution was described as a being little better, to outward appearance, than a brute. Barye helped the cause of the dumb creation. He raised the animal in art as Millet did the human caste from which he sprang.

This kinship in aim was accompanied by a strong personal friendship. Barye also had his *pied-à-terre* in Barbizon village near the woods of Fontainebleau, where Rousseau, Millet, and Diaz lived, where Corot often came. He left a number of studies in oil of the Fontainebleau landscape, studies that have a somber dig-

JAGUAR ATTACKING CROCODILE. (DRAWN FROM THE BRONZE IN THE POSSESSION OF CYRUS J. LAWRENCE, ESQ.)

nity, a quiet richness, which are very individual. The wood-cut is from such a picture in the possession of Mr. Cyrus J. Lawrence, who, with Messrs. Theodore K. Gibbs of New York and Wm. T. Walters of Baltimore, has enabled us to study and enjoy Barye more completely than is possible in France. Those who estimate a man by the breadth of his range can hardly refuse to place Barye beside if not before the greatest of these friends. The Tuileries lion with serpent is animated; but what a sullen dignity in the colossal lion seated before the gateway of the Prefecture of the Seine on the river front of the Louvre! How magnificently have the mane and heavy hair about the head and shoulders been massed! At Marseilles the Château d'Eau is ornamented with four gigantic animals. The Bastille column has in relief a lion of the zodiac which is

pensity for animated action, and showed the domestic idyl in the lives of wild deer? He reached humor in the figurine of a Senegal elephant trotting. The quiet ferocity of the walking lion is most impressive. In the little group of jaguar and dead hare, the sense of muscular power and ferocious rapacity is terrible.

"Tiger, tiger, burning bright!"

Who ever molded such limbs before? What sculptor ever told a tragedy so inexorably? One must go back to the wounded lioness on the bas-reliefs from Mesopotamia to find this spirit. The famous lion in the Tuileries gardens was a revelation to many artists in 1833, when it was put up. Perhaps more open to criticism than later work, it showed the world a new master, not merely because of its ex-

FONTAINEBLEAU LANDSCAPE. (FROM A PAINTING IN OIL BY BARYE, IN THE POSSESSION OF CYRUS J. LAWRENCE, ESQ.)

greatly admired. The Madeleine and Sainte Clothilde have full-length statues of woman saints. At Ajaccio, Corsica, is the equestrian statue of Napoleon the Great surrounded by four standing figures, and carrying in his right hand a globe surmounted by a winged victory. This is perhaps the most classical (and the least interesting) large work by Barye. The little statuette of the First Consul or of the young General Bonaparte on horseback is a wonderful piece, infinitely finer than the Ajaccio Emperor ordered by Napoleon III. The face of the young Corsican is ascetic and beautiful, the figure slender, the costume most picturesque. The horse unites the Arab head with the barrel of a charger, and the treatment of the tail and mane is singularly fine, massive, original. Is it needful to speak of the groups of stag, doe, and fawn in which he curbed his natural pro-

traordinary lifelikeness, but in a more technical sense by its boldness in the handling of the hair. The same group occurs, slightly different, in a small bronze in which the lion is younger. The mood is pettier; he is snarling and strikes at the serpent in a perfectly cat-like manner. Then there are the eagles; they surprise one by the size of their talons and spread of wings as compared with their bodies. The rabbit in the wood-cut is full of character, a minute "paper-weight" bigly molded. This and certain minim stork-like birds are delightful bits; but each, though a "paper-weight," is treated with a largeness in the modeling that removes it from all fear of contempt. In Japan the nobles treasure okimono or paper-weights signed by famous masters in metal-work who lived several centuries ago. In regard to them the phrase "worth their weight in gold" becomes ridic-

NAPOLÉON BONAPARTE, FIRST CONSUL, STATUETTE.
(FROM A PHOTOGRAPH FROM THE PLASTER CAST, BY PERMISSION OF F. BARBEDIEENNE.)

ulous. When Western amateurs can get them, the prices range from three to ten thousand dollars, yet one hundred golden dollars may outweigh them in the balances. Looking over a collection of Barye bronzes like the large one in the Corcoran Gallery, Washington, or private collections like those of Messrs. Lawrence and Gibbs, one is astonished at the amount of genius modestly hidden in such figurines. Not every one is equally great; yet the evenness of their excellence is remarkable. Look at Barye's hunting-dogs, bears, wolves, panthers, jaguars, and ocelots; his hares and rabbits; his axis deer, stags, *bouquetins*, buffaloes, bulls; his tortoises, crocodiles, and pythons; his eagles, storks, marabouts, and pheasants; his half-bred and his pure Turkish horses. It is a marvel where he found time to study all these animals in the conscientious fashion we know he did. It was in these and the groups of them that he showed most his love of movement. Soon after his death, forced to it by unappreciative criticism in America, Mr. Truman Bartlett wrote a warm letter to "The Tribune." He spoke as a sculptor and a personal acquaintance. "No sculptor of modern times," he wrote, "has

treated so large a number of subjects with such consummate grasp and elevation of conception. A candlestick was as seriously and successfully composed as if done by a Greek. No subject was too simple. There was none he did not touch with grace." What a heart-rending series of struggles the collection holds! If one allows oneself to look at Barye from that side alone, without remembering the great lessons that science was telling the world at the time, it is natural enough to feel more than amazed, perhaps to feel shocked at the savageness of the scenes. By superficial observers he has been accused of brutality. But the scenes were true; they were, moreover, refined and enlarged above the bald truth; and they were part of the great lesson of evolution in which, so far as the writer is aware, here for the first time Barye has been shown to have done his part.

A powerful trait in Barye was his faculty of generalization. He saw things naturally on a big scale, in great masses. Only his laborious career permitted this trait to remain a good one and not become a danger. His big, broad-palmed, short-fingered hands are, according to gypsy lore, the hands of one who

BRONZE LIONS IN FRONT OF THE PREFECTURE OF THE SEINE.
(ENGRAVED FROM A PHOTOGRAPH, BY PERMISSION OF A. GIRAUDON, PARIS.)

thinks of things first as wholes and afterward in particulars. A case in point occurred when Louis Philippe, who admired the Lion and Serpent extremely, and yet haggled with Barye over its price, agreed to have the Arc de Triomphe crowned with a suitable sculpture to take the place of that which the Allies carried off. Thiers, always an advanced connoisseur in matters of the fine arts, asked Barye for a design. The genius of the latter did not shape for the top of that handsome arch a complicated, semi-classical group. Perhaps the richness of the lower parts warned him that a big and simple object was needed. Very certainly, knowing from what great distances the arch can be seen, he formed in his mind some large single figure, but not a human

one, because, to be effective, that would be too tall and slender if standing, too complicated in outline if seated. So he modeled in extreme roughness a gigantic eagle, the eagle of France and her armies, alighting on a pile of cannon and trophies from all nations. It was this simple, colossal, effective, and, for the period, incredibly bold conception which was then cast aside, and now perhaps will be supplanted by a labored and unsimple, a complicated and ineffective group, containing a chariot, a female Liberty, a mass of standards, two falling figures, four horses in wild movement, and a group of men behind. So that even at the present, even under a republic which seems come to stay, classicism is so entrenched in Paris that Barye's big simple

PERMISSION OF F. BARBEDIEENNE, PARIS.)

thought is not revived, but an inferior by Falguière considered—a design difficult to understand, and impossible to decipher at a distance.

Among other treasures the Louvre contains a series of chambers devoted to antiquities from Nineveh and older towns in the Euphrates valley. There can be little doubt that Barye availed himself of any hints the remote past might give. But he was far too able to be an imitator. In all probability the lioness dying under the bolts of an Assyrian king, the most vivid piece of Assyrian bas-relief which has been unearthed, was to Barye a delightful surprise. Yet if he took from it anything, it was not, as a weaker might have done, a pose, but movement in its very essence, the living emotion of anguish in the crippled beast. Assyria has revealed transition forms in art between man and brutes such as Greek art was indeed not without, but analyzed as the Greek was not, and grosser. At Phigaleia there was one, a horse-headed Demeter, goddess of agriculture, and at Delphi there are traces of a bear-headed Artemis, sacred to the Arcadians, whose symbol was a bear. How instructive to Barye must have been the impos-

ing bull-men, guards at the portals of royal court-yards, which Layard found at Nineveh and Place at Khorsabad! It must have thrown a flood of light on the origin of the Centaur and Minotaur figures, which his patient and audacious hand evolved again under the glare of the skeptical nineteenth century. Barye's "Theseus Slaying Minotaur" is in the museum of Le Puy. We are

EAGLE. (DRAWN FROM A PHOTOGRAPH OF THE PLASTER CAST,
BY PERMISSION OF F. BARBEDIEENNE, PARIS.)

now able to understand better than the savants of thirty years ago what this grotesque among Greek myths signified. Instead of considering Minotaur the product of licentious imaginations run wild, or the caricature of an early tyrant who exacted slaves as tribute from Attica, or the symbol of the juncture in Crete of two warring religions, or a special emblem of the god of the sun, we can now ally him with such genii, *jinn*, as the wardens of the portals in Babylonia and Assyria, and, like them, consider him the idol of a subjugated people, the sign of a religion relegated to a second place. We can be as confident as possible that Theseus himself was a pure sun-god humanized, like Hercules, Bellerophon, and Perseus. He makes war on and

RABBIT. (DRAWN FROM THE BRONZE IN THE POSSESSION OF CYRUS J. LAWRENCE, ESQ.)

subdues a monster who bears the root of the word "moon" in his name. As it was suggested long ago, Minotaur means the moon plus the beast sacred to the moon. Theseus overwhelms him, just as the rising sun causes the moon to fade. The labyrinth in which he wanders is the dark world under the flat earth, Hades. The boys and maidens dedicate to him are the human sacrifices his rites de-

begins to appear between the man shoulders and meets the bull head with its sharp horns. The only human beings who recall him are the horrible *goitreux* one sees at Aosta and in some of the Swiss valleys; bull-visaged, half-imbecile creatures, who sit begging by the wayside; incorrigible misers, whose relatives fill the local courts with suits for guardianship of their rights and property. Various and

TIGER. (FROM A WATER-COLOR BY BARYE, IN THE POSSESSION OF S. P. AVERY, ESQ.)

manded, which the new religion puts an end to. In many other places besides Crete sun-worship drove out moon-worship with its horrid rites of Moloch. Thus Minotaur belongs with Gorgon, Typhon, the Titans, Giants, Cyclopes, among the gods of a dark past and lower civilization. By a further move back into the past these composites of animals and men connect themselves with totems, or the animal badges assumed as crests or emblems by families, tribes, and nations.

But, to leave the myth, Barye has fashioned the sun-man beautiful, shapely, stalwart, with the calm look of triumph irresistible that one finds in the best period of Greek art, and perhaps on the features a trace of the earlier and more conventional epoch when religious precedents and the absorbing attention paid to the human figure rather than the human face made the sculptor think more of form than feature. The moon-bull man is tailed, big-footed, thick-ankled, grossly fleshed. Marvelous is the modeling where the bull neck

sometimes unmentionable are the causes assigned for these beings among the people — Italian imagination running riot to account for their origin, just as the Greek fantasy tried to explain Minotaur through the fable of Pasiphaë (whose name means the shining moon) and Dædalus, the complacent artificer. Somewhat like these poor creatures, but not disgusting, because he seems to be a possible and in no way a morbid form, is Barye's Minotaur, as he catches at the shoulder of implacable Theseus and tries to throw him; as he feels his own knees giving way, although the sharp short sword leveled at him is not yet buried in his neck, very much as in the Iliad the unarmed Lykaon suffers at the hands of Achilles. "But Achilles drew his sharp sword and smote on the collar-bone beside the neck, and all the two-edged sword sank into him, and he lay stretched prone upon the earth, and blood flowed dark from him and soaked the earth." (Myers's translation.)

The Centaur is a more grateful subject. What

THESEUS BATTLING WITH THE MINOTAUR.
(FROM A PHOTOGRAPH FROM THE PLASTER CAST, BY PERMISSION OF F. BARBEDIEENNE, PARIS.)

looks like fun, laughter, or perhaps the intoxication of love or of wine, in the famous Centaur of the Capitol, appears a mad struggle for existence in the group by Barye of Theseus killing the Centaur Bianor. It is the tragic antithesis. The Centaurs may be allied in art to the genii of Mesopotamia, but in history it is likely that they represent a tribe, not a religion; a totem, not a faith. When first mentioned the Centaurs have no special monster-trait. We can see in many early sculptures the gradual evolution of the Centaur on Greek soil: first, the man being the larger, a monster man, with the equine barrel and hind-legs added to the complete

human figure; then, with the horse preponderating, a four-hoofed beast with a human torso in the place of the horse's neck. In the arts we can watch the Centaur becoming less and less man, more and more horse, thus corroborating history, which does not assign to the Centaur tribes physical monstrosity, but savagery and moral depravity. The Centaurs in art are curiously parallel to the Asian man-bulls, and if the meaning of their name as the learned explain it is correct, namely, "bull-drivers" (compare the vulgar Western term "cow-punchers"), and, later, "horse-bull-drivers" (Hippocentaurs), it is extremely likely that we

PEACE—IN A COURT OF THE LOUVRE. (FROM A PHOTOGRAPH OF THE PLASTER CAST, BY PERMISSION OF F. BARBEDIEENNE.)

owe the Centaur of Greek art to a mixture of ideas among the Greeks of the Asia Minor coast. They had seen on the Euphrates, cut in soft stone, the majestic man-bulls, and heard from Greece of the equestrian bull-drivers whose crest was a horse's head. In all probability we have a singular and complete instance of the march of a Semitic art-idea from Asia into Europe, which idea became Aryanized in the process, changing from the bull, more common to Semitic moon-worship (the golden calf, the brazen serpent, Moloch, Astarte, Baal), to the horse, the favorite Aryan symbol of the sun.

Barye's Centaur was much criticised, and objection in particular was made to one of its most realistic points, the digging of the toes of the Theseus into the sides of the Centaur's horse-back. That reminds one of the story told about Regnault's horses of Achilles in the picture now at Boston.

"Have you ever seen such a horse as that?" cried an envious person.

"No," was the answer, "but I have been looking for one like it for forty years."

To those who believe that all art worth

thinking about was confined to a couple of centuries before Christ and to the small land of Greece, the battle between the man and the horse-monster is too violently moved. The suspended blow of the Theseus worries them; the agony of Bianor's face as his rider drags back his head to give him the finishing stroke, the convulsive grasp of his hands, and the stumbling of his hoofs (whereby the horse is shown in the most intimate fusion and sympathy with the man) do not give them that sense of peace, that gentle glow of delight, which the greatest sculptors in Greek art are capable of imparting. After Canova's spirited but conventional group, at Vienna, too much importance seemed given to the conquered man-horse. It is the bane of art that people make standards for themselves, and force every new creation to reach the mark they have fixed. To be narrow in sympathies is one of the cheapest, simplest ways of setting up for wisdom. Unfortunately, habits of mind grow like others. He who, narrow from ignorance, begins innocently enough, remains narrow always, becomes narrower and narrower the more he learns. Without claiming for

Barye's Centaur the magnificent simplicity of the horses on the frieze of the Parthenon, or the restrained wildness of the broken bas-reliefs of Pergamos, it may be pointed out that he has shown new beauties, new capabilities in the horse, and made more spirited and understandable as a possible creature the Greek Centaur.

Thus Barye passed the gap between brutes and men by the stepping-stone of the monsters.* He was an evolutionist unconsciously; not a scientist, but a sculptor who based his work more immediately than others before

ORDER—IN A COURT OF THE LOUVRE.
FROM A PHOTOGRAPH FROM THE PLASTER CAST, BY
PERMISSION OF F. BARBEDIEENNE.)

him upon that basis of science, accurate observation. His stepping-stones were not of the barbarous kind mentioned in the sixth book of the *Iliad*: "First he bade Bellerophon slay Chimaira the unconquerable. Of divine birth was she and not of men, in front a lion and behind a serpent, and in the midst a goat, and she breathed dread fierceness of blazing fire." (Leaf's translation.) It was the monster that could lend itself to compositions, in which the magnificent movement of the horse or the muscular power of the bull could be joined to the grace of the human torso. Nor did the ideal of grace desert him when he rose to the human form unallied to the beast, as we have seen in his two figures of Theseus. Yet when one weighs him against the greatest sculptors of the past, it is an error to claim for Barye as high a position for his human figures as for his transition figures and for his beasts. This, let it be at once said, is very far from conceding that he was weak

in the treatment of the human being. Few careful judges will hold to that opinion, however much it may have been heretofore advanced. It is notorious that Barye was crippled by the stigma "animalist," in so far that he failed of getting many orders for human groups. While the painter, lucky mortal! can paint a great picture between whiles, keeping the hearth alight with commissions on lower levels, the sculptor, like the architect, works with materials too costly to permit experiments. His work is seldom independent of its background and surroundings; these must commonly be known to him before he begins on the clay. He must do what is ordered and feel in luck if he gets a commission at all. At the most he can model a sketch, and trust to its catching the eye of a patron wise enough in such matters to forecast its appearance when enlarged and hewn or cast. But Barye does not need to rest upon negative arguments his claim to a high place as a sculptor of the human nude. At the Tuileries is the graceful recumbent youth as a river-god, a charming, sober, peaceful male deity of the Seine, let us say, with none of the turbulence supposed to be characteristic of the inhabitants of its great city, but with much of the tranquil beauty of its glistening reaches. Among the statuettes are the Duc d'Orléans, the Tartar Warrior Reining in his Horse, the small Minerva, the Piqueur in seventeenth century dress, the little Roman Fool, the Horseman Surprised by a Serpent, the animated groups of sportsmen and of beast combats modeled for the dinner-table of the Duc d'Orléans, a central elephant-hunt with eight supporting groups, and a number of other human figures and groups besides. The table-ornament, by the way, forms probably the strongest proof that can be advanced for the theory that Barye was beholden to Delacroix; for the fiery painter loved such Oriental scenes as the center-piece now in the galleries of Mr. Walters of Baltimore, the elk and bear hunts in the possession of Mrs. Wm. T. Blodgett, and the other groups of that famous and now scattered set. The pieces, however, on which his high claims to a sculptor of the human figure must rest are the large three-figure groups which perch high above the tourist's gaze in the Carrousel court of the Louvre. Here are pretty effectually concealed from notice the compositions of man, boy, and beast that symbolize War, Peace, Force, and Order respectively. Unlike the Centaur, with its tremendous movement, they are extremely restful, particularly in the dominant member of each group, the man. Varied expressions and some range of individuality are given to the man; his gestures of head and arms, either martial, or

pondering, or determined, or insistent, add wonderfully to the effect of each. The naked boy is delightful, perhaps the most delightful of the trio, in one case supplying an element of humor. Barye allowed himself more play of surface, of curves, and rounded masses in the outlines of these charmingly fresh young figures. Peace and War have two domesticated animals—the ox and the horse. Order and Force have the savage—the lion and tiger. Each beast is thoroughly subordinated in the composition: the peaceful lie at the feet of the human beings in trustful comradeship; the savage aid the meaning of Order and Force by showing the repression of their natural instincts to destroy. It is true that he might have made the action of the man more moved and his face more vividly expressive. But the effects he sought were strength, calmness, massiveness. He felt that the meaning ought to be told by masses rather than play of features; taking a useful leaf from the Greek book, he subordinated expression in feature and brought out expression in the composition of the whole. Sculptors say that the combination of man, boy, and beast is difficult to manage; these do not, without great art, come together as a group in a way that will satisfy the requirements from all points of view. But Barye has not solved the problem once or twice—thrice, four times he has solved it. When one reflects on the task one is amazed at the simple, solid power of these four groups, which may be seen in bronze, reduced, on one of the principal squares of Baltimore (the gift of Mr. Walters of that city). Still, it is by no means needful to contend that his greatest work will be found in the human groups. Let him re-

FORCE—IN A COURT OF THE LOUVRE.
(FROM A PHOTOGRAPH FROM THE PLASTER CAST,
BY PERMISSION OF F. BARBEDIEENNE.)

main, like St. Francis of Assisi, the apostle of the animals. Let us agree that his highest level, or his highest originality, was reached in them. But it is wrong to hold that he failed in life-sized and heroic human statuary. On the contrary, there, too, he was original enough. It was a monumental, massive, large-planed figure that he made, but it does not follow that it is not good because it resembles hardly at all the hollow elegancies of Canova or the commonplaces of Thorwaldsen and Rauch. His human statuary is unlike that of the century in which he lived, as if it had been evolved out of sources quite different from those drained by other sculptors. Michael Angelo, Cellini, Bernini, David d'Angers, were not for Barye; his ambition took a much humbler flight. The masses and broad planes of his men recall the sculptor's own face and figure. His statues of men may be wanting in majesty, or in style, or in grimace, or in technical dexterousness, but they are unmistakably genuine, unmistakably Barye, the work of a master more truly representative of France (not Paris) than any native since Goujon and Puget. The pity is that nobody who had the power quite realized how alone the genius of Barye was; how unlikely it is that he will have an equal. Otherwise the French, in many ways the most patriotic nation in the world, devoured with ambition to be first in arts, letters, and war, would have given him earlier in life as good a chance as Rude to grapple with human groups on a scale worthy of his mettle. He is the modern equivalent of the stone-cutter artists on the old French

cathedrals; like them showing a passion for animal forms, but, unlike them, learned in books and instructed at once in life and art by the menageries and museums of Paris. Surely without a tithe of the fame he deserved has this quiet, modest, deep-thinking man passed away! Is there any sculptor now living in Europe or America who can fill his shoes? But let us think farther back. Where, when, was there a sculptor like him? Exaggeration reacts and harms its subject. But is it exaggeration to say

he was unequalled in his range? The Assyrian human figures do not approach his. The great Greeks and Michael Angelo: could they near him in modeling animals? The more one studies Barye, the more his range fills the mind, the bigger his genius seems to grow. Another significant fact, and then an end. The closer one examines the sculpture of to-day in France, Italy, England, and America into which animals enter, the more one meets with Barye.

Henry Eckford.

THE MINISTER'S CHARGE;*

OR, THE APPRENTICESHIP OF LEMUEL BARKER.

BY W. D. HOWELLS,

Author of "Venetian Life," "A Chance Acquaintance," "A Modern Instance," "The Rise of Silas Lapham," etc.

I.

ON their way back to the farm-house where they were boarding, Sewell's wife reproached him for what she called his recklessness. "You had no right," she said, "to give the poor boy false hopes. You ought to have discouraged him—that would have been the most merciful way—if you knew the poetry was bad. Now, he will go on building all sorts of castles in the air on your praise, and sooner or later they will come tumbling about his ears—just to gratify your passion for saying pleasant things to people."

"I wish you had a passion for saying pleasant things to me, my dear," suggested her husband evasively.

"Oh, a nice time I should have!"

"I don't know about *your* nice time, but I feel pretty certain of my own. How do you know—Oh, *do* get up, you implacable cripple!" he broke off to the lame mare he was driving, and pulled at the reins.

"Don't saw her mouth!" cried Mrs. Sewell.

"Well, let her get up, then, and I won't. I don't like to saw her mouth; but I have to do something when you come down on me with your interminable consequences. I dare say the boy will never think of my praise again. And besides, as I was saying when this animal interrupted me with her ill-timed attempts at grazing, how do you know that I knew the poetry was bad?"

"How? By the sound of your voice. I could tell you were dishonest in the dark, David."

"Perhaps the boy knew that I was dishonest too," suggested Sewell.

"Oh, no, he didn't. I could see that he pinned his faith to every syllable."

"He used a quantity of pins, then; for I was particularly profuse of syllables. I find that it requires no end of them to make the worse appear the better reason to a poet who reads his own verses to you. But come, now, Lucy, let me off a syllable or two. I—I have a conscience, you know well enough, and if I thought—But pshaw! I've merely cheered a lonely hour for the boy, and he'll go back to hoeing potatoes to-morrow, and that will be the end of it."

"I *hope* that will be the end of it," said Mrs. Sewell, with the darkling reserve of ladies intimate with the designs of Providence.

"Well," argued her husband, who was trying to keep the matter from being serious, "perhaps he may turn out a poet yet. You never can tell where the lightning is going to strike. He has some idea of rhyme, and some perception of reason, and—yes, some of the lines *were* musical. His general attitude reminded me of Piers Plowman. Didn't he recall Piers Plowman to you?"

"I'm glad you can console yourself in that way, David," said his wife relentlessly.

The mare stopped again, and Sewell looked over his shoulder at the house, now black in the twilight, on the crest of the low hill across the hollow behind them. "I declare," he said, "the loneliness of that place almost broke my heart. There!" he added, as the faint sickle gleamed in the sky above the roof, "I've got the new moon right over my left shoulder for my pains. That's what comes of having a sympathetic nature."

THE boy was looking at the new moon, across the broken gate which stopped the largest gap in the tumbled stone wall. He still gripped in his hand the manuscript which he had been reading to the minister.

"There, Lem," called his mother's voice from the house, "I guess you've seen the last of 'em for one while. I'm 'fraid you'll take cold out there'n the dew. Come in, child."

The boy obeyed. "I was looking at the new moon, mother. I saw it over my right shoulder. Did you hear—hear him," he asked in a broken and husky voice,—“hear how he praised my poetry, mother?"

"OH, *do* make her get up, David!" cried Mrs. Sewell. "These mosquitoes are eating me alive!"

"I will saw her mouth all to the finest sort of kindling-wood, if she doesn't get up this very instant," said Sewell, jerking the reins so wildly that the mare leaped into a galvanic canter, and continued without further urging for twenty paces. "Of course, Lucy," he resumed, profiting by the opportunity for conversation which the mare's temporary activity afforded,

"I should feel myself greatly to blame if I thought I had gone beyond mere kindness in my treatment of the poor fellow. But at first I couldn't realize that the stuff was so bad. Their saying that he read all the books he could get, and was writing every spare moment, gave me the idea that he *must* be some sort of literary genius in the germ, and I listened on and on, expecting every moment that he was coming to some passage with a little lift or life in it; and when he got to the end, and hadn't come to it, I couldn't quite pull myself together to say so. I had gone there so full of the wish to recognize and encourage, that I couldn't turn about for the other thing. Well! I shall know another time how to value a rural neighborhood report of the existence of a local poet. Usually there is some hardheaded cynic in the community with native perception enough to enlighten the rest as to the true value of the phenomenon; but there seems to have been none here. I ought to have come sooner to see him, and then I could have had a chance to go again and talk soberly and kindly with him, and show him gently how much he had mistaken himself. Oh, *get up!*" By this time the mare had lapsed again into her habitual absent-mindedness, and was limping along the dark road with a tendency to come to a full stop, from step to step. The remorse in the minister's soul was so keen that he could not use her with the cruelty necessary to rouse her flagging energies; as he held the reins he flapped his elbows up toward his face, as if they were wings, and contrived to beat away a few of the mosquitoes with them; Mrs. Sewell, in silent exasperation, fought them from her with the bough which she had torn from an overhanging birch-tree.

In the morning they returned to Boston, and Sewell's parish duties began again; he was rather faithfuller and busier in these than he might have been if he had not laid so much stress upon duties of all sorts, and so little upon beliefs. He declared that he envied the ministers of the good old times who had only to teach their people that they would be lost if they did not do right; it was much simpler than to make them understand that they were often to be good for reasons not immediately connected with their present or future comfort, and that they could not confidently expect to be lost for any given transgression, or even to be lost at all. He found it necessary to do his work largely in a personal way, by meeting and talking with people, and this took up a great deal of his time, especially after the summer vacation, when he had to get into relations with them anew, and to help them recover themselves

from the moral lassitude into which people fall during that season of physical recuperation.

He was occupied with these matters one morning late in October when a letter came addressed in a handwriting of copybook carefulness, but showing in every painstaking stroke the writer's want of training, which, when he read it, filled Sewell with dismay. It was a letter from Lemuel Barker, whom Sewell remembered, with a pang of self-upbraiding, as the poor fellow he had visited with his wife the evening before they left Willoughby Pastures; and it inclosed passages of a long poem which Barker said he had written since he got the fall work done. The passages were not submitted for Sewell's criticism, but were offered as examples of the character of the whole poem, for which the author wished to find a publisher. They were not without ideas of a didactic and satirical sort, but they seemed so wanting in literary art beyond a mechanical facility of versification, that Sewell wondered how the writer should have mastered the notion of anything so literary as publication, till he came to that part of the letter in which Barker spoke of their having had so much sickness in the family that he thought he would try to do something to help along. The avowal of this meritorious ambition inflicted another wound upon Sewell's guilty consciousness; but what made his blood run cold was Barker's proposal to come down to Boston, if Sewell advised, and find a publisher with Sewell's assistance.

This would never do, and the minister went to his desk with the intention of dispatching a note of prompt and total discouragement. But in crossing the room from the chair into which he had sunk, with a cheerful curiosity, to read the letter, he could not help some natural rebellion against the punishment visited upon him. He could not deny that he deserved punishment, but he thought that this, to say the least, was very ill-timed. He had often warned other sinners who came to him in like resentment that it was this very quality of inopportuneness that was perhaps the most sanative and divine property of retribution; the eternal justice fell upon us, he said, at the very moment when we were least able to bear it, or thought ourselves so; but now in his own case the clear-sighted prophet cried out and revolted in his heart. It was Saturday morning, when every minute was precious to him for his sermon, and it would take him fully an hour to write that letter; it must be done with the greatest sympathy; he had seen that this poor foolish boy was very sensitive, and yet it must be done with such thoroughness as to cut off all hope of anything like literary achievement for him.

At the moment Sewell reached his desk, with a spirit disciplined to the sacrifice required of it, he heard his wife's step outside his study door, and he had just time to pull open a drawer, throw the letter into it, and shut it again before she entered. He did not mean finally to conceal it from her, but he was willing to give himself breath before he faced her with the fact that he had received such a letter. Nothing in its way was more terrible to this good man than the righteousness of that good woman. In their case, as in that of most other couples who cherish an ideal of dutiful living, she was the custodian of their potential virtue, and he was the instrument, often faltering and imperfect, of its application to circumstances; and without wishing to spare himself too much, he was sometimes aware that she did not spare him enough. She worked his moral forces as mercilessly as a woman uses the physical strength of a man when it is placed at her direction.

"What is the matter, David?" she asked, with a keen glance at the face he turned upon her over his shoulder.

"Nothing that I wish to talk of at present, my dear," answered Sewell, with a boldness that he knew would not avail him if she persisted in knowing.

"Well, there would be no time if you did," said his wife. "I'm dreadfully sorry for you, David, but it's really a case you can't refuse. Their own minister is taken sick, and it's appointed for this afternoon at two o'clock, and the poor thing has set her heart upon having you, and you must go. In fact, I promised you would. I'll see that you're not disturbed this morning, so that you'll have the whole forenoon to yourself. But I thought I'd better tell you at once. It's only a child—a little boy. You won't have to say much."

"Oh, of course I must go," answered Sewell, with impatient resignation; and when his wife left the room, which she did after praising him and pitying him in a way that was always very sweet to him, he saw that he must begin his sermon at once, if he meant to get through with it in time, and must put off all hope of replying to Lemuel Barker till Monday at least. But he chose quite a different theme from that on which he had intended to preach. By an immediate inspiration he wrote a sermon on the text, "The tender mercies of the wicked are cruel," in which he taught how great harm could be done by the habit of saying what are called kind things. He showed that this habit arose not from goodness of heart, or from the desire to make others happy, but from the wish to spare one's self the troublesome duty of for-

mulating the truth so that it would perform its heavenly office without wounding those whom it was intended to heal. He warned his hearers that the kind things spoken from this motive were so many sins committed against the soul of the flatterer and the soul of him they were intended to flatter; they were deceits, lies; and he besought all within the sound of his voice to try to practice with one another an affectionate sincerity, which was compatible not only with the brotherliness of Christianity, but the politeness of the world. He enforced his points with many apt illustrations, and he treated the whole subject with so much fullness and fervor, that he fell into the error of the literary temperament, and almost felt that he had atoned for his wrong-doing by the force with which he had portrayed it.

Mrs. Sewell, who did not always go to her husband's sermons, was at church that day, and joined him when some ladies who had lingered to thank him for the excellent lesson he had given them at last left him to her.

"Really, David," she said, "I wondered your congregation could keep their countenances while you were going on. Did you think of that poor boy up at Willoughby Pastures when you were writing that sermon?"

"Yes, my dear," replied Sewell gravely; "he was in my mind the whole time."

"Well, you were rather hard upon yourself; and I think I was rather too hard upon you, that time, though I *was* so vexed with you. But nothing has come of it, and I suppose there are cases where people are so lost to common sense that you can't do anything for them by telling them the truth."

"But you'd better tell it, all the same," said Sewell, still in a glow of righteous warmth from his atonement; and now a sudden temptation to play with fire seized him. "You wouldn't have excused me if any trouble had come of it."

"No, I certainly shouldn't," said his wife. "But I don't regret it altogether if it's made you see what danger you run from that tendency of yours. What in the world made you think of it?"

"Oh, it came into my mind," said Sewell. He did not find time to write to Barker the next day, and on recurring to his letter he saw that there was no danger of his taking another step without his advice, and he began to postpone it: when he had time he was not in the mood; he waited for the time and the mood to come together, and he also waited for the most favorable moment to tell his wife that he had got that letter from Barker and to ask her advice about answering it. If it had been really a serious matter, he would have told

her at once; but being the thing it was, he did not know just how to approach it, after his first concealment. He knew that, to begin with, he would have to account for his mistake in attempting to keep it from her, and would have to bear some just upbraiding for this unmanly course, and would then be miserably led to the distasteful contemplation of the folly by which he had brought this trouble upon himself. Sewell smiled to think how much easier it was to make one's peace with one's God than with one's wife; and before he had brought himself to the point of answering Barker's letter, there came a busy season in which he forgot him altogether.

II.

ONE day in the midst of this Sewell was called from his study to see some one who was waiting for him in the reception-room, but who sent in no name by the housemaid.

"I don't know as you remember me," the visitor said, rising awkwardly, as Sewell came forward with a smile of inquiry. "My name's Barker."

"Barker?" said the minister, with a cold thrill of instant recognition, but playing with a factitious uncertainty till he could catch his breath in the presence of the calamity. "Oh, yes! How do you do?" he said; and then planting himself adventurously upon the commandment to love one's neighbor as one's self, he added: "I'm very glad to see you!"

In token of his content, he gave Barker his hand and asked him to be seated.

The young man complied, and while Sewell waited for him to present himself in some shape that he could grapple with morally, he made an involuntary study of his personal appearance. That morning, before starting from home by the milk-train that left Willoughby Pastures at 4:05, Barker had given his Sunday boots a coat of blacking, which he had eked out with stove-polish, and he had put on his best pantaloons, which he had outgrown, and which, having been made very tight a season after tight pantaloons had gone out of fashion in Boston, caught on the tops of his boots and stuck there in spite of his efforts to kick them loose as he stood up, and his secret attempts to smooth them down when he had reseated himself. He wore a single-breasted coat of cheap broadcloth, fastened across his chest with a carnelian clasp-button of his father's, such as country youth wore thirty years ago, and a belated summer scarf of gingham, tied in a breadth of knot long since abandoned by polite society.

Sewell had never thought his wife's recep-

tion-room very splendidly appointed, but Barker must have been oppressed by it, for he sat in absolute silence after resuming his chair, and made no sign of intending to open the matter upon which he came. In the kindness of his heart Sewell could not refrain from helping him on.

"When did you come to Boston?" he asked with a cheeriness which he was far from feeling.

"This morning," said Barker, briefly, but without the tremor in his voice which Sewell expected.

"You've never been here before, I suppose," suggested Sewell, with the vague intention of generalizing or particularizing the conversation, as the case might be.

Barker abruptly rejected the overture, whatever it was. "I don't know as you got a letter from me a spell back," he said.

"Yes, I did," confessed Sewell. "I did receive that letter," he repeated, "and I ought to have answered it long ago. But the fact is ——" He corrected himself when it came to his saying this, and said, "I mean that I put it by, intending to answer it when I could do so in the proper way, until, I'm very sorry to say, I forgot it altogether. Yes, I forgot it, and I certainly ask your pardon for my neglect. But I can't say that as it's turned out I altogether regret it. I can talk with you a great deal better than I could write to you in regard to your"—Sewell hesitated between the words poems and verses, and finally said—"work. I have blamed myself a great deal," he continued, wincing under the hurt which he felt that he must be inflicting on the young man as well as himself, "for not being more frank with you when I saw you at home in September. I hope your mother is well?"

"She's middling," said Barker, "but my married sister that came to live with us since you was there has had a good deal of sickness in her family. Her husband's laid up with the rheumatism most of the time."

"Oh!" murmured Sewell sympathetically. "Well! I ought to have told you at that time that I could not see much hope of your doing acceptable work in a literary way; and if I had supposed that you ever expected to exercise your faculty of versifying to any serious purpose,—for anything but your own pleasure and entertainment,—I should certainly have done so. And I tell you now that the specimens of the long poem you have sent me give me even less reason to encourage you than the things you read me at home."

Sewell expected the audible crash of Barker's air-castles to break the silence which the young man suffered to follow upon

these words; but nothing of the kind happened, and for all that he could see, Barker remained wholly unaffected by what he had said. It nettled Sewell a little to see him apparently so besotted in his own conceit, and he added: "But I think I had better not ask you to rely altogether upon my opinion in the matter, and I will go with you to a publisher, and you can get a professional judgment. Excuse me a moment."

He left the room and went slowly upstairs to his wife. It appeared to him a very short journey to the third story, where he knew she was decking the guest-chamber for the visit of a friend whom they expected that evening. He imagined himself saying to her when his trial was well over that he did not see why she complained of those stairs; that he thought they were nothing at all. But this sense of the absurdity of the situation which played upon the surface of his distress flickered and fled at sight of his wife bustling cheerfully about, and he was tempted to go down and get Barker out of the house, and out of Boston if possible, without letting her know anything of his presence.

"Well?" said Mrs. Sewell, meeting his face of perplexity with a penetrating glance. "What is it, David?"

"Nothing. That is — everything! Lemuel Barker is here!"

"Lemuel Barker? Who is Lemuel Barker?" She stood with the pillow-sham in her hand which she was just about to fasten on the pillow, and Sewell involuntarily took note of the fashion in which it was ironed.

"Why, surely you remember! That simpleton at Willoughby Pastures." If his wife had dropped the pillow-sham, and sunk into a chair beside the bed, fixing him with eyes of speechless reproach; if she had done anything dramatic, or said anything tragic, no matter how unjust or exaggerated, Sewell could have borne it; but she only went on tying the sham on the pillow, without a word. "The fact is, he wrote to me some weeks ago, and sent me some specimens of a long poem."

"Just before you preached that sermon on the tender mercies of the wicked?"

"Yes," faltered Sewell. "I had been waiting to show you the letter."

"You waited a good while, David."

"I know — I know," said Sewell miserably. "I was waiting — waiting —" He stopped, and then added with a burst, "I was waiting till I could put it to you in some favorable light."

"I'm glad you're honest about it at last, my dear!"

"Yes. And while I was waiting I forgot Barker's letter altogether. I put it away somewhere — I can't recollect just where, at the

moment. But that makes no difference; he's here with the whole poem in his pocket, now." Sewell gained a little courage from his wife's forbearance; she knew that she could trust him in all great matters, and perhaps she thought that for this little sin she would not add to his punishment. "And what I propose to do is to make a complete thing of it, this time. Of course," he went on convicting himself, "I see that I shall inflict twice the pain that I should have done if I had spoken frankly to him at first; and of course there will be the added disappointment, and the expense of his coming to Boston. But," he added brightly, "we can save him any expense while he's here, and perhaps I can contrive to get him to go home this afternoon."

"He wouldn't let you pay for his dinner out of the house anywhere," said Mrs. Sewell. "You must ask him to dinner here."

"Well," said Sewell, with resignation; and suspecting that his wife was too much piqued or hurt by his former concealment to ask what he now meant to do about Barker, he added: "I'm going to take him round to a publisher and let him convince himself that there's no hope for him in a literary way."

"David!" cried his wife; and now she left off adjusting the shams, and erecting herself looked at him across the bed. "You don't intend to do anything so cruel."

"Cruel?"

"Yes! Why should you go and waste any publisher's time by getting him to look at such rubbish? Why should you expose the poor fellow to the mortification of a perfectly needless refusal? Do you want to shirk the responsibility — to put it on some one else?"

"No; you know I don't."

"Well, then, tell him yourself that it won't do."

"I have told him."

"What does he say?"

"He doesn't say anything. I can't make out whether he believes me or not."

"Very well, then; you've done your duty, at any rate." Mrs. Sewell could not forbear saying also: "If you'd done it at first, David, there wouldn't have been any of this trouble."

"That's true," owned her husband, so very humbly that her heart smote her.

"Well, go down and tell him he must stay to dinner, and then try to get rid of him the best way you can. Your time is really too precious, David, to be wasted in this way. You *must* get rid of him, somehow."

Sewell went back to his guest in the reception-room, who seemed to have remained as immovably in his chair as if he had been a sitting statue of himself. He did not move when Sewell entered.

"On second thoughts," said the minister, "I believe I will not ask you to go to a publisher with me, as I had intended; it would expose you to unnecessary mortification, and it would be, from my point of view, an unjustifiable intrusion upon very busy people. I must ask you to take my word for it that no publisher would bring out your poem, and it never would pay you a cent if he did." The boy remained silent as before, and Sewell had no means of knowing whether it was from silent conviction or from mulish obstinacy. "Mrs. Sewell will be down presently. She wished me to ask you to stay to dinner. We have an early dinner, and there will be time enough after that for you to look about the city."

"I shouldn't like to put you out," said Barker.

"Oh, not at all," returned Sewell, grateful for this sign of animation, and not exigent of a more formal acceptance of his invitation. "You know," he said, "that literature is a trade, like every other vocation, and that you must serve an apprenticeship if you expect to excel. But first of all you must have some natural aptitude for the business you undertake. You understand?" asked Sewell; for he had begun to doubt whether Barker understood anything. He seemed so much more stupid than he had at home; his faculties were apparently sealed up, and he had lost all the personal picturesqueness which he had when he came in out of the barn, at his mother's call, to receive Sewell.

"Yes," said the boy.

"I don't mean," continued Sewell, "that I wouldn't have you continue to make verses whenever you have the leisure for it. I think, on the contrary, that it will give a grace to your life which it might otherwise lack. We are all in daily danger of being barbarized by the sordid details of life; the constantly recurring little duties which must be done, but which we must not allow to become the whole of life." Sewell was so much pleased with this thought, when it had taken form in words, that he made a mental note of it for future use. "We must put a border of pinks around the potato-patch, as Emerson would say, or else the potato-patch is no better than a field of thistles." Perhaps because the logic of this figure rang a little false, Sewell hastened to add: "But there are many ways in which we can prevent the encroachment of those little duties without being tempted to neglect them, which would be still worse. I have thought a good deal about the condition of our young men in the country, and I have sympathized with them in what seems their want of opportunity, their lack of room for expansion. I have often wished that I could do some-

thing for them—help them in their doubts and misgivings, and perhaps find some way out of the trouble for them. I regret this tendency to the cities of the young men from the country. I am sure that if we could give them some sort of social and intellectual life at home, they would not be so restless and dissatisfied."

Sewell felt as if he had been preaching to a dead wall; but now the wall opened, and a voice came out of it, saying: "You mean something to occupy their minds?"

"Exactly so!" cried Sewell. "Something to occupy their minds. Now," he continued, with a hope of getting into some sort of human relations with his guest which he had not felt before, "why shouldn't a young man on a farm take up some scientific study, like geology, for instance, which makes every inch of earth vocal, every rock historic, and the waste places social?" Barker looked so blankly at him that he asked again, "You understand?"

"Yes," said Barker; but having answered Sewell's personal question, he seemed to feel himself in no wise concerned with the general inquiry which Sewell had made, and he let it lie where Sewell had let it drop. But the minister was so well pleased with the fact that Barker had understood anything of what he had said, that he was content to let the notion he had thrown out take its chance of future effect, and rising, said briskly: "Come upstairs with me into my study, and I will show you a picture of Agassiz. It's a very good photograph."

He led the way out of the reception-room, and tripped lightly in his slippers up the steps against which Barker knocked the toes of his clumsy boots. He was not large, nor naturally loutish, but the heaviness of the country was in every touch and movement. He dropped the photograph twice in his endeavor to hold it between his stiff thumb and finger.

Sewell picked it up each time for him, and restored it to his faltering hold. When he had securely lodged it there, he asked sweetly: "Did you ever hear what Agassiz said when a scheme was once proposed to him by which he could make a great deal of money?"

"I don't know as I did," replied Barker.

"But, gentlemen, *I've no time to make money.*"

Barker received the anecdote in absolute silence, standing helplessly with the photograph in his hand; and Sewell with a hasty sigh forbore to make the application to the ordinary American ambition to be rich that he had intended. "That's a photograph of the singer Nilsson," he said, cataloguing the other objects on the chimney-piece. "She was a peasant, you know, a country girl in Norway. That's

Grévy, the President of the French Republic ; his father was a peasant. Lincoln, of course. Sforza, throwing his hoe into the oak," he said, explaining the picture that had caught Barker's eye on the wall above the mantel. "He was working in the field, when a band of adventurers came by, and he tossed his hoe at the tree. If it fell to the ground, he would keep on hoeing ; if it caught in the branches and hung there he would follow the adventurers. It caught, and he went with the soldiers and became Duke of Milan. I like to keep the pictures of these great Originals about me," said Sewell, "because in our time, when we refer so constantly to law, we are apt to forget that God is creative as well as operative." He used these phrases involuntarily ; they slipped from his tongue because he was in the habit of saying this about these pictures, and he made no effort to adapt them to Barker's comprehension, because he could not see that the idea would be of any use to him. He went on pointing out the different objects in the quiet room, and he took down several books from the shelves that covered the whole wall, and showed them to Barker, who, however, made no effort to look at them for himself, and did not say anything about them. He did what Sewell bade him do in admiring this thing or that ; but if he had been an Indian he could not have regarded them with a greater reticence. Sewell made him sit down from time to time, but in a sitting posture Barker's silence became so deathlike that Sewell hastened to get him on his legs again, and to walk him about from one point to another, as if to keep life in him. At the end of one of these otherwise aimless excursions Mrs. Sewell appeared, and infused a gleam of hope into her husband's breast. Apparently she brought none to Barker ; or perhaps he did not conceive it polite to show any sort of liveliness before a lady. He did what he could with the hand she gave him to shake, and answered the brief questions she put to him about his family to precisely the same effect as he had already reported its condition to Sewell.

"Dinner's ready now," said Mrs. Sewell, for all comment. She left the expansiveness of sympathy and gratulation to her husband on most occasions, and on this she felt that she had less than the usual obligation to make polite conversation. Her two children came down-stairs after her, and as she unfolded her napkin across her lap after grace she said, "This is my son, Alfred, Mr. Barker ; and this is Edith." Barker took the acquaintance offered in silence, the young Sewells smiled with the wise kindliness of children taught to be good to all manner of strange guests, and the

girl cumbered the helpless country boy with offers of different dishes.

Mr. Sewell as he cut at the roast beef lengthwise, being denied by his wife a pantomimic prayer to be allowed to cut it crosswise, tried to make talk with Barker about the weather at Willoughby Pastures. It had been a very dry summer, and he asked if the fall rains had filled up the springs. He said he really forgot whether it was an apple year. He also said that he supposed they had dug all their turnips by this time. He had meant to say potatoes when he began, but he remembered that he had seen the farmers digging their potatoes before he came back to town, and so he substituted turnips ; afterwards it seemed to him that dig was not just the word to use in regard to the harvesting of turnips. He wished he had said, "got your turnips in," but it appeared to make no difference to Barker, who answered, "Yes, sir," and "No, sir," and "Yes, sir," and let each subject drop with that.

III.

THE silence grew so deep that the young Sewells talked together in murmurs, and the clicking of the knives on the plates became painful. Sewell kept himself from looking at Barker, whom he nevertheless knew to be changing his knife and fork from one hand to the other, as doubt after doubt took him as to their conventional use, and to be getting very little good of his dinner in the process of settling these questions. The door-bell rang, and the sound of a whispered conference between the visitor and the servant at the threshold penetrated to the dining-room. Some one softly entered, and then Mrs. Sewell called out, "Yes, yes ! Come in ! Come in, Miss Vane !" She jumped from her chair and ran out into the hall, where she was heard to kiss her visitor ; she reappeared, still holding her by the hand, and then Miss Vane shook hands with Sewell, saying in a tone of cordial liking, "*How d'ye do ?*" and to each of the young people, as she shook hands in turn with them, "*How d'ye do, dear ?*" She was no longer so pretty as she must have once been ; but an air of distinction and a delicate charm of manner remained to her from her fascinating youth.

Young Sewell pushed her a chair to the table, and she dropped softly into it, after acknowledging Barker's presentation by Mrs. Sewell with a kindly glance that probably divined him.

"You must dine with us," said Mrs. Sewell. "You can call it lunch."

"No, I can't, Mrs. Sewell," said Miss Vane. "I could once, and should have said with

great pleasure, when I went away, that I had been lunching at the Sewells; but I can't now. I've reformed. What have you got for dinner?"

"Roast beef," said Sewell.

"Nothing I dislike more," replied Miss Vane. "What else?" She put on her glasses, and peered critically about the table.

"Stewed tomatoes, baked sweet potatoes, macaroni."

"How unimaginative! What are you going to have afterwards?"

"Cottage pudding."

"The very climax of the commonplace! Well!" Miss Vane began to pull off her gloves, and threw her veil back over her shoulder. "I will dine with you, but when I say dine, and people ask me to explain, I shall have to say 'Why, the Sewells still dine at one o'clock, you know,' and laugh over your old-fashioned habits with them. I should like to do differently, and to respect the sacredness of broken bread and that sort of thing; but I'm trying to practice with every one an affectionate sincerity, which is perfectly compatible not only with the brotherliness of Christianity, but the politeness of the world." Miss Vane looked demurely at Mrs. Sewell. "I can't make any exceptions."

The ladies both broke into a mocking laugh, in which Sewell joined with sheepish reluctance; after all, one does not like to be derided, even by one's dearest friends.

"As soon as I hear my other little sins denounced from the pulpit, I'm going to stop using profane language and carrying away people's spoons in my pocket."

The ladies seemed to think this also a very good joke, and his children laughed in sympathy, but Sewell hung his head; Barker sat bolt upright behind his plate, and stared at Miss Vane. "I never have been all but named in church before," she concluded, "and I've heard others say the same."

"Why didn't you come to complain sooner?" asked Sewell.

"Well, I have been away ever since that occasion. I went down the next day to Newport, and I've been there ever since, admiring the ribbon-planting."

"On the lawns or on the ladies?" asked Sewell.

"Both. And sowing broadcast the seeds of plain speaking. I don't know what Newport will be in another year if they all take root."

"I dare say it will be different," said Sewell. "I'm not sure it will be worse." He plucked up a little spirit, and added: "Now you see of how little importance you really are in the community; you have been gone

these three weeks, and your own pastor didn't know you were out of town."

"Yes, you did, David," interposed his wife. "I told you Miss Vane was away two weeks ago."

"Did you? Well, I forgot it immediately; the fact was of no consequence, one way or the other. How do you like that as a bit of affectionate sincerity?"

"I like it immensely," said Miss Vane. "It's delicious. I only wish I could believe you were honest." She leaned back and laughed into her handkerchief, while Sewell regarded her with a face in which his mortification at being laughed at was giving way to a natural pleasure at seeing Miss Vane enjoy herself. "What do you think," she asked, "since you're in this mood of exasperated veracity,—or pretend to be,—of the flower charity?"

"Do you mean by the barrel, or the single sack? The Graham, or the best Haxall, or the health-food cold-blast?" asked Sewell.

Miss Vane lost her power of answering in another peal of laughter, sobering off, and breaking down again before she could say, "I mean cut flowers for patients and prisoners."

"Oh, that kind! I don't think a single pansy would have an appreciable effect upon a burglar; perhaps a bunch of forget-me-nots might, or a few lilies of the valley carelessly arranged. As to the influence of a graceful little *boutonnière*, in cases of rheumatism or cholera morbus, it might be efficacious; but I can't really say."

"How perfectly cynical!" cried Miss Vane. "Don't you know how much good the flower mission has accomplished among the deserving poor? Hundreds of bouquets are distributed every day. They prevent crime."

"That shows how susceptible the deserving poor are. I don't find that a bowl of the most expensive and delicate roses in the center of a dinner-table tempers the asperity of the conversation when it turns upon the absent. But perhaps it oughtn't to do so."

"I don't know about that," said Miss Vane; "but if you had an impulsive niece to supply with food for the imagination, you would be very glad of anything that seemed to combine practical piety and picturesque effect."

"Oh, if you mean that," began Sewell more soberly, and his wife leaned forward with an interest in the question which she had not felt while the mere joking went on.

"Yes. When Sibyl came in this morning with an imperative demand to be allowed to go off and do good with flowers in the homes of virtuous poverty, as well as the hospitals and prisons, I certainly felt as if there had been an interposition, if you will allow me to say so."

Miss Vane still had her joking air, but a note of anxiety had crept into her voice.

"I don't think it will do the sick and poor any harm," said Sewell, "and it may do Sibyl some good." He smiled a little in adding: "It may afford her varied energies a little scope."

Miss Vane shook her head, and some lines of age came into her face which had not shown themselves there before. "And you would advise letting her go into it?" she asked.

"By all means," replied Sewell. "But if she's going to engage actively in the missionary work, I think you'd better go with her on her errands of mercy."

"Oh, of course, she's going to do good in person. What she wants is the sensation of doing good — of seeing and hearing the results of her beneficence. She'd care very little about it if she didn't."

"Oh, I don't know that you can say that," replied Sewell in deprecation of this extreme view. "I don't believe," he continued, "that she would object to doing good for its own sake."

"Of course she wouldn't, David! Who in the world supposed she would?" demanded his wife, bringing him up roundly at this sign of wandering, and Miss Vane laughed wildly.

"And is this what your doctrine of sincerity comes to? This fulsome! You're very little better than one of the wicked, it seems to me! Well, I *hoped* that you would approve of my letting Sibyl take this thing up, but such *unbounded* encouragement!"

"Oh, I don't wish to flatter," said Sewell, in the spirit of her raillery. "It will be very well for her to go round with flowers; but don't let her," he continued seriously — "don't let her imagine it's more than an innocent amusement. It would be a sort of hideous mockery of the good we ought to do one another if there were supposed to be anything more than a kindly thoughtfulness expressed in such a thing."

"Oh, if Sibyl doesn't feel that it's real, for the time being she won't care anything about it. She likes to lose herself in the illusion, she says."

"Well!" said Sewell with a slight shrug, "then we must let her get what good she can out of it as an exercise of the sensibilities."

"Oh, my dear!" exclaimed his wife. "You *don't* mean anything so abominable as that! I've heard you say that the worst thing about fiction and the theater was that they brought emotions into play that ought to be sacred to real occasions."

"Did I say that? Well, I must have been right. I —"

Barker made a scuffling sound with his boots under the table, and rose to his feet. "I guess," he said, "I shall have to be going."

They had all forgotten him, and Sewell felt

as if he had neglected this helpless guest. "Why, no, you mustn't go! I was in hopes we might do something to make the day pleasant to you. I intended proposing —"

"Yes," his wife interrupted, believing that he meant to give up one of his precious afternoons to Barker, and hastening to prevent the sacrifice, "my son will show you the Public Garden and the Common, and go about the town with you." She rose too, and young Sewell, accustomed to suffer, silently acquiesced. "If your train isn't to start very soon —"

"I guess I better be going," said Barker, and Mrs. Sewell now gave her husband a look conveying her belief that Barker would be happier if they let him go. At the same time she frowned upon the monstrous thought of asking him to stay the night with them, which she detected in Sewell's face.

She allowed him to say nothing but, "I'm sorry; but if you really must —"

"I guess I better," persisted Barker. He got himself somehow to the door, where he paused a moment, and contrived to pant "Well, good-day," and without effort at more cordial leave-taking, passed out.

Sewell followed him, and helped him find his hat, and made him shake hands. He went with him to the door, and, beginning to suffer afresh at the wrong he had done Barker, he detained him at the threshold. "If you still wish to see a publisher, Mr. Barker, I will gladly go with you."

"Oh, not at all, not at all. I guess I don't want to see any publisher this afternoon. Well, good-afternoon!" He turned away from Sewell's remorseful pursuit, and clumsily hurrying down the steps, he walked up the street and round the next corner. Sewell stood watching him in rueful perplexity, shading his eyes from the mild October sun with his hand; and some moments after Barker had disappeared, he remained looking after him.

When he rejoined the ladies in the dining-room they fell into a conscious silence.

"Have you been telling, Lucy?" he asked.

"Yes, I've been telling, David. It was the only way. Did you offer to go with him to a publisher again?"

"Yes, I did. It was the only way," said Sewell.

Miss Vane and his wife both broke into a cry of laughter. The former got her breath first. "So *that* was the origin of the famous sermon that turned all our heads gray with good resolutions." Sewell assented with a sickly grin. "What in the world *made* you encourage him?"

"My goodness of heart, which I didn't take the precaution of mixing with goodness of head before I used it."

Everything was food for Miss Vane's laugh, even this confession. "But what is the natural history of the boy? How came he to write poetry? What do you suppose he means by it?"

"That isn't so easy to say. As to his natural history, he lives with his mother in a tumble-down, unpainted wooden house in the deepest fastness of Willoughby Pastures. Lucy and I used to drive by it and wonder what kind of people inhabited that solitude. There were milk-cans scattered round the door-yard, and the Monday we were there a poverty-stricken wash flapped across it. The thought of the place preyed upon me till one day I asked about it at the post-office, and the postmistress told me that the boy was quite a literary character, and read everything he could lay his hands on, and 'sat up nights' writing poetry. It seemed to me a very clear case of genius, and the postmistress's facts rankled in my mind till I couldn't stand it any longer. Then I went to see him. I suppose Lucy has told you the rest?"

"Yes, Mrs. Sewell has told me the rest. But still I don't see how he came to write poetry. I believe it doesn't pay, even in extreme cases of genius."

"Ah, but that's just what this poor fellow didn't know. He must have read somewhere, in some deleterious newspaper, about the sale of some large edition of a poem, and have had his own wild hopes about it. I don't say his work didn't show sense; it even showed some rude strength, of a didactic, satirical sort, but it certainly didn't show poetry. He might have taken up painting by a little different chance. And when it was once known about the neighborhood that he wrote poetry, his vanity was flattered——"

"Yes, I see. But wasn't there any kind soul to tell him that he was throwing his time away?"

"It appears not."

"And even the kind soul from Boston, who visited him," suggested Mrs. Sewell. "Go on, David."

"Visited him in spite of his wife's omniscience,—even the kind soul from Boston paltered with this plain duty. Even he, to spare himself the pain of hurting the boy's feelings, tried to find some of the lines better than others, and left him with the impression that he had praised them."

"Well, that was pretty bad," said Miss Vane. "You had to tell him to-day, I suppose, that there was no hope for him?"

"Yes, I had to tell him at last, after letting him waste his time and money in writing more stuff and coming to Boston with it. I've put him to needless shame, and I've inflicted

suffering upon him that I can't lighten in the least by sharing."

"No, that's the most discouraging thing about pitying people. It does them no manner of good," said Miss Vane, "and just hurts you. Don't you think that in an advanced civilization we shall cease to feel compassion? Why don't you preach against common pity, as you did against common politeness?"

"Well, it isn't quite such a crying sin yet. But really, really," exclaimed Sewell, "the world seems so put together that I believe we ought to think twice before doing a good action."

"David!" said his wife warningly.

"Oh, let him go on!" cried Miss Vane, with a laugh. "I'm proof against his monstrous doctrines. Go on, Mr. Sewell."

"What I mean is this," Sewell pushed himself back in his chair, and then stopped.

"Is what?" prompted both the ladies.

"Why, suppose this boy really had some literary faculty, should I have had any right to encourage it? He was very well where he was. He fed the cows and milked them, and carried the milk to the cross-roads, where the dealer collected it and took it to the train. That was his life, with the incidental facts of cutting the hay and fodder, and bedding the cattle; and his experience never went beyond it. I doubt if his fancy ever did, except in some wild, mistaken excursion. Why shouldn't he have been left to this condition? He ate, he slept, he fulfilled his use. Which of us does more?"

"How would you like to have been in his place?" asked his wife.

"I couldn't *put* myself in his place; and therefore I oughtn't to have done anything to take him out of it," answered Sewell.

"It seems to me that's very un-American," said Miss Vane. "I thought we had prospered up to the present point by taking people out of their places."

"Yes, we have," replied the minister, "and sometimes, it seems to me, the result is hideous. I don't mind people taking themselves out of their places; but if the particles of this mighty cosmos have been adjusted by the divine wisdom, what are we to say of the temerity that disturbs the least of them?"

"I'm sure I don't know," said Miss Vane, rising. "I'm almost afraid to stir, in view of the possible consequences. But I can't sit here all day, and if Mrs. Sewell will excuse me, I'll go at once. Yes, 'I guess I better be going,' as your particle Barker says. Let us hope he'll get safely back to his infinitesimal little crevice in the cosmos. He's a very pretty particle, don't you think? That thick, coarse, wavy black hair growing in a natural bang

over his forehead would make his fortune if he were a certain kind of young lady."

They followed her to the door, chatting, and Sewell looked quickly out when he opened it for her.

As she shook his hand she broke into another laugh. "Really, you looked as if you were afraid of finding him on the steps!"

"If I could only have got near the poor boy," said Sewell to his wife, as they returned within doors. "If I could only have reached him where he lives, as our slang says! But do what I would, I couldn't find any common ground where we could stand together. We were as unlike as if we were of two different species. I saw that everything I said bewildered him more and more; he couldn't understand me! Our education is unchristian, our civilization is pagan. They both ought to bring us in closer relations with our fellow-creatures, and they both only put us more widely apart! Every one of us dwells in an impenetrable solitude! We understand each other a little if our circumstances are similar, but if they are different all our words leave us dumb and unintelligible."

IV.

BARKER walked away from the minister's door without knowing where he was going, and with a heart full of hot pain. He burned with a confused sense of shame and disappointment and anger. It had turned out just as his mother had said: Mr. Sewell would be mighty different in Boston from what he was that day at Willoughby Pastures. There he made Barker think everything of his poetry, and now he pretended to tell him that it was not worth anything; and he kept hinting round that Barker had better go back home and stay there. Did he think he would have left home if there had been anything for him to do there? Had not he as much as told him that he was obliged to find something to make a living by, and help the rest? What was he afraid of? Was he afraid that Barker wanted to come and live off *him*? He could show him that there was no great danger. If he had known how, he would have refused even to stay to dinner.

What made him keep the pictures of these people who had got along, if he thought no one else ought to try? Barker guessed to himself that if that Mr. Agassiz had had to get a living off the farm at Willoughby Pastures, he would have *found* time to make money. What did Mr. Sewell mean by speaking of that Nilsson lady by her surname, without

any Miss or Mrs.? Was that the way people talked in Boston?

Mr. Sewell had talked to him as if he were a baby, and did not know anything; and Barker was mad at himself for having staid half a minute after the minister had owned up that he had got the letter he wrote him. He wished he had said, "Well, that's all I want of *you*, sir," and walked right out; but he had not known how to do it. Did they think it was very polite to go on talking with that woman who laughed so much, and forget all about him? Pretty poor sort of manners to eat with her bonnet on, and tell them she hated their victuals.

Barker tried to rage against them in these thoughts, but at the bottom of all was a simple grief that he should have lost the friend whom he thought he had in the minister; the friend he had talked of and dreamed of ever since he had seen and heard him speak those cordial words; the friend he had trusted through all, and had come down to Boston counting upon so much. The tears came into his eyes as he stumbled and scuffled along the brick pavements with his uncouth country walk.

He was walking up a straight, long street, with houses just alike on both sides, and bits of grass before them, that sometimes were gay with late autumn flowers. A horse-car track ran up the middle, and the cars seemed to be tinkling by all the time, and people getting on and off. They were mostly ladies and children, and they were very well dressed. Sometimes they stared at Barker, as they crossed his way in entering or issuing from the houses, but generally no one appeared to notice him. In some of the windows there were flowers in painted pots, and in others little marble images on stands.

There were more images in the garden that Barker came to presently: an image of Washington on horseback, and some orator speaking, with his hand up, and on top of a monument a kind of Turk holding up a man that looked sick. The man was almost naked, but he was not so bad as the image of a woman in a granite basin; it seemed to Barker that it ought not to be allowed there. A great many people of all kinds were passing through the garden, and after some hesitation he went in too, and walked over the bridge that crossed the pond in the middle of the garden, where there were rowboats and boats with images of swans on them. Barker made a sarcastic reflection that Boston seemed to be a great place for images, and passed rather hurriedly through the garden on the other side of the bridge. There were beds of all kinds of flowers scattered about, and they were hardly

touched by the cold yet. If he had been in better heart, he would have liked to look round a little; but he felt strange, being there all alone, and he felt very low-spirited.

He wondered if this were the Public Garden that Mrs. Sewell had spoken of, and if that kind of grove across the street were the Common. He felt much more at home in it, as he wandered up and down the walks, and finally sat down on one of the iron benches beside the path. At first he obscurely doubted whether he had any right to do so, unless he had a lady with him; most of the seats were occupied by couples who seemed to be courting, but he ventured finally to take one; nobody disturbed him, and so he remained.

It was a beautiful October afternoon; the wind, warm and dry, caught the yellow leaves from the trees overhead in little whiffs, and blew them about the grass, which the fall rains had made as green as May; and a pensive golden light streamed through the long loose boughs, and struck across the slopes of the Common. Slight buggies flashed by on the street near which he sat, and glistening carriages, with drivers dressed out in uniform like soldiers, rumbled down its slope.

While he sat looking, now at the street and now at the people sauntering and hurrying to and fro in the Common, he tried to decide a question that had mixed itself up with the formless resentment he had felt ever since Mr. Sewell played him false. It had got out in the neighborhood that he was going to Boston before he left home; his mother must have told it; and people would think he was to be gone a long time. He had warned his mother that he did not know when he should be back, before he started in the morning; and he knew that she would repeat his words to everybody who stopped to ask about him during the day, with what she had said to him in reply: "You better come home to-night, Lem; and I'll have ye a good hot supper waitin' for ye."

The question was whether he should go back on the five o'clock train, which would reach Willoughby Centre after dark, and house himself from public ignominy for one night at least, or whether self-respect did not demand that he should stay in Boston for twenty-four hours at any rate, and see if something would not happen. He had now no distinct hope of anything; but his pride and shame were holding him fast, while the homesickness tugged at his heart, and made him almost forget the poverty that had spurred him to the adventure of coming to Boston. He could see the cows coming home through the swampy meadow as plain as if they were coming across the Common; his mother was

calling them; she and his sister were going to milk in his absence, and he could see her now, how she looked going out to call the cows, in her bare, gray head, gaunt of neck and cheek, in the ugly Bloomer dress in which she was not grotesque to his eyes, though it usually affected strangers with stupefaction or alarm. But it all seemed far away, as far as if it were in another planet that he had dropped out of; he was divided from it by his failure and disgrace. He thought he must stay and try for something, he did not know what; but he could not make up his mind to throw away his money for nothing; at the hotel, down by the depot, where he had left his bag, they were going to make him pay fifty cents for just a room alone.

"Any them beats 'round here been trying to come their games on you?"

At first Barker could not believe himself accosted, though the young man who spoke stood directly in front of him, and seemed to be speaking to him. He looked up, and the young man added, "Heigh?"

"Beats? I don't know what you mean," said Barker.

"Confidence sharps, young feller. They're 'round everywhere, and don't you forget it. Move up a little!"

Barker was sitting in the middle of the bench, and at this he pushed away from the young man, who had dropped himself sociably beside him. He wore a pair of black pantaloons, very tight in the legs, and widening at the foot so as almost to cover his boots. His coat was deeply braided, and his waistcoat was cut low, so that his plastron-scarf hung out from the shirt-bosom, which it would have done well to cover.

"I tell you, Boston's full of 'em," he said, excitedly. "One of 'em come up to me just now, and says he, 'Seems to me I've seen you before, but I can't place you.' 'Oh yes,' says I, 'I'll tell you where it was. I happened to be in the police court one morning when they was sendin' you up for three months.' I tell you he got round the corner! Might 'a' played checkers on his coat-tail. Why, what do you suppose would be the next thing if I hadn't have let him know I saw through him?" demanded the young man of Barker, who listened to this adventure with imperfect intelligence. "He'd 'a' said, 'Hain't I seen you down Kennebunk way som'er?' And when I said, 'No, I'm from Leominster!' or wherever I was from if I was green, he'd say, 'Oh yes, so it *was* Leominster. How's the folks?' and he'd try to get me to think that *he* was from Leominster too; and then he'd want me to go off and see the sights with him; and pretty soon he'd meet a feller that

'ud dun him for that money he owed him; and he'd say he hadn't got anything with him but a check for forty dollars; and the other feller'd say he'd got to have his money, and he'd kind of insinuate it was all a put-up job about the check for forty dollars, any way; and that 'ud make the first feller mad, and he'd take out the check, and ask him what he thought o' that; and the other feller'd say, well, it was a good check, but it wa'n't money, and he wanted money; and then the first feller'd say, 'Well, come along to the bank, and get your money,' and the other'd say the bank was shut. 'Well, then,' the first feller'd say, 'well, sir, I ain't a-goin' to ask any favor of *you*. How much *is* your bill?' and the other feller'd say ten dollars, or fifteen, or may be twenty-five, if they thought I had that much, and the first feller'd say, 'Well, here's a gentleman from up my way, and I guess he'll advance me that much on my check if I make it worth his while. He knows me.' And the first thing you know — he's been treatin' you, and so polite, showin' you round, and ast you to go to the theayter — you advance the money, and you keep on with the first feller, and pretty soon he asks you to hold up a minute, he wants to go back and get a cigar; and he goes round the corner, and you hold up, and *hold* up, and in about a half an hour, or may be less time, you begin to smell a rat, and you go for a policeman, and the next morning you find your name in the papers, 'One more unfortunate!' You look out fer 'em, young feller! Wish I *had* let that one go on till he done something so I could handed him over to the cops. It's a shame they're allowed to go 'round, when the cops knows 'em. Hello! There *comes* my mate, *now*." The young man spoke as if they had been talking of his mate and expecting him, and another young man, his counterpart in dress, but of a sullen and heavy demeanor very unlike his own brisk excitement, approached, flapping a bank-note in his hand. "I just been tellin' this young feller about that beat, you know."

"Oh, he's all right," said the mate. "Just seen him down on Tremont street, between two cops. Must ha' caught him in the act."

"You don't say so! Well, that's good, any way. Why! Didn't you get it changed?" demanded the young man with painful surprise as his mate handed him the bank-note.

"No, I didn't. I been to more'n twenty places, and there ain't no small bills nowhere. The last place, I offered 'em twenty-five cents if they'd change it."

"Why didn't you offer 'em fifty? I'd 'a' give fifty, and glad to do it. Why, I've *got* to have this bill changed."

"Well, I'm sorry for you," said the mate, with ironical sympathy, "because I don't see how you're goin' to git it done. Won't you move up a little bit, young feller?" He sat down on the other side of Barker. "I'm about tired out." He took his head between his hands in sign of extreme fatigue, and drooped forward, with his eyes fixed on the ground.

Lemuel's heart beat. Fifty cents would pay for his lodging, and he could stay till the next day and prolong the chance of something turning up without too sinful a waste of money.

"How much is the bill?" he asked.

"Ten dollars," said the young man despondently.

"And will you give me fifty cents if I change it?"

"Well, I *said* I'd give fifty cents," replied the young man gloomily, "and I *will*."

"It's a bargain," said Lemuel promptly, and he took from his pocket the two five-dollar notes that formed his store, and gave them to the young man.

He looked at them critically. "How do I know they're good?" he asked. "You're a stranger to me, young feller, and how do I know you ain't tryin' to beat me?" He looked sternly at Lemuel, but here the mate interposed.

"How does *he* know that you ain't tryin' to beat *him*?" he asked contemptuously. "I never saw such a feller as you are! Here you make me run half over town to change that bill, and now when a gentleman offers to break it for you, you have to go and accuse him of tryin' to put off counterfeit money on you. If I was him I'd see you furdur."

"Oh, well, I don't want any words about it. Here, take your money," said the young man. "As long as I said I'd do it, I'll do it. Here's your half a dollar." He put it, with the bank-note, into Lemuel's hand, and rose briskly. "You stay here, Jimmy, till I come back. I won't be gone a minute."

He walked down the mall, and went out of the gate on Tremont street. Then the mate came to himself. "Why, I've *let* him go off with both them bills now, and he owes me one of 'em." With that he rose from Lemuel's side and hurried after his vanishing comrade; before he was out of sight he had broken into a run.

Lemuel sat looking after them, his satisfaction in the affair alloyed by dislike of the haste with which it had been transacted. His rustic mind worked slowly; it was not wholly content even with a result in its own favor, where the process had been so rapid; he was scarcely able to fix the point at which the

talk ceased to be a warning against beats and became his opportunity for speculation. He did not feel quite right at having taken the fellow's half-dollar; and yet a bargain was a bargain. Nevertheless, if the fellow wanted to rue it, Lemuel would give him fifteen minutes to come back and get his money; and he sat for that space of time where the others had left him. He was not going to be mean; and he might have waited a little longer if it had not been for the behavior of two girls who came up and sat down on the same bench with him. They could not have been above fifteen or sixteen years old, and Lemuel thought they were very pretty, but they talked so, and laughed so loud, and scuffled with each other for the paper of chocolate which one of them took out of her pocket, that Lemuel, after first being abashed by the fact that they were city girls, became disgusted with them. He was a stickler for propriety of behavior among girls; his mother had taught him to despise anything like carrying-on among them, and at twenty he was as severely virginal in his morality as if he had been twelve.

People looked back at these tomboys when they had got by; and some shabby young fellows exchanged saucy speeches with them. When Lemuel got up and walked away in reproving dignity, one of the hoydens bounced into his place, and they both sent a cry of derision after him. But Lemuel would not give them the satisfaction of letting them know that he heard them, and at the same time he was not going to let them suppose that they had driven him away. He went very slowly down to the street where a great many horse-cars were passing to and fro, and waited for one marked "Fitchburg, Lowell, and Eastern Depots." He was not going to take it; but he meant to follow it on its way to those stations, in the neighborhood of which was the hotel where he had left his traveling-bag. He had told them that he might take a room there, or he might not; now since he had this half-dollar extra he thought that he would stay for the night; it probably would not be any cheaper at the other hotels.

He ran against a good many people in trying to keep the car in sight, but by leaving the sidewalk from time to time where it was most crowded, he managed not to fall very much behind; the worst was that the track went crooking and turning about so much in different streets, that he began to lose faith in its direction, and to be afraid, in spite of the sign on its side, that the car was not going to the depots after all. But it came in sight of them at last, and then Lemuel, blown with the chase

but secure of his ground, stopped and rested himself against the side of a wall to get his breath. The pursuit had been very exhausting, and at times it had been mortifying; for here and there people who saw him running after the car had supposed he wished to board it, and in their good-nature had hailed and stopped it. After this had happened twice or thrice, Lemuel perceived that he was an object of contempt to the passengers in the car; but he did not know what to do about it; he was not going to pay six cents to ride when he could just as well walk, and on the other hand he dared not lose sight of the car, for he had no other means of finding his way back to his hotel.

But he was all right now, as he leaned against the house-wall, panting, and mopping his forehead with his handkerchief; he saw his hotel a little way down the street, and he did not feel anxious about it.

"Gave you the slip after all," said a passer, who had apparently been interested in Lemuel's adventure.

"Oh, I didn't want to catch it," said Lemuel.

"Ah, merely fond of exercise," said the stranger. "Well, it's a very good thing, if you don't overdo it." He walked by, and then after a glance at Lemuel over his shoulder, he returned to him. "May I ask why you wanted to chase the car, if you didn't want to catch it?"

Lemuel hesitated; he did not like to confide in a total stranger; this gentleman looked kind and friendly, but he was all the more likely on that account to be a beat; the expression was probably such as a beat would put on in approaching his intended prey. "Oh, nothing," said Lemuel evasively.

"I beg your pardon," said the stranger, and he walked away with what Lemuel could only conjecture was the air of a baffled beat.

He waited till he was safely out of sight, and then followed on down the street towards his hotel. When he reached it he walked boldly up to the clerk's desk, and said that he guessed he would take a room for the night, and gave him the check for his bag that he had received in leaving it there.

The clerk wrote the number of a room against Lemuel's name in the register, and then glanced at the bag. It was a large bag of oil-cloth, a kind of bag which is by nature lank and hollow, and must be made almost insupportably heavy before it shows any signs of repletion. The shirt and pair of every-day pantaloons which Lemuel had dropped that morning into its voracious maw made no apparent effect there, as the clerk

held it up and twirled it on the crook of his thumb.

"I guess I shall have to get the money for that room in advance," he said, regarding the bag very critically. However he might have been wounded by the doubt of his honesty or his solvency implied in this speech, Lemuel said nothing, but took out his ten-dollar note

and handed it to the clerk. The latter said apologetically, "It's one of our rules, where there isn't baggage," and then glancing at the note he flung it quickly across the counter to Lemuel. "That won't do!"

"Won't do?" repeated Lemuel, taking up the bill.

"Counterfeit," said the clerk.

(To be continued.)

W. D. Howells.

ANECDOTES OF McCLELLAN'S BRAVERY.

LANCER-SCOUTS.

THE first distinct recollection I have of General McClellan is connected with an incident in the Mexican War which impressed his personality upon my mind so sharply that I have never forgotten it. Of course I had seen him before, as on the occasion referred

to I recognized and spoke familiarly to him, but when and where I cannot with certainty say.

McClellan was attached as a lieutenant to the company of sappers and miners, the first engineer troops raised in our army under the organization of 1821. This company was engaged in 1846-7, soon after its recruitment, in opening the road from Matamoras to Tampico, Mexico; then at the siege of Vera Cruz, and either there or at Cerro Gordo I must have met McClellan for the first time. After the battle of Cerro Gordo Worth's division, to which I belonged, was sent forward in advance, seized the castle and town of Perote, and remained some weeks at Tepeyahualco, twenty miles beyond, while General Scott at Jalapa was reorganizing his army for an advance to Puebla. Near the middle of May, Worth's division resumed its march, followed by a large wagon train, a day in the rear, which was accompanied by General Quitman's small division.

On reaching Amozoque, fifteen miles from Puebla, news was received that Santa Anna with the rear-guard of the Mexican army—a cavalry force—was about withdrawing from Puebla towards the city of Mexico, and a commission from the council arrived to arrange for the surrender of the town. General Worth remained a day to complete arrangements, and in the meantime the troops put themselves in good order for their entrance to so considerable a place. As the

days were long we arranged for a rather late start on the next morning, and as I left my quarters early I saw McClellan riding past in company with a large, fine-looking Mexican officer whom I took for one of the commissioners. They were followed by a mounted orderly. After bowing to the Mexican I said to McClellan, "You are out early this morning." And he replied quietly, "I have been a little way down the road." I was struck with and noted his appearance. A slight, youthful figure which had not yet attained its full growth, for he was not yet twenty-one. He had graduated at West Point the preceding July, with the reputation of having a brilliant as well as a solid mind, and his bright eye and intelligent expression seemed to justify the reputation. They passed on toward General Worth's quarters, and in a few moments the "long-roll" was beaten, taken up by the drums of the different regiments, and in a short time the division was under arms, staff-officers hurrying off; and soon came the report from the pickets that the enemy was advancing in heavy force. On pushing out of the village our eyes were greeted by an imposing spectacle—some 2500 cavalry forming up, apparently for attack. At that time, it may be noted, "a little army went a great way"; and so a good strong brigade of cavalry produced a decided sensation,—no doubt the more impressive from its sudden and wholly unexpected appearance. I heard soon after that "that boy McClellan" had, according to his custom of looking sharply about him, ridden out early on the Puebla road. He soon came to a narrow ridge of high ground or hills at the end of which the road forked. After riding some distance on the main road he turned up a ravine to take a look at the other side of the ridge, when he suddenly came upon a Mexican engineer officer. Taking in the situation at a glance, he dashed forward, and with his large American horse rode down his opponent, disarmed him, and handed him over to his orderly; whilst he himself climbed to the summit and there saw approaching, by

the other and least-used fork, a heavy body of cavalry. Returning at once with his prisoner to headquarters, he reported the facts to General Worth, who immediately turned out his division and sent word to General Quitman, who was now approaching. It seems that Santa Anna thought he had a favorable opportunity to pass Worth on the march unseen and strike the wagon train; so instead of marching west toward the city of Mexico he had marched east, without any regard to the engagements of the town council. The Mexican engineer officer was enacting the same part as McClellan—"scouting." Santa Anna, finding that his *coup* had failed, withdrew after the exchange of a few cannon-shots, resumed his march to the city of Mexico, and General Worth that day occupied Puebla.

In the subsequent operations in the valley of Mexico McClellan's reputation was rather one for personal intrepidity than for other qualities, which was natural in a junior lieutenant of a company. Still he was active in all the duties of an engineer, and was awarded the two brevets of first-lieutenant and captain, the latter of which he declined because, as I heard at the time, his company commander had not received a similar brevet. This omission being corrected so that their relative rank was not changed, he accepted his captaincy.

In 1852 he accompanied Captain Marcy in the exploration of the sources of the Red River, which separates Texas from the Indian Territory. When stationed in this territory a few years after, I was asked by an old hunter what had become of Captain McClellan. On my informing him that I had not met the captain since the Mexican War he said, "Well, he is a mighty plucky little man," and gave me an account of a hunt by the two captains. They left camp together, and separating a short distance, Captain Marcy tried his fawn-bleat in hopes of calling up a doe. Hearing a rustle through the prairie grass he thought he had been successful, but found that he had called in another hunter, in the shape of a panther, or, as the man called it, "a big painter, a monstrous ugly customer," which came bounding towards him. Marcy fired and, the beast rolling over, uttered a shout of triumph, which soon called McClellan to his side, when suddenly the "painter," which had only been stunned, made the fact known by a sudden attack, before Marcy had reloaded. McClellan fired, missed, and as promptly as in the case of the Mexican, took in the situation, clubbed his rifle, met the animal half-way, and broke both the animal's head and the rifle, but bagged the game. I heard the incident spoken of repeatedly in that country as one showing great activity, courage, and presence of mind.

He showed this same habit of personal exposure when the circumstances justified it,—and sometimes when they did not,—after he was placed at the head of a great army. He reconnoitered boldly, and none went nearer the enemy nor ran more risks than he on such duty. Of this trait the Prince de Joinville gave an instance in an article printed in the "*Revue des Deux Mondes*" soon after the Peninsula Campaign. Speaking of the measures taken by McClellan after Fair Oaks, the prince—who was also noted for the freedom with which he exposed himself—continues: "This done, General McClellan endeavored to provoke a general action on the ground between his army and Richmond, which he had thoroughly studied in numerous reconnaissances. These reconnaissances gave rise to many incidents. Once the general climbed with some of his officers to the top of a high tree, and there, each occupying his own branch, field-glass in hand, held a sort of council of war. This was near the enemy's pickets, to whom all our movements were perfectly plain. We trembled lest we should hear the crack of the rifles of these famous squirrel-hunters of the South; but they were magnanimous, and the reconnaissance terminated without disagreeable consequences."

I know of others myself, and am a competent witness to one of them. At Yorktown, being out one day with a member of his staff, I joined them. The general approached closer and closer to the works on which the enemy were engaged, diminishing from time to time the number of his followers, until we two only were left. We dismounted, crept along under cover of the ravines and bushes until close to the works, when he thought it would be imprudent for more than one to advance farther, and directed me to stop and await his return. I remonstrated and told him I would go forward, but he insisted, and leaving me was soon beyond my sight. After a time, much to my relief on my own account as well as his, he returned and we silently withdrew. He had got immediately below the works, got a sight of their armaments, of the character of the works, and could hear the conversation of the men. At a later period of the war this special trait of McClellan's character was once suddenly recalled to my mind by an abrupt speech of an engineer officer, still living, to the then commander of the army. The engineer had made a very close and dangerous reconnaissance and was reporting its result, when the general said he was mistaken on a certain point. The officer insisted that he was right, when the general rather tartly said he was mistaken, and quoted his authority. This nettled the engineer, who replied at once: "I

don't care what — says; I risked my life to find out how this was. Why don't you examine such an important point yourself? *McClellan always did.*" This closed the discussion very promptly.

This trait, well known to his troops, and the further fact that it was utilized for their benefit,—that he was careful not to expose them

without full knowledge of the work he put them upon, and that intelligent care was taken to provide against the effects of reverses,— were powerful elements in confirming the confidence he had inspired from the beginning, and it fixed the affection and devotion for his person, which has rarely been equaled in the history of armies.

Z.

THE DANCE IN PLACE CONGO.

A MANDINGO

I.

CONGO SQUARE.

WHOEVER has been to New Orleans with eyes not totally abandoned to buying and selling will, of course, remember St. Louis Cathedral, looking south-eastward — riverward — across quaint Jackson Square, the old Place d'Armes. And if he has any feeling for flowers, he has not forgotten the little garden behind the cathedral, so antique and unexpected, named for the beloved old priest Père Antoine.

The old Rue Royale lies across the sleeping garden's foot. On the street's farther side another street lets away at right angles, north-

westward, straight, and imperceptibly downward from the cathedral and garden toward the rear of the city. It is lined mostly with humble ground-floor-and-garret houses of stuccoed brick, their wooden doorsteps on the brick sidewalks. This is Orleans street, so named when the city was founded.

Its rugged round-stone pavement is at times nearly as sunny and silent as the landward side of a coral reef. Thus for about half a mile; and then Rampart street, where the palisade wall of the town used to run in Spanish days, crosses it, and a public square just beyond draws a grateful canopy of oak and sycamore boughs. That is the place. One may shut his buff umbrella there, wipe the beading sweat from the brow, and fan himself with his

hat. Many's the bull-fight has taken place on that spot Sunday afternoons of the old time. That is Congo Square.

The trees are modern. So are the buildings about the four sides, for all their aged looks. So are all the grounds' adornments. Trémé market, off, beyond, toward the swamp, is not so very old, and the scowling, ill-smelling prison on the right, so Spanish-looking and dilapidated, is not a third the age it seems; not fifty-five. In that climate every year of a building's age counts for ten. Before any of these M. Cayetane's circus and menagerie were here. Cayetane the negroes called him. He was the Barnum of that region and day.

"Miché Cayetane, qui sortie de l'Havane, Avec so chouals et somacaques."

"THE RENDEZVOUS OF THE RICH MAN."

That is, "who came from Havana with his horses and baboons."

Up at the other end of Orleans street, hid only by the old padre's garden and the cathedral, glistens the ancient Place d'Armes. In the early days it stood for all that was best; the place for political rallying, the retail quarter of all fine goods and wares, and at sunset and by moonlight the promenade of good so-

ciety and the haunt of true lovers; not only in the military, but also in the most unwarlike sense the place of arms, and of hearts and hands, and of words tender as well as words noble.

The Place Congo, at the opposite end of the street, was at the opposite end of everything. One was on the highest ground; the other on the lowest. The one was the rendezvous of the rich man, the master, the military

officer — of all that went to make up the ruling class; the other of the butcher and baker, the raftsman, the sailor, the quad-room, the painted girl, and the negro slave. No meaner name could be given the spot. The negro was the most de-

spised of human creatures and the Congo the plebeian among negroes. The white man's plaza had the army and navy on its right and left, the court-house, the council-hall and the church at its back, and the world before it. The black man's was outside the rear gate, the poisonous wilderness on three sides and the proud man's contumely on its front.

Before the city overgrew its flimsy palisade

walls, and closing in about this old stamping-ground gave it set bounds, it was known as Congo Plains. There was wide room for much field sport, and the Indian villagers of the town's outskirts and the lower class of white Creoles made it the ground of their wild ball game of *raquette*. Sunday afternoons were the time for it. Hence, beside these diversions there was, notably, another.

The hour was the slave's term of momentary liberty, and his simple, savage, musical and superstitious nature dedicated it to amatory song and dance tinged with his rude notions of supernatural influences.

II.

GRAND ORCHESTRA.

THE booming of African drums and blast of huge wooden horns called to the gathering. It was these notes of invitation, reaching beyond those of other outlandish instruments, that caught the Ethiopian ear, put alacrity into the dark foot, and brought their owners, male and female, trooping from all quarters. The drums were very long, hollowed, often from a single piece of wood, open at one end and having a sheep or goat skin stretched across the other. One was large, the other much smaller. The tight skin heads were not held up to be struck; the drums were laid along on the turf and the drummers bestrode them, and beat them on the head madly with fingers, fists, and feet,—with slow vehemence on the great drum, and fiercely and rapidly on the small one. Sometimes an extra performer sat on the ground behind the larger drum, at its open end, and “beat upon the wooden sides of it with two sticks.” The smaller drum was often made from a joint or two of very large bamboo, in the West Indies where such

could be got, and this is said to be the origin of its name; for it was called the *Bamboula*.

In stolen hours of night or the basking-hour of noon the black man contrived to fashion these rude instruments and others. The drummers, I say, bestrode the drums; the other musicians sat about them in an arc, cross-legged on the ground. One important instrument was a gourd partly filled with pebbles or grains of corn, flourished violently at the end of a stout staff with one hand and beaten upon the palm of the other. Other performers rang triangles, and others twanged from jew's-harps an astonishing amount of sound. Another instrument was the jawbone of some ox, horse, or mule, and a key rattled rhythmically along its weather-beaten teeth. At times the drums were reënforced by one or more empty barrels or casks beaten on the head with the shank-bones of cattle.

A queer thing that went with these when the affair was pretentious—full dress, as it were—at least it was so in the West Indies, whence Congo Plains drew all inspirations—was the Marimba brett, a union of reed and string principles. A single strand of wire ran lengthwise of a bit of wooden board, sometimes a shallow box of thin wood, some eight inches long by four or five in width, across which, under the wire, were several joints of reed about a quarter of an inch in diameter and of graduated lengths. The performer, sitting cross-legged, held the board in both hands and plucked the ends of the reeds with his thumb-nails. The result was called—music.

But the grand instrument at last, the first violin, as one might say, was the banjo. It had but four strings, not six: beware of the dictionary. It is not the “favorite musical instrument of the negroes of the Southern States of America.” Uncle Remus says truly that

BLOWING THE QUILLS.

A FIELD-HAND.

that is the fiddle; but for the true African dance, a dance not so much of legs and feet as of the upper half of the body, a sensual, devilish thing tolerated only by Latin-American masters, there was wanted the dark inspiration of African drums and the banjo's thrump and strum.

And then there was that long-drawn human cry of tremendous volume, richness, and resound, to which no instrument within their reach could make the faintest approach :

"Eh ! pou' la belle Layotte ma mourri 'nocent,
Oui 'nocent ma mourri !"

all the instruments silent while it rises and swells with mighty energy and dies away distantly, "Yea-a-a-a-a!"—then the crash of savage drums, horns, and rattles—

"For the fair Layotte I must crazy die!
Yes, crazy I must die!"

To all this there was sometimes added a Pan's-pipe of but three reeds, made from single

A CONGO WOMAN.

joints of the common brake cane, and called by English-speaking negroes "the quills." One may even at this day hear the black lad, sauntering home at sunset behind a few cows that he has found near the edge of the cane-brake whence he has also cut his three quills, blowing and hooting, over and over,—

But to show how far the art of playing the "quills" could be carried, if we are not going too much aside, see this "quill tune" (page 529), given me by Mr. Krehbiel, musical critic of the "New York Tribune," and got by him from a gentleman who heard it in Alabama.

Such was the full band. All the values of

contrast that discord can furnish must have been present, with whatever there is of ecstasy in maddening repetition, for of this the African can never have too much.

And yet there was entertaining variety. Where? In the dance! There was constant, exhilarating novelty—endless invention—in the turning, bowing, arm-swinging, posturing and leaping of the dancers. Moreover, the music of Congo Plains was not tamed to mere monotone. Monotone became subordinate to many striking qualities. The strain was wild. Its contact with French taste gave it often great tenderness of sentiment. It grew in fervor, and rose and sank, and rose again, with the play of emotion in the singers and dancers.

III.

THE GATHERING.

IT was a weird one. The negro of colonial Louisiana was a most grotesque figure. He was nearly naked. Often his neck and arms, thighs, shanks, and splay feet were shrunken, tough, sinewy like a monkey's. Sometimes it was scant diet and cruel labor that had made them so. Even the requirement of law was only that he should have not less than a barrel of corn—nothing else,—a month, nor get more than thirty lashes to the twenty-four hours. The whole world was crueler those times than now; we must not judge them by our own.

Often the slave's attire was only a cotton shirt, or a pair of pantaloons hanging in indecent tatters to his naked waist. The bondswoman was well clad who had on as much as a coarse chemise and petticoat. To add a *tignon*—a Madras handkerchief twisted into a turban—was high gentility, and the number of kerchiefs beyond that one was the measure of absolute wealth. Some were rich in *tignons*; especially those who served within the house, and pleased the mistress, or even the master—there were Hagars in those days. However, Congo Plains did not gather the house-servants so much as the "field-hands."

These came in troops. See them; wilder than gypsies; wilder than the Moors and Arabs whose strong blood and features one sees at a glance in so many of them; gangs—as they were called—gangs and gangs of them, from this and that and yonder direction; tall, well-knit Senegalese from Cape Verde, black as ebony, with intelligent, kindly eyes and long, straight, shapely noses; Mandingoes, from the Gambia River, lighter of color,

of cruder form, and a cunning that shows in the countenance; whose enslavement seems specially a shame, their nation the "merchants of Africa," dwelling in towns, industrious, thrifty, skilled in commerce and husbandry, and expert in the working of metals, even to silver and gold; and Foulahs, playfully mis-called "*Poulards*,"—fat chickens,—of goodly stature, and with a perceptible rose tint in the cheeks; and Sosos, famous warriors, dexterous with the African targe; and in contrast to these, with small ears, thick eyebrows, bright eyes, flat, upturned noses, shining skin, wide mouths and white teeth, the negroes of Guinea, true and unmixed, from the Gold Coast, the Slave Coast, and the Cape of Palms—not from the Grain Coast; the English had that trade. See them come! Popoes, Cotocolies, Fidas, Socoes, Agwas, short, copper-colored Mines—what havoc the slavers did make!—and from interior Africa others equally proud and warlike: fierce Nagoes and Fonds; tawny Awassas; Iboes, so light-colored that one could not tell them from mulattoes but for their national tattooing; and the half-civilized and quick-witted but ferocious Arada, the original Voudou worshiper. And how many more! For here come, also, men and women from all that great Congo coast,—Angola, Malimbe, Ambrice, etc.,—small, good-natured, sprightly "boys," and gay, garrulous "gals," thick-lipped but not tattooed; chattering, chaffering, singing, and guffawing as they come: these are they for whom the dance and the place are named, the most numerous sort of negro in the colonies, the Congoes and Franc-Congoes, and though serpent worshipers, yet the gentlest and kindest natures that came from Africa. Such was the company. Among these *bossals*—that is, native Africans—there was, of course, an ever-growing number of negroes who proudly called themselves Creole negroes, that is, born in America;* and at the present time there is only here and there an old native African to be met with, vain of his singularity and trembling on his staff.

IV.

THE BAMBOULA.

THE gathering throng closed in around, leaving unoccupied the circle indicated by the crescent of musicians. The short, harsh turf was the dancing-floor. The crowd stood. Fancy the picture. The pack of dark, tattered

* This broader use of the term is very common. The Creole "dialect" is the broken English of the *Creoles*, while the Creole *patois* is the corrupt French,

not of the Creoles, but rather of the former slave race in the country of the Creoles. So of Creole negroes and Creole dances and songs.

figures touched off every here and there with the bright colors of a Madras *tignon*. The squatting, cross-legged musicians. The low-roofed, embowered town off in front, with here and there a spire lifting a finger of feeble remonstrance; the flat, grassy plain stretching around and behind, dotted with black stumps; in the distance the pale-green willow undergrowth, behind it the *cyprès* — the cypress swamp — and in the pale, seven-times-heated sky the sun, only a little declined to south and westward, pouring down its beams.

With what particular musical movements the occasion began does not now appear. May be with very slow and measured ones; they had such that were strange and typical. I have heard the negroes sing one — though it was not of the dance-ground but of the cane-field — that showed the emphatic barbarism of five bars to the line, and was confined to four notes of the open horn.*

But I can only say that with some such slow and quiet strain the dance may have been preluded. It suits the Ethiopian fancy for a beginning to be dull and repetitious; the bottom of the ladder must be on the ground.

The singers almost at the first note are many. At the end of the first line every voice is lifted up. The strain is given the second time with growing spirit. Yonder glistening black Hercules, who plants one foot forward, lifts his head and bare, shining chest, and rolls out the song from a mouth and throat like a cavern, is a *candio*, a chief, or was before he was overthrown in battle and dragged away, his village burning behind him, from the mountains of High Soudan. That is an African amulet that hangs about his neck — a *greegree*. He is of the Bambaras, as you may know by his solemn visage and the long tattoo streaks running down from the temples to the neck, broadest in the middle, like knife-gashes. See his play of restrained enthusiasm catch from one bystander to another. They swing and bow to right and left, in slow time to the piercing treble of the Congo women. Some are responsive; others are competitive. Hear that bare foot slap the ground! one sudden stroke only, as it were the foot of a stag. The musicians warm up at the sound. A smiting of breasts with open hands begins very softly and becomes vigor-

ous. The women's voices rise to a tremulous intensity. Among the chorus of Franc-Congo singing-girls is one of extra good voice, who thrusts in, now and again, an improvisation. This girl here, so tall and straight, is a Yaloff. You see it in her almost Hindoo features, and hear it in the plaintive melody of her voice. Now the chorus is more piercing than ever. The women clap their hands in time, or standing with arms akimbo receive with faint courtesies and head-liftings the low bows of the men, who deliver them swinging this way and that.

See! Yonder brisk and sinewy fellow has taken one short, nervy step into the ring, chanting with rising energy. Now he takes another, and stands and sings and looks here and there, rising upon his broad toes and sinking and rising again, with what wonderful lightness! How tall and lithe he is. Notice his brawn shining through his rags. He too, is a *candio*, and by the three long rays of tattooing on each side of his face, a Kiamba. The music has got into his feet. He moves off to the farther edge of the circle, still singing, takes the prompt hand of an unsmiling Congo girl, leads her into the ring, and leaving the chant to the throng, stands her before him for the dance.

Will they dance to that measure? Wait! A sudden frenzy seizes the musicians. The measure quickens, the swaying, attitudinizing crowd starts into extra activity, the female voices grow sharp and staccato, and suddenly the dance is the furious Bamboula. (See page 529.)

Now for the frantic leaps! Now for frenzy! Another pair are in the ring! The man wears a belt of little bells, or, as a substitute, little tin vials of shot, "bram-bram sonnette!" And still another couple enter the circle. What wild — what terrible delight! The ecstasy rises to madness; one — two — three of the dancers fall — *bloucoutoum! boum!* — with foam on their lips and are dragged out by arms and legs from under the tumultuous feet of crowding new-comers. The musicians know no fatigue; still the dance rages on:

"Quand patate la cuite na va mangé li!"

And all to that one nonsense line meaning only,

"When that 'tater's cooked don't you eat it up!"

THE BAMBOULA.

It was a frightful triumph of body over mind, even in those early days when the slave was still a genuine pagan; but as his moral education gave him some hint of its enormity, and it became a forbidden fruit monopolized by those of reprobate will, it grew everywhere more and more gross. No wonder the police stopped it in Congo Square. Only the music deserved to survive, and does survive — coin snatched out of the mire. The one just given, Gottschalk first drew from oblivion. I have never heard another to know it as a bamboula; but Mr. Charles P. Ware, in "Slave Songs of the United States," has printed one got from Louisiana, whose characteristics resemble the bamboula reclaimed by Gottschalk in so many points that here is the best place for it: * As much as to say, in English, "Look at that darky," — we have to lose the saucy double meaning between *mulet* (mule) and *mulâtre* (mulatto) —

"Look at that darky there, Mr. Banjo,
Doesn't he put on airs!
Hat cocked on one side, Mr. Banjo,
Walking-stick in hand, Mr. Banjo,
Boots that go 'crank, crank,' Mr. Banjo,—
Look at that darky there, Mr. Banjo,
Doesn't he put on airs!"

THE LOVE SONG.

It is odd that such fantastical comicality of words should have been mated to such fierce and frantic dancing, but so it was. The reeking faces of the dancers, moreover, always solemnly grave. So we must picture it now if we still fancy ourselves spectators on Congo Plains. The bamboula still roars and rattles, twangs, contorts, and tumbles in terrible earnest, while we stand and talk. So, on and on. Will they dance nothing else? Ah! — the music changes. The rhythm stretches out heathenish and ragged. The quick contagion is caught by a few in the crowd, who take it

up with spirited smittings of the bare sole upon the ground, and of open hands upon the thighs. From a spot near the musicians a single male voice, heavy and sonorous, rises in improvisation, — the Mandingoes brought that art from Africa, — and in a moment many others have joined in refrain, male voices in rolling, bellowing resonance, female responding in high, piercing unison. Partners are stepping into the ring. How strangely the French language is corrupted on the thick negro tongue,

as with waving arms they suit gesture to word and chant (the translation is free, but so is the singing and posturing):

and chanting and swinging and writhing has risen with it, and the song is changed. (See RÉMON, page 530.)

V.

THE COUNJAILLE.

SUDDENLY the song changes. The rhythm sweeps away long and smooth like a river escaped from its rapids, and in new spirit, with louder drum-beat and more jocund rattle, the voices roll up into the sky and the dancers are at it. Aye, ya, yi!*

I could give four verses, but let one suffice; it is from a manuscript copy of the words, probably a hundred years old, that fell into my hands through the courtesy of a Creole lady some two years ago. It is one of the best known of all the old Counjaille songs. The four verses would not complete it. The Counjaille was never complete, and found its end, for the time being, only in the caprice of the improvisator, whose rich, stentorian voice sounded alone between the refrains.

But while we discourse other couples have stepped into the grassy arena, the instrumental din has risen to a fresh height of inspiration, the posing and thigh-beating and breast-patting

But the dance is not changed, and love is still the theme. Sweat streams from the black brows, down the shining black necks and throats, upon the men's bared chests, and into dark, unstayed bosoms. Time wears, shadows lengthen; but the movement is brisker than ever, and the big feet and bent shanks are as light as thistles on the air. Let one flag, another has his place, and a new song gives new vehemence, new inventions in steps, turns, and attitudes.

More stanzas could be added in the original *patois*, but here is a translation into African English as spoken by the Creole negro:

CHORUS. I done been 'roun' to evvy spot
Don't foun' nair match fo' sweet } *Bis.*
Layotte.

SOLO. I done hunt all dis settlement
All de way 'roun' fum Pierre Soniat';
Never see yalla gal w'at kin
'Gin to lay 'longside sweet Layotte.
I done been, etc.

SOLO. I yeh dey talk 'bout 'Loise gal —
Loise, w'at b'long to Pierre Soniat';
I see her, but she can't biggin
Stan' up 'longside my sweet Layotte.
I done been, etc.

A MARCHANDE DES CALAS.

SOLO. I been meet up wid John Bayou,
Say to him, "John Bayou, my son,
Yalla gal nevva meet yo' view
Got a face lak dat chahmin' one!"

I done been, etc.

The fair Layotte appears not only in other versions of this *counjaille* but in other songs. (See MA MOURRI, page 531.)

Or in English:

Well I know, young men, I must die,
Yes, crazy, I must die.
Well I know, young men, I must crazy die,
Yes, crazy, I must die. Eh-h-h-h!
For the fair Layotte, I must crazy die,— Yes, etc.
Well I know, young men, I must die,— Yes, etc.
Well I know, young men, I must crazy die,
I must die for the fair Layotte.

VI.

THE CALINDA.

THERE were other dances. Only a few years ago I was honored with an invitation, which I had to decline, to see danced the Babouille, the Cata (or Chacta), the Counjaille, and the Calinda. Then there were the

Voudou, and the Congo, to describe which would not be pleasant. The latter, called Congo also in Cayenne, Chica in San Domingo, and in the Windward Islands confused under one name with the Calinda, was a kind of Fandango, they say, in which the Madras kerchief held by its tip-ends played a graceful part.

The true Calinda was bad enough. In Louisiana, at least, its song was always a grossly personal satirical ballad, and it was the favorite dance all the way from there to Trinidad. To dance it publicly is not allowed this side the West Indies. All this Congo Square business was suppressed at one time; 1843, says tradition.

The Calinda was a dance of multitude, a sort of vehement cotillion. The contortions of the encircling crowd were strange and terrible, the din was hideous. One Calinda is still familiar to all Creole ears; it has long been a vehicle for the white Creole's satire; for generations the man of municipal politics was fortunate who escaped entirely a lam-pooning set to its air.

In my childhood I used, at one time, to hear,

every morning, a certain black *marchande des calas* — peddler-woman selling rice croquettes — chanting the song as she moved from street to street at the sunrise hour with her broad, shallow, laden basket balanced on her head.

be covered by the roll of victims. The masters winked at these gross but harmless liberties and, as often as any others, added stanzas of their own invention.

The Calinda ended these dissipations of the

In other words, a certain Judge Preval gave a ball — not an outdoor Congo dance — and made such Cuffees as could pay three dollars a ticket. It doesn't rhyme, but it was probably true. "Dance, dance the Calindá! Boujoum! Boujoum!"

The number of stanzas has never been counted; here are a few of them.

"Dans l'équie la 'y' avé grand gala;
Mo cré choual la yé t b'en étonné.

Miché Preval, li té capitaine bal;
So cocher Louis, té maîte cérémonie.

Y avé des négresses belle passé maitresses,
Qui volé bel-bel dans l'ormoire momselle.
* * * * *

Ala maite la geôle li trouvé si drôle,
Li dit, "moin aussi, mo fé bal ici."

Ouatchman la yé yé tombé la dans;
Yé fé gran' déga dans léquie la." etc.

"It was in a stable that they had this gala night," says the song; "the horses there were greatly astonished. Preval was captain; his coachman, Louis, was master of ceremonies. There were negresses made prettier than their mistresses by adornments stolen from the ladies' wardrobes (*armoires*). But the jailer found it all so funny that he proposed to himself to take an unexpected part; the watchmen came down"

No official exaltation bought immunity from the jeer of the Calinda. Preval was a magistrate. Stephen Mazureau, in his attorney-general's office, the song likened to a bull-frog in a bucket of water. A page might

summer Sabbath afternoons. They could not run far into the night, for all the fascinations of all the dances could not excuse the slave's tarrying in public places after a certain other *bou-djoum!* (that was not of the Calinda, but of the regular nine-o'clock evening gun) had rolled down Orleans street from the Place d'Armes; and the black man or woman who wanted to keep a whole skin on the back had to keep out of the Calaboosse. Times have changed, and there is nothing to be regretted in the change that has come over Congo Square. Still a glamour hangs over its dark past. There is the pathos of slavery, the poetry of the weak oppressed by the strong, and of limbs that danced after toil, and of barbaric love-making. The rags and semi-nakedness, the bamboula drum, the dance, and almost the banjo, are gone; but the *bizarre* melodies and dark lovers' apostrophes live on; and among them the old Counjaille song of Aurore Pradère.

AURORE PRADÈRE.

CHO. || Aurore Pradère, pretty maid, || (*ter*)
She's just what I want and her I'll have.

SOLO. Some folks say she's too pretty, quite;
Some folks they say she's not polite;
All this they say — Psha-a-ah!
More fool am I!

For she's what I want and her I'll have.

CHO. || Aurore Pradère, pretty maid, || (*ter*)
She's just what I want and her I'll have.

SOLO. Some say she's going to the bad;
Some say that her mamma went mad;
All this they say — Psha-a-ah!
More fool am I!

For she's what I want and her I'll have.

THE CALABOOSSE.

Mr. Ware and his associate compilers have neither of these stanzas, but one very pretty one; the third in the music as printed here, and which we translate as follows:

This article and another on a kindred theme were originally projected as the joint work of Mr. H. E. Krehbiel, musical editor of the "New York Tribune," author of "The History of Choral Music in New York City," etc.; and the present writer. But under the many prior claims of the journalist's profession, Mr. Krehbiel withdrew from the work, though not until he had furnished a number of instrumental accompaniments, as well as the "Quill Song" credited to him, and much valuable coöperation.

As may in part be seen by the names attached to the musical scores, the writer is indebted to a number of friends: Mr. Krehbiel; Miss Mary L. Bartlett,

SOLO. A muslin gown she doesn't choose,
She doesn't ask for broidered hose,
She doesn't want prunella shoes,
O she's what I want and her I'll have.
CHO. Aurore Pradère, etc.

of Hartford, Conn.; Madame Louis Lejeune, of New Orleans; Dr. Blodgett, of Smith College, Northampton, Mass.; Mr. C. G. Ware, of Brookline, in the same State; Madame Clara Gottschalk Petersen, of Philadelphia; and in his earlier steps—for the work of collection has been slow—to that skillful French translator and natural adept in research, Mr. Lafcadio Hearn, of New Orleans; the late Isaac N. Philips, Mr. Louis Powers, Miss Clara Cooper Hallaran, the late Professor Alexander Dimitry, all of the same city; Madame Sidonie de la Houssaye, of Franklin, La.; and, through the editors of THE CENTURY, to Mr. W. Macrum, of Pittsburg.—G. W. C.

George W. Cable.

WILL THE LAND BECOME A DESERT?

IN spite of the fact that Americans are really fond of trees, and do not, like Spaniards or Turks, exterminate them wantonly for the sake of exterminating them, the trees will yet be sacrificed under the strong demand for fuel, lumber, and land to cultivate. Forests will not produce bread, and the millions of the future must have bread. The question of forest extermination must be looked at quite unæsthetically. Under such a sacrifice of the woodlands as appears likely to come, will the land become a desert? Is there any less fearful side to the picture than that which Bryant shows us in his "Indian at the Burial-place of his Fathers":

"The springs are silent in the sun;
 The rivers by the blackened shore
 With lessened current run;
 The realm our tribes were crushed to get
 May be a barren desert yet?"

Our country is not now meagerly provided with forests. In addition to the vast aggregate expanse of woodlands which are the property of private persons or of States of the Union, the timber-lands owned by the Federal Government in 1880 were estimated (no exact account of the matter having ever been made) at 84,000,000 acres. This area is half the size of Texas, and twice the size of Virginia. These woods are widely scattered, 20,000,000 acres being in the Southern States, and a very large proportion of the remainder west of the Mississippi. But this total area falls far short of the one-quarter of the land which, it is held, should be left wooded for climatic reasons. If the land is to become arid for want of timber, it is clear that the Government, without planting trees on its lands or seizing private woodlands, cannot prevent it, though it may preserve in special districts the proportion of timber-land which is deemed desirable.

The forests of the region west of the hundredth meridian, themselves very considerable in extent, though not relatively so, do not prevent that part of the country from being arid as a whole; nor has the destruction of forests on the Atlantic slope made this region arid. In the Far West natural conditions have been undisturbed until very lately. In the East timber-cutting has been unchecked; but the East is vastly better wooded to-day than the West. The aridity of the Western plains cannot be due to their loss of trees at some former epoch, for it does not appear that they have ever been wooded. They are a raw and primitive surface. Our own arid regions, like the other great deserts of the world, are supposed to have been swept together or distributed by marine currents, and to have been elevated above the ocean by the same means as the other upheaved strata.* Lieutenant Ives, an early explorer of the trans-Mississippi region, found, indeed, in the central basin, near the Mexican border, tracts with trees standing dry and dead, as if killed within a recent period; but such discoveries have been extremely rare. There is no large district in our West (I mean large relatively to the mass of the country) known to owe its aridity to disafforesting. The character of the soil, not the hand of man, has prevented the clothing of a great portion of the Western plains with woods. We find, for instance, that the line upon these plains marking the junction of the carboniferous rocks with the cretaceous and the tertiary is a distinct limitation of many trees. The soil and the underlying rocks are too porous to retain sufficient moisture to nourish forests, † though the earth struggles to clothe itself with trees, and has, where the conditions are in some measure favorable, been able to do so; and the gradual transformation of the surface

* G. P. Marsh, "The Earth as Modified by Human Action," p. 546.

† "Distribution of the Forests and Trees of America." J. G. Cooper, Smithsonian Report, 1858.

by human occupancy is being followed by the extension of tree-growths. As for the prairie regions proper, further east, we shall presently see how they have spontaneously sought a tree-covering for themselves as their surface grew less primitive, and have been obliged to seek it from neighboring regions.

The soil has as great an influence in the East as in the West, but in a different direction. There can be no phenomenon more striking throughout the whole region east of the prairies than the great vitality and spontaneity of growth of kinds of trees suited to the soil. If a forest in this part of the country is cut down simply for its timber, and not with a view to the use of the soil, the new growth, being left free, springs up immediately. I have stood on the most barren portion of the pine-belt of Michigan, where the timber had all been cut away, and where the soil was clear sand. As far as the eye could reach there was a continuous though scanty stretch of scrub-oaks, thorns, blackberry-bushes, and other more or less stunted growths, interspersed with a crop of coarse weeds,—a poor vegetation, leaving the land unspeakably wearisome to the eye, and yet affording the beginning of a future genuine forest-growth. And in the Old Colony district of Massachusetts I know many stony wastes and hill-sides, never cultivated, but regularly and completely stripped of their timber for fuel as often as it grows large enough to “work up,” the last cutting having been within thirty years; yet there is on every hand a most promising growth of young trees of many varieties, deciduous and evergreen. A very large portion of eastern Massachusetts is now covered with a young forest-growth, everywhere vigorous, and sometimes almost impenetrable—a forest which no man planted, and which exists in spite of the most persistent and unsparing felling of the timber. This condition seems to be the rule except upon Cape Cod and other tracts bordering the ocean, where the severity of the winds blights young tree-growths.

If the forests are burned, the new growth asserts itself with astonishing vigor. The late Mr. Marsh, in the invaluable work already mentioned, “The Earth as Modified by Human Action,” mentions the case of the great forest fire of Miramichi in 1825, “probably the most extensive and terrific conflagration recorded in authentic history, which spread over six thousand square miles, and was of such intensity that it seemed to consume the very soil itself; but in twenty-five years the ground was thickly covered with trees of fair dimensions.” The same phenomenon has occurred in the case of forest fires throughout our eastern and central regions.

And if the original forest is cut down in order that the soil may be tilled or grazed, it need not suffer deterioration. The effect of tillage is not desiccation, and the land that is actually tilled must not be begrudged to man, whether it is taken from the forest or the savanna. If the soil is grazed, the covering of turf (except on very steep hill-sides) prevents it from washing away; holds the rain as it falls more readily than the forest itself, though it afterward throws it off more rapidly by evaporation; and grows richer, deeper, and more capable of retaining moisture, even though the springs may be “silent in the sun.” And if the pastures are not watched and guarded, evergreen-trees, which the cattle will not crop, quickly cover the ground, if there are trees of the sort in the neighborhood to cast the seeds. Hundreds of pastures in Vermont and New Hampshire are becoming pine or spruce forests, because they have been abandoned by farmers moving westward, or not properly cared for by their “shiftless” owners. Indeed, the white pine is now reasserting itself in its old New England habitat to an extent which threatens to turn the land into a wilderness.

Precipitous mountain slopes must, of course, suffer a considerable and rapid erosion during heavy rains if stripped all at once of their timber, the new growth finding it very hard to establish itself. But many of the steepest mountain slopes might lose their covering of soil without sensibly altering the climatic conditions of the surrounding regions. The space above the timber-line cannot be clothed with woods. The area of totally bare rock surface in the White and Green mountains and their spurs, which has been bare from a time antedating our knowledge, is sufficient to cause inundations which could not be prevented by any amount of reafforestation, though they may be aggravated by an increase of the area of bare surface. The bare faces of Lafayette and Moosilauke alone must pour down into the streams below a vast volume of water in every heavy rain. If inundations are to be prevented in the districts below mountains, reservoirs must be constructed to retain the water; and these, it has been demonstrated, will perform this work more effectively than the forests themselves.

We can only conclude that the region of the Appalachians and the Atlantic coast are not in danger of falling into aridity through loss of trees from any process now going on. What is the condition and prospect with regard to the great Mississippi Valley, west of the wooded foot-hills of the Alleghanies and east of the arid plains? This region was not originally wooded. This is proved not only by the story told by the soil, but by the fact

that, though it was not without its woodlands at the time of its settlement, it *has no characteristic trees*. All are derived either from the Appalachian region or from the west and north, ninety varieties coming from the east, and only nine or ten from the west and north.* The great prairie region has sought all the trees it possesses from adjoining regions. Does it lose these under occupancy? The testimony of the inhabitants is strongly to the effect that there are more trees in the prairie States than have ever been there at any previous epoch. Tree-planting is encouraged in many ways, and is a prevailing fashion. There is no systematic forest-planting worthy the name, but there is going on a process of spontaneous growth or spreading of certain kinds of trees upon the prairies, especially of cottonwoods, which may some time produce genuine forests. This large section is gaining trees, not losing them.

And here we reach the consideration of a highly important fact, which seems to teach us that the greater part of our national territory is beyond the danger of a serious change in its character. The fact that permanence of conditions may be reached is shown by Marsh, who says on the subject:

"If the precipitation, whether great or small in amount, be equally distributed through the seasons, so that there are neither torrential rains nor parching droughts, and if, further, the general inclination of ground be moderate, so that the superficial waters are carried off without destructive rapidity of flow, and without sudden accumulation in the channels of natural drainage, there is little danger of the degradation of the soil in consequence of the removal of forest or other vegetable covering, and the natural face of the earth may be considered as virtually permanent. These conditions are well exemplified in Ireland, in a great part of England, in extensive districts in Germany, and, fortunately, in an immense proportion of the valley of the Mississippi, and the basin of the great American lakes."

As for the South, it is still a land abounding in forests. Its great woods have scarcely been touched, save where the turpentine industry has stripped some of the more accessible districts of their pines. But this immunity is, unfortunately, not likely to continue. The lumbering industry is turning southward from exhausted Northern forests. The Southern hard-wood district extends over large portions of North Carolina, West Virginia, Virginia, Tennessee, and Kentucky. About one-half of the last-named State is said to be covered with fine and valuable forests. West Virginia has enormous forests of cherry, walnut, white

oak, maple, ash, and black spruce timber. In North Carolina there yet remain at least forty thousand square miles of fine forests. In that State and Tennessee there are white pine and the much-valued long-leaf pine in abundance, and further south is a vast area of yellow pine and cypress. But already inroads are being made in the Southern forests. A recent number of the Boston "Commercial Bulletin" names five places in Kentucky where large saw-mills have been erected within the last eighteen months. It adds that numerous wood-working establishments have been erected there and elsewhere in the South. This need not be a melancholy assurance, as it certainly is now, if the forests were to be *used* instead of destroyed; but the American woodman does not understand the distinction. Other Southern States will doubtless soon join Kentucky in the wood-working industry, and the Government timber will be taken first, because it is cheaper to "take" than to buy. It remains to be seen whether the South, with its fiercer sun, can stand the cutting down of its forests without unfavorable climatic effect. But there is little reason to suppose that the timber-growth of the South would not be found at least as persistent as that of the North and West.

At about the hundredth meridian west from Greenwich the prairies give way to the plains, so called, and new conditions begin. But the prairies, as we have already seen, are encroaching upon the plains; the latter are losing their buffalo-grass, even in advance of cultivation, exchanging it for the rich, sharp-bladed, thick, and tall prairie-grass, which covers the ground when it falls in masses, and around the roots of which a moss-like undergrowth forms and *humus* is created. The earth, with the true wild prairie-grass growing upon it, becomes as spongy as in a forest.† The shifty soil becomes fixed; the rainfall is equalized; roadside shade-trees and even orchards are planted, and begin to thrive under the new conditions. Very many of the people familiar with these changes believe that eventually the cultivated belt will extend to the base of the Rocky Mountains. An extravagant prediction, perhaps; but it is, at least, certain that the cultivated and measurably humid region is extending westward.

Forests grow upon the Rocky Mountains at an altitude of eleven thousand feet above the sea, and are often very extensive. More serious consequences follow their destruction

* "Distribution of Forests and Trees of North America." J. G. Cooper, Smithsonian Report, 1858.

† This condition is perhaps reached only where the prairie-grass is left uncut for a few years. I have

known a prairie fire in southern Wisconsin, in an exceptionally dry season, to burn away two feet of the surface soil, because the soil for that depth was little else than a mass of roots of the grass, mingled with moss and light loam.

than follow the similar process on the Appalachian ranges. The spontaneity of reafforestation characteristic of the more humid regions does not seem to prevail; very destructive avalanches and land-slides are the first effect of the destruction of these woods. The chief danger here is the drying up of the streams, upon which agriculture at the base of the mountains is wholly dependent for irrigation. Agriculture there does not thrive without artificial irrigation; a constantly increasing supply of water is needed, and vast sums are expended in making great irrigating canals. But if the sources of the streams are dried up by the destruction of the mountain forests, these great ditches, upon which millions are to be spent, will be useless. The people of Colorado, New Mexico, and other Western States and Territories dependent upon irrigation, appear quite indifferent to forest destruction; but it is the duty of Congress to be watchful in this respect, even if the people chiefly interested are not. All the Western mountain forests should be withdrawn at once from preëemption or sale—a step which would not, of course, prevent the Government from deriving a considerable revenue, in time, from the sale of the timber which could be spared.

It appears to be quite within the bounds of possibility, if the proper efforts of the settlers to water and cultivate the soil are seconded by prudent legislation, while such legislation is possible,—the work of both citizens and Government being still further advanced, as it would surely be, by the kindly efforts of nature,—to make the Western arid region no longer arid, and to render it fit for the occupancy of millions of people where thousands now subsist. Would not such a transformation be a result worthy of the efforts of the greatest statesmen? Would not the forwarding of such a work be a noble feature in the policy of any political party?

But with the destruction of the forests now on the mountains which are robbed by the Sierras of the moisture of the Pacific winds, we must look for the end of all possibility of successful irrigation in the entire region, except in certain favored valleys; for the relapse to a desert state of tracts already reclaimed; for the enlargement of the area of desolation; and for the aggravation of every climatic evil that now afflicts the region.

The Pacific coast proper has many advantages in climate, but the irregularity in precipitation that now constitutes so great a menace to the agriculture of California would, no doubt, be aggravated by loss of the forests now standing. In Oregon and Washington Territory the moisture is certainly abundant, and the immense forests, as yet almost un-

touched, exercise a beneficial effect upon the climate.

HAVING completed this rapid survey of our own country, with a result possibly in some degree reassuring, though not altogether so, we may with profit, I believe, note certain considerations of a general nature bearing on the question under examination. We have been told often that the Mediterranean countries indicate what the face of our own country may become through disafforesting. The conditions of that region, however, are not like those of any considerable portion of the United States. Parching winds from the African deserts tend to prevent reafforestation, as the winds from the Australian deserts blight the vegetation of the Timor group of the Malay Archipelago, while all the islands protected from these winds are marked by a luxuriance and vigor of vegetation not equaled elsewhere.

True desert lands are the result of geologic causes; or, where lands have become desert through loss of forests and erosion, such lands have generally been within the reach of the parching influence of neighboring deserts. This is exemplified in the desolation of a large area upon the slopes of the Atlas Mountains in northern Africa. The breath of the Sahara has not only seconded the destructive agencies of man—and in this instance of the camel and goat, which crop all young vegetation—in rendering desolate a large portion of northern Africa, once fruitful, but is now, as we have seen, withering the shores of southern Europe. It is a significant fact that while the southern slopes of the Pyrenees are bare, the northern are wooded. On the other hand, lesser areas, arid from original causes, tend to clothe themselves with vegetation. The plains of Hungary were, within a recent geological period, a desert. They are now almost unwatered save by streams from the mountains which traverse them; the water in the wells and occasional pools is very brackish, and great sand-storms even now sometimes fill the streets of Debreczin and Pesth. Yet these plains are the most fruitful region of Austria-Hungary, producing immense crops of grain. They are treeless, and always have been; but nature has reclaimed them.

There is no proof that the amount of rainfall is diminished by destruction of forests, nor has any forest destruction in the United States, where summer rains fall, put an end to those rains; and we have good authority for assuming that “in the United States, where summer rains are abundant, the quantity of water furnished by deep wells and natural streams depends almost as much upon the

rains of summer as those of the rest of the year, and consequently a large portion of the rain of that season must find its way into strata too deep for the water to be wasted by evaporation."*

Inundations certainly do result from the destruction of forests at the head-waters of rivers, but these and other resulting evils are curable in a very great degree, as a last resort, by the systematic cultivation of forests there. Even partial reafforestation in Brescia, Bergamo, and other Italian provinces, is said to have stopped the inundations in their streams. The Landes or sand-wastes of Gascony have, to a great extent, been rendered once more inhabitable by the planting of woods.

Totally unwooded districts in a humid region, conditions of soil being favorable, are in no danger of becoming arid. Nantucket, Martha's Vineyard, Rhode Island, Block Island, and other islands on the Atlantic coast are practically treeless, but are no more subject to droughts than wooded districts on the mainland. On these islands, however, the natural water-courses are to a great extent dried up.

Inundations, it has been proved, can be prevented by artificial reservoirs upon the head-waters of rivers.

Nature appears to pass through periods of loss and recovery. In France, where a sentiment has, during the present generation, been aroused in behalf of forest preservation, destruction is no new thing. "Under the reign of Augustus," says Ribbe, in "La Provence," "the forests which protected the Cévennes were felled or destroyed by fire in mass. A vast country, before covered with impenetrable woods, was suddenly swept bare, and soon after a scourge hitherto unknown struck terror over the land — the mistral." Provence, however, was once more thickly clothed with

woods. Once more a large part of it has been stripped with disastrous results. In the great alluvial plain of northern Italy the superficial stratum of fine earth and vegetable mold is very extensively underlaid with beds of pebbles and gravel, brought down by mountain torrents at a remote epoch.† Now the torrents are again overlaying the mold with gravel. This points to an ancient erosion from which there was recovery.

THE reasonable conclusion of the whole matter would seem to be that while there is no present serious menace to the eastern half of the United States through the loss of forests, there is good reason to urge the preservation of as much of them as possible and the encouragement of new plantations; while in the western half of the country the immediate withdrawal from sale of the whole body of forests belonging to the Government is highly desirable. There should be an exhaustive inquiry, at the hands of a competent Government commission, into the subject of the extent of forests belonging to the Government, their location, value, character, etc., the proportion of private lands now wooded, and the apparent dependence or independence, as the case may be, of all sections of the country upon the modifying effect of forests. Exact information is now needed, which could scarcely be obtained except through the efforts of such a commission.

Sentimental considerations, I suppose, are to be held secondary to the practical in the matter; but they are powerful, and should be aroused in behalf of no object more readily than the woods, which have occupied so large a place in the sentimental life of man from the earliest times.

RETROSPECT.

Los Angeles.

A BREATH of balm,— of orange bloom!
By what strange fancy wafted me,
Through the lone starlight of the room?
And suddenly I seem to see
The long, low vale, with tawny edge
Of hills, within the sunset glow;
Cool vine-rows through the cactus hedge,
And fluttering gleams of orchard snow.

Far off, the slender line of white
Against the blue of ocean's crest;
The slow sun sinking into night,
A quivering opal, in the west.

Somewhere a stream sings, far away;
Somewhere from out the hidden groves,
And dreamy as the dying day,
Comes the soft coo of mourning doves.

One moment all the world is peace!
The years like clouds are rolled away,
And I am on those sunny leas,
A child, amid the flowers at play.

Ina D. Coolbrith.

A BORROWED MONTH.

BY FRANK R. STOCKTON,

Author of "Rudder Grange," "The Lady, or the Tiger?" etc.

EAST.

I AM a painter of landscapes, and my brethren in the craft, as well as all those who delight in the beauties of lake and valley, the grandeur of snowy mountain-peaks, and the invigoration of pure mountain air, can imagine the joy with which I found myself in Switzerland on a sketching tour. It had not been easy for me to make this, my first visit to Europe. Circumstances, which the very slightly opened purses of my patrons had not enabled me to control, had deferred it for several years. And even now my stay was strictly limited, and I must return by a steamer which sailed for America early in the autumn. But I had already traveled a good deal on the Continent; had seen Italy; and now had six summer weeks to give to Switzerland. Six months would have suited me much better, but youth and enthusiasm can do a great deal of sketching and nature-reveling in six weeks.

I began what I called my Alpine holidays in a little town not far from the upper end of Lake Geneva, and at the close of my second day of rambling and sketching I was attacked by a very disagreeable and annoying pain in my left leg. It did not result, so far as I could ascertain, from a sprain, a bruise, or a break, but seemed to be occasioned by a sort of tantalizing rheumatism; for while it entirely disappeared when I remained at rest, its twinges began as soon as I had taken half-a-dozen steps in walking. The next day I consulted a doctor, and he gave me a lotion. This, however, was of no service, and for three or four days he made use of other remedies, none of which were of the slightest benefit to me.

But, although I was confined to the house during this period, I did not lose my time. From the windows of my room in the hotel I had a series of the most enchanting views, which I sketched from early morning until twilight, with an earnest and almost ecstatic zeal. On the other side of the lake rose, ten thousand feet in the air, the great Dent du Midi, with its seven peaks clear and sharp against the sky, surrounded by its sister mountains, most of them dark of base and white of tip. To the east stretched the

beautiful valley of the Rhone, up which the view extended to the pale-blue pyramid of Mont Vélán. Curving northward around the end of the lake was a range of lower mountains, rocky or verdant; while at their base, glistening in the sun, lay the blue lake reflecting the white clouds in the sky, and dotted here and there with little vessels, their lateen-sails spread out like the wings of a descending bird.

I sketched and painted the lake and mountains, by the light of morning, in their noontide splendors, and when all lay in shadow except where the highest snowy peaks were tipped with the rosy afterglow. My ailment gave me no trouble at all so long as I sat still and painted, and in the wonderful opportunity afforded by nature to my art I forgot all about it.

But in the course of a week I began to get very impatient. There was a vast deal more of Switzerland to be seen and sketched; my time was growing short, and the pain occasioned by walking had not abated in the least. I felt that I must have other views than those which were visible from my window, and I had myself driven to various points accessible to vehicles, from which I made some very satisfactory sketches. But this was not roaming in Alpine valleys and climbing mountain-peaks. It was only a small part of what brought me to Switzerland, and my soul rebelled. Could any worse fate befall a poor young artist, who had struggled so hard to get over here, than to be thus chained and trammelled in the midst of the grandest opportunities his art life had yet known?

My physician gave me but little comfort. He assured me that if I used his remedies and had patience, there would be no doubt of my recovery; but that it would take time. When I eagerly asked how much time would be required, he replied that it would probably be some weeks before I was entirely well, for these disorders generally wore off quite gradually.

"Some weeks!" I ejaculated when he had gone. "And I have barely a month left for Switzerland!"

This state of affairs not only depressed me, but it disheartened me. I might have gone by rail to other parts of Switzerland, and made other sketches from hotels and carriages,

but this I did not care to do. If I must still carry about with me my figurative ball and chain, I did not wish to go where new temptations would beckon and call and scream to me from every side. Better to remain where I was; where I could more easily become used to my galling restraints. This was morbid reasoning, but I had become morbid in body and mind.

One evening I went in the hotel omnibus to the Kursaal of the little town where I was staying. In this building, to which visitors from the hotels and *pensions* of the vicinity went in considerable numbers every afternoon and evening, for the reason that they had nothing else to do, the usual concert was going on in the theater. In a small room adjoining, a company of gentlemen and ladies, the latter chiefly English or Russian, were making bets on small metal horses and jockeys which spun round on circular tracks, and ran races which were fairer to the betters than the majority of those in which flesh-and-blood animals, human and equine, take part. Opening from this apartment was a large refreshment-room, in which I took my seat. Here I could smoke a cigar and listen to the music, and perhaps forget for a time the doleful world in which I lived. I had not been long seated before I was joined by a man whom I had met before, and in whom I had taken some interest. He was a little man with a big head, on which he occasionally wore a high-crowned black straw hat; but whenever the sun did not make it absolutely necessary he carried this in his hand. His clothes were black and of very thin material, and he always had the appearance of being too warm. In my occasional interviews with him I had discovered that he was a reformer, and that his yearnings in the direction of human improvement were very general and inclusive.

This individual sat down at my little table and ordered a glass of beer.

"You do not look happy," he said. "Have you spoiled a picture?"

"No," I replied, "but a picture has been spoiled for me." And, as he did not understand this reply, I explained to him how the artistic paradise which I had mentally painted for myself had been scraped from the canvas by the knife of my malicious ailment.

"I have been noticing," he said,—he spoke very fair English, but it was not his native tongue,—“that you have not walked. It is a grand pity.” And he stroked his beard and looked at me steadfastly. “An artist who is young is free,” he said, after some moments’ reflection. “He is not obliged to carry the load of a method which has grown upon him

like the goitre of one of these people whom you meet here. He can despise methods and be himself. You have everything in art before you, and it is not right that you should be held to the ground like a serpent in your own country, with a forked stick. You have some friends, perhaps?”

I replied, a little surprised, that I had a great many friends in America.

“It is of no import where they are,” he said. And then he again regarded me in silence. “Have you a good faith?” he presently asked.

“In what?” said I.

“In anything. Yourself, principally.”

I replied that just now I had very little faith of that sort.

His face clouded; he frowned, and, pushing away his empty glass, he rose from the table. “You are a skeptic,” he said, “and an infidel of the worst sort.”

In my apathetic state this remark did not annoy me. “No man would be a skeptic,” I said carelessly, “if other people did not persist in disagreeing with him.”

But my companion paid no attention to me, and walked away before I had finished speaking. In a few minutes he came back, and, leaning over the table, he said in low but excited tones: “It is to yourself that you are an infidel. That is very wrong. It is degrading.”

“I do not understand you at all,” I said. “Won’t you sit down and tell me what you mean?”

He seated himself, and wiped his forehead with his handkerchief. Then he fixed his eyes upon me, and said: “It is not to everybody I would speak as I now speak to you. You must believe something. Do you not believe in the outstretching power of the mind; of the soul?”

My ideas in this regard were somewhat chaotic. I did not know what was his exact meaning, but I thought it best to say that it was likely that some souls could outstretch.

“And do you not believe,” he continued, “that when your friend sleeps, and your thoughts are fixed upon him, and your whole soul goes out to him in its most utter force and strength, that your mind becomes his mind?”

I shook my head. “That is going rather far,” I said.

“It is not far,” he exclaimed emphatically. “It is but a little way. We shall go much farther than that when we know more. And is it that you doubt that the mind is in the brain? And where is pain? Is it in the foot? In the arm? It is not so. It is in the brain. If you cut off your wounded foot, you have

the pain all the same; the brain remains. I will say this to you. If it were I who had soul-friends, it would not be that every day I should shut the door on my art. Once it happened that I suffered—not like you, much worse. But I did not suffer every day. No, no, my friend, not every day. But that was I; I have faith. But I need speak no more to you. You are infidel. You do not believe in yourself."

And with this he suddenly pushed back his chair, picked up his black straw hat from the floor, and walked out of the room, wiping his forehead as he went. I am not given to sudden reciprocations of sentiment, but what this man had said made a good deal of impression upon me. Not that I had any confidence in the value of his psychological ideas, but his words suggested a train of thought which kept me awake a long time after I had gone to bed that night; and gradually I began to consider the wonderful advantage and help it would be to me if it were possible that a friend could bear my infirmity even for a day. It would inconvenience him but little. If he remained at rest he would feel no pain, and he might be very glad to be obliged to take a quiet holiday with his books or family. And what a joy would that holiday be to me among the Alps, and relieved of my fetters! The notion grew. One day one friend might take up my burden, and the next another. How little this would be for them; how much for me! If I should select thirty friends, they could, by each taking a day of pleasant rest, make me free to enjoy to the utmost the month which yet remained for Switzerland. My mind continued to dwell on this pleasing fancy, and I went to sleep while counting on my fingers the number of friends I had who would each be perfectly willing to bear for a day the infirmity which was so disastrous to me, but which would be of such trifling importance to them.

I woke very early in the morning, and my thoughts immediately recurred to the subject of my ailment and my friends. What a pity it was that such an advantageous arrangement should be merely whim and fancy! But if my companion of the night before were here, he would tell me that there was no impossibility, only a want of faith—faith in the power of mind over mind, of mind over body, and, primarily, of faith in my own mind and will. I smiled as I thought of what might happen if his ideas were based on truth. There was my friend Will Troy. How gladly would he spend a day at home in his easy-chair, smoking his pipe and forgetting, over a novel, that there were such things as ledgers, day-books, and columns of figures, while I

strode gayly over the mountain-sides. If Troy had any option in the matter, he would not hesitate for a moment; and, knowing this, I would not hesitate for a moment in making the little arrangement, if it could be made. If belief in myself could do it, it would be done; and I began to wonder if it were possible, in any case, for a man to believe in himself to such an extent.

Suddenly I determined to try. "It is early morning here," I said to myself, "and in America it must be about the middle of the night, and Will Troy is probably sound asleep. Let me then determine, with all the energy of my mental powers, that my mind shall be his mind, and that he shall understand thoroughly that he has some sort of trouble in his left leg which will not inconvenience him at all if he allows it to rest, but which will hurt him very much if he attempts to walk about. Then I will make up my mind, quite decidedly, that for a day it shall be Will who will be subject to this pain, and not I."

For half an hour I lay flat on my back, my lips firmly pressed together, my hands clinched, and my eyes fixed upon the immutable peaks of the Dent du Midi, which were clearly visible through the window at the foot of my bed. My position seemed to be the natural one for a man bending all the energies of his mind on a determinate purpose. The great mountain stood up before me as an example of the steadfast and immovable. "Now," said I to myself, over and over again, "Will Troy, it is you who are subject to this trouble. You will know exactly what it is, because you will feel it through my mind. I am free from it; I will that, and it shall be so. My mind has power over your mind, because yours is asleep and passive, while mine is awake and very, very active. When I get out of bed I shall be as entirely free from pain and difficulty in walking as you would have been if I had not passed my condition over to you for one short day." And I repeated again and again: "For one day; only for one day."

The most difficult part of the process was the mental operation of believing all this. If I did not believe it, of course, it would come to nothing. Fixing my mind steadfastly upon this subject, I believed with all my might. When I had believed for ten or fifteen minutes, I felt sure that my faith in the power of my mind was well grounded and fixed. A man who has truly believed for a quarter of an hour may be considered to have embraced a faith.

And now came the supreme moment, and when I arose would I be perfectly well and strong? The instant this question came into

my mind I dismissed it. I would have no doubt whatever on the subject. I would *know* that I would be what I willed I should be. With my mind and my teeth firmly set, I got out of bed, I walked boldly to the window, I moved about the room, I dressed myself. I made no experiments; I would scorn to do so. Experiments imply doubt. I believed. I went down several flights of stairs to my breakfast. I walked the whole length of the long *salle-à-manger*, and sat down at the table without having felt a twinge of pain or the least discomfort.

"Monsieur is better this morning," said the head-waiter, with a kindly smile.

"Better," said I; "I am well."

When I returned that evening after a day of intoxicating delight, during which I had climbed many a mountain path, had stood on bluffs and peaks, had gazed over lake and valley, and had breathed to the full the invigorating upper air, I stood upon the edge of the lake, just before reaching the hotel, and stretched forth my hands to the west.

"I thank you, Will Troy," I said, "from the bottom of my heart I thank you for this day; and if I ever see my way to repay you, I will do it, my boy. You may be sure of that."

I now resolved to quit this place instantly. I had been here too long; and before me was spread out in shadowy fascination the whole of Switzerland. I took a night-train for Berne, where I arrived early the next day. But before I descended from the railway carriage, where I had managed to slumber for part of the night, I had determinately willed an interchange of physical condition with another friend in America. During the previous day I had fully made up my mind that I should be false to myself and to my fortunes if I gave up this grand opportunity for study and artistic development, and I would call upon my friends to give me these precious holidays, of which, but a little while ago, I believed myself forever deprived. I belonged to a club of artists, most of whom were young and vigorous fellows, any one of whom would be glad to do me a service; and although I desired on special occasions to interchange with particular friends, I determined that during the rest of my holiday I would, for the most part, exchange physical conditions with these young men, giving a day to each.

The next week was a perfect success. As Martyn, Jeffries, Williams, Corbell, Field, Booker, and Graham, I walked, climbed, sketched, and, when nobody was near, shouted with delight. I took Williams for Sunday, because I knew he never sketched on that day, although he was not averse to the longest kind of rural ramble. I shall not detail my route.

The Bernese Oberland, the region of Lake Lucerne, the Engadine, and other earthly heavens opened their doors to my joyous anticipations, provided always that this system of physical exchange continued to work.

The Monday after Williams's Sunday I appropriated to a long tramp which should begin with a view of the sunrise from a mountain height, and which necessitated my starting in the morning before daylight. For such an excursion I needed all the strength and endurance of which I could possess myself, and I did not hesitate as to the exchange I should make for that long day's work. Chester Parkman was the man for me. Parkman was a fairly good artist, but the sphere in which he shone was that of the athlete. He was not very tall, but he was broad and well made, with a chest and muscles which to some of his friends appeared to be in an impertinent condition of perfect development. He was a handsome fellow, too, with his well-browned face, his fine white teeth, and his black hair and beard, which seemed to curl because the strength which they imbibed from him made it necessary to do something, and curling is all that hair can do. On some occasions it pleased me to think that when by the power of my will my physical incapacity was transferred for a time to a friend, I, in turn, found myself in his peculiar bodily condition, whatever it might be. And whether I was mistaken or not, and whether this phase of my borrowed condition was real or imaginary, it is certain that when I started out before dawn that Monday morning I strode away with vigorous Parkmanic legs, and inhaled the cool air into what seemed to be a deep Parkmanic chest. I took a guide that day, and when we returned, some time after nightfall, I could see that he was tired, and he admitted the fact; but as for me, I ate a good supper, and then walked a mile and a half to sketch a moonlight effect on a lake. I will here remark that, out of justice to Parkman, I rubbed myself down and polished myself off to the best of my knowledge and ability before I went to bed.

When, as usual, I awoke early the next morning, I lay for some time thinking. It had been my intention to spend that day in a boat on the lake, and I had decided to direct my will-power upon Tom Latham, a young collegian of my acquaintance. Tom was an enthusiastic oarsman, and could pull with such strength that if he were driving a horse he could almost haul the animal back into the vehicle, but if a stout boy were to be pushed off a horse-block Tom could not do it. Tom's unequally developed muscles were just what I wanted that day; but before I threw out my mind in his direction I let it

dwelt in pleasant recollection upon the glorious day I had had with Chester Parkman's corporeal attributes. Thinking of Chester, I began to think of some one else—one on whom my thoughts had rested with more pleasure and more pain than on any other person in the world. That this was a woman I need not say. She was young, she was an artist, and a very good friend of mine. For a long time I had yearned with all my heart to be able to say that she was more than this. But so far I could not say it. Since I had been in Europe I had told myself over and over that in coming away without telling Kate Balthis that I loved her I made the greatest mistake of my life. I had intended to do this, but opportunity had not offered. I should have made opportunity.

The reason that the thought of Chester Parkman made me think of Kate was the fact that they occupied studios in the same building, and that he was a great admirer not only of her work, but of herself. If it had not been for the existence of Parkman, I should not have blamed myself quite so much for not proposing to Kate before I left America. But I consoled myself by reflecting that the man was so intent upon the development of his lungs that his heart, to put it anatomically, was obliged to take a minor place in his consideration.

Thinking thus, a queer notion came into my head. Suppose that Kate were to bear my troubles for a day! What friend had I who would be more willing to serve me than she? And what friend from whom I would be more delighted to receive a favor? But the next instant the contemptibleness of this idea flashed across my mind, and I gritted my teeth as I thought what a despicable thing it would be to deprive that dear girl of her strength and activity, even for a day. It was true, as I honestly told myself, that it was the joy and charm of being beholden to her, and not the benefit to myself, that made me think of this thing. But it was despicable, all the same, and I utterly scouted it. And so, forgetting as far as possible that there was such a person in the world as Kate, I threw out my mind, as I originally intended, towards Tom Latham, the oarsman.

I spent that day on the lake. If I had been able to imagine that I could walk as far as Chester Parkman, I failed to bring myself to believe that I could row like young Latham. I got on well enough, but rowed no better than I had often done at home, and I was soon sorry that I had not brought a man with me to take the oars, of which I had tired.

Among those I called upon in the next few days was Professor Dynard, a man who

was not exactly a friend, but with whom I was very well acquainted. He was a scientific man, a writer of books, and an enthusiastic lover of nature. He was middle-aged and stooped a little, but his legs were long, and he was an unwearied walker. Towards the end of the very pleasant day which I owed to my acquaintance with him, I could not help smiling to find that I had thought so much of the professor during my rambles that I had unconsciously adopted the stoop of his shoulder and his ungainly but regular stride.

The half-starved man to whom food is given eats too much; the child, released from long hours of school, runs wild, and is apt to make himself objectionable; and I, rising from my condition of what I had considered hopeless inactivity to the fullest vigor of body and limb, began to perceive that I had walked too much and worked too little. The pleasure of being able to ramble and scramble wherever I pleased had made me forget that I was in Switzerland not only for enjoyment, but for improvement. Of course I had to walk and climb to find points of view, but the pleasure of getting to such places was so great that it overshadowed my interest in sitting down and going to work after I had reached them. The man who sketches as he walks and climbs is an extraordinary artist, and I was not such a one.

It was while I was in the picturesque regions of the Engadine that these reflections forced themselves upon me, and I determined to live less for mere enjoyment and more for earnest work. But not for a minute did I think of giving up my precious system of corporeal exchange. I had had enough of sitting in my room and sketching from the window. If I had consented to allow myself to relapse into my former condition, I feared that I would not be able to regain that firm belief in the power of my mental propulsion which had so far enabled my friends to serve me so well, with such brief inconvenience to themselves. No. I would continue to transfer my physical incapacity, but I would use more conscientiously and earnestly the opportunities which I thus obtained.

Soon after I came to this determination, I established myself at a little hotel on a mountain-side, where I decided to stay for a week or more and do some good hard work; I was surrounded by grand and beautiful scenery, and it was far better for my progress in art to stay here and do something substantial than to wander about in search of fresh delights. As an appropriate beginning to this industrious period, I made an exchange with my friend Bufford, one of the hardest-working painters I knew. His industry as well as his

genius had brought him, when he had barely reached middle life, to a high position in art, and it pleased me to think that I might find myself influenced by some of his mental characteristics as well as those of a physical nature. At any rate, I tried hard to think so, and I am not sure that I did not paint better on the Bufford day than on any other. If it had not been that I had positively determined that I would not impose my ailment upon any one of my friends for more than one day, I would have taken Bufford for a week.

There were a good many people staying at the hotel, and among them was a very pretty English girl, with whom I soon became acquainted; for she was an enthusiastic amateur artist, and was engaged in painting the same view at which I had chosen to work. Every morning she used to go some distance up the mountain-side, accompanied by her brother Dick, a tall, gawky boy of about eighteen, who was considered to be a suitable and sufficient escort, but who was in reality a very poor one, for no sooner was his sister comfortably seated at her work than he left her and rambled away for hours. If it had not been for me I think she would sometimes have been entirely too lonely and unprotected. Dick's appetite would generally bring him back in time to carry down her camp-chair and color-box when we returned to dinner; and as she never complained of his defections, I suppose her mother knew nothing about them. This lady was a very pleasant person, a little too heavy in body and a little too large in cap for my taste, but hearty and genial, and very anxious to know something about America, where her oldest son was established on a Texas ranch. She and her daughter and myself used to talk a good deal together in the evenings, and this intimacy made me feel quite justified in talking a good deal to the daughter in the mornings as we were working together on the mountain-side. The first thing that made me take an interest in this girl was the fact that she considered me her superior, and looked up to me. I could paint a great deal better than she could, and could inform her on a lot of points, and I was always glad to render her such service. She was a very pretty girl,—the prettiest English girl I ever saw,—with large, gray-blue eyes, which had a trustfulness about them which I liked very much. She evidently had a very good opinion of me as an artist, and paid as much earnest and thoughtful attention to what I said about her work as if she had really been the scholar and I the master. I tried not to bore her by too much technical conversation, and endeavored to make myself as agreeable a companion as I could. I found that fellowship of

some kind was very necessary to a man so far away from home, and so cut off from social influences.

Day after day we spent our mornings together, sketching and talking; and as for Dick, he was the most interesting brother I ever knew. He had a great desire to discover something hitherto unknown in the heights above our place of sketching. Finding that he could depend on me as a protector for his sister, he gave us very little of his company. Even when we were not together I could not help thinking a great deal about this charming girl. Our talks about her country had made me remember with pride the English blood that was in me, and revived the desire I had often felt to live for a time, at least, in rural England, that land of loveliness to the Anglo-Saxon mind. And London too! I had artist friends, Americans, who lived in London, and such were their opportunities, such the art atmosphere and society, that they expected to live there always. If a fellow really wished to succeed as an artist, some years' residence in England, with an occasional trip to the Continent, would be a great thing for him. And, in such a case — well, it was a mere idle thought. If I had been an engaged man, I would not have allowed myself even such idle thoughts. But I was not engaged; and alas! I thought with a sigh, I might never be. I thought of Parkman and of Kate, and how they must constantly see each other; and I remembered my stupid silence when leaving America. How could I tell what had happened since my departure? I did not like to think of all this, and tried to feel resigned. The world was very wide. There was that English brother, over on the Texas ranch; he might marry an American girl; and here was his sister — well, this was all the merest nonsense, and I would not admit to myself that I attached the slightest importance to these vague and fragmentary notions which floated through my mind. But the girl had most lovely, trustful eyes, and I felt that a sympathy had grown up between us which must not be rudely jarred.

We had finished our work at the old sketching-place, and we proposed on the morrow to go to a higher part of the mountain, and make some sketches of a more extended nature than we had yet tried. This excursion would require a good part of the day, but we would take along a luncheon for three, and no doubt nothing would please Dick better than such a trip. The mother agreed, if Dick could be made to promise that he would take his sister by the hand when he came to any steep places. But, alas! when that youngster was called upon to receive his injunctions, he

declared he could not accompany us. He had promised, he said, to go on a tramp with some of the other men, which would take him all day. And that, of course, put an end to our expedition. I shall not soon forget the air, charming to me, of evident sorrow and disappointment with which Beatrice told me this early in the evening. The next day was the only one for which such a trip could be planned, for, on the day following, two older sisters were expected, and then everything would be different. I, too, was very much grieved and disappointed, for I had expected a day of rare pleasure; but my regret was tempered by an intense satisfaction at perceiving how sorry she was. The few words she said on the subject touched me very much. She was such a true, honest-hearted girl that she could not conceal what she felt; and when we shook hands in bidding each other good-night, it was with more warmth than either of us had yet shown at the recurrence of this little ceremony. When I went to my room I said to myself: "If she had not been prevented from going, I should never have known how glad she would be to go." The thought pleased me greatly, but I had no time to dwell upon it, for in came Dick, who, with his hands in his pockets and his legs very wide apart, declared to me that he had found his sister was so cut up by not being able to make those sketches on the mountain the next day, that he had determined to go with us.

"It will be a beastly shame to disappoint her," he said; "so you can get your traps together, and we will have an early breakfast and start off."

"Now," said I, when he had shut the door behind him, "I know how much she wanted to go, and she is going! Could anything be better than this?"

In making the physical transfers which were necessary at this period for my enjoyment of an outdoor excursion, I did not always bring my mental force to work upon an exchange of condition. Very often I was willing to send out my ailment to another, and to content myself with being for the day what I would be in my ordinary health. But in particular instances, such as those of Parkman and Bufford, I willed—and persuaded myself that I had succeeded—that certain desirable attributes of my benefactor for the day, which would be useless to him during his period of enforced restfulness, should be attracted to myself. Before I went to sleep I determined that on the following day I would exchange with my brother Philip, and would make it as absolute an exchange as my will could bring about. Phil was not an athlete,

like Parkman, but he was a strong and vigorous fellow, with an immense deal of go in him. He was thoroughly good-natured, and I knew that he would be perfectly willing, if he could know all about it, to take a day's rest, and give me a day with Beatrice. And what a charming day that was to be! We did not know exactly where we were going, and we would have to explore. There would be steep places to climb, and it would not be Dick who would help his sister. We would have to rest, and we would rest together. There would be a delightful lunch under the shade of some rock. There would be long talks, and a charming coöperation in the selection of points of view and in work. Indeed, there was no knowing what might not come out of a day like that.

In the morning I made the transfer, and soon afterwards I arose. Before I was ready to go down-stairs I was surprised by an attack of headache, a thing very unusual with me. The pain increased so much that I was obliged to go back to bed. I soon found that I must give up the intended excursion, and I remained in bed all day. In the course of the afternoon, while I lay bemoaning my present misery as well as the loss of the great pleasure I had expected, a thought suddenly came into my mind, which, in spite of my miseries, made me burst out laughing. I remembered that my brother Phil, although enjoying, as a rule, the most vigorous good health, was subject to occasional attacks of sick headache, which usually laid him up for a day or two. Evidently I had struck him on one of his headache days. How relieved the old fellow must be to find his positive woe changed to a negative evil! It was very funny!

In the evening came Dick with a message from his mother and his sister Beatrice, who wanted to know how I felt by this time, and if I would have a cup of tea, or anything. "It's a beastly shame," said he, "that you got yourself knocked up in this way."

"Yes," said I, "but my misfortune is your good fortune, for, of course, you had your tramp with your friends."

"Oh, I should have had that any way," replied the good youth, "for I only intended to walk a mile or two up the mountain, just to satisfy the old lady, and then, without saying whether I was coming back or not, I intended to slip off and join the other fellows. Wouldn't that have been a jolly plan? Beatrice would have had her day, and I would have had mine. But *you* must go and upset her part of it."

When Dick had gone I reflected. What a day this would have been! Alone so long with Beatrice among those grand old moun-

tains! As I continued to think of this I began to tremble, and the more I thought the more I trembled; and the reason I trembled was the conviction that if I had spent that day with her, I certainly should have proposed to her.

"Phil," I said, "I thank you. I thank you more for your headache than for anything else any other fellow could give me."

A sick headache, aided by conscience, can work a great change in a man. My soul condemned me for having come so near being a very false lover, and my mind congratulated me upon having the miss made for me, for I never would have been strong enough to make it for myself.

The next day the sisters arrived, and I saw but little of Beatrice, for which, although quite sorry, I was also very glad; and after a day on the mountain which I owed to Horace Bartlett, the last man in our club on whom I felt I could draw, I returned to the hotel, and wrote a long letter to Kate. I had informed my friends in America of the ailment which had so frustrated all my plans of work and enjoyment, but I had never written anything in regard to my novel scheme of relief. This was something which could be better explained by word of mouth when I returned. And, besides, I did not wish to say anything about it until the month of proposed physical transfers had expired. I wrote to Kate, however, that I was now able to walk and climb as much as I pleased, and in my repentant exuberance I hinted at a great many points which, although I knew she could not understand them, would excite her curiosity and interest in the remarkable story I would tell her when I returned. I tried to intimate, in the most guarded way, much that I intended to say to her when I saw her concerning my series of deliverances; and my satisfaction at having escaped a great temptation gave a kindly earnestness to my

manner of expressing myself, which otherwise it might not have had.

There were now six days of my Swiss holiday left; and during these I threw myself upon the involuntary kindness of Mr. Henry Brinton, editor of a periodical entitled "Our Mother Earth," and upon that of his five assistants in the publishing and editorial departments. Brinton was a good fellow, devoted to scientific agriculture and the growing of small fruits; a man of a most practical mind. I knew him and his associates very well, and had no hesitation in calling upon them.

At the end of the month, as I had previously resolved, I brought my course of physical transfers to a close; and it was with no little anxiety that I arose one morning from my bed with my mind determined to bear in my own proper person all the ills of which I was possessed.

I walked across the room. It may appear strange, but I must admit that it was with a feeling of satisfaction that I felt a twinge. It was but a little twinge, but yet I felt it, and this was something that had not happened to me for a month.

"It was not fancy then," I said to myself, "that gave me this precious relief, this month of rare delight and profit; it was the operation of the outstretching power of the mind. I owe you much happiness, you little man with the big head whom I met in the Kursaal, and if you were here I would make you admit that I can truly believe in myself."

The next day I was better, with only an occasional touch of the old disorder; and in a few days I was free from it altogether, and could walk as well as ever I could in my life.

I returned to America strong and agile, and with a portfolio full of suggestive sketches. One of these was the back hair and part of the side face of a girl who was engaged in sketching in a mountainous region. But this I tore up on the voyage.

(To be concluded.)

Frank R. Stockton.

CAMPION.

I PLACED a scarlet campion flower
In the wreathed tresses of my head.
"No damosel in hall or bower
Is fairer than my love," he said.

Years after, in a folded book,
I found a withered campion flower,
And paled with that swift backward look
That ghost-seers have at twilight hour.

O withered heart, O love long dead!
"Poor faded flower that shone so fair,
Well suits thy phantom bloom," I said,
"With the white tresses of my hair."

Alice Williams Brotherton.

HEBE.

SEE, what a beauty! Half-shut eyes,—
Hide all buff, and without a break
To the tail's brown tuft that mostly lies
So quiet one thinks her scarce awake;
But pass too near, one step too free,
You find her slumber a devil's truce:
Up comes that paw,—all plush, you see,—
Out four claws, fit for Satan's use.

'Ware! Just a sleeve's breadth closer then,
And your last appearance on any stage!
Loll, if you like, by Daniel's Den,
But clear and away from Hebe's cage:—
That's Hebe! listen to that purr,
Rumbling as from the ground below:
Strange, when the ring begins to stir,
The fleshings always vex her so.

You think 'twere a rougher task by far
To tame her mate with the sooty mane?
A splendid bronze for a showman's car,
And quiet enough for bit and rein.
But Hebe is—just like all her sex—
Not good, then bad,—be sure of that:
In either case 'twould a sage perplex
To make them out, both woman and cat.

A curious record, Hebe's. Reared
 In Italy; age,—that's hard to fix;
 Trained from a cub, until she feared
 The lash, and learned her round of tricks;
 Always a traveler,—one of two
 A woman-tamer took in hand,
 Whipped them, coaxed them,—and so they grew
 To fawn or cower at her command.

None but Florina—that was her name
 And this the story of Hebe here—
 Entered their cage; the brutes were tame
 As kittens, though, their mistress near.
 A tall, proud wench as ever was seen,
 Supple and handsome, full of grace:
 The world would bow to a real queen
 That had Florina's form and face.

Her lover—for one she had, of course—
 Was Marco, acrobat, circus-star,
 The lightest foot on a running horse,
 The surest leap from a swinging bar;
 And she,—so jealous he dared not touch
 A woman's hand, and, truth to say,
 He had no humor to tease her much
 Till a girl in spangles crossed their way.

'Twas at Marseilles, the final scene:
 This pretty rider joined the ring,
 Ma'am'selle Céleste or Victorine,
 And captured him under Florina's wing.
 They hid their meetings, but when, you see,
 Doubt holds the candle, love will show,
 And in love's division the one of three,
 Whose share is lessened, needs must know.

One night, then, after the throng outpoured
 From the show, and the lions my Lady's power
 Had been made to feel, with lash that scored
 And eye that cowed them, a snarling hour;—
 (They were just in the mood for pleasantry
 Of those holidays when saints were thrown
 To beasts, and the Romans, entrance-free,
 Clapped hands;)—that night, as she stood alone,

Florina, Queen of the Lions, called
 Sir Marco toward her, while her hand
 Still touched the spring of a door that walled
 Her subjects safe within Lion-land.
 He came there panting, hot from the ring,
 So brave a figure that one might know
 Among all his tribe he must be king,—
 If in some wild tract you met him so.

“Do you love me still,” she asked, “as when
 You swore it first?” “Have never a doubt!”
 “But I have a fancy—men are men,
 And one whim drives another out,—”

"What fancy? Is this all? Have done:
You tire me." "Look you, Marco! oh,
I should die, if another woman won
Your love,—but would kill you first, you know!"

"Kill me? and how,—with a jealous tongue?"
"Thus!" quoth Florina, and slipped the bolt
Of the cage's door, and headlong flung
Sir Marco, ere he could breathe, the dolt!
Plump on the lion he bounced, and fell
Beyond, and Hebe leapt for him there,—
No need for their lady's voice to tell
The work in hand for that ready pair.

They say one wouldn't have cared to see
The group commingled, man and beast,
Or to hear the shrieks and roars,—all three,—
One red, the feasters and the feast!
Guns, pistols, blazed, till the lion sprawled,
Shot dead, but Hebe held to her prey
And drank his blood, while keepers bawled
And their hot irons made yon scars that day.

But the woman? True, I had forgot:
She never flinched at the havoc made,
Nor gave one cry, but there on the spot
Drove to the heart her poniard-blade,
Straight, like a man, and fell, nor stirred
Again;—so that fine pair were dead;
One lied, and the other kept her word,—
And death pays debts, when all is said.

So they hustled Hebe out of France,
To Spain, or may be to England first.
Then hitherward over seas, by chance,
She came as you see her, always athirst,—
As if, like the tigresses that slink
In the village canes of Hindostan,
Of one rare draught she loves to think,
And ever to get it must plan and plan.

THE APPLETON HOUSE, 54 BEACON STREET, BOSTON.

RECENT ARCHITECTURE IN AMERICA. V.

CITY DWELLINGS.

THE days are long since past when the temple or cathedral, the royal palace, the feudal castle, or the civic hall overshadowed the homes of men as the oak-tree overshadows the grasses of the field. The progress of modern civilization has meant the growing importance of the average individual, and this can nowhere more clearly be traced than in the history of architecture. It is true that even in our republican land the average does not mean the noblest, either among men or buildings. But it means that which is *collectively* most prominent. The general effect of a modern town depends less upon its monumental structures than upon the aggregate of its dwellings, humble in comparison though these individually may be. So there is no architectural branch in which success is more desirable than in the domestic branch. And there is none, perhaps, where it is so difficult of attainment. For here success can mean only a very *general* success—must mean that a hundred artists are working together without discord, and a thousand patrons are harmoniously minded.

It may seem at first sight an earnest of success that this branch should be more universally interesting than any other; that while the majority of men feel no responsibility for monumental undertakings, and care

so little for art as to be indifferent even in face of their results, every man has a home or hopes to have one; and that—if not for the love of art, then for some other equally potent though less admirable reason—he will wish his home to present a beautiful appearance. But, we must remember, almost all men think that here at least they are entitled to suggest how beauty should be wrought; and amateur ideas are apt to be all the more obstinate when very vague, all the more decided when very ignorant. And this will lead us to suspect that popular interest may, in fact, have tended to retard, not hasten, progress. And it will convince us, too, that in this branch especially we must be careful not to identify the architect too closely with his architecture, lest we should impute to him alone transgressions for which his patron has been in great part responsible.

It is not necessary for me to speak of the older domestic building of New York—Mr. White has described it so sympathetically in these same pages.* I will but pick up the story's thread where he let it drop,—in the neighborhood of Washington Square, and of the year 1840,—premising that I cannot hope in the strict sense to complete the tale of so delightful an historian.

More than fifty years ago the old Dutch

* See CENTURY MAGAZINE for October, 1883.

influence had ceased to reign alone. English examples had been widely followed, though never so as to subordinate those of New York's true mother-country. For example, prototypes of the "Colonnade" on Lafayette Place are to be found in London squares and "crescents," and English inspiration

frequent in our newer Western towns as is the high-stoop pattern.

In the neighborhood of Fourteenth street we come upon work of a later day, of that which as yet must be called our most characteristic epoch — work which was soon to give our city an individual aspect that it has not

THE SOMERSET CLUB, BEACON STREET, BOSTON.

shows in those houses on the lower part of Fifth Avenue which by courtesy we call Gothic. But the most conspicuous importation from Britain was the house New Yorkers call the "English basement" — the house which has its entrance at the level of the street and its drawing-rooms upstairs, as distinguished from the Dutch type with its "high stoop" giving immediate access to the chief apartments. We have since built basement-houses in not inconsiderable numbers, but they have never been really popular in New York, and the demand for them seems to be waning now. Nor are they nearly as

wholly lost even in its newest portions. The "brown-stone front" was as barren of true architectural ideas as the older brick box, but it sought stateliness by the aid of pedimented windows, of columned porticoes, and of heavy overhanging cornices of — zinc. It is "a poor thing, but mine own," a style — or, much more properly, a *pattern* — that we did not borrow ready-made, but formed by retaining the Dutch high-stoop, joining it to a provincial translation of Italian Renaissance ornament, and executing the result in a local material. The type has spread far and wide — is visible even at the Golden Gate. But *we* are respon-

sible for its every appearance, and he is no true-souled New Yorker who does not feel a homesick thrill whenever in his Western travels he meets its ugly, stupid, but familiar face. Even if the pattern had been better, we could hardly have made a beautiful street with the material we chose. We once admired our brown-stone very heartily; it became, indeed, an almost proverbial synonym for all that is desirable and elegant. But it is nevertheless one of the most unfortunate substances that ever went by the honorable name of stone — cold and unattractive in color, and too poor in substance to receive carving well, or to stand well though not carved at all. It does not take time and get

tious nullity they have often the merit of a comfortable spaciousness; — not until the real-estate speculator began to raven in our midst, not until his ally, the cheap-building contractor, began to follow Mr. Thomas's lead, did we see the worst to which the type could be reduced. It is impossible to exaggerate the faults of our speculative building, or the degree to which they have contaminated building that is not, or that ought not to be, speculative in character; — the poverty of its materials, the flimsiness of its construction, the passive stupidity of its planning, the hideous vulgarity of its details; its neglect of architectural essentials and distortion of architectural desirabilities. There is only one civilized habitation worse than these narrow New York dwellings, and that is the house we often find in fashionable London districts which has but

WINDOW AND TOWER OF MR. W. K. VANDERBILT'S HOUSE, FIFTH AVENUE AND FIFTY-SECOND STREET, NEW YORK.

decently weather-worn; it simply cracks and splits and scales to pieces.*

Mr. Griffith Thomas was the most conspicuous among those who established this "New York vernacular." The brown-stone fronts he built are innumerable, and one scarcely differs from the other. But in spite of their preten-

one room on a floor, and out of that room a great corner cut to make place for the stairway. And there is, I may add, at least one material worse than our poorest brick or stone — the wretched kind of stucco that has been so generally used in London.

The old domestic architecture of Boston

* See, for instance, the stoop of the Manhattan Club-house on the south-west corner of Fifth Avenue and Fifteenth street. No stone worthy of the name should look like this — not though it had stood three hundred years instead of thirty.

and its neighborhood naturally followed English models. Very attractive are its relics—even more worthy, I think, of such a commentator as Mr. White than the old homes of New York. A good local feature was the bowed front, which gave a pleasant room within and supplied variety to the unornamented façade. A good example of such a Boston exterior is to be seen in our illustration of the Appleton house on Beacon street; a still better one in that of the Somerset Club near by. This is finer, not only because a beautiful light-colored granite has been used, but because the proportions are more agreeable, and dignity is increased by its elevation above the street level. There is no better house than this in Boston, and it is peculiarly instructive as showing how beauty may result from almost unornamented construction. It is not an old house, either, but an exceptional example, dating from only some thirty years ago. It was built for a private residence, and, I believe, by a Frenchman, who must have been liberally minded, since he was inspired to work with variations after the good old local type rather than to import the manner of his own land.

In our dark ages Boston never did quite such dreadful things as New York. Or, at least, it never did so many of them—doubtless because it was not the scene of so much speculative work. Yet the Bostonians were pretty stupid too at times, as when they degraded their bowed front into a cramped angular bay, and repeated it along rows of narrow houses, thus producing an effect as of corrugated iron on a large scale.

English parentage is, of course, apparent in Philadelphia too. The basement house is again the rule, though when small it is differently disposed inside. The New York high-stoop has been generally preferred in Washington, where, except in the suburbs, we find no houses that can be called old even in the limited American sense. Nothing could be more comfortable-looking than a few of the larger homes near Lafayette Square, nothing more ugly or mean than many streets where the ubiquity of the boarding-house seems only too well expressed.

Let us now look at some of our most recent dwellings, giving the first word to New York.

When our conventional pattern was broken in upon some fifteen years ago,—when we first began to look about for more varied materials, to try sometimes for at least partial isolation, and to remember that there were other available fashions besides the “vernacular,”—what was the immediate result? It was an increase of display, but not always an improvement in art. Indeed, we felt very

often that art must have been left entirely out of the calculation. We felt inclined to apply a quotation from the genial old chronicle of “Tom Jones,” which speaks of the buildings “with which some unknown hand hath adorned the rich clothing town, *where heaps of brick are piled up to show that heaps of money have been piled up before.*” The sin is, we see, no novel one; but it is a sin to blush for all the same. That is, unless its iniquity be purged by art in the result. In every land and in every age the love of display—the delight in spending money and in *proving* its expenditure—has been perhaps the mightiest motive force toward architectural creation. But the fact is masked, condoned, forgotten,—nay, approved,—when it is artistically expressed. Fortunately we too may already count dwellings not a few where evident costliness is amply justified by beauty.

The great marble house on the north-west corner of Fifth Avenue and Thirty-fourth

HOUSE OF MRS. CHARLES KNEELAND, 6 EAST FIFTY-FIFTH STREET.

MR. W. K. VANDERBILT'S HOUSE, FIFTY-SECOND STREET AND FIFTH AVENUE.

street was one of our earliest attempts at novelty, and in ambition it has certainly not since been surpassed. But it was not really a new departure—it was merely an effort to glorify the “vernacular” by increase of size, by isolation, and by change of material. In the last-named respect the effort was commendable. Under our bright sky and with our sootless atmosphere, white stone is very well in place and might much more often be employed. But not in just this fashion. For

here we have no good proportioning and no skillful composition either with masses or with features. Beauty has been sought only in the applied columnar decoration, and this is not architecturally valuable because it has been used without moderation, without care for contrast or relief or structural subordination, and without artistic knowledge in design or artistic grace in execution. We can only call it a very showy house, and add that to some eyes it may seem imposing—may seem to

MR. TIFFANY'S HOUSE, MADISON AVENUE AND SEVENTY-SECOND STREET.

deserve the epithet "palatial," which epithet, I imagine, it was the first New York home to suggest to the reportorial pen.

But a little later we really did begin to build in more unfamiliar ways. "Queen Anne," for instance, became very popular. It has wrought some not unpleasing results, but has often been conspicuously misconceived and misapplied — as, for example, in the Union League Club-house, on the corner of Fifth Avenue and Fortieth street. Picturesqueness seems to have been the chief desire, and picturesqueness was an unworthy aim in a building of this size, in this position,

and devoted to this purpose. If it had really been secured, however, we should not grumble greatly. But we find instead a restlessness, a want of unity, an unmotivated variety, which strike us as irrational, and which are peculiarly unfortunate with features so large in scale. The great roof is simple and imposing, but the rest of the work cannot be said — either in general effect or in detail — to satisfy the mind or to please the eye. Is it a better building than, for instance, the Union Club at the corner of Twenty-first street, which is a good example of the "vernacular"? Hardly, I think, except as a sign of

MR. J. COLEMAN DRAYTON'S HOUSE.

effort, a sign of commendable discontent with the old *régime*.

Pass now a little farther up the avenue, and we shall see the famous twin Vanderbilt

houses, where we have brown-stone again, though not of the old poor quality, and used in a very different manner. They are not ostentatious or vulgar or distressingly ugly houses, but neither are they really good or beautiful. In their quieter way they are great architectural sinners too. Stripped of their carving, they would be, as I have heard it expressed, merely "brown-stone packing-boxes." And their carving does not help them save to a superficial eye. We know that decoration is not *architectural* decoration unless it emphasizes construction. I may add that it is not architectural decoration unless it is *itself constructed*. Here neither requirement is fulfilled. The carving — one must not call it by any nobler name — is applied in just those places where it does not belong, and where it hurts, not helps, the structural expression. And it is not itself in any sense constructed. It consists simply of broad bands (of naturalistic foliage for the most part) which have no beginnings or endings, no moldings or framings, nothing to prove that they were designed for the rôle which they attempt, much less for the places that they fill. Their relief, moreover, is so low and uniform that they suffer doubly from want of proper setting, and utterly fail to perform not only the first purpose of ornament, structural emphasis, but the second

ENTRANCE TO MR. J. COLEMAN DRAYTON'S HOUSE.

also, the creation of effects of light and shadow. Abstractly considered, the carving is pretty enough in design and quite charming in execution; but in both respects it is carving such as a cabinet-maker might use in wood, not such as an architect should use in stone. And, I repeat, it is displayed for its own sake only. It is an interesting testimony to the fact that these dwellings were built, in truth, not by an architect, but by a clever decorator of interiors.

On the corner above we see another Vanderbilt house, built of light gray limestone,

the roof. We may feel, again, that since it is a city house its ornamentation is rather too profuse and delicate. But it is so skillfully applied and so charmingly executed, is so *architectural* in spite of its delicacy, that we have not the heart to wish it altered. Indeed, I think we may greatly rejoice in this sumptuous accumulation of beauty; for, while it is necessary that the virtues and possibilities of simplicity should be preached, it is well to be reminded occasionally that they are not the only virtues or the finest possibilities. It is well that we should see that the richest

ENTRANCE TO MR. R. FULTON CUTTING'S HOUSE, 724 FIFTH AVENUE.

which is a house and not a carven chest. I think, too, that it is the most beautiful house in New York. Mr. Hunt has long stood at the head of his profession in America, his preëminence acknowledged not only by ourselves, but by the Frenchmen who elected him one of the seven foreign members of their Academy. So long had we known his learning, his taste, and his ability, that it was an oft-mentioned subject of regret that he should have found no favorable opportunity to show what his idea of a city home would be. So we are all the more thankful that it should have come to him at last. We may pick little faults in his building if we will. We may say — and the more we admire it the more apt we are to say, I think — that it would be better as a country than as a city house. We may think, too, that it has an overabundance of features; yet unity of effect has not been sacrificed to them — unless, perhaps, in the treatment of

elaboration need not be ostentatious, much less vulgar; that lavish art may be as refined as modest art; that excess means *wrong* work, not always *much* work. I am sure the most captious critic cannot deny that Mr. Hunt has carried out a very ambitious and elaborate design in a very successful way — in a way that is marvelously successful considering what the level of our art has been. If we examine his decoration closely, moreover, we shall see how great an improvement we have made in manual skill. What would have been the use had Mr. Hunt designed such work even a dozen years ago? Can we think with tolerance of how it would then have been translated into stone?

There are many large houses a little farther up the avenue which have the advantage of comparative isolation, or at least of a corner site. Where all are very ambitious, it is much to say that some — not all — are good; as,

HOUSE OF MR. R. FULTON CUTTING, 724 FIFTH AVENUE.

for instance, the one that Mr. Harney has built on the south-west corner of Fifty-seventh street. The old brown-stone front is prominent still in less conspicuous residences, but "Queen Anne" and French Renaissance fashions crowd it close.

Two houses of brick and stone on the lower corner of Fifth Avenue and Sixty-third street seem to me to merit mention, as does also Messrs. McKim, Mead and White's light-brick house near Seventy-fifth street, which, with its doubly bowed front, recalls the old Boston type. And then, if we turn into Madison Avenue, we shall see on the corner of Seventy-second street another and a very different work by the same hands.

It is a huge house extending a hundred feet on either street and holding three homes, which are disposed neither in flats nor in ver-

tical sections, but which (being intended for members of the same family) share the various floors between them in a more irregular way. Below, the structure is of rock-faced blue-stone, and is pierced with a broad, low archway leading to an interior court; above, we find the beautiful and novel brick-work to which I have already referred in an earlier chapter, harmonizing well with the ruggedly treated basement; and the great steep roof is of very dark-toned tiles. There is scarcely anything that can be called detail, the windows being simply framed in molded brick, and the stone being quite innocent of the chisel. I need not enumerate the various features upon which the effect wholly depends, for they are at least suggested in the illustration. I will only call attention to the design of the upper portion of the main front, where one side balances the other sufficiently well to secure harmony and avoid restlessness, but where, nevertheless, there is enough variation to obviate monotony and produce an allowable, desirable, moderate degree of picturesqueness; and add that if we examine the dif-

ferent features with the key afforded by interior necessity, we find them dictated by common sense, and not by fantasy. For example, the whole upper floor immediately beneath the roof is an enormous studio; and this explains not only the prominence of the roof itself, but also the great dormer with its many lights, which might seem "willful" did they illuminate an attic merely. In color I think the building very successful — alike in the blue and brown tones of its stone, in the yellow and brown gradations of its brick-work, in the rich duskiness of its tiling, and in the harmonious way these all work in together. Nor must we fail to mark how very quiet the color is, for it is well to know that architectural color worthy of the name may be attained without vivid tints or pronounced oppositions.

To me this is a very beautiful house as well

as a very good one. But I know there are many eyes which, while acknowledging its excellence as a piece of construction and an architectural design (as to this there can hardly be serious question), find it too uncompromisingly massive, too grave and somber, too forbidding, almost, to fit in with the idea of what is beautiful in domestic building. I can but reiterate that I myself do not feel thus about it, and then explain why, whether it be very beautiful or not, it seems to me the most interesting and most promising house we have yet constructed—more interesting even and much more promising than Mr. Hunt's indisputably beautiful French château. This is because when we come into its presence we do not for a moment think of asking what "style" it follows, or care a whit whether it follows none or draws inspirations from a dozen. Style it has—that style which means harmony of proportions, accord of features, unity of effect; which means that the artist has had a definite, homogeneous conception to express, and has expressed it clearly, coherently, and in each and every proportion, form, and detail. But it is a style of its own—one which must be judged by intrinsic standards, and not by reference to bygone fashions and antiquarian dogmas. For this reason I believe it must have a good influence upon our art; not as inciting to direct imitation,—that would perhaps be a dangerous essay,—but as showing that it is possible to be "original" without being fantastic or unscholarly (no work is unscholarly which is perfectly coherent and harmonious), and to build admirably without a particle of ornamentation. Nothing could be more instructive than to compare (or, rather, to *contrast*) the two finest houses New York has yet to show—this house and Mr. Hunt's. They prove how wide are the limits that bound architectural excellence even in the one branch of city domestic work; how foolish it is to try and fetter effort with narrow artistic creeds, with rigid dogmas as to style and treatment and amount of decoration. Each is an admirable house in its own way—I am almost afraid to say how admirable in my eyes when judged by the standard of current performance even in its better phases, and even in Europe as well as here. Yet no two houses could well be more unlike in idea; in material, in treatment, or in degree of ornamentation.

Continue down Madison Avenue now, and at the corner of Sixty-seventh street we shall find three houses built by Mr. Hunt—again in a rich and charming French transitional style. Here, too, we see the *artist*, and in work that has much beauty. Yet certain parts of it are, I think, inferior to the rest. The

Madison Avenue side contents us thoroughly as a piece of composition, the Sixty-seventh street side less entirely; and the corner, which should have been the strongest, is the weakest portion of the whole.

Farther on, just back of the cathedral, we find Messrs. McKim, Mead and White once more. The whole block is occupied by four houses treated as a single composition. In happy variation on our usual arrangement, the central ones are thrown far back, giving space for a turfed court with a fountain in the middle, while the others form projecting wings on either hand. The southerly wing contains Mr. Villard's house, so justly famed for its interior beauty. The external treatment is throughout very simple, after an Italian Renaissance fashion which wins a local flavor from the use of "brown-stone,"—better, however, than the average, both in quality and in color. The broad plain walls and regularly spaced and delicately ornamented windows are enlivened by the introduction of a *loggia* in the central portion, and are *composed*, moreover, by intelligent proportioning. The effect is very quiet, a little cold, perhaps a little tame; but it is extremely refined, and affords an interesting contrast to the effect of those "vernacular" examples whose inspiration was drawn from similar sources. Perhaps a careless eye will not see at first all the difference between the two; but it is there, both in structure and in decoration,—all the difference that marks off art from no art. As in their great house just described, so here as well, though in a very different language, these artists seem to be protesting against frivolity, tawdriness, unrest, and ostentation.

These have all been exceptional houses as to situation, or, at least, as to size. Individually they are, of course, more interesting than their humbler neighbors. But collectively considered, our average homes are the most important and should be most carefully studied. If *they* cannot be made good, then our city will never really be redeemed from the reproach of its ugly monotony.

The old average house is an unsuccessful thing indeed. In fact, it is not a *thing* at all, for a thing, at least in architecture, means an organism, and this house is merely a mechanical accumulation of spaces and openings, unbeautiful in themselves and uncombined with one another. For too long a time we apathetically excused it as the result of unalterable and unfortunate conditions. What could we do with a façade that was sixty feet or more in height and but twenty-five feet—as often, indeed, but twenty or even less—in width? We might have answered *much* if we had cared to use, not even our imagination,

but our memory merely. For the same problem had been at least agreeably treated in almost every foreign town. The "obelisque style" of house, as Balzac calls it, was characteristic of the old Paris that he loved. It was very lofty, often only three windows in width, and commonly built of but humble materials. Yet it was an organic structure and a picturesque. It was not a lifeless screen like ours. And similar houses in countless European streets have such charming fronts that they find illustration in every architectural hand-book.

Nor was another familiar complaint any more reasonable than this. It was very untrue that we could not light our houses better and yet give sufficient solidity of effect. I think the open, late-gothic façades of Venice look strong enough; and I know of many an old German house-front which is almost all windows, yet which looks delightfully secure,—as, for instance, the beautiful Leibnitz house in Hanover, pictured in Lübke's "History of Architecture."*

It has often been said, again, that New York building was bad chiefly because it showed no roofs. Surely there has often enough been good street architecture without visible roofs, and surely there is no possible reason why we might not have had as many roofs and gables and dormers and chimneys as heart could wish. They already exist to-day on most of the large houses I have named, and we find them modestly apparent in the three narrower façades that are among our illustrations.

I have heard Mr. Haight's basement house on East Fifty-fifth street described as "Queen Anne." If the reader cares to see how widely

things may differ that are called by this one name, he has only to contrast it with a group of four houses—*not* by Mr. Haight—at Fifth Avenue and Sixty-seventh street. These were built at the same time and by the same hands, yet each is as different as possible from its neighbors, and each is as distressingly fantastic as a house well could be.

Messrs. McKim, Mead and White's two houses on Fifth Avenue show varying adaptations of a delicate early Renaissance style that has refinement as its very essence. These three dwellings, together with others not a few, prove that composition *is* possible even with our average proportions. They prove, too, that composition does not mean a multitude of features—an idea that has too often found expression since we began to have ideas at all. There are scores and scores of houses in our up-town streets which have tried to be more "architectural" than the brown-stone front, but which show almost less of definite conception on their designers' part and visibly less of unity in their results—which are mere medleys of as many alien "things" as could be crowded into the given surface. There are but few "things" in our illustrated examples, but these few express structure and are combined with one another. Neither of them, perhaps, can we call quite perfect; yet we should be glad enough if all our houses were as good. And we should hardly complain if none of them were less attractive than a still simpler work of Messrs. McKim, Mead and White's—the Mercantile Library office on Fifth Avenue near Thirty-eighth street.

* I may note in passing the house fronts of Dantzic, which have been illustrated in various publications, and which might furnish our architects with peculiarly helpful suggestions. They are wonderfully varied and

charming, and they are lofty, narrow, and almost made up of windows. And, moreover, they reveal the Dutch high stoop, modified in the most sensible and attractive ways.

M. G. van Rensselaer.

FOR OTHERS.

WEeping for another's woe,
Tears flow then that would not flow
When our sorrow was our own,
And the deadly, stiffening blow
Was upon our own heart given
In the moments that have flown!

Cringing at another's cry
In the hollow world of grief,
Still the anguish of our pain
For the fate that made us die
To our hopes as sweet as vain;
And our tears can flow again!

One storm blows the night this way,
But another brings the day.

Rose Hawthorne Lathrop.

JOHN BODEWIN'S TESTIMONY.

BY MARY HALLOCK FOOTE,

Author of "The Led-Horse Claim," "Friend Barton's Concern," etc.

XV.

CIRCUMSTANTIAL EVIDENCE.

EARLY on the morning after Bodewin's disappearance a telegram from Mr. Craig was received at the mine, asking news of Bodewin. Two men had already set out from the camp to search the trail for signs which might lead to some conclusion as to what had become of him. None were found, nor was there evidence of any kind indicating a struggle by the wayside. Various theories were advanced as to Bodewin's fate, but the general opinion in the camp, in view of his known reluctance to appear on the trial, was what he himself had expected it would be. The pistol-mark on Baldy's hip was pronounced, by experts in such matters, the work of a hand that had been careful not to aim too well — probably the hand of Baldy's master. If Bodewin had been stopped on the road by persons who had reasons for not wishing their business with him to be known, they would never have allowed his horse to escape, especially with that mark upon him. So said the men of experience. That any such persons would have allowed the horse to get beyond range of a dead-sure shot was too wild an improbability altogether. Bodewin, no doubt, was hiding out until after the trial, and had sent Baldy home with a blood-stain on him to lead conjecture astray.

In these days Josephine felt strongly drawn towards Hillbury. She saw him frequently, but he never spoke to her of Bodewin, even when the latter's disappearance was the one topic in the camp, and she believed that his silence, like her own, covered a heart-ache to which words could give no relief. Hillbury was no less drawn towards Josephine. She was more beautiful than ever, he thought. She had the look of one who was suffering. He would have been glad to believe it was not for Bodewin's sake — from no reason personal to himself, — so he assured himself, — but from a lamentable suspicion, that cut him very deep on the score of friendship, that Bodewin was unworthy. Hillbury was not yet willing to believe him so, but the doubt was in itself a trouble. It was also a responsibility, for while

he harbored it he felt like a traitor to his friend; yet he could not free himself from it.

A few days before Bodewin took his ride up the pass, Hillbury had made a second search for the mysterious cabin. He had found it, and there began his sadness. He had come upon it as unexpectedly as if it had sprung up out of the earth. Some accident of the location had the curious effect to render it invisible from any point of view that was not very near. There had been no one at home, or so Hillbury had supposed. Finding himself out of matches and in urgent want of a smoke, he pushed open the door, after the unceremonious fashion of the region, and looked about within for what he required. He had expected to find a match or two without any trouble, then quietly to go his ways and pass on his obligation to some other needy wayfarer. But the matches were not in any of the usual places. He found them at last in an Indian basket of braided grasses, made in the shape of half a hollow sphere, that rocked when he touched it, on the corner of a high wooden shelf. Poking about in it for a match with a buckskin glove on, he upset it and spilled its contents on the floor, — sewing materials, a woman's thimble, the matches, an imperfect pack of cards, one of them cut as for the measure of a hem or tuck, and — a photograph of John Bodewin! An old and faded picture of him in his cavalry uniform, slim in figure, with the boyish face fixed in that slightly exaggerated look of determination which characterized the pictures of our young volunteers. The mustache was faintly perceptible, the hair a little longer than Bodewin's present cut, but it was Bodewin, without the shadow of a doubt. Hillbury was touched at seeing the face of his friend as he had known it fifteen years before; it sobered him with a rush of recollections; and then came the cold conjecture, how should it be there — in the cabin which Bodewin had declared was purely of Craig's invention? Hillbury hated mysteries. He wished his friends' lives to be, like his own, in no need of explanation or defense. Here was something to be accounted for. While he stood musing, with the picture in his hand, the outer door of the cabin was pushed open, and a girl, bareheaded, carrying an apronful of pine chips, entered the

room. Hillbury was not as surprised to see her as she evidently was to see him. He had recognized her at once as the girl of Craig's adventure. He apologized for his intrusion. The girl had let fall her apron-load on the hearth, and stood as if waiting for him to take his departure. Her beauty corresponded to Craig's description better than her *manner*. That "sweet, stolid way" he had spoken of was not conspicuous to Hillbury's notice. At that moment, certainly, she looked neither sweet nor stolid, but rather keenly and resentfully observant of her visitor. There was in Hillbury's manner a certain superiority, as a matter of course, which his equals admitted and even liked, if he happened to like them, but which his inferiors, socially speaking, were apt to find as uncompanionable as a "no trespass" on a signboard. Hillbury appreciated the girl's beauty, in the abstract, as he would have appreciated the beauty of a perfect crystal; as a woman she had no existence for him, and, as a woman, she instantly felt it.

"Pardon me," said Hillbury, suddenly aware that he was still holding the photograph. "Is this a picture of a friend of yours?"

"No," said the girl,—she seemed to hesitate, and then added,—"not to say a friend."

Hillbury could not help seeing that she was blushing, and that some excitement made her breath come deep and short. It might be anger, but it did not look like it.

"Is it—pardon me again—a friend of your father's?" The girl did not reply, and Hillbury added: "I take the liberty of asking because it is a picture of a friend of mine, and I cannot help being surprised to find it here."

Hillbury could not help laying a slight emphasis on the last word. The girl's color deepened as she said:

"I do know as you had any call to find it here."

"Very true," Hillbury admitted, smiling in acknowledgment of the just retort. "But you see I have found it, as it happens, and really I would like to know how it came here."

"Well, then, I can't tell you."

"Do you mean you cannot tell me because you do not know?"

"I mean you needn't ask me no more questions, for I won't answer 'em."

"Very well," said Hillbury. "Here is the picture,—and here is my card. When you see this gentleman again, please hand it to him, will you?"

The girl took the picture, and the card he gave her. She looked doubtfully at the words, "U. S. Geological Survey," engraved beneath the name. They conveyed to her mind no idea beyond that vague suspicion with which

the pass-words of the educated class are regarded by the ignorant. She was not sure that this easy yet distant stranger was not making her in some way the instrument of his diversion—perhaps at her own expense.

Hillbury stood in the doorway watching her with puzzled, unhappy interest. Her beauty, as of a perfect young animal, a triumphant survival of the fittest feminine type, impressed him the more as he examined it. She was as handsome as Josephine, and as much more dangerous, to the average man, as passion without mental discipline could make her.

The girl found nothing to reassure her in Hillbury's inscrutable dark eyes. He lifted his hat and gravely wished her good-afternoon, and again his courtesy seemed to remind her of the distance between them.

Hillbury had a great fondness for Bodewin. He was quite used to disapproving of him. He was always longing to put him to rights, to rouse his ambition, and make him show for what he was worth. But, illogical as Bodewin's life was, in his friend's opinion, and provoking as were his habits, Hillbury had ever found him one of the most truthful, sensitive, and scrupulous of men. Yet he was aware that there was a side of Bodewin's life he knew nothing of. There had been a journey to Deadwood to which Bodewin had never referred, though it was evident to all who knew him that, in one way or another, it had been a hard trip for him; and there was this trouble with Harkins which Bodewin had gloomily alluded to. Why not go to him frankly and ask him what all this nonsense was about—and what, in particular, he meant by pretending ignorance of a house where a discussion of his picture called up so much feeling on the part of a pretty resident? Decidedly that was the proper thing to do. Since he had spoken of Bodewin in the matter, he could do no less than speak to him. He would open the subject on the first suitable occasion. No such occasion came, however. It seemed, almost, as if Bodewin might be trying to avoid him. Hillbury did not see him again to speak with him before his departure for Denver.

Hillbury had certain convictions which he never expressed because they were incapable of proof. One of these was the conviction that Bodewin was not dead. About two weeks after Bodewin's disappearance, when all efforts to find him or to learn his fate had ceased in the camp, Hillbury set out one day alone in search of his friend. He had mentioned to no one the object of his journey. He took the same way by which he had guided Mrs. Craig's party to the lake. He passed the burnt timber, entered the spruce forest, and,

plodding on through gleam and shadow, kept the trail as far as a certain ridge which he followed, moving now more slowly and looking about him for that little hollow where the cabin lurked and where he expected to find, yet hoped not to find, his friend.

He came upon the cabin from the rear, and finding the ground around the prospect-hole unsuitable for a nearer approach on horse-back, he dismounted and walked around the cabin towards its entrance. He could see the porch while he was still some distance from it,—the long bench, sheltered by the projecting roof,—and seated there, conspicuous in the morning sunlight, he saw John Bodewin. His back was partly turned to Hillbury. Against his shoulder rested a woman's head, a young head, thickly covered with light, shining hair. His hand seemed to press it closer, while his head was bent over the face, beneath his own. An idyllic stillness and peace surrounded the solitary cabin. There seemed no one in the forest but these two silent, lover-like figures,—and Hillbury, who had set his foot within their paradise. Hillbury did not see a man seated, smoking, on the farther end of the bench, where a hop-vine sheltered it. He looked but an instant upon what he believed to be his friend's disgrace, and then tramped fiercely back to the spot where he had left his horse.

As he rode homeward through the melancholy spruces, his hot disgust passed and left a feeling as if he had come from a burial. "I knew he was not dead. Would that he were—would that he were, rather than this!" He lay sleepless in his blankets that night before his camp-fire, going over and over again the evidence against Bodewin, and trying to find some flaw in the chain of proofs against him.

He remembered that Bodewin had not joined in the mirth over Craig's story of the cabin, and the pretty, golden-haired girl who had said she was a stranger in those parts. He had declared there was no such cabin. He had afterwards seemed to waver and half withdraw the assertion. The cabin had been found, and his picture had been seen there. The girl had blushed and refused to talk of it or of him. He had refused to go on the Eagle Bird case because of some mysterious hold Harkins had on him, through a woman. He had been on the verge of a confession, or an explanation which was evidently painful to him. He had at the last moment consented to give his testimony,—had declined to go over the range with the Eagle Bird outfit, had gone alone, and had not been heard from since. He was at the cabin in the woods,—the cabin he had pretended to doubt the existence of,—comfortably secluded, in the society of a hand-

some girl of a class from which he could not take a wife.

Would that he were dead! Hillbury summed up the case against his friend. The sad, pure, sensitive Bodewin, negligent, yet over-scrupulous, whom he had loved and watched over for many years, was no more,—nor had he ever been. The poor fellow had his own strange charm. Hillbury owned it and missed it, even then when he believed that he had long been misled by it. The next evening he went to see Josephine. He went more than once to see her, nor could he yet assure himself that she was not grieving silently for Bodewin. One evening he asked her if she would take a ride with him in the valley. She turned red and then pale.

"No," she said; "I hate the valley!"

"Wherever else you please, then."

"No, not anywhere, thank you. I shall not ride any more while I am here."

When he went home that night, he said to himself, "She too is mourning for the living dead." And when he considered how her thoughts must be dwelling on the recreant Bodewin and idealizing him in his absence, the folly of his friend's conduct seemed to him almost more tragic than its baseness.

XVI.

BABE.

THE Keesner cabin consisted of two rooms, one behind the other, with an unfinished loft above them. The rear room was built into the hill, windowless, and lighted only from the adjoining room. Babe had slept in this part of the cabin, called the "dug-out," until Bodewin became one of the family, when it was given to him, and Babe took the garret for her bedroom.

The Keesners, father and son, slept below in the outer room, across the doorway of Bodewin's room. They lay, with their guns beside them, on a camp blanket sewed to the hem of the calico curtain which covered the doorway. The blanket was an extension of the curtain;—sleeping on it, they were thus in a position to be disturbed by any movement of it from within.

At five o'clock on the morning after his capture Bodewin and his keepers were still asleep. The interior of the cabin was dim and quiet as the gray morning twilight in the woods outside. Babe had been softly moving about overhead, and now she came down the ladder which, propped against a square hole in the floor of the garret, served for a staircase. A few red coals were still winking among the ashes on the hearth. She raked

them out and started a blaze with kindlings laid ready overnight. Then she took the water-pail and went out to fill it at the well. By this time her father and brother were awake. They got up with a noise of boots like horses waking in their stalls, and limped, grumbling and cursing, to the fire.

"Floor gits mighty cold, nights," said the elder Keesner. "Dum nigh par'ized!" he muttered, rubbing his chilled joints. Tony, squatting on the hearth, shoulders drawn together and hands spread to the warmth, spat into the ashes in silence.

Bodewin now came out and asked for water to wash with. Neither of the men stirred, but Dad said:

"Guess Babe ain't done with the basin yet."

Tony, on reflection, went to the door and ordered her to hurry up, and was in turn ordered by his father to "shut that door!"

In a few moments Babe came in, looking pink about the ears and elbows, with damp rings of hair standing out around her forehead, and offered to Bodewin a clean bright tin basin, which had been not only emptied but wiped. She filled it for him as he held it, gave him a coarse clean towel and a square of yellow soap; but not a glance or a word did she bestow upon him.

"'Tain't often Babe's mad lasts overnight," her father remarked as she left the room.

When Bodewin, his camp toilet completed, went to the door to empty the tin basin, he was fain to linger there a moment for another look at Babe. She was hanging out the blankets to air, standing a little way off, in the clear morning sunlight, against the bronze and green tones of the forest distance. Her attitude, with both arms lifted, showed the nymph-like proportions of her form. From the back-thrown head, and full short curve of the chin melting into the long white curve of the throat, to the strong-springing line of her instep that lightly upbore her to her fullest height, she was to the eye perfect.

Bodewin prudently reflected that her speech would probably be disillusioning. Dad Keesner and Tony had followed him closely with their rifles in their hands. He turned suddenly from the open door and confronted them, glancing coolly from their faces to their weapons.

"You don't need to go to that door again," said Dad; and Tony added, "We kin empty your slops for you."

At breakfast the three men sat down together, and Babe waited on them. Bodewin thought of those long-haired, white-armed northern captives serving in the tents of their conquerors. Babe's beauty had in it the element of tragedy, as he discovered when he

tried to find her prototype in romance or tradition.

During the next three days Bodewin was confined to the cabin, Dad and Tony relieving each other in the close watch they kept upon him. He saw much of Babe, as she went and came about her housework, but he was far too wise in the ways of all proud, shy, dependent creatures to force himself in the slightest upon her notice. He was tolerably sure that he was observed, and that keenly, but he was not impatient to learn the nature of Babe's conclusions with regard to himself. In small unobtrusive ways he made himself useful to her, but most of the time he was occupied with mild resources of his own to which she was a stranger. He made sketches in his note-book. Happening to have about him a stylographic pen charged with ink, he took advantage of its unexpected fluency and copied some straggling pencil-notes from one book into another. This latter amusement, however, aroused the suspicions of his keepers. Keesner remarked that there wasn't any post-office anywhere in that part of the woods, and that he guessed Bodewin's letters could wait.

Bodewin took the hint good-humoredly enough. It was part of the situation which he had decided to accept. But afterwards, as he sat smoking by the fire, his occupation gone, his face fell into its habitual expression, a sadness which bore no reference to his present circumstances, but was rather an aggregation dating from the time of his moody boyhood. Babe, looking at him wistfully, and forgetting in his evident abstraction to ignore his presence in the room, interpreted it otherwise. Bodewin, having nothing else to do, continued to smoke, and to stare at the water which was beginning to ruffle in a saucepan propped on two stones above a bed of coals. Babe had gone out-of-doors. Shortly she returned with something that moved, bundled in her apron. She came over to the hearth, knelt in front of Bodewin, and lowering her arms showed him a young setter dog, that immediately began whirling about in her lap and caressing her hands and face alternately. She muzzled his nose with both hands.

"Pretty, ain't he?" she asked, smiling down into the creature's face, and trying to fix his soft, restless brown eyes with her own. The dog snuffed and struggled, and tried to free his nose from the pressure of her circling fingers. Bodewin leaned down and admired him, pulling his ears, looking at his teeth, and inquiring his age and name.

"We call him 'Pardner,'" Babe replied to the last question. "Don't you want him to play with? He's heaps of company."

The dog was transferred from Babe's lap to

Bodewin's knees. As Pardner objected to the smell of tobacco, Bodewin put his pipe in his pocket. Babe stood up, and for a moment lost her shyness of Bodewin in the fond content with which she regarded his wooing of her pet. She remonstrated with Pardner for chewing Bodewin's sleeve-buttons, but evidently thought no less of Bodewin for holding his ornaments so cheap, or the dog so dear.

"You can fool with him all you want to," she said finally. "He don't belong to anybody in this house but me."

After these first few days of confinement Bodewin was allowed to spend his time as he preferred, either in the cabin or outside in the woods, close by. One day Tony was missing, and the next morning Jim Keesner volunteered that Tony had heard from the camp yesterday. The Eagle Bird had obtained a postponement of the trial for a month,— "on account of unavoidable absence of principal witness," Keesner quoted complacently. He then made Bodewin the offer of his liberty, on condition that he would swear not to testify on this or any subsequent trial of the case between the two mines, and that he would keep the secret of his abduction. Bodewin smiled at this proposition.

Keesner admitted that he had not expected him to accept it, and advised him to take his detention as coolly as possible, since it would now necessarily be prolonged until after the trial.

Keesner protested that neither he nor Tony had anything against Bodewin, unless it might be Tony "owed him one on that circus with the horse." And further, he was willing Bodewin should know that, "although *they* hel' the cards, *Harkins* was runnin' the game."

While they were on the subject Bodewin asked if it was not Harkins who had planned his capture.

Keesner shut one eye tight and fixed the other on the toe of his uppermost boot, as he sat, with his knees crossed, on the bench by the door. "That there Harkins is jest murmurin' h—— when he gits started! He's jest omnivorous!" He rocked himself forward on his crossed arms and laughed with deep and silent enjoyment.

"How did he know I was going alone by the trail?" Bodewin asked.

"How does Harkins know anything! If you'd 'a' went the other way he'd been fixed for you just the same. How'd he git your picture?"

"What!"

Keesner rose up chuckling and went into the cabin, followed by the roused look of inquiry in Bodewin's eyes. He fumbled about

on the mantel-shelf, and came back with a photograph, which he laid on Bodewin's knee.

"There ye are! How'd he git that?"

Bodewin stared at the picture in gloomy amazement. He had not seen it since the day, fourteen years ago, when he stood by the white-draped table in his sister's room at home, talking to her of Frank Eustis, his eyes meanwhile wandering absently from one to another of her innocent girlish trophies. It was the day before Frank Eustis came, at his invitation, on that hapless visit. So all these years of their separation she had kept her brother's picture. Seldom as she might have looked upon it, there must have been some lingering sentiment which had prevented her from parting with it. Bodewin was at no loss to guess how, among her poor belongings, it had passed from the hand of Harkins's lady friend to Harkins himself, to be finally put to this ingenious use. Harkins had certainly a devilish sense of humor.

"Why did Harkins give you this, do you know?" Bodewin asked at length.

"So we wouldn't miss our man," Keesner replied. "I never set eyes on you, and didn't want to, beforehand,—see,—for fear you'd know me when I come to tackle you on the road."

Bodewin tore up the picture, Keesner looking on and making no objection. It had served its purpose, so far as he was concerned.

It had served another purpose. The picture had been sent to the cabin a month or more before Bodewin himself was brought there. Babe had not seen many pictures in her life. She had never known a man's face like the one this picture set before her. Poring over it whenever she could have it to herself unobserved, there had been time enough for the sowing of those seeds of trouble which were now maturing fast.

So, while Tony sulked and Bodewin rested in his brief exemption from responsibility, and Keesner chuckled over Harkins's cleverness and counted the wages of his own iniquity, Babe was the common victim.

XVII.

AMATEUR SURGERY.

THAT evening by candle-light in the cabin Bodewin was looking over a collection of "specimens," which represented the financial hopes and disappointments of the Keesner family for the past two or three years. Jim Keesner was trying to get a professional opinion from Bodewin regarding a certain piece of quartz he had at that time a particular interest in. It had been taken from one

of Keesner's numerous "prospects" which Harkins had just bonded for ten thousand dollars. Bodewin's safe-keeping until after the trial had a more important bearing on the sale of Keesner's mine than the value of the property itself.

Keesner was well aware of this fact; but there was the bare possibility that the mine might be worth something like the amount of the bond, in which case Harkins's bounty on Bodewin's capture and detention would not amount to much after all. Highly as Keesner respected his principal's ability, he did not care to furnish an illustration of it in his own person. It was a privilege to be associated in business with a man like Harkins; nevertheless it was a privilege one might, at any moment, be called upon to pay dearly for.

Bodewin turned the quartz specimen over on his palm and tried its weight. In order to obtain a fresh fracture he struck it, as it lay on his open hand, with another piece of stone he had picked up from the table. As the quartz fell in pieces, Babe, who had been leaning over Tony's shoulder, looking on at the inspection of minerals, drew back quickly. She had got a particle of the sharp quartz sand in her eye.

She went away from the light and sat apart with her hand over her face, refusing to have the eye looked at. Her father teased her, and Tony bullied her with various methods of extracting the sand. Babe would have none of them, and finally went to bed, saying "it would work out itself before morning."

She came down early as usual next day and prepared breakfast, making no complaint. She had tied a bandage over the injured eye, and was evidently suffering, though still obstinate when remedies were suggested. After breakfast Tony went to the corral to feed the horses. Dad Keesner had taken his favorite seat for a morning smoke, on the corner of the bench sheltered by a hop-vine, and near the cabin window. He could thus enjoy the still September sunshine and keep, at the same time, an eye on Bodewin, who sat within, whittling, by the hearth. Babe had washed and put away her breakfast things, moving about silently, as she had done ever since the formidable stranger's arrival. She now took down the broom from its nail behind the door, a sign that she wanted the cabin cleared of men.

Bodewin had been at work on a couple of match-sticks, whittling them until each one was as soft and thin at the end as a fine, flat camel's-hair brush. With these frivolous-looking implements in his fingers he approached Babe and said gently, but as if he expected her to listen :

"I want to take that thing out of your eye. It is time it was out."

"How are you going to?" Babe asked.

"Come here to the light, and I will show you."

As she hesitated, Bodewin took the broom out of her hands, keeping his eyes upon her, and motioned towards the door. He waited for her to precede him, grave, courteous, but peremptory, as a physician should be.

She obeyed, laughing a little nervously, perhaps at the novelty of finding herself obedient to masculine direction.

At his command she sat down on the bench outside, turning her face to the light.

"Take off the bandage, please."

She took it off with fingers that were slightly tremulous. Bodewin gave her one of the match-sticks and showed her how to moisten the whittled end in her mouth, until it was soft and pliable as a feather. Then taking her head firmly against his shoulder he pressed her shrinking lids apart, and passed the slip of wood under the lid, from the outer to the inner corner of the eye.

The relief was instantaneous. Babe's head drooped. Helpless tears bathed her cheek where the mounting blood was fast effacing the impress of Bodewin's fingers.

He did not look at her at once, but turning to her father, showed him the speck of quartz on the soft end of the stick he had just used.

"—Hisht!" said Keesner, taking his pipe from his mouth. "Tony!" he called, leaning to look past Bodewin. "Is that you, Tony? I thought I heered a man's feet goin' round the house. Did you hear him?" turning to Bodewin.

"Yes, I heard it; I thought it was Tony," Bodewin replied.

Keesner listened a moment, dubiously, and then resumed his pipe. There was nothing surprising in the silence that had followed Keesner's call. Tony rarely condescended to raise his voice in answer to the paternal summons, but made his appearance in due time when it pleased him to come.

Bodewin, meantime, in whom captivity had bred a habit of restlessness that was not natural to him, had wandered back into the cabin, because he was tired of the porch. He was surprised to see Babe seated by the table, her head bowed low, her face hidden on her crossed arms. He stopped beside her and asked if the wounded eye still gave her pain. She seemed to repel his sympathy by a mute gesture which left him still in doubt as to the cause of her trouble.

"What is it, Babe? What is the matter?" he urged.

Babe had never in her life listened to a

man's voice like Bodewin's, with sensitive inflections, that made her color come and go, and a distinctive quality like that of a musical instrument. His low tones touched her the more keenly now by contrast to that peremptory manner of the physician he had before assumed. They thrilled across her fresh, wild sensibilities as the tenderest-uttered words might have done. She raised her head and looked up at Bodewin, without speaking. Bodewin turned away. He was impatient of this un-called-for show of feeling in Babe, which seemed to threaten complications in their enforced relation to each other. He was himself intensely, often savagely, preoccupied with thoughts of all that might be doing or done with and finished in that world of his own, from which he had been eliminated as by death. It was irritating to have to think about Babe when he wanted to think about himself. He called it thinking about himself when he dreamed restlessly, in the long, silent hours, of Josephine. He would have had this other girl come and go before his absent gaze in her beauty that was so satisfying in its strength and completeness, and be no more of a problem than the sunlight on the wall.

From some impulse, perhaps to satisfy himself that he had not been making too much of a momentary impression, he went back to where Babe still sat, with her face hidden in her hands.

"Let me see that eye again," he said, resuming the matter-of-fact tone of her physician.

"You don't need to; it's all right," she protested, shrinking away from him.

"Let me see it!" he repeated, authoritatively. "It cannot be all right if you have to keep it covered, like that."

She let her hands fall and submitted to his scrutiny, but it was impossible to meet his eyes, with such a helpless quivering of her lips, and the blood rushing into her face. She drew back, with a quick, gasping sigh, and burst into tears.

"What are you crying about?" said Bodewin, angry with himself, and with Babe for making him feel both foolish and cruel. "Are you crying because the speck is gone? You will have to forgive me;—I cannot put it back again."

During the rest of the day Bodewin made it easy for Babe to avoid him by keeping outside of the cabin himself. At dinner she did not sit at the table with the family. Bodewin was not surprised at her absence. He knew that she had not forgiven him; moreover, he had observed that Babe would never eat with him if she could help it, partly from shyness, partly from pride. She was intensely sure

that in a hundred unknown ways he found her different from the women he was used to. Not to exhibit this difference, she took pains to give him as little of her speech and manners as possible. She had got a step beyond the men of her family, who saw between Bodewin and themselves few differences that were not in their own favor.

At dusk Bodewin found himself alone with Babe, a moment, in the cabin. Tony sat in the doorway, his rifle between his knees, his face turned towards the copper-colored sunset, glowing behind the woods. It was Tony's watch. Dad was relaxing himself with a twilight stroll outside.

Babe had taken this opportunity to give Bodewin the card which Hillbury had left for him.

"Where did this come from?" Bodewin asked.

"He told me to give it to you."

"He? What, this man?" pointing to the card.

Babe looked bewildered.

"I don't know. He was a dark-complexioned man in buckskin clothes. He stopped in here for some matches. There wasn't anybody 'round but me. I found him standing there with your — with that picture of you in his hand."

"And then ——?" said Bodewin seeing the whole situation, and now painfully interested.

"He asked me some questions."

"Do you remember what questions?"

Babe repeated the questions, falteringly, though she remembered them well.

"And you did not tell him I had never been to the cabin and you had never seen me before?"

Babe was silent.

"This is the worst yet!" Bodewin groaned.

"Tell him yourself when you see him again, if you're so 'shamed of it!" Babe whispered passionately.

"Yes, when I see him again," Bodewin repeated. "When will that be?"

"Sooner than you think, maybe."

"The sooner the better," he said. Stepping back from the hearth, he trod on Pardner's foot. The dog howled dismally, and Babe, with a look of angry reproach at Bodewin, swept the wailing puppy into her arms and carried him out-of-doors.

When she had prepared supper she set a single candle in a japanned tin candlestick on the table, and, without speaking to any one, went out into the darkness, leaving the men to themselves.

"What ails Babe?" Tony asked.

"She's on her ear about somethin' or other,"

her father explained, between large mouthfuls of beans.

"I'd make her quit her foolishness if I was you," said Tony.

"Yes, you better try a lasso to her; maybe you'll fetch her same's you did that there white-faced hoss o' his'n," said the father, winking at Bodewin and laughing uproariously at his own joke.

Bodewin ate his supper in silence and went to bed early. He was not fond of the "dug-out," but its cave-like darkness and stillness suited him to-night better than the society and candle-light of the outer room.

Hillbury's tacit message by the hand of Babe had given him a bad turn. He could not have known that the keen eyes of his friend had surprised Babe's miserable little secret in her face, and that the man of evidence had for once allowed himself to come to a conclusion without waiting for proof; but without going this length in his apprehensions, there were reasons enough why he should be impatient to explain himself. Small effort as he had ever made to gain it, Bodewin really hungered for Hillbury's cold and tardy approbation. His friend's whole attitude and humor suited him exquisitely in a man; in a woman the effect might be a little meager. A man should never make a fool of himself, but a woman might do so very charmingly, on occasion, with the right person, of course.

The conjunction of ideas was hardly complimentary, but Bodewin's next thought was of Josephine. There comes a time, no doubt, in a man's relations with an attractive woman, when he may yet decide either to take in sail, emotionally speaking, or square away before it, trusting there may be no danger ahead. This time came to Bodewin about the period of those long gallops in the valley and paces homeward through the pine woods at sunset. Setting his estimate of his own person, attainments, fortune, and prospects against her youth, beauty, and nobleness of character, he had decided to take in sail. Theoretically he had begun to do so before his abduction. It might be questioned how well he would have succeeded in practice had he been left to complete his journey to Denver, and to return with the honors of chief witness on the winning side, to be petted by the Eagle Bird constituency. As it had turned out, Bodewin more than once since his sequestration had sadly congratulated himself on this stroke of fate which had put him out of temptation's way.

But to-night, in the general upheaval, reason could make no headway against the keen and passionate sense of loss with which he counted the days of his absence. After the trial the Newbolds would probably go East

at once; he might never see Josephine again. The break was intolerably sudden. There were things he must say to her before they parted finally. He must clear himself from all injurious, vague suspicions, and establish his good faith in her eyes; then perhaps he might be able to give her up without this clamorous, childish pain.

Bodewin was not the only watcher in the cabin that night. Babe had also gone early to bed, but not to sleep. She had taken Bodewin's last words to her pillow. "The sooner the better," she repeated to herself. It should be soon. It must be soon, for her own sake, if not for his. She heard her father talking with Tony in the room below. Their voices were slightly lowered, as if the conversation had taken a confidential tone. Babe got out of bed, stepped softly across the loose boards of the floor to the open ladder-hole, and laid herself down beside it. She had come to a bitter, costly resolve with regard to Bodewin, but to carry it out she must learn all she could of her father's intentions towards his prisoner.

Tony was speaking now. "Say, do you know what the talk is down to camp?"

"What do I know about camp!" Dad crossly rejoined. "Hain't seen so much as the sign on a gin-mill for six months."

"There's a heap of talk about *him*. They 'low down there he never would 'a' started if it hadn't 'a' been for Newbold's daughter."

"Say Newbold's coin, and you'll be talkin'."

"Same thing"—it was Tony who spoke again. "Newbold gits his case, and *he* gits the girl, and the coin too. That's what they're talkin' down below."

"Thought you said 'twas generally 'lowed he'd lit out by himself, on purpose?"

"That's Sammis's racket. Sammis makes himself a heap of importance 'bout now. He knowed it all beforehand. *He* told 'em just how 'twould be!"

"Well, it don't look unlikely," said Dad, slowly.

"What don't?"

"That there story 'bout the girl."

"Guess you'd think so if you was to see her once!"

"Where'd *you* ever see her?"

Babe could not see the men, as they crouched forward over the fire, but by their shadows thrown on the opposite wall she could guess at Tony's attitude.

"I looked at her," he said, leaning towards his father, without taking his elbows off his knees, "straight as I'm lookin' at you now, for much as half an hour up there on Mike's claim. I could tell you her p'int's like I could Babe's here."

"She's got p'int, eh?"

Tony nodded his head, and his giant double on the wall repeated the action impressively.

"What age 'bout?" Dad asked.

"'Bout Babe's age—little older, maybe. She's a different color to Babe. Black eyes, and eyebrows like a streak o' charcoal."

"Sho, I bet she can't hold half a candle to our Babe!"

"I bet she can hold two—ask Bod'in!"

"Durn'd if it ain't a reg'lar circus!" Dad laughed his low-bred, cunning laugh and slapped his knees.

"Can't ye make a little more noise?" Tony whispered savagely.

"Say, Tony!"—Keesner gave his son a shove with his elbow,— "was he long of her up there on the Mike?"

"They was jawin' together, I tell you, the whole durned time. Him a-layin' on his elbow lookin' at her, and her face as red as that coal."

"No! 'Twas the sun likely."

"I tell you, he's dead gone on her. It's all the talk down to camp. She put him up to testifyin'. Harkins must 'a' had that in his head when he told us to say she sent the papers."

"That there Harkins is a reg'lar coon," said Dad, with feeling.

"It's going to be a tough pull on him, hidin' out here for a month. He'll feel mighty ugly when he gits loose," said Tony.

"Harkins has got to settle that bill," Dad replied. "Tain't none of my funeral!"

"*You'll* see 'fore we git through whose funeral it will be."

Babe had writhed herself over, prone on the floor, in the darkness. She had no words, no thoughts. She seemed made of one great agony. Nothing was clear to her but the image of Bodewin, his attitude, his eyes. She could feel them resting upon her face as if she had been that other girl whom he was longing to see.

She understood all, now, as one sufferer knows another's pain—his restless days, his days of moody silence. The dull, beseeching pain in his eyes meant no want of his that she could satisfy.

Towards morning she got up from the floor and threw herself on her bed. From complete weariness she lost herself, and slept heavily until awakened by her father, calling and shaking the ladder below.

XVIII.

ANOTHER OBLIGATION.

THE days of Bodewin's captivity were spent in eating and sleeping, training the setter pup,

arguing with Dad, ignoring Tony, and, over and above his own private fund of sweet and bitter fancy, wondering what could be the matter with Babe. At times, as on the day he had treated the wounded eye, he had fancied he knew what the nature of her trouble was; but the supposition involved such gross and fatuous vanity on his part, that he preferred to reject it, even in the face of symptoms difficult to account for on any other hypothesis.

To keep on the safe side, however, he now spent his days almost entirely out-of-doors.

He had found some amusement in the making of a rude sun-dial on the top of a pine-stump that had been sawed a few feet from the ground. On its tablet of shaded amber-colored rings he had inscribed the hours in a circle. He was now at work on an appropriate motto, which was to form a lesser circle, inclosing the dial-plate. He had first read it, carved on a stone dial that had counted the sunny hours in an old mission garden of lower California. A passion-vine had wound itself about the broken column, and fragrantly closed the record. Bodewin had parted its sprays, heavy with purple blossoms, to read the words:

"Coma la sombra, haya la hora"
(As the shadow, flies the hour).

Many a time since, in times of waiting or on solitary journeys, they had found their way back to his thoughts and left with him their echo of homesickness.

Bodewin was cutting the last letters of this inscription one day when Babe, on her way to the well, stopped and watched him at his work, and lingered still, with nothing to say, yet as if she wished to say something. After waiting for her to speak, Bodewin asked rather sentimentally—"You will look at my clock in the forest, sometimes, when I am gone, Babe?"

He found it difficult to avoid a half-caressing, half-condescending tone in talking to her. She made him think of those women in Genesis, with perfect bodies, and souls whose history went not back beyond a few generations.

"You want to leave yere mighty bad, don't you?" she asked in a low voice, without looking at him or replying to his speech about the clock.

"I want to get away, of course," Bodewin answered indifferently, and on his guard at once.

"I've been studyin' 'bout a way to help you off. I can't talk now,—after supper maybe, outside."

After supper Bodewin lit his pipe and strolled out of the cabin, attended by the familiar consciousness that he was watched

by one or both of his keepers. It was Dad's watch to-night. Dad was more cunningly vigilant than Tony. He had an air of abstraction when on duty that made his society less of a restraint on the movements of his prisoner. It was thus he kept *en rapport* with Bodewin's varying mood under the pressure of his long waiting. When her evening work was done, Babe came out and sat a little way off from Bodewin on the bench. Dad smoked and paced slowly up and down the cleared space in front of the cabin. As it grew dusk only the red spark of his pipe showed where he moved against the gloom of the trees, and the figures of the two who sat on the bench blended with the shadow of the low projecting roof. Tony was sleeping heavily and audibly on the floor of the cabin. From time to time, in his walk, Dad paused opposite the open door and listened with disgust to the sleeper's breathing, muttering to himself the reproof he was rehearsing for his benefit. Tony was getting slack about his share of the work in hand, and showing besides an inclination to resume his habit of drinking. Dad had unpleasant suspicions as to the cause of this early and profound nap.

This was Babe's opportunity. Speaking low, and with thickening heart-beats, she confided to Bodewin her plan for his escape. The possibility that he might hesitate to avail himself of it had not once occurred to her.

"Thank you, Babe," he said. "It is very sweet of you to want to help me, but I'm not going, you know."

"You ain't a-going? Don't you want to go?"

"Not in that way."

He heard her stir softly beside him as if she sighed.

"I been a-studyin', but I can't think of any other way."

"Never mind, Babe. It's awfully good of you," he said, in that caressing tone which was a fatality of his talk with Babe. "I'll have to see it through, if you can stand having me around."

Babe moved again restlessly beside him. Hope was stirring in her heart, telling her that perhaps he was not so eager to get away after all.

"It is a great temptation," he said at last. "Have you thought what you will say to your father when he questions you to-morrow?"

"I ain't afraid of Dad. You can believe me—it will be worse for me if you keep on stayin' here."

"I thought we were getting to be such good friends, Babe."

Babe was silent a moment; he thought she was not going to answer, when she said, with

an effort at lightness, "You know you don't care for me only to fool with me."

"I care for any girl too much to fool with her. It was only on your account I hesitated. Heaven knows, I want to get away badly enough. If you understand the risk you are taking and are willing to take it for me——"

"I take it for myself," said Babe proudly. "It suits me to have you go, as well as it suits you to go. You can go to-night, if you've a mind to keep awake. When you hear me stirrin' 'round overhead, climb up the logs to a hole in the floor where you'll see a light——"

She was interrupted by Dad's approach. The old man sauntered towards them out of the twilight, knocked the ashes out of his pipe against a post of the porch, and set his heavy foot upon the boards.

"Git in, git in!" he said. "Night's yere and mornin's comin'!"

Tony was still sleeping by the fire. Bodewin had gone to bed, and Babe was stooping over the coals on the hearth to light her candle, when her father signed to her to draw near. He looked at her fixedly a moment as she stood before him, the unlit candle in her hand.

"'Pears to me you and him's gittin' mighty good friends," he said, with a gesture of his head towards the door of Bodewin's room.

Babe winced, but she faced him desperately. "If you don't want us to be friends, what you keepin' him here for?" she said.

"That's my business. Your business is to look out for yourself. I don't want no gal's foolishness 'round yere. You hear me?"

The girl flushed and then turned white.

"Dad," she almost whispered, meeting her father's eyes, shrinkingly, "send him away. He don't ought to be yere. I can't bear the sight of him."

"It looks like you can't bear the sight of him! It looks a heap like it." Dad wagged his head sarcastically. "Now look yere,—I'll tell you somethin' you don't want to forgit. He's got his eye on a different piece of goods to what you be."

Babe did not take her eyes from her father's face while he was speaking. She was trembling, and there was a strange, set smile about her mouth.

"You make me feel like I wish I was dead," she said, heavily. She moved a step backwards and her eyes fell. Something seemed to break up within her;—tears came, and hard, choking sobs.

Her father still eyed her sternly, without any movement of relenting towards her; but she found her way into his arms and clung to him, rubbing her face against his, humbly.

"There, there," said Dad, soothingly, "don't talk no more foolishness."

Babe lifted her head.

"It ain't foolishness. Oh, you'll see! All of Harkins's mines and all his money won't pay you for the trouble he's makin' here—no—not if you love your poor old Babe!"

She sobbed, holding him by the shoulders, and fairly rocking his sturdy bulk in the strength of her despair.

"Girl," Keesner said, holding her off from him to give his severity its full effect, "you're talkin' mighty queer. You're gittin' simple. Now, you hear me,—that man stops yere, you understand? It suits me to have him. If you're so durned skeered of his company, I can put you where you'll have a chance to git used to men."

Babe wrenched herself out of his grasp.

"Father!" she cried, in a low, wild voice.

"Don't you come a-fatherin' me!" Keesner interrupted, nodding his big head at her. "You git to bed, and salt down what I been sayin' to you."

When Babe had gone to her room Keesner filled another pipe and smoked it tranquilly, satisfied that he had done a parent's duty, and more than satisfied with the situation, as he regarded it, between Bodewin and his daughter. Nothing would have suited Keesner better than for Bodewin to "take a hankerin' after our Babe." He was willing to use his daughter, but not to sacrifice her. It was not in Keesner's scheme that Babe should suffer any but that intangible harm which would wear out with a few girlish tears and reproaches. He had gone a little too far, perhaps, when he had threatened to send her down to her Aunt Matild', whose husband kept a billiard and drinking saloon in the camp. Babe must have known that that was all a joke. He stirred up Tony with his foot, and made him spread down the camp blankets and fetch in more wood, growling like a Caliban, while he himself covered the fire and bolted the outer door.

About one o'clock Bodewin, lying awake and dressed on his bed, heard cautious footsteps and movements overhead. When all was quiet again he rose, and, groping his way to the corner of the room, climbed up the logs and crawled through an opening in the floor above, where two loose boards had been removed. He found himself close under the rafters of the garret, and across the wide, low-eaved chamber, he saw through a square window in the gable the moonlight on the trees outside. It was a window of but one sash which had been taken out. Bodewin stumbled against it in reaching the window. He heard the stir of the night-breeze and felt its soft suspiration on his face. Somewhere in the shadowy room Babe was lying, breath-

lessly waiting for him to be gone. He dared not speak to her. He looked once toward the white outline of her bed, and with a mute "God bless her," turned his face to the night and liberty. The descent from the window to the ground, seven feet below, was easily made. Moonlight nights had come again. The last one, he remembered most vividly, was when at Josephine's side he had walked his horse through the lights and shadows of the forest trail, on their homeward ride from the lake. The moon was setting behind the low hooded cabin which sat with its shadow at its feet. In one of the bright spots of moonlight, between the cabin and the trees, Bodewin was startled to see a woman's figure, standing as if waiting for him. Raising her hand with a gesture of silence, she came towards him, and he saw that it was Babe. She had a shawl over her head which partly concealed her face. Bodewin protested against this needless risk on her part.

"Your horse is saddled ready here at the corral," she said, without heeding his remonstrance.

Again he insisted that she was doing too much for him.

"The creeturs know me, and you couldn't find the gear," she said.

"Which horse have you given me?"

"The black one. He ain't known yerabouts."

"That was a good thought," said Bodewin. "I'll see that he gets back. Good-bye, Babe."

He held out his hand. She made no movement to take it.

"You've got to promise me something before you go," she said. Her manner was dull and quiet, as it had been for days past.

"I'll make you any promise in the world that I can honestly keep," Bodewin said.

"This here is between you and Harkins, ain't it? You won't make Dad pay for it?"

"I will swear to you, Babe, that I will take no revenge on any one in this house."

"Nor give us away by name?"

"Your name shall never pass my lips, so help me God."

After a pause she added, "Nor my father's nor Tony's?"

"You may trust me. I will be silent, for your sake, remember—for what you are doing for me to-night."

"I ain't a-doin' it for you," she murmured doggedly, half to herself.

"I may have to explain," Bodewin continued, "that I was detained by force. I must do that to clear myself from ugly suspicions about my absence, you understand?"

"It makes no odds to me what you say, so's you don't name us to no one, nor tell where you was kep'."

"It shall be so. Now run in, quick. God bless you."

She said nothing, but dropped her head an instant against the horse's neck. Bodewin thought she kissed it. When she had turned away, he mounted and rode on slowly, looking back and only half satisfied to go, while Babe still stood where he had left her, with her head down.

She stood there listening until the last light hoof-tread had died away. She then walked slowly around the cabin to the mound behind it, where the platform of boards glistened frosty in the moonlight. Behind the cabin no one, looking out by chance, could see her if she sat awhile and tried to realize what it was she had done. How would it be when her father came to question her as to Bodewin's escape?

The garret floor, once the boards were laid back in their places, would tell no tales, but a young girl's countenance is not so safe a shield to put before a secret. Her heart sank at the thought of her father's eyes resting on her face, as they had the night before, when he had scourged her to bed with his brutal words. The threat, moreover, with which he had dismissed her that night haunted her with a dread worse than that of any imaginable death. It was an overmastering fear, which made the night and the forest seem like home to her, by comparison with the house where her father and her brother lay asleep. Where should she go, along that pathway, wide as the gate and easy as the way of all desperate journeys? She tried her feet upon it as it were. They did not refuse to obey her. She walked on, hardly aware how far she had gone, on the blind forest track Bodewin had taken before her.

On a sudden a thought she had dwelt on often before asserted itself in the dull confusion of her mind. She would see the face of that other girl—the dark-eyed, the chosen one. Perhaps she might have sight of their happiness together. After that, whatever came to her, it would be easy to bear.

The resolve nerved her with sudden strength. She walked on fast, with long, soundless steps. Her head felt clear. Her journey had now an object. By daybreak she would be on the edge of the forest; and then, by the nearest and loneliest trail, she would find her way to the Eagle Bird mine.

XIX.

THE PRICE OF BODEWIN'S LIBERTY.

It was evening of the day of Bodewin's return. All that afternoon in Mr. Craig's office he had been in earnest consultation

with Mr. Newbold and his lawyer concerning the part he was to bear in the coming trial. The consultation had warmed into a discussion which was now closing with some excitement on the part of both lawyer and client. Bodewin was quiet and evidently depressed, but in a new and unexpected direction he was, as Craig would have expressed it, as freaky and mulish as ever. Mr. Craig felt entitled, in his professional capacity, to his witness's full confidence. Bodewin, on the contrary, declined to give any explanation of his late disappearance, beyond the fact that he had been captured on the road and forcibly detained. He carried his reticence to the point of making it a condition of his voluntary presence at the trial, that he should not be questioned as to the place where he had been kept a prisoner, or the authors of his detention. All this mystery was excessively irritating to Mr. Craig.

"Do you suppose I don't know what points to bring out and what to leave alone?" he asked impatiently. "Tell me the whole story, and I will know then what questions to ask you."

"I am not at liberty to tell the whole story to you, Craig, or to any one else," Bodewin replied. He hated to have to explain himself to Craig, whose unfortunate manner always made Bodewin forget that gentleman's numerous good and useful qualities, but it was the only alternative to a prolonged agitation of the subject of his testimony. "You will have to forego the sensation my little adventure might make in court. I was not set at liberty; I got off in the night—but not without help. I don't choose that the first use I make of my freedom shall be to retaliate even indirectly upon those who helped me to it. Harkins was at the bottom of the whole thing, and we will beat him at his own game. It would be childish now to try to revenge ourselves for what is past on those who are merely his tools. This little episode of my capture has no bearing on the case beyond its showing to what lengths Harkins will go and what risks he will take to make his point. But you would be giving yourself superfluous trouble to show up Harkins. He is well enough known, and so far from prejudicing a jury against him, in my opinion, such a jury as you will be likely to get would be immensely amused by the whole thing, and look at it only as, another daring proof of his cleverness. My relations with Harkins are getting somewhat complicated, I'll admit, but they are after all my own affair. If you meddle with them in court, Craig, let me tell you, you'll be sorry for it."

"Confound it, Bodewin, this is the second

time you have intimated that you know my business better than I do myself. Perhaps you would like to be witness and counsel both."

Bodewin leaned back in his chair with his hands deep in his pockets and studied the lacing of his shoes in silence. Mr. Newbold interposed with the assurance that he, for his part, admired Bodewin's magnanimity towards his enemies, and would be the last one to try to overcome his scrupulousness.

"They are not my enemies," Bodewin said.

"Are they your friends?" Craig retorted.

"Come, now, Craig," said Mr. Newbold. "You shall not badger your own witness. Keep that tone for the Uinta men. If Mr. Bodewin is as true to us as he is generous to those fellows who plotted his abduction, we'll have no fault to find with him."

"Thank you, Mr. Newbold, but you give me too much credit," said Bodewin, coldly. "The person or persons concerned in my escape had nothing to do with my capture. As for my truth to you, sir, that means simply my truth to the truth itself, in so far as your case represents it. It means that, or else it means that I am a fool," he added bitterly.

Mr. Craig glanced at his client, as if to say, You see what an uncomfortable fellow he is, take him any way you like.

Bodewin rose and took up his hat. He was conscious that he had been provoked into saying several extremely foolish things, and was anxious to make his retreat before he said any more.

"I shall stay up at the mine to-night, if Mrs. Sammis can give me a bed," he said, addressing himself to Mr. Newbold; and mentally he resolved that he would remain there until the camp had done asking questions and talking about him. Something new would turn up in a day or two — a suicide, or a street fight, or a stage robbery, or a rich strike of mineral — to divert the public interest from his own affairs.

In the meantime he could get a better grasp over his feelings towards Josephine. It was but a month he had been missed from the little stage of the camp, yet the parts might be all changed. Hillbury and Josephine were perhaps even now riding homewards in the sunset glow after a long gallop in the valley, as he and Josephine had ridden a month ago. The explanation he had longed to make his friend, as to the photograph and the cabin, was now impossible through his promise to Babe the night of his escape. His appearance on the witness-stand with Craig as a questioner was seriously complicated by it.

Why under the heavens had he accepted Babe's help! Was he such a fool as to have forgotten that a man cannot take favors from

a woman who is fond of him unless he returns her fondness? Is even a month's captivity enough to soften a man's brains as well as his muscles? Dad and Tony's rifles no longer restrained his movements, but he was not a free man. His promise was scarcely twenty-four hours old, yet already he hated it worse than he had hated his obligation to Harkins. For it was a promise to a woman, and a woman whose circumstances, compared with his own, made her peculiarly helpless. Harkins could "get even" with him for the slighted obligation in his own way; but Babe could take no reprisals were he to break his promise to her. These thoughts were passing through his mind while Mr. Newbold was saying, "We shall be most happy to have you, my dear fellow; we'll ride up together if you like."

"I beg your pardon," said Bodewin.

"I say, we'll ride up to the mine together, if you've no objection," Mr. Newbold repeated.

"Are you staying at the mine?" Bodewin asked, in surprise and some confusion.

"Yes," said Mr. Newbold. "We have given up our rooms at the Wiltsie. Josephine disliked the restaurant, and she insists that the Sammises need the price of our board, especially as Sammis will probably have to resign. He can't stay, of course, if the mine goes into Harkins's hand, though I have suspected that lately he has been hedging a little; and if we get our case — thanks to you — I shall want a different man altogether."

Mr. Newbold and Bodewin had left the lawyer's office and were now riding slowly up the street.

"I haven't seen Hillbury yet," Bodewin said. "He must have got into his new quarters by this time?"

"Oh, yes — so he has," said Mr. Newbold vaguely. "I believe Mr. Hillbury did say something about his rock specimens the other evening. He asked us to come down and look at them now he has them all boxed and arranged."

"How is Hillbury?" asked Bodewin.

"Oh, he's all right, I guess. We haven't seen much of him. He came up to the mine once or twice; but to tell you the truth, my dear fellow, we have been a house of mourning since you were spirited away. My daughter has been — well — she's been a little absurd about it, I tell her. She seemed to feel that we were somehow accountable for your fate, because it was on our side you were going to testify. I couldn't feel that way myself, but then women will think of more ingeniously disagreeable things once they get low in their minds than any reasonable man can possibly refute. Josephine is a terrible hand to worry

if she thinks she, or any of her family, for that matter, is to *blame* about anything," said Mr. Newbold feelingly.

This phase of Josephine's melancholy was less sweet to Bodewin than her sorrow would have been undiluted with self-blame, but it was enough to set his heart at rest, so far as Hillbury was concerned.

As they passed a quiet corner near the assay office, Bodewin saw Hillbury himself standing in the door of the office. At the sight of his friend's face and characteristic pose, guarded and dignified even in its unconsciousness, a tender, half-humorous enjoyment of him swelled in Bodewin's heart. It gave him a certain surprise to find how fond he was of Hillbury. His desire of the moment was to jump off his horse and seize upon Hillbury and assure him, "It is all right about the cabin, all right about the photograph, all right about everything; I cannot explain, but you must have faith in me, old fellow, as I would have in you if things looked queer."

"Hullo, here is Hillbury!" he called out joyously. "I'll catch up with you on the next block," he said to Mr. Newbold, and turned his horse's head sharply towards the sidewalk. Hillbury's eyes kindled at sight of Bodewin's face, and then grew stern.

"How are you, old man?" said Bodewin, reaching a hand to him from his saddle. "You don't look as if you had mourned for me much."

Hillbury's hands were in the side pockets of his coat; he kept them there, regarding Bodewin calmly. Hillbury's habit of repression deceived people as to his emotional capacity. At the moment he was deeply disturbed, but no trace of his inward struggle betrayed itself.

"I have mourned an old friend lately," he said, with a sad dignity of manner that sobered Bodewin at once. "Can you tell me anything about him?"

"Is he a friend of mine?" asked Bodewin, speaking bewilderedly the first words that came.

"He should be — his name is John Bodewin. I thought I saw him a week ago amusing himself in an idyllic fashion in a cabin in the Lake woods; but as he once assured me there was no such cabin, I must have been mistaken."

Bodewin returned Hillbury's look steadily. "Were you looking for John Bodewin when you saw him as you say?"

"I was."

"Why did you go *there* to look for him? To find out if he was a liar and a scoundrel? I'll tell you where you *were* mistaken, Hillbury — in calling a man you did not trust your friend. When you begin to suspect your friends, you will not lack trifles to confirm your suspicions."

"There may be a difference of opinion as to what are trifles," Hillbury said. Bodewin looked once more at his friend. His dark eyes softened into no returning tenderness, though Bodewin's eyes were smarting with a hot, shameful moisture. The blow had cut him keenly. It was so unexpected — so coolly, neatly delivered. Misunderstandings between friends are not always hopeless things, especially when the friends are men, and capable of reasoning even upon questions of feeling. But how to come to an explanation with a man who is convinced that none is needed? Well, let it go — the friendship that has no foundation in faith is not worth the entreating for. He had thought it seasoned timber that would not give, but it had parted with the first strain. So Bodewin tried to philosophize away his pain; but it stayed. It gnawed into his self-respect, not an over-excessive virtue with Bodewin in his best moods. It took all the sweet excitement out of his meeting with Josephine.

(To be continued.)

Mary Hallock Foote.

STRUGGLE.

My soul is like the oar that momentarily
Dies in a desperate stress beneath the wave,
Then glitters out again and sweeps the sea:
Each second I'm new-born from some new grave.

Sidney Lanier.

PREPARING FOR THE WILDERNESS CAMPAIGN.

HEADQUARTERS FLAG, ARMY OF THE POTOMAC.*

MY commission as lieutenant-general was given to me on the 9th of March, 1864. On the following day I visited General Meade, commanding the Army of the Potomac, at his headquarters, Brandy Station, north of the Rapidan. I had known General Meade slightly in the Mexican war, but had not met him since until this visit. I was a stranger to most of the Army of the Potomac, I might say to all except the officers of the regular army who

had served in the Mexican war. There had been some changes ordered in the organization of that army before my promotion. One was the consolidation of five corps into three, thus throwing some officers of rank out of important commands. Meade evidently thought that I might want to make still one more change not yet ordered. He said to me that I might want an officer who had served with me in the West, mentioning Sherman especially, to take his place. If so, he begged me not to hesitate about making the change. He urged that the work before us was of such vast importance to the whole nation that the feeling or wishes of no one person should stand in the way of selecting the right men for all positions. For himself, he would serve to the best of his ability wherever placed. I assured him that I had no thought of substituting any one for him. As to Sherman, he could not be spared from the West.

This incident gave me even a more favorable opinion of Meade than did his great victory at Gettysburg the July before. It is men who wait to be selected, and not those who seek, from whom we may always expect the most efficient service.

Meade's position afterwards proved embarrassing to me if not to him. He was commanding an army, and, for nearly a year previous to my taking command of all the armies,

was in supreme command of the Army of the Potomac—except from the authorities at Washington. All other general officers occupying similar positions were independent in their commands so far as any one present with them was concerned. I tried to make General Meade's position as nearly as possible what it would have been if I had been in Washington or any other place away from his command. I therefore gave all orders for the movements of the Army of the Potomac to Meade to have them executed. To avoid the necessity of having to give orders direct, I established my headquarters near his, unless there were reasons for locating them elsewhere. This sometimes happened, and I had no occasion to give orders direct to the troops affected.

On the 11th of March I returned to Washington, and on the day after orders were published by the War Department placing me in command of all the armies. I had left Washington the night before to return to my old command in the West and to meet Sherman, whom I had telegraphed to meet me in Nashville.

Sherman assumed command of the Military Division of the Mississippi on the 18th of March, and we left Nashville together for Cincinnati. I had Sherman accompany me that far on my way back to Washington, so that we could talk over the matters about which I wanted to see him, without losing any more time from my new command than was necessary. The first point which I wished to discuss was particularly about the coöperation of his command with others when the spring campaign should commence. There were also other and minor points,—minor as compared with the great importance of the question to be decided by sanguinary war,—the restoration to duty of officers who had been relieved from important commands; namely, McClellan, Burnside, and Frémont in the East, and Buell, McCook, Negley, and Crittenden in the West.

Some time in the winter of 1863-4, I had been invited by the general-in-chief to give my views of the campaign I thought advisable for the command under me—now Sherman's. General J. E. Johnston was defending Atlanta and the interior of Georgia with an army, the largest part of which was stationed at Dalton,

* General Meade adopted solferino as the color of his headquarters flag, and a golden eagle in a silver wreath as the emblem. The latter had already been in use as a badge for headquarters aides. It was a showy standard,

and A. R. Waud, the war artist, remembers that General Grant when he first saw it unfurled, as they broke camp for the Wilderness campaign, exclaimed: "What's this! —Is Imperial Cæsar anywhere about here?"—EDITOR.

about thirty-eight miles south of Chattanooga. Dalton is at the junction of the railroad from Cleveland with the one from Chattanooga to Atlanta.

There could have been no difference of opinion as to the first duty of the armies of the Military Division of the Mississippi. Johnston's army was the first objective, and that important railroad center, Atlanta, the second. At the time I wrote General Halleck giving my views of the approaching campaign, and at the time I met General Sherman, it was expected that General Banks would be through with the campaign which he had been ordered upon before my appointment to the command of all the armies, and would be ready to coöperate with the armies east of the Mississippi; his part in the programme being to move upon Mobile by land, while the navy would close the harbor and assist to the best of its ability. The plan, therefore, was for Sherman to attack Johnston and destroy his army if possible, to capture Atlanta and hold it, and with his troops and those of Banks to hold a line through to Mobile, or at least to hold Atlanta and command the railroad running east and west, and the troops from one or other of the armies to hold important points on the southern road, the only east and west road that would be left in the possession of the enemy. This would cut the Confederacy in two again, as our gaining possession of the Mississippi River had done before. Banks was not ready in time for the part assigned to him, and circumstances that could not be foreseen determined the campaign which was afterwards made, the success and grandeur of which has resounded throughout all lands.

In regard to restoring officers who had been relieved from important commands to duty again, I left Sherman to look after those who had been removed in the West, while I would look out for the rest. I directed, however, that he should make no assignment until I could speak to the Secretary of War about the matter. I shortly after recommended to the Secretary the assignment of General Buell to duty. I received the assurance that duty would be offered to him, and afterwards the Secretary told me that he had offered Buell an assignment and that the latter declined it, saying that it would be a degradation to accept the assignment offered. I understood afterwards that he refused to serve under either Sherman or Canby because he had ranked them both. Both graduated before him and ranked him in the old army. Sherman ranked him as brigadier-general. All of them ranked me in the old army, and Sherman and Buell did as brigadiers.

On the 23d of March I was back in Washington, and on the 26th took up my headquar-

ters at Culpeper Court House, a few miles south of the headquarters of the Army of the Potomac.

Although hailing from Illinois myself, the State of the President, I never met Mr. Lincoln until called to the capital to receive my commission as lieutenant-general. I knew him, however, very well and favorably from the accounts given by officers under me at the West, who had known him all their lives. I had also read the remarkable series of debates between Lincoln and Douglas a few years before, when they were rival candidates for the United States Senate. I was then a resident of Missouri, and by no means a "Lincoln man" in that contest; but I recognized then his great ability.

In my first interview with Mr. Lincoln alone he stated to me that he had never professed to be a military man or to know how campaigns should be conducted, and never wanted to interfere in them; but that procrastination on the part of commanders and the pressure from the people at the North and Congress, *which was always with him*, forced him into issuing his series of "Military Orders"—one, two, three, etc. He did not know but they were all wrong, and did know that some of them were. All he wanted, or had ever wanted, was some one who would take the responsibility and act, and call on him for all the assistance needed, pledging himself to use all the power of the Government in rendering such assistance. Assuring him that I would do the best I could with the means at hand, and avoid as far as possible annoying him or the War Department, our first interview ended.

The Secretary of War I had met once before only, but felt that I knew him better. While commanding in West Tennessee we had occasionally held conversations over the wires at night, when they were not being otherwise used. He and General Halleck both cautioned me against giving the President my plans of campaign, saying that he was so kind-hearted, so averse from refusing anything asked of him, that some friend would be sure to get from him all he knew. I should have said that in our interview the President told me that he did not want to know what I proposed to do. But he submitted a plan of campaign of his own which he wanted me to hear and then do as I pleased about. He brought out a map of Virginia on which he had evidently marked every position occupied by the Federal and Confederate armies up to that time. He pointed out on the map two streams which empty into the Potomac, and suggested that the army might be moved on boats and landed between the mouths of these streams. We would then have the Potomac

to bring our supplies, and the tributaries would protect our flanks while we moved out. I listened respectfully, but did not suggest that the same streams would protect Lee's flanks while he was shutting us up. I did not communicate my plans to the President, nor did I to the Secretary of War or to General Halleck.

March the 26th, with my headquarters at Culpeper, the work of preparing for an early campaign commenced.

When I assumed command of all the armies the situation was about this: The Mississippi was guarded from St. Louis to its mouth; the line of the Arkansas was held, thus giving us all the North-west north of that river. A few points in Louisiana, not remote from the river, were held by the Federal troops, and also the mouth of the Rio Grande. East of the Mississippi we held substantially all north of the Memphis and Charleston railroad as far east as Chattanooga, thence along the line of the Tennessee and Holston rivers, taking in nearly all of the State of Tennessee. West Virginia was in our hands; and that part of old Virginia north of the Rapidan and east of the Blue Ridge we also held. On the sea-coast we had Fort Monroe and Norfolk in Virginia; Plymouth, Washington, and New-Berne in North Carolina; Beaufort, Folly and Morris islands, Hilton Head, Port Royal, and Fort Pulaski in South Carolina and Georgia; Fernandina, St. Augustine, Key West, and Pensacola in Florida. The rest of the Southern territory, an empire in extent, was still in the hands of the enemy.

Sherman, who had succeeded me in the command of the Military Division of the Mississippi, commanded all the troops in the territory west of the Alleghanies and north of Natchez, with a large movable force about Chattanooga. His command was subdivided into four departments, but the commanders all reported to Sherman, and were subject to his orders. This arrangement, however, insured the better protection of all lines of communication through the acquired territory, for the reason that these different department commanders could act promptly in case of a sudden or unexpected raid within their respective jurisdiction, without waiting the orders of the division commander.

In the East the opposing forces stood in substantially the same relations toward each other as three years before; or when the war began: they were both between the Federal and Confederate capitals. It is true footholds had been secured by us on the sea-coast, in Virginia and North Carolina, but beyond that no substantial advantage had been gained by either side. Battles had been fought of as great severity as had ever been known in war,

over ground from the James River and the Chickahominy, near Richmond, to Gettysburg and Chambersburg, in Pennsylvania, with indecisive results, sometimes favorable to the National army, sometimes to the Confederate army, but in every instance, I believe, claimed as victories for the South, by the Southern press if not by the Southern generals. The Northern press, as a whole, did not discourage their claims; a portion of it always magnified rebel success and belittled ours, while another portion, most sincerely earnest in their desire for the preservation of the Union and the overwhelming success of the Federal arms, would nevertheless generally express dissatisfaction with whatever victories were gained because they were not more complete.

That portion of the Army of the Potomac not engaged in guarding lines of communication was on the northern bank of the Rapidan; the Army of Northern Virginia confronting it on the opposite bank of the same river, was strongly intrenched and commanded by the acknowledged ablest general in the Confederate army. The country back to the James River is cut up with many streams, generally narrow, deep, and difficult to cross except where bridged. The region is heavily timbered, and the roads narrow and very bad after the least rain. Such an enemy was not, of course, unprepared with adequate fortifications at convenient intervals all the way back to Richmond, so that when driven from one fortified position they would always have another farther to the rear to fall back into. To provision an army, campaigning against so formidable a foe through such a country, from wagons alone, seemed almost impossible. System and discipline were both essential to its accomplishment. (See map, page 607.)

The Union armies were now divided into nineteen departments, though four of them in the West had been concentrated into a single military division. The Army of the Potomac was a separate command, and had no territorial limits. There were thus seventeen district commanders. Before this time these various armies had acted separately and independently of each other, giving the enemy an opportunity, often, of depleting one command, not pressed, to reinforce another more actively engaged. I determined to stop this. To this end I regarded the Army of the Potomac as the center, and all west to Memphis, along the line described as our position at the time, and north of it, the right wing; the Army of the James, under General Butler, as the left wing, and all the troops south as a force in rear of the enemy. Some of these latter were occupying positions from which they could not render service proportionate

to their numerical strength. All such were depleted to the minimum necessary to hold their positions as a guard against blockade-runners; when they could not do this, their positions were abandoned altogether. In this way ten thousand men were added to the Army of the James from South Carolina alone, with General Gillmore in command. It was not contemplated that General Gillmore should leave his department. But as most of his troops were taken, presumably for active service, he asked to accompany them, and was permitted to do so. Officers and soldiers on furlough, of whom there were many thousands, were ordered to their proper commands; concentration was the order of the day, and to have it accomplished in time to advance at the earliest moment the roads would permit was the problem.

As a reinforcement to the Army of the Potomac, or to act in support of it, the Ninth Army Corps, over twenty thousand strong, under General Burnside, had been rendezvoused at Annapolis, Maryland. This was an admirable position for such a reinforcement. The corps could be brought at the last moment as a reinforcement to the Army of the Potomac, or it could be thrown on the seacoast, south of Norfolk, in Virginia or North Carolina, to operate against Richmond from that direction. In fact Burnside and the War Department both thought the Ninth Corps was intended for such an expedition up to the last moment.

My general plan now was to concentrate all the force possible against the Confederate armies in the field. There were but two such, as we have seen, east of the Mississippi River and facing north. The Army of Northern Virginia, General Robert E. Lee commanding, was on the south bank of the Rapidan, confronting the Army of the Potomac; the second, under General Joseph E. Johnston, was at Dalton, Georgia, opposed to Sherman, who was still at Chattanooga. Besides these main armies the Confederates had to guard the Shenandoah Valley, a great storehouse to feed their armies from, and their line of communications from Richmond to Tennessee. Forrest, a brave and intrepid cavalry general, was in the West, with a large force, making a larger command necessary to hold what we had gained in Middle and West Tennessee. We could not abandon any territory north of the line held by the enemy, because it would lay the Northern States open to invasion. But as the Army of the Potomac was the principal garrison for the protection of Washington, even while it was moving on Lee, so all the forces in the West, and the Army of the James, guarded their special trusts when advancing

from them as well as when remaining at them. Better, indeed, for they forced the enemy to guard his own lines and resources, at a greater distance from ours and with a greater force. Little expeditions could not so well be sent out to destroy a bridge or tear up a few miles of railroad track, burn a storehouse, or inflict other little annoyances. Accordingly I arranged for a simultaneous movement all along the line.

Sherman was to move from Chattanooga, Johnston's army and Atlanta being his objective points. Crook, commanding in West Virginia, was to move from the mouth of the Gauley River with a cavalry force and some artillery, the Virginia and Tennessee railroad to be his objective. Either the enemy would have to keep a larger force to protect their communications or see them destroyed, and a large amount of forage and provisions, which they so much needed, fall into our hands. Sigel was in command in the valley of Virginia. He was to advance up the valley, covering the North from an invasion through that channel as well while advancing as by remaining near Harper's Ferry. Every mile he advanced also gave us possession of stores on which Lee relied. Butler was to advance by the James River, having Richmond and Petersburg as his objective. Before the advance commenced I visited Butler at Fort Monroe. This was the first time I had ever met him. Before giving him any order as to the part he was to play in the approaching campaign I invited his views. They were very much such as I intended to direct, and as I did direct, in writing, before leaving.

General W. F. Smith, who had been promoted to the rank of major-general shortly after the battle of Chattanooga, on my recommendation, had not yet been confirmed. I found a decided prejudice against his confirmation by a majority of the Senate, but I insisted that his services had been such that he should be rewarded. My wishes were now reluctantly complied with, and I assigned him to the command of one of the corps under General Butler. I was not long in finding out that the objections to Smith's promotion were well founded.

In one of my early interviews with the President I expressed my dissatisfaction with the little that had been accomplished by the cavalry so far in the war, and the belief that it was capable of accomplishing much more than it had done if under a thorough leader. I said I wanted the very best man in the army for that command. Halleck was present and spoke up, saying:

"How would Sheridan do?"

I replied: "The very man I want."

The President said I could have anybody I wanted. Sheridan was telegraphed for that day, and on his arrival was assigned to the command of the cavalry corps with the Army of the Potomac. This relieved General Alfred Pleasonton. It was not a reflection on that officer, however, for I did not know but that he had been as efficient as any other cavalry commander.

Banks in the Department of the Gulf was ordered to assemble all the troops he had at New Orleans in time to join in the general move, Mobile to be his objective.

At this time I was not entirely decided as to whether I should move the Army of the Potomac by the right flank of the enemy or by his left. Each plan presented advantages. If by his right — my left — the Potomac, Chesapeake Bay, and tributaries would furnish us an easy line over which to bring all supplies to within easy hauling distance of every position the army could occupy from the Rappahannock to the James River. But Lee could, if he chose, detach, or move his whole army north on a line rather interior to the one I should have to take in following. A movement by his left — our right — would obviate this; but all that was done would have to be done with the supplies and ammunition we started with. All idea of adopting this latter plan was abandoned when the limited quantity of supplies possible to take with us was considered. The country over which we should have to pass was so exhausted of all food or forage, that we should be obliged to carry everything with us.

While these preparations were going on the enemy was not entirely idle. In the West, Forrest made a raid in West Tennessee up to the northern border, capturing the garrison of four or five hundred men at Union City, and followed it up by an attack on Paducah, Kentucky, on the banks of the Ohio. While he was able to enter the city, he failed to capture the forts or any part of the garrison. On the first intelligence of Forrest's raid I telegraphed Sherman to send all his cavalry against him, and not to let him get out of the trap he had put himself into. Sherman had anticipated me by sending troops against him before he got my order.

Forrest, however, fell back rapidly, and attacked the troops at Fort Pillow, a station for the protection of the navigation of the Mississippi River. The garrison consisted of a regiment of colored troops, infantry, and a detachment of Tennessee cavalry. These troops fought bravely, but were overpowered. I will leave Forrest in his dispatches to tell what he did with them.

"The river was dyed," he says, "with the

blood of the slaughtered for two hundred yards. The approximate loss was upward of five hundred killed; but few of the officers escaped. My loss was about twenty killed. It is hoped that these facts will demonstrate to the Northern people that negro soldiers cannot cope with Southerners." Subsequently Forrest made a report in which he left out the part which shocks humanity to read.

At the East, also, the rebels were busy. I had said to Halleck that Plymouth and Washington, North Carolina, were unnecessary to hold. It would be better to have the garrisons engaged there added to Butler's command. If success attended our arms both places, and others too, would fall into our hands naturally. These places had been occupied by Federal troops before I took command of the armies, and I knew that the Executive would be reluctant to abandon them, and therefore explained my views; but before my views were carried out, the rebels captured the garrison at Plymouth. I then ordered the abandonment of Washington, but directed the holding of New-Berne at all hazards. This was essential, because New-Berne was a port into which blockade-runners could enter.

General Banks had gone on an expedition up the Red River long before my promotion to general command. I had opposed the movement strenuously, but acquiesced because it was the order of my superior at the time. By direction of Halleck I had reinforced Banks with a corps of about ten thousand men from Sherman's command. This reinforcement was wanted back badly before the forward movement commenced. But Banks had got so far that it seemed best that he should take Shreveport, on the Red River, and turn over the line of that river to Steele, who commanded in Arkansas, to hold instead of the line of the Arkansas. Orders were given accordingly, and with the expectation that the campaign would be ended in time for Banks to return A. J. Smith's command to where it belonged, and get back to New Orleans himself in time to execute his part in the general plan. But the expedition was a failure. Banks did not get back in time to take part in the programme as laid down; nor was Smith returned until long after the movements of May, 1864, had been begun. The services of forty thousand veteran troops over and above the number required to hold all that was necessary in the Department of the Gulf were thus paralyzed. It is but just to Banks, however, to say that his expedition was ordered from Washington, and he was in no way responsible except for the conduct of it. I make no criticism on this point. He opposed the expedition.

By the 27th of April, spring had so far advanced as to justify me in fixing a day for the great move. On that day Burnside left Annapolis to occupy Meade's position between Bull Run and the Rappahannock. Meade was notified and directed to bring his troops forward to his advance; on the following day Butler was notified of my intended advance on the 4th of May, and he was directed to move the night of the same day, and get as far up the James River as possible by daylight, and push on from there to accomplish the task given him. He was also notified that reinforcements were being collected in Washington, which would be forwarded to him should the enemy fall back into the trenches at Richmond. The same day Sherman was directed to get his forces up ready to advance on the 5th. Sigel was in Winchester, and was notified to move in conjunction with the others.

The criticism has been made by writers on the campaign from the Rapidan to the James River that all the loss of life could have been obviated by moving the army there on transports. Richmond was fortified and intrenched so perfectly that one man inside to defend was more than equal to five outside besieging or assaulting. To get possession of Lee's army was the first great object. With the capture of his army Richmond would necessarily follow. It was better to fight him outside of his stronghold than in it. If the Army of the Potomac had been moved bodily to the James River by water, Lee could have moved a part of his forces back to Richmond, called Beauregard from the South to reinforce it, and with the remainder moved on to Washington. Then, too, I ordered a move simultaneous with that of the Army of the Potomac up the James River, by a formidable army already collected at the mouth of the river.

While my headquarters were at Culpeper, from the 26th of March to the 4th of May, I generally visited Washington once a week to confer with the Secretary of War and the President. On the last occasion, a few days before moving, a circumstance occurred which came near postponing my part in the campaign altogether. Colonel John S. Mosby had for a long time been commanding a partisan corps, or regiment, which operated in the rear of the Army of the Potomac. On my return to the field on this occasion, as the train approached Warrenton Junction, a heavy cloud of dust was seen to the east of the road, as if made by a body of cavalry on a charge. Arriving at the junction, the train was stopped and inquiries made as to the cause of the dust. There was but one man at the station, and he informed us that Mosby had crossed a few minutes before at full speed

in pursuit of Federal cavalry. Had he seen our train coming, no doubt he would have let his prisoners escape to capture the train. I was on a special train, if I remember correctly, without any guard. Since the close of the war I have come to know Colonel Mosby personally, and somewhat intimately. He is a different man entirely from what I had supposed. He is slender, not tall, wiry, and looks as if he could endure any amount of physical exercise. He is able, and thoroughly honest and truthful. There were probably but few men in the South who could have commanded successfully a separate detachment, in the rear of an opposing army and so near the border of hostilities, as long as he did without losing his entire command.

On this same visit to Washington I had my last interview with the President before reaching the James River. He had, of course, become acquainted with the fact that a general movement had been ordered all along the line, and seemed to think it a new feature in war. I explained to him that it was necessary to have a great number of troops to guard and to hold the territory we had captured, and to prevent incursions into the Northern States. These troops could perform this service just as well by advancing as by remaining still; and by advancing they would compel the enemy to keep detachments to hold them back or else lay his own territory open to invasion. His answer was: "Oh! yes, I see that. As we say out West, if a man can't skin he must hold a leg while somebody else does."

The following correspondence closed the first chapter of my personal acquaintance with President Lincoln:

"EXECUTIVE MANSION, WASHINGTON, April 30, 1864.

"LIEUTENANT-GENERAL GRANT: Not expecting to see you again before the spring campaign opens, I wish to express in this way my entire satisfaction with what you have done up to this time, so far as I understand it. The particulars of your plans I neither know or seek to know. You are vigilant and self-reliant; and, pleased with this, I wish not to obtrude any constraints or restraints upon you. While I am very anxious that any great disaster or the capture of our men in great numbers shall be avoided, I know these points are less likely to escape your attention than they would be mine. If there is anything wanting which is within my power to give, do not fail to let me know it. And now with a brave army and a just cause, may God sustain you. Yours, very truly,

"A. LINCOLN."

"HEAD-QUARTERS, ARMIES OF THE UNITED STATES, CULPEPER COURT HOUSE, VIRGINIA, May 1, 1864.

"THE PRESIDENT: Your very kind letter of yesterday is just received. The confidence you express for the future and satisfaction for the past in my military administration is acknowledged with pride. It shall be my earnest endeavor that you and the country shall not be disappointed. From my first entrance into the volunteer service of the country to the present day, I have never had cause of complaint — have never ex-

pressed or implied a complaint against the Administration or the Secretary of War, for throwing any embarrassment in the way of my vigorously prosecuting what appeared to be my duty. And since the promotion which placed me in command of all the armies, and in view of the great responsibility and the importance of success, I have been astonished at the readiness with which everything asked for has been yielded, without even an explanation being asked. Should my success be less than I desire and expect, the least I can say is, the fault is not with you.

"Very truly, your obedient servant.

"U. S. GRANT, Lieutenant-General."

The armies were now all ready to move for the accomplishment of a single object. They were acting as a unit so far as such a thing was possible over such a vast field. Lee, with the capital of the Confederacy, was the main end to which all were working. Johnston, with Atlanta, was an important obstacle in the way of our accomplishing the result aimed at, and was therefore almost an independent objective. It was of less importance only because the capture of Johnston and his army would not produce so immediate and decisive a result in closing the rebellion as would the possession of Richmond, Lee and his army. All other troops were employed exclusively in support of these two movements. This was the plan; and I will now endeavor to give, as concisely as I can, the method of its execution, outlining first the operations of minor detached but coöperative columns.

As stated before, Banks failed to accomplish what he had been sent to do on the Red River, and eliminated the use of forty thousand veterans whose coöperation in the grand campaign had been expected—ten thousand with Sherman and thirty thousand against Mobile.

Sigel's record is almost equally brief. He moved out, it is true, according to programme; but just when I was hoping to hear of good work being done in the valley, I received instead the following announcement from Halleck: "Sigel is in full retreat on Strasburg. He will do nothing but run; never did anything else." The enemy had intercepted him about New Market and handled him roughly, leaving him short six guns and some nine hundred men out of six thousand.

The plan had been for an advance of Sigel's forces in two columns. Though the one under his immediate command failed ingloriously, the other proved more fortunate. Under Crook and Averell, his western column advanced from the Gauley in West Virginia at the appointed time, and with more happy results. They reached the Virginia and Tennessee railroad at Dublin, and destroyed a depot of supplies besides tearing up several miles of road and burning the bridge over New River. Having accomplished this, they

recrossed the Alleghanies to Meadow Bluffs, and there awaited further orders.

Butler embarked at Fort Monroe with all his command, except the cavalry and some artillery which moved up the south bank of the James River. His steamers moved first up Chesapeake Bay and York River as if threatening the rear of Lee's army. At midnight they turned back, and Butler by daylight was far up the James River. He seized City Point and Bermuda Hundred early in the day, without loss, and no doubt very much to the surprise of the enemy.

This was the accomplishment of the first step contemplated in my instructions to Butler. He was to act from here, looking to Richmond as his objective point. I had given him to understand that I should aim to fight Lee between the Rapidan and Richmond if he would stand; but should Lee fall back into Richmond, I would follow up and make a junction of the armies of the Potomac and the James on the James River. He was directed to secure a footing as far up the south side of the river as he could at as early a date as possible.

Butler was in position by the 6th of May and had begun intrenching, and on the 7th he sent out his cavalry from Suffolk to cut the Weldon railroad. He also sent out detachments to destroy the railroads between Petersburg and Richmond, but no great success attended these latter efforts. He made no great effort to establish himself on that road, and neglected to attack Petersburg, which was almost defenseless. About the 11th he advanced slowly until he reached the works at Drewry's Bluff, about half-way between Bermuda Hundred and Richmond. In the mean time Beauregard had been gathering reinforcements. On the 16th he attacked Butler with great vigor, and with such success as to limit very materially the further usefulness of the Army of the James as a distinct factor in the campaign. I afterwards ordered a portion of it to join the Army of the Potomac, leaving a sufficient force with Butler to man his works, hold securely the footing he had already gained, and maintain a threatening front toward the rear of the Confederate capital.

The position which General Butler had chosen between the two rivers, the James and Appomattox, was one of great natural strength, and where a large area of ground might be thoroughly inclosed by means of a single intrenched line, and that a very short one in comparison with the extent of territory which it thoroughly protected. His right was protected by the James River, his left by the Appomattox, and his rear by their junction—the two streams uniting near by. The bend of the two

streams shortened the line that had been chosen for intrenchment, while it increased the area which the line inclosed.

Previous to ordering any troops from Butler I sent my chief engineer, General Barnard, from the Army of the Potomac to that of the James, to inspect Butler's position and ascertain whether I could again safely make an order for General Butler's movement in co-operation with mine, now that I was getting so near Richmond; or, if I could not, whether his position was strong enough to justify me in withdrawing some of his troops and having them brought round by water to White House to join me, and reënforce the Army of the Potomac. General Barnard reported the position very strong for defensive purposes, and that I could do the latter with great security; but that General Butler could not move from where he was, in coöperation, to produce any effect. He said that the general occupied a place between the James and Appomattox rivers which was of great strength, and where with any inferior force he could hold it for an indefinite length of time against a superior; but that he could do nothing offensively. I then asked him why Butler could not move out from his lines and push across the Richmond and Petersburg railroad to the rear and on the south side of Richmond. He replied that it was impracticable because the enemy had substantially the same line across the neck of land that General Butler had. He then took out his pencil and drew a sketch of the locality, remarking that the position was like a bottle, and that Butler's line of intrenchments across the neck represented the cork; that the enemy had built an equally strong line immediately in front of him across the neck; and it was, therefore, as if Butler was in a bottle. He was perfectly safe against an attack; but, as Barnard expressed it, the enemy had corked the bottle, and with a small force could hold the cork in its place. This struck me as being very expressive of his position, particularly when I saw the hasty sketch which General Barnard had drawn; and in making my subsequent report I used that expression without adding quotation marks, never thinking that anything had been said that would attract attention, as this did, very much to the annoyance, no doubt, of General Butler, and I know very much to my own. I found afterwards that this was mentioned in the notes of General Badeau's book which, when they were shown to me, I asked to have stricken out; yet it was retained there, though against my wishes.

I make this statement here because, although I have often made it before, it has never been in my power until now to place it where it

will correct history; and I desire to rectify all injustice that I may have done to individuals, particularly to officers who were gallantly serving their country during the trying period of the war for the preservation of the Union. General Butler certainly gave his very earnest support to the war; and he gave his own best efforts personally toward the suppression of the rebellion.

The further operations of the Army of the James can best be treated of in connection with those of the Army of the Potomac, the two being so intimately associated and connected as to be substantially one body, in which the individuality of the supporting wing is merged.

I will briefly mention Sheridan's first raid upon Lee's communications which, though an incident of the operations on the main line and not specifically marked out in the original plan, attained in its brilliant execution and results all the proportions of an independent campaign. On the 8th of May, just after the battle of the Wilderness, and when we were moving on Spottsylvania, I directed Sheridan verbally to cut loose from the Army of the Potomac, pass around the left of Lee's army and attack his cavalry; to cut the two roads—one running west through Gordonsville, Charlottesville, and Lynchburg, the other to Richmond; and, when compelled to do so for want of forage and rations, to move on to the James River and draw these from Butler's supplies. This move took him past the entire rear of Lee's army. These orders were also given in writing through Meade.

The object of this move was threefold: 1. If successfully executed—and it was—he would annoy the enemy by cutting his lines of supplies and telegraphic communications, and destroy or get for his own use supplies in store in the rear and coming up; 2. He would draw the enemy's cavalry after him, and thus better protect our flanks, rear and trains, than by remaining with the army; 3. His absence would save the trains drawing his forage, and other supplies from Fredericksburg, which had now become our base. He started at daylight the next morning, and accomplished more than was expected. It was sixteen days before he got back to the Army of the Potomac.

Sheridan in this memorable raid passed entirely around Lee's army; encountered his cavalry in four engagements and defeated them in all; recaptured 400 Union prisoners and killed and captured many of the enemy; destroyed and used many supplies and munitions of war; destroyed miles of railroad and telegraph, and freed us from annoyance by the cavalry for more than two weeks.

I fixed the day for Sherman to start when

Executive Mansion
Washington, April 30, 1864

Lieutenant General Grant.

Not expecting to see you again before the spring campaign opens, I wish to express, in this way, my entire satisfaction with what you have done up to this time, so far as I understand it. The particulars of your plans I neither know, or seek to know. You are vigilant and self-reliant; and, pleased with this, I wish not to obtrude any constraints or restraints upon you. While I am very anxious that any great disaster, or the capture of our men in great numbers, shall be avoided, I know these points are less likely to escape your attention than they would be mine. If there is anything wanting which is within my power to give, do not fail to let me know it.

And now with a brave Army, and a just cause, may God sustain you.

Yours very truly
A. Lincoln.

LINCOLN'S GOD-SPEED TO GRANT. (FAC-SIMILE OF THE ORIGINAL, SLIGHTLY REDUCED IN SCALE.)

[THIS remarkable letter was received by General Grant on the 1st of May, three days before the Wilderness campaign began. He was always careless about his papers, and private or semi-official ones were often thrust into his pockets, where they remained for months. In some such way Mr. Lincoln's beautiful God-speed was mislaid. General Grant had forgotten

its existence, until in 1866 I came across it in my researches for my history of his campaigns. He was so pleased at the discovery, or recovery, that he gave me the original letter at the time. It is my intention eventually to present it either to the Government or to the family of General Grant.

NEW YORK, November 10, 1885.

Adam Badeau.]

the season should be far enough advanced, it was hoped, for the roads to be in a condition for the troops to march. General Sherman at once set himself to work preparing for the task which was assigned him to accomplish in the spring campaign.

The campaign to Atlanta was managed with the most consummate skill, the enemy being flanked out of one position after another all the way there. It is true this was not accomplished without a good deal of fighting,

some of it very hard fighting, rising to the dignity of very important battles; neither were positions gained in a single day. On the contrary, weeks were spent at some; and about Atlanta more than a month was consumed.

Soon after midnight, May 3d-4th, the Army of the Potomac moved out from its position north of the Rapidan, to start upon that memorable campaign destined to result in the capture of the Confederate capital and the army defending it.

U. S. Grant.

AN INCIDENT OF THE WILDERNESS.

At the close of the first day's battle in the Wilderness, I was at General Grant's headquarters in the edge of the pine grove west of the Wilderness tavern. General Meade and his chief of staff, General Humphreys, Grant's staff, and Congressman E. B. Washburne were there.

Suddenly there came a yell from the direction of the Sixth Corps on our right; then quick, rapid volleys. We could see a sudden movement of teams to the rear. An officer rode up, much excited, exclaiming that the right flank had been turned, that the enemy had massed their whole force to crush Sedgwick, and that Shaler's brigade had been captured. Grant was

sitting with his back to a pine-tree, whittling a stick (as shown in the picture drawn by Mr. C. W. Reed after a little pencil sketch made by him at the time). Grant said nothing, did not rise, and went on quietly with his whittling.

"Shall I order a diversion by the Ninth Corps in support of the Sixth?" asked Meade.

"If you think best," was Grant's reply.

Humphreys wrote the order, which was sent. The firing was increasing.

After several minutes, Grant turned to Washburne and said, "I don't believe that story. Warren has been fighting all day, and since mid-afternoon Hancock has been at it. Lee hasn't had time to mass his forces in front of Sedgwick. We shall hear a different story."

In the course of fifteen or twenty minutes an officer came in, and reported that a large part of Shaler's brigade had been captured, but that the enemy had been repulsed on the right. During the excitement Grant never rose from his seat.

Charles Carleton Coffin.

AN "ONFORTUNIT CREETUR."

MRS. UPCHURCH sat in the entry of her house knitting, while down on the step—a rough block of Georgia granite—Mr. Upchurch sat resting and smoking an after-dinner pipe. It was on a summer afternoon, and the hot glare of the sun made a shade gratefully welcome. The house had only the space of an ordinary yard between it and the public country road, but it was on a breezy hill and commanded a fine view of the surrounding country.

Far away above the green, wooded hills and valleys rose the North Georgia Mountains, veiled in misty blue. Those mountains were the boundary line of Mrs. Upchurch's world. She had never gone to them, she never dreamed of going beyond them. Still they were old friends, immovable, unchangeable, upon which she could look when perplexed, sorrowful, or glad. She worked slowly, and often glanced away toward those distant peaks, a very grave meditative light in her eyes.

She was a woman above medium height, and rather dignified in appearance and manner, with a kind, homely face, yellowed and

hardened by sun and wind, and honest, steadfast eyes. She had on a stout, plain cotton dress, and an old brown veil was drawn around her head and tied under her chin. Summer and winter she wore it, to ward off that greatest enemy of her peace—neuralgia.

"He always was an onfortunit creetur," she said abruptly, and with a sigh.

"Who now, Peggy?" inquired Mr. Upchurch in some surprise.

"Why, Ab," and laying her knitting down on her knee, she smoothed it out thoughtfully.

"That brother o' yours?"

"Yes; I said he always was an onfortunit creetur."

"Yes, onfortunitly lazy," her husband dryly observed.

"He all but died w' the measles when he was a sucklin' baby not mor'en three months old, an' then 'long came the whoopin'-cough on the heels er that, an' liked to 'a' tuk him off. Then you remember ther time he was snake-bit on his big toe, an' how the pizen flew all ovr him like lightenin', an' he would er died if we hadn't er happened ter have some dram in the house. Then he tuk cramp once

in Punkin Vine Creek, an' would er drowned right on the spot if Providence hadn't er sent the singin'-school teacher along for ter fish him out."

The half-forgotten incidents of childhood and youth crowded fresh upon her memory. She leaned forward, resting her elbows on her knees,—a favorite attitude with many country-women when they are smoking their pipes, dipping snuff, or are lost in deep thought,—and thrust a knitting-needle through her hair. But her reminiscences did not impress her husband very deeply. He eyed her kindly, and with a slight touch of pity.

"You hain't seen him sence the war, Peggy. What's got inter you that your mind keeps er runnin' ont'er him ter-day?"

"I'm shore I don't know, Sam, but it's er fact. I ain't thought as much er bout him these twenty years an' more as I have ter-day. Mebby Ab's a-comin'."

"Mebby he is, but it tain't likely at this late day, an' I wouldn't be a-botherin' er bout it, Peggy," said the farmer, shaking the ashes out of his pipe before placing it in his pocket.

"I ain't exactly botherin', Sam, but I dreamed er bout him las' night, an' takin' it all together it jes' pesters me er little."

Mr. Upchurch got up slowly from his resting-place, and, stepping into the west room, took down his gun from over the door.

"B'lieve I'll go a-huntin', Peggy."

"Well," she answered, absently, still thinking of her brother, and wondering if she would ever see him again.

"He's that onfortunit, he might 'a' wandered off an' er died among strangers, with not er soul ter look arter him, or ter put him er way decently," she murmured in a troubled undertone. "I can't fergit the time he stood between me an' old Miss Whitlock's dog, that run mad when me an' him was little fellers. He was always sorter sickly an' quare, but I knowed then he had grit, for there he stood as calm as could be, an' that dog-a-comin' straight for him, or so it 'peared like, jest er-foamin' at the mouth. I thought shore Ab ud be bit plum through, but the critter passed by without techin' him. Them days is all ovr, but I ain't fergot that. I orter love him, poor feller!" And she looked away to those blue mountains with eyes grown dim with sudden tears.

It was Saturday afternoon, and therefore a holiday among the farmers. A man must be hard pushed indeed who will not "knock off" Saturday afternoon.

The Upchurch family were thrifty, industrious people, took care of their not too fertile farm, lived honest lives, and kept peace with their neighbors.

"Upchurch is er smart man, if I do say it," his wife would sometimes proudly remark.

"When me an' him married we 'lowed we'd help one ernuther, an' mebby we'd git helped; an' so we did, fer Providence always helps them that helps themselves."

Peggy Upchurch was a good woman, and noted among her neighbors and friends for her readiness to visit the sick and the sorrowful. She was a useful woman in her narrow sphere, a strict member of Ebenezer Baptist Church, and while she did not consider it right "fer wimmin to speak out in meetin'," she did a good deal of missionary work quietly.

She rose and glanced around to see if everything had been put in proper order, then sat down again, with her snuff-box and her knitting on her lap.

The house was a double log house—that is, two large rooms with a wide, open entry between, and a loft above. In the furnishing of those rooms the chief consideration seemed to have been beds,—high feather beds, with blue and white checked foot-curtains concealing the unpainted pine posts of the bedsteads, and elaborately fringed "double-wove" counterpanes spread over them. Those beds were the pride of Mrs. Upchurch's heart.

"I raised them feathers-myself, an' I know they er fresh ernough fer the President ter sleep on."

Doors stood wide open, letting in sunshine and sweet flowers' scents, and George Washington looked down from his rusty frame with a gracious unbending of his dignity.

A few scrubby oaks shaded the clean-swept yard, and a honeysuckle vine had been trained to climb and spread itself over the rough logs of the house. A fine rose-bush bloomed beside the gate, and there were beds of larkspur, pinks, and sweet-williams in the sunnier spots.

It was a home the counterpart of which may be found in almost any portion of Georgia, bare and rather lonely-looking, but clean and healthy, and to the householders acceptable as a kingly palace. It appeared a sorry haven of rest and peace to the tired, dusty tramp toiling up the wide, hot road. His eyes wandered from object to object as though the place was not unfamiliar to him, and a slight quiver of emotion crossed his features when that roving glance fell on Mrs. Upchurch. He carried a small bundle hanging from the end of a knotted hickory stick over his right shoulder, and he walked in a halting, uneven way. He turned from the road and stopped at the gate.

"Good-evenin', ma'am."

"Good-evenin', sir," said Mrs. Upchurch, looking at him with some curiosity.

He opened the gate.

"May I come in an' git er drink er water? Walkin' is pow'ful hot work."

"Ter be shore; jes' walk right in an' take er seat an' rest yerself; you look plum fagged out," said the hospitable woman, rising and placing a chair out in the entry for him.

He walked across the yard in a footsore and weary way, and dropped feebly down on the edge of the floor, laying his stick and

less did he appear, that deep pity stirred Mrs. Upchurch's heart. He stared hard at her, his face working in an agitated manner. She brought him a gourd of water, and taking it in his trembling hands he drank softly from it.

"That's good," he muttered softly.

"Yes, we've got the best well in this coun-

"HAVE YOU FORGOT YER BROTHER AB, PEGGY?"

meager bundle beside him. He took off his ragged old hat, and wiped his face on a faded cotton handkerchief. He was a sorry-looking case, shabbily dressed, thin, and stooping, and without the color of blood about his sallow face and hardened hands. His eyes were hollow, and he coughed once or twice a dry hacking cough. So utterly forlorn and friend-

try. But won't you take this cheer an' rest? It's better'n the floor," she said compassionately.

"No'm. Is this — where — Sam — Upchurch — lives — that married Peggy Dyer?" he slowly inquired.

"Why, yes; Upchurch bought this place before me an' him was married, an' we've been er-livin' here ever sense," she said, surprised

and striving to recognize him. He had called her name with the ease and familiarity of one well acquainted with it, but not a friend of her youth could she recall who would bear the slightest resemblance to this poor wanderer. Singularly enough, at that moment she had forgotten the brother Ab who had been haunting her memory all day. "You're not er stranger in this settlement, air you?"

"Yes, it 'pears like I am now. You don't seem to know me, Peggy," he said with a sort of tremble in his voice, his haggard eyes raised to her pleasant, homely face.

She fell to trembling then herself, and her sunburnt face grew pale, for a sudden thought flashed into her mind, a bare possibility that overcame her. She sat down in her chair, with a searching, eager look at the shabby stooping figure, and pallid sickly face.

"I orter know that voice; it 'pears like ——" she faltered unsteadily.

"Have you forgot yer brother Ab, Peggy?"

"Lor', Ab! that ain't possible; it's too good ter be true," she cried, and then burst into joyful tears.

"Yes, it's me," he said quietly, and wiped his own eyes.

There were no open demonstrations of love. They did not even shake hands.

"Air you glad ter see me, Peggy?" he asked in a sort of sad wonder, but no longer doubtful of his welcome.

"Glad! O Ab, ain't I been a-wantin' ter see you for nigh on to twenty years?" she cried, in a voice that might have laid the most subtle doubts at rest. "Come in, brother, and take a cheer, do," wiping her eyes on her knitting, and looking at him tenderly.

"I'm not a-hurtin' here, Peggy. I'm tired enough to rest ennywheres. It's been er hard pull ter git here."

"Praise the Lord that you did git here," she ejaculated fervently.

She took his hat and stick and bundle and put them away, she brought him more water, and when he declined any further service she drew her chair near him, and sat down.

"You look well an' hearty, Peggy."

"Yes, I ain't got nothin' ter complain erbout; but you—you're dreadful peaked, Ab," she faltered, her heart yearning over him.

He drew his handkerchief across his face again, and coughed that dull, hacking little cough.

"I've been a'mos' dead with my liver. Low-country life didn't agree with me, an' I've been onfortunit, Peggy."

"You always was onfortunit, Ab. Me an' Upchurch have jes' been a-talkin' of the many times you came nigh ter losin' yer life when er boy, let erlone the war an' sence the war.

Upchurch is gone a-huntin' now, an' Tempy an' the boys they er gone over the creek ter town; but as I started ter say, it's cur'us how some folks hev ter live, sorter holdin' on ter life ennyhow. It's er slippery thing at ther best, somethin' like er eel that'll slip through yer fingers jest when you're shore you've got it" (ending with a sigh).

"I've had mysheer er bad luck now, shorely," said Dyer wearily.

"Then you must be a-lookin' out fer the good," said his sister more cheerfully. The deep dejection, the utter hopelessness of tone and appearance troubled her, took away something from her joy. She grew anxious to see him brighten up, raise his head, and speak with animation. She could not keep her eyes off him. His vagabond appearance, his evident ill health roused all her sisterly love, her womanly compassion. Oh, what a hard life he must have lived to be so changed! He had been a weak and ailing child, and odd, extremely odd, in all his ways. She, being the eldest, had watched over him, and had learned to know him better than any one else did, but she never expected to see him so unkempt, neglected, and broken down.

"Oh, brother, what've you been a-doin' with yourself?" she said abruptly, her eyes filling up again.

"A-roamin' up an' down the world. Lately I've been livin' down in south-west Georgia. I married there," he replied.

"Law, you did? Where is your wife?"

"Dead, an' so is my little gal. She was er peart little thing," and he turned his head away, swallowing audibly as though something choked him. "I wish you could 'a' seed her, Peggy," he continued after a slight pause.

"An' I wish it too, Ab. Can't you tell me erbout her?" she said gently, and with deep sympathy.

"She was the smartest little creetur I ever saw, an' knowed the mos' for her age. She use' ter run an' meet me when I came in, an' the fust thing 'ud be, 'Daddy, I love you; do you love me?' Then she'd put her arms round my neck an' lay her face up close ter mine. Then when she got bigger, she was always a-wantin' ter help me, an' I never axed for better comp'ny than my little Sary Jane. O Lord! if she'd only 'a' lived. It fairly tuk the life outen me to see her—to see her ——"

His head dropped on his breast, and again he was silent.

"You er 'bout all the kin I've got, Peggy," he said at last, and there was something in the broken way he uttered the few words that caused her to wipe her eyes again furtively on her knitting.

"You mus' stay with me now, Ab, an' not

go wanderin' off enny more. You've been keardless erbout your health, I know in reason."

"Mebby I have."

He met his brother-in-law rather shrinkingly at first, but Sam Upchurch gave him such a hearty welcome, he seemed to grow more at ease. About sundown the children returned from their holiday visit to Rockymount, a small town two miles away across Bear Creek. There were four — three sturdy sunburnt boys and one handsome sunburnt girl. She was the eldest, and Mrs. Upchurch presented her to her uncle with motherly pride.

"This is our Tempy, Ab."

He looked at the tall, bright-eyed, rose-faced girl with melancholy surprise. He shook hands with her in an awkward, hesitating way.

"Why, she's grown, Peggy."

"Yes, grown, an' talkin' er gitten married," said Peggy with a laugh and a sigh.

"Law, now, ma, jes' lis'en at you!" cried Tempy, blushing crimson and retreating to the kitchen.

The young people eyed the new-comer cautiously, and would have little to say to him; but the elders used all their homely arts to entertain him and make him comfortable. After supper, when they had returned from the kitchen to the entry, he grew more communicative. The boys were off in the thickets bird-thrashing, and Tempy sat in the best room with Jeff Morgan, her sweetheart, who lived in an adjoining settlement, and came on Saturday evening and remained until Monday morning. So the older people were sitting alone in the entry, and Sam Upchurch smoked his pipe, and Peggy dipped snuff, but Dyer declined joining them in using tobacco.

"Had ter quit that years ergo. I have had ups an' downs sence the war. One time I went down inter the piny woods of Alabama an' j'ined the gopher traders, but it wasn't a pay-in' business, an' I quit it an' sot up ter teachin' school. If you can spell baker you can teach school in them diggin's. Then I tuk it inter my head ter settle down an' have er home; but Susan she died, and the little un had ter go too, an' I've jes' been knockin' erbout ever since." His poor thin hands worked nervously, and his head drooped dejectedly again.

How sharply his empty, desolate life contrasted with his sister's busy, useful, happy one. Her husband was beside her; the shouts of her boys floated up from the pine thickets where their torches flashed in and out like the flame of a "Jack-o'-lantern," and occasionally Tempy's full, hearty laugh rang out. The sister thought of it with a sigh, but feeling humbly grateful for her own good fortune. Upchurch, too, vaguely felt the contrast, for he said:

"Well, you've got er home here now if you

er mind ter take it. Peggy'll be doctorin' you up in no time."

He shook his head with a faint, dry smile.

A screech-owl flew into the yard near the house and began a doleful "shir-r-r-r." The men did not seem to notice it, but Mrs. Upchurch moved uneasily, for neither religion nor common sense could rid her of the superstitious feeling that it meant bad luck. That night her short, simple, but earnest prayers included the poor wanderer, and also an entreaty that no bad luck might come to any of them.

On Sunday morning the wagon was brought around, and all the family came out in their "go-ter-meetin'" clothes.

Ab declined accompanying them, although he had partially recovered from the fatigue of the day before, and he obstinately refused to allow one of the family to remain at home with him, to his sister's distress. She would gladly have remained, for there were still many things she wished to talk over with him, but he would not hear to it.

"I make no pretensions, Peggy, but neither am I goin' ter keep them erway that does," he said more decidedly than she had yet heard him speak.

He was sitting on the fence whittling a stick, and many were the curious glances directed toward the shabby, stooping figure, as the country people passed on their way to Ebenezer.

It was soon known throughout the settlement that Ab Dyer, Peggy Upchurch's brother, had come, and the women discovered they owed Peggy a visit, and the men dropped in to see Upchurch or to borrow some farming tool. Ab did not impress the visitors very favorably. Some regarded him suspiciously, others with more or less contempt.

"He's shore ter be crazy," said old Miss Davis confidentially to Sally Gancey.

"You reckon?" in a shocked tone.

"Yes, an' er tramp, too. Won't you take er dip?" producing the little black snuff-box her grandfather had bequeathed to her.

"B'lieve I will. Po' Mis' Upchurch, how she mus' feel."

"Law, it ain't no new thing. I knowed Ab Dyer when he wasn't much bigger'n er wood-peck, an' he never was right bright. He ain't 'walked fur with Solomon,' I kin tell you," rolling her eyes knowingly.

So the bit of gossip went from house to house, and hints of it reached the Upchurches; but if the poor wanderer ever heard of it, he made no sign. Yet it cut Peggy Upchurch to the heart, and she strove, by additional tenderness and consideration, to make up to him for all he had lost in not gaining the goodwill of the neighbors.

"I've always noticed that them that's talked erbout is apt ter be better than them that does the talkin'," she said privately to Upchurch.

But once she ventured to gently remonstrate with Ab about the palpable lack of pride in his personal appearance.

"'Tain't no use, Peggy. I wanted ter be somethin' an' I tried, but ever'thing went ag'in' me."

"You musn't be mad erbout that, Ab. It was the Almighty's doin's, though I ain't one er them that lays ever'thing ter Providence. Mebby you didn't start right."

"Mebby I didn't," he replied, spiritlessly, and with a fit of coughing. He sat on the door-step in the sunshine, his shoulders bent over, his chin almost touching his knees, as much of a vagabond as the day on which he walked up the road, seeking the last of his kith and kin.

"It pesters me to see you so down in the mouth. I'm all the time a-wantin' ter see you pearten up. Don't that fat light'ood-splinter tea help yer cough?"

"No; but don't you be a-botherin' erbout me, Peggy. 'Tain't no use."

"Ah, that sayin' o' yourn, ' 'Tain't no use,' has done a sight er harm in this world. Too many folks say it fer their own good," said Mrs. Upchurch solemnly.

"That may be so, but I ain't been no use ter myself nor nobody else."

"Well, I say you have. Don't forgit your young days an' the time you run between me an' old Miss Whitlock's mad dog. I remember it, an' I'll keep on rememberin' it till I die."

"Lor! that wasn't nothin'," he said, moving uneasily, a sort of flush passing over his face.

"Yet if you hadn't 'a' done it, I might not 'a' been here now," impressively, and with the feeling that she must ever hold him lovingly and gratefully in her heart, no matter how idle and purposeless his life might be—and one had better have been dead than lazy in that community.

"Mebby if the little un had 'a' lived——" he muttered, but leaving the sentence unfinished, he hastily rose and walked away toward the lot.

He grew rather fond of Tempy, after a cautious, undemonstrative fashion. His eyes would follow her in an absorbed, wistful way, for in her he saw, as it were, a pale vision of his own child grown to womanhood;—a pale vision, for no girl can compare with what the reality would have been in his eyes.

Tempy's wedding-day approached, and he astonished her with the gift of ten dollars, all he had.

"Ter help buy yer fixin's," he said, and carefully restored the empty leather purse to his pocket.

The days came and went, and the farmers worked from daylight till dark, but Ab Dyer idled about the house or wandered aimlessly through the woods with a gun. Sometimes he would bring home game, but oftener he would come empty-handed.

"What ails him, Peggy?" Sam Upchurch inquired one evening, after Dyer had gone off to bed. "There ain't nothin' to be got out er him."

"He's give up, that's what ails him, an' it's the worst thing a body could do for themselves. Ab always was easy to git down in the mouth, an' it 'pears like he ain't a-goin' to git over the loss o' his fambly. Poor fellow! he always was an onfortunit creetur," wiping her eyes on her nightcap and sighing deeply.

The summer drew near its end, and one cloudy morning late in August Sam Upchurch pulled out the buggy, harnessed his best horse to it, and invited Ab to go with him over to Rockymount, to buy some things for Tempy's wedding. It had rained torrents the night before, and Bear Creek rushed along turbulent, muddy, and nearly up to the bridge.

"But we'll be all right, if it don't set into rainin' ag'in," said Upchurch, taking a sweeping glance at the clouds rolling so darkly above them.

"An' if it does?" Ab dryly inquired.

"Well, I reckon we will, ennyhow; the bridge is new," Sam easily and carelessly replied.

It did rain again, heavy flooding rains, and they were detained in town until quite late. Indeed they did not realize how swiftly the day passed, until night was upon them.

"Better lie over in town to-night. Bear Creek ain't er pleasant sight jes' now," said an acquaintance, who also lived beyond the creek. But Sam Upchurch shook his head.

"No, Peggy'll be a-lookin' fer us, an' the bridge is strong. There ain't no danger, if the water does run over it."

"You-uns don't know that. My old woman'll be a-lookin' fer me too, but I ain't a-goin' ter risk my life jes' for that," muttered the other countryman, shrugging his shoulders.

It was dark when the belated travelers reached the creek, not the gray darkness of twilight, but the pitchy blackness of a clouded, stormy night. They could hear the rush and roar of the stream, and the horse trembled and shrank back from it in fear, but, urged on by his master's voice, he ventured in. For many a day Sam Upchurch reproached himself for that rash and foolhardy act, but he had

such faith in the strength of the bridge, that he did not think of danger until with a desperate plunge they were floundering in the creek.

"Good God! the bridge is gone!" he groaned, and the next moment felt the buggy swept away from him by the strong current.

"Ab," he shouted loudly.

"Here I am. Can you swim, Sam?"

"Not much here," he cried hoarsely, realizing that only a bare chance of life remained. A vision of his home rose up before him, and of his wife and children; life never seemed so precious and desirable a thing as when death stared him in the face. He groaned aloud; then he heard Ab's voice close beside him.

"Ketch onto this limb."

It was a willow bough half dipping into the water, a slender, flexible thing, not strong enough to bear the weight of both men; but Upchurch did not know that when he clutched so desperately at the frail chance of salvation.

Ab loosened his grasp.

"What's the matter?" cried his brother-in-law in quick alarm, for the poor fellow brushed against him as the strong, swift current carried him away.

"Nothin'! Git home ter Peggy an' the chillun if you can. I'm goin'"—but there his

voice died away, was swallowed up in the confusion of noises around them. Upchurch shouted himself hoarse, but no reply came back to him, and chilled and stiffened he drew himself up out of the water, realizing at last that Ab had given up to him the one chance of life that lay between them.

THEY laid him down within the shadow of Ebenezer Church, along with the other quiet sleepers who rested there, and no one ever again breathed aught against the luckless vagabond; while in one household his memory was gratefully and tenderly cherished. Never did a stormy night come but they would draw up around the flaming pine-knot fire thinking of him, and Mrs. Upchurch would take one of Tempy's children on her knee, to shield her tearful eyes from observation.

Then again she would sit out in the entry on calm, clear summer days, with her knitting and her snuff, just as she sat that day he came up the road footsore and weary with his long tramp, and, recalling all the trials and failures of his life, she would look far away toward those misty blue mountains, softly murmuring:

"Poor Ab! He always was an onfortunit creetur."

Mat Crim.

ZWEIBAK; OR, NOTES OF A PROFESSIONAL EXILE.—II.

I HAVE with me the autobiographical works of Carlyle, edited by Froude, which have attracted so much attention. There are two periods in the history of the world's state of mind towards almost every clever and successful man. One of these is when he is recognized; the other is when he is found out. At the former period his distinctions and peculiar abilities are perceived. The world sees what he is. He may then be said to have been recognized. But along with this recognition the world is apt to bestow a vague and tacit credit for superiority in those qualities in which he has not been tried. There comes a time, however, when his limitations are understood. The world sees what he is not. He may then be said to have been found out. That man is fortunate who is recognized early and found out late. The latter period was much deferred in Carlyle's case, owing to the vigor of the impression which he made upon us. But when the time came for the public to be undeceived with regard to the character of this great and good man, it certainly did not judge him fairly. The ill-nature of these writings of Carlyle is not profound. Carlyle had the presumptuous discon-

tent of a spoiled child. It was his instinct and habit to "sass" right and left. And the public itself was mainly to blame for the spoiling. The fault in such cases is mainly the public's, on account of the queer exemptions they accord people who are able to "sling ink" particularly well. Authors are spoiled because of the weak supposition of the public that they are as good as they profess to be. The public will not insist upon remembering that great authors are like other people. Has not an author hands, organs, dimensions, senses, affections, passions; if you prick them do they not bleed; if you tickle them do they not laugh? Of course, the book reveals Carlyle as an egotist. But are not nearly all recent autobiographers egotists? A number of such works have appeared during the last ten years, and the position of the autobiographer has been in nearly every case the same,—namely, that God did a good thing when he made him; but that he should have made anybody else, and should have taken an interest in the other individual equal to that which he manifested in the autobiographer, is a proposition which he cannot bring himself for a moment to consider. Two books

in which this view is conspicuous are the autobiographies of John Quincy Adams and Miss Harriet Martineau. Carlyle is a mild egotist beside these writers. Adams does not speak of himself as an individual, but as a cause which he has espoused. Of the two, Miss Martineau is the more naïve. She is for arranging the world entirely from her own point of view. For instance, she attacked the late Lord Lytton because he did not carry an ear-trumpet. Lord Lytton was deaf, and preferred not to carry an ear-trumpet. Miss Martineau was deaf also, and did carry one. She did not believe in the immortality of the soul, and was very hard upon any one who was of a contrary opinion. Her Heaven, had her belief permitted her to have one, would have been a place where they all sat round with ear-trumpets and derided the doctrine of the immortality of the soul.

. . . It is always a matter of surprise to find how tall some very young girls are. You know they are young, and you discount their inches unconsciously. Your knowledge of their age has the effect of an optical illusion. Speaking of tall women, there is here an extraordinarily tall young lady, who is at the same time very pretty. She must be considerably more than six feet, and the fact of her being very slender adds to her apparent height. I was introduced to her the other evening. Her face is remarkably pretty, the features being very regular and perfect, and the expression charming. As I looked up at it, it seemed to me like some beautiful picture at the Academy, which had unfortunately been hung too high.

It is interesting to observe how gentle the minds of many of these tall women are. If there were somewhere a woman a mile high, and you could, by an arrangement of ladders, climb up to a level with her face, I believe that you would there find a sweet and foolish mind, an eye that would sink with giddy pleasure under the glance of admiration.

. . . I find that certain American women are very hard, or tart, or both. I have spoken of a want of a positive feminine nature which some American women have. It is upon this basis that the character I speak of is produced. Ammonia and Lapidea are both here. Ammonia is a woman who has been so used to thinking tart thoughts and saying tart things that her face has a drawn and puckered expression, like that of a person who has been eating persimmons. Not that I suppose she has ever eaten them. The persimmon is Southern; I have never seen it farther north than Pennsylvania. Ammonia on the other hand is from New York. I have never heard of her farther south than Hudson River. Ammonia, more-

over, is a polite person, while the persimmon is anything but a polite fruit. It is never eaten except by darkies or by very small boys in moments of extreme *ennui*. So I doubt if Ammonia has ever seen a persimmon. Ammonia is unmarried. Lapidea is married. She is a distinguished and handsome creature. She has been a great heiress, but it was not on that account A—— married her. It was her distinction, good connections, and unmistakable fashion that attracted him. He chose her because he is the kind of man who likes to be well turned out. She is ambitious, and I don't doubt will have a career.

I do not mean to accuse ambitious women. I often admire them. There is often a force about them which is admirable. Where the ambitious disposition is based upon a vigorous physique, a practical temper, and an enjoyment of the visible life, the character is a proper and natural one. There always will be such women. In many of them the character is discoverable even as girls. I met such a one recently. I was sitting in a drawing-room in a London hotel when the door opened and there entered an apparition. It was that of a young lady, handsome, prettily dressed, with a perfect hat and an original parasol and the smartest possible boots—altogether a smart apparition. I was unable to guess her nationality or condition. She began to speak in perfect English. She spoke it as I have only heard it spoken by some three or four persons, and these Americans. You could not in the least infer her nationality from her speech. She seemed to speak the original and perfect tongue of which local varieties, whether English or American, are inferior modifications. I supposed at first that she was married, her aplomb was so perfect, her gestures were so easy, and her speeches so pretty. But I presently discovered that she was a very young girl, and soon perceived that her self-possession was due to innocence, was the result not of experience, but of the want of it. The good and clever creature had wandered straight from the school-room or the nursery and had picked up in a day from a single woman of fashion the tricks and tones of Babylon. Later I had some talk with her on the subject of worldliness. She said she could not be worldly because she had not seen enough of the world. I reminded her that experience of the world was not necessary to worldliness, that "worldling" and "duckling" were two words which, besides sounding somewhat alike, had this in common, that a worldling takes to the world, just as a duckling takes to the water.

"Oh," she said, "you would compare me to one of those dirty little fuzzy things."

. . . The pretty American women here are

much admired by foreigners, especially Englishmen. It is not in the nature of women to resent this kind of thing. American women have, moreover, an adaptability which few other women have, and they like to practice their talents upon the various orders and races of men. But it makes the American men jealous, and it is not surprising that it does. I find that I don't like it. I will own that when I see one of them surrounded by half a dozen foreigners, I feel like Troilus when he saw Cressida flirting in the camp of the Greeks.

But notwithstanding the adaptability of our women, they have a character of their own, of which they are tenacious—often no doubt against their will—amid circumstances most remote from those of their own country. There are various marks of this character. For instance, there is a woman here who lives altogether abroad and at such places as this, and who pursues the life of the third-rate watering-place society to which she devotes herself with the same bustling activity with which, were she amid her native scenes, she would be making pumpkin pies.

There is also a tall, dark, slight girl, Miss B——. She is a young woman of undoubted fashion and perfectly dressed. Yet as I see her walking through a quadrille I observe in her mind a perception so vivacious as to be almost unlady-like. I am aware of a Yankee incisiveness, a keen, dry light like that of her native hills. I am conscious of her New England origin whenever I am in her society. There is somewhere a reminiscence of the ancestral "apple-sass." Beyond her Worth dresses and her bric-à-brac, perfect French, and mundane wit and manners (what a clever and amusing woman of the world she is!) I see a smart white farm-house on a round, clear hill.

But I am just now thinking especially of one characteristic of American women. There is a school-ma'am basis in the character of certain of our women, particularly those of Puritan origin. A peculiarity of them is that they seem to disapprove of you a little, and, if they are pretty, I find that there is something pleasant in being the object of their disapproval. I see this character in women who of course could not have been school-ma'ams, who indeed have hardly lived in America. I know one—and she is very pretty—who even as a girl has passed most of her days abroad. She is married to a German nobleman, and has a castle in Silesia. The whole of the few years of her married life she has

spent about courts. Yet I never meet her, amid scenes so different from those of the land of our common birth, without being conscious that she has this quality. It always seems to me that she is going to "keep me in."

. . . I shall begin to wonder presently who isn't here. I have just met Mildred R—— in the Ferdinand Strasse. Mildred is a woman very characteristic of America, but of an entirely different type from those I have just mentioned. She is a Virginian. She is an inevitable flirt, whose coquetry is of the muscular, vigorous kind. I met her first one evening in the parlor of an American house. It was in one of those scenes the participation in which has afforded me the keenest social pleasure I have ever known. She was staying in this house at the time or had dined there. Two youths were sitting on either side of her, one holding a spool of thread, the other playing with the scissors. Miss H—— said: "Do you see those two boys? They ought to have gone hours ago to a dance across the street. They promised, and they wanted to go, but they can't get away from Mildred." She is a large, finely proportioned creature, and is particularly grand in such things as cloaks, furs, etc. Her movement is unusually good. I have heard a friend of hers say—it was a woman—that some five years ago, when she was her best, it was a sight to remember to see her walk the length of the room. She is looking very well now. I think she is getting a little affected. Her conversation is beginning to take on an intellectual tone. She is going in for a salon. She now poses as the friend and confidante of statesmen, like those silly women in the novels of Bulwer and Disraeli. I think this is a mistake. She is not clever. Besides it is unnecessary. I will guarantee her a salon on the strength of the qualities she really has. She belongs to a class of women who are perhaps the most effective flirts in existence, women who are about one-fourth or one-sixth man. These women I believe are oftener to be met with in America than elsewhere. A peculiarity of them is a generosity of soul, a good-nature, an almost infantile readiness to like and be pleased which contrasts strangely with their contralto voices and grand size. It is odd to hear the language of gentle and giddy unwisdom from the lips of such tall people. Mildred is like this. Her volatile benevolence is bestowed upon old and young alike. There is no ill-nature in her. I figure her like Ceres holding in her hand a sheaf of the sunny corn-field.

THE BOSTONIANS.*

BY HENRY JAMES,

Author of "Portrait of a Lady," "Daisy Miller," "Lady Barberina," etc.

XLI.

HE walked about for the next two hours, walked all over Boston, heedless of his course, and conscious only of an unwillingness to return to his hotel, and an inability to eat his dinner or rest his weary legs. He had been roaming in very much the same desperate fashion, at once eager and purposeless, for many days before he left New York, and he knew that his agitation and suspense must wear themselves out. At present they pressed him more than ever; they had become tremendously acute. The early dusk of the last half of November had gathered thick, but the evening was fine, and the lighted streets had the animation and variety of a winter that had begun with brilliancy. The shop-fronts glowed through frosty panes; the passers bustled on the pavement; the bells of the street-cars jangled in the cold air; the newsboys hawked the evening papers; the vestibules of the theater, illuminated and flanked with colored posters and the photographs of actresses, exhibited seductively their swinging doors of red leather or baize, spotted with little brass nails. Behind great plates of glass the interior of the hotels became visible, with marble-paved lobbies white with electric lamps, and columns, and Westerners on divans stretching their legs; while behind a counter, set apart and covered with an array of periodicals and novels in paper covers, little boys, with the faces of old men, showing plans of the play-houses, offering librettos, and selling orchestra-chairs at a premium. When from time to time Ransom paused at a corner, hesitating which way to drift, he looked up and saw the stars, sharp and near, scintillating over the town. Boston seemed to him big and full of nocturnal life, very much awake and preparing for an evening of pleasure.

He passed and repassed the Music Hall; saw Verena immensely advertised; gazed down the vista, the approach for pedestrians, which leads out of School street, and thought it looked expectant and ominous. People had not begun to enter yet, but the place was ready, lighted, and opened, and the interval would be only too short. So it appeared to Ransom, while at the same time he wished

immensely the crisis was over. Everything that surrounded him referred itself to the idea with which his mind was palpitating, the question whether he might not still intervene, as against the girl's jump into the abyss. He believed that all Boston was going to see her, or that at least every one was whom he saw in the streets; and there was a kind of incentive and inspiration in this thought. The vision of wresting her from the mighty multitude set him off again, to stride through the population that would fight for her. It was not too late, for he felt strong; it would not be too late even if she should already stand there before thousands of converging eyes. He had had his ticket since the morning, and now the time was going on. He went back to his hotel at last for ten minutes, and refreshed himself by dressing a little and by drinking a glass of wine. Then he took his way once more to the Music Hall, and saw that people were beginning to go in—the first drops of the great stream, among whom there were many women. Since seven o'clock the minutes had moved fast,—before that they had dragged,—and now there was only half an hour. Ransom passed in with the others; he knew just where his seat was; he had chosen it, on reaching Boston, from the few that were left, with what he believed to be care. But now, as he stood beneath the far-away paneled roof, stretching above the line of little tongues of flame which marked its junction with the walls, he felt that this didn't matter much, since he certainly was not going to subside into his place. He was not one of the audience; he was apart, unique, and had come on an altogether special business. It wouldn't have mattered if, in advance, he had got no place at all, and had just left himself to pay for standing-room at the last. The people came pouring in, and in a very short time there would only be standing-room left. Ransom had no definite plan; he had mainly wanted to get inside of the building, so that, on a view of the field, he might make up his mind. He had never been in the Music Hall before, and its lofty vault and rows of overhanging balconies made it to his imagination immense and impressive. There were two or three moments during

* Copyright, 1884, by Henry James.

which he felt as he could imagine a young man to feel who, waiting in a public place, has made up his mind, for reasons of his own, to discharge a pistol at the king or the president.

The place struck him with a kind of Roman vastness; the doors which opened out of the upper balconies, high aloft, and which were constantly swinging to and fro with the passage of spectators and ushers, reminded him of the *vomitoria* that he had read about in descriptions of the Colosseum. The huge organ, the background of the stage,—a stage occupied with tiers of seats for choruses and civic worthies,—lifted to the dome its shining pipes and sculptured pinnacles, and some genius of music or oratory erected himself in monumental bronze at the base. The hall was so capacious and serious, and the audience increased so rapidly without filling it, giving Ransom a sense of the numbers it would contain when it was packed, that the courage of the two young women, face to face with so tremendous an ordeal, hovered before him as really sublime, especially the conscious tension of poor Olive, who would have been spared none of the anxieties and tremors, none of the previsions of accident or calculations of failure. In the front of the stage was a slim, high desk, like a music-stand, with a red velvet cover, and near it was a light, ornamental chair, on which he was sure Verena would not seat herself, though he could fancy her leaning at moments on the back. Behind this was a kind of semicircle of a dozen arm-chairs, which had evidently been arranged for the friends of the speaker, her sponsors and patrons. The hall was more and more full of premonitory sounds; people making a noise as they unfolded, on hinges, their seats, and itinerant boys, whose voices as they cried out "Photographs of Miss Tarrant—sketch of her life!" or "Portraits of the speaker—story of her career!" sounded small and piping in the general immensity. Before Ransom was aware of it, several of the arm-chairs in the row behind the lecturer's desk were occupied, with gaps, and in a moment he recognized, even across the interval, three of the persons who had appeared. The straight-featured woman, with bands of glossy hair and eyebrows that told at a distance, could only be Mrs. Farrinder, just as the gentleman beside her, in a white overcoat, with an umbrella and a vague face, was probably her husband Amariah. At the opposite end of the row were another pair, whom Ransom, unacquainted with certain chapters of Verena's history, perceived without surprise to be Mrs. Burrage and her insinuating son. Apparently their interest in Miss Tarrant was more than

a momentary fad, since—like himself—they had made the journey from New York to hear her. There were other figures, unknown to our young man, here and there in the semicircle, but several places were still empty (one of which was of course reserved for Olive), and it occurred to Ransom, even in his pre-occupation, that one of them ought to remain so—ought to be left to symbolize the presence, in the spirit, of Miss Birdseye.

He bought one of the photographs of Verena, and thought it shockingly bad, and bought also the sketch of her life, which many people seemed to be reading, but crumpled it up in his pocket for future consideration. Verena was not in the least present to him, in connection with this exhibition of enterprise and puffery; what he saw was Olive, struggling and yielding, making every sacrifice of taste for the sake of the largest hearing, and conforming herself to a great popular system. Whether she had struggled or not, there was a catch-penny effect about the whole thing which added to the fever in his cheek and made him wish he had money to buy up the stock of the vociferous little boys. Suddenly the notes of the organ rolled out into the hall, and he became aware that the overture or prelude had begun. This, too, seemed to him a piece of claptrap, but he didn't wait to think of it; he instantly edged out of his place, which he had chosen near the end of a row, and reached one of the numerous doors. If he had had no definite plan, he now had at least an irresistible impulse, and he felt the prick of shame at having faltered for a moment. It had been his tacit calculation that Verena, still enshrined in mystery by her companion, would not have reached the scene of her performance till within a few minutes of the time at which she was to come forth; so that he had lost nothing by waiting, up to this moment, before the platform. But now he must overtake his opportunity. Before passing out of the hall into the lobby, he paused, and with his back to the stage gave a look at the gathered auditory. It was now densely numerous, and, suffused with the evenly distributed gaslight, which fell from a great elevation, and the thick atmosphere that hangs forever in such places, it appeared to pile itself high and to look dimly expectant and formidable. He had a throb of uneasiness at his private purpose of balking it of its entertainment, its victim—a glimpse of the ferocity that lurks in a disappointed mob. But the thought of that danger only made him pass more quickly through the ugly corridors; he felt that his plan was definite enough now, and he found that he had no need even of asking the way to a certain small door (one or more

of them) which he meant to push open. In taking his place in the morning, he had assured himself as to the side of the house on which (with its approach to the platform) the withdrawing-room of singers and speakers was situated; he had chosen his seat in that quarter, and he now had not far to go before he reached it. No one heeded or challenged him; Miss Tarrant's auditors were still pouring in (the occasion was evidently to have been a tremendous success of curiosity), and had all the attention of the ushers. Ransom opened a door at the end of a passage, and it admitted him into a sort of vestibule, quite bare save that at a second door, opposite to him, stood a figure at the sight of which he paused for a moment in his advance.

The figure was simply that of a robust policeman, in his helmet and brass buttons—a policeman who was expecting him—Ransom could see that in a twinkling. He judged in the same space of time that Olive Chancellor had heard of his having been there and had applied for the protection of this functionary, who was now simply guarding the approach, and was prepared to defend it against all comers. There was a slight element of surprise in this, as he had reasoned that his nervous kinswoman was absent from her house for the day—had been spending it all in Verena's retreat, wherever that was. The surprise was not great enough, however, to interrupt his course for more than an instant, and he crossed the room and stood before the belted sentinel. For a moment neither spoke; they looked at each other very hard in the eyes, and Ransom heard the organ, beyond partitions, launching its waves of sound through the hall. They seemed to be very near it, and the whole place vibrated. The policeman was a tall, lean-faced, sallow man, with a stoop of the shoulders, a small, steady eye, and something in his mouth which made a protuberance in his cheek. Ransom could see that he was very strong, but he believed that he himself was not materially less so. However, he had not come there to show physical fight: a public tussle about Verena was not an attractive idea, except perhaps, after all, if he should get the worst of it, from the point of view of Olive's new system of advertising; and, moreover, it would not be in the least necessary. Still he said nothing, and still the policeman remained dumb, and there was something in the way the moments elapsed, and in our young man's consciousness that Verena was separated from him only by a couple of thin planks, which made him feel that she too expected him, but in another sense; that she had nothing to do with this parade of resistance, that she would know in

a moment, by quick intuition, that he was there, and that she was only praying to be rescued, to be saved. Face to face with Olive she hadn't the courage, but she would have it with her hand in his. It came to him that there was no one in the world less sure of her business just at that moment than Olive Chancellor; it was as if he could see, through the door, the terrible way her eyes were fixed on Verena while she held her watch in her hand and Verena looked away from her. Olive would have been so thankful that she should begin before the hour, but of course that was impossible. Ransom asked no question—that seemed a waste of time; he only said, after a minute, to the policeman:

"I should like very much to see Miss Tarrant, if you will be so good as to take in my card."

The guardian of order, well planted just between him and the handle of the door, took from Ransom the morsel of pasteboard which he held out to him, read slowly the name inscribed on it, turned it over and looked at the back, then returned it to his interlocutor. "Well, I guess it ain't much use," he remarked.

"How can you know that? You have no business to decline my request."

"Well, I guess I have about as much business as you have to make it." Then he added, "You are just the very man she wants to keep out."

"I don't think Miss Tarrant wants to keep me out," Ransom returned.

"I don't know much about her, she hasn't hired the hall. It's the other one—Miss Chancellor; it's her that runs this thing."

"And she has asked you to keep me out? How absurd!" exclaimed Ransom, ingenuously.

"She tells me you're none too fit to be round alone; you have got this thing on the brain. I guess you'd better be quiet," said the policeman.

"Quiet? Is it possible to be more quiet than I am?"

"Well, I've seen crazy folks that were a good deal like you. If you want to see the speaker, why don't you go and set round in the hall, with the rest of the public?" And the policeman waited in an immovable, ruminating, reasonable manner, for an answer to this inquiry.

Ransom had one, on the instant, at his service. "Because I don't want simply to see her; I want also to speak to her—in private."

"Yes—it's always intensely private," said the policeman. "Now I wouldn't lose the lecture if I was you. I guess it will do you good."

"The lecture?" Ransom repeated, laughing. "It won't take place."

"Yes it will — as quick as the organ stops." Then the policeman added, as to himself, "Why the devil don't it?"

"Because Miss Tarrant has sent up to the organist to tell him to keep on."

"Who has she sent, do you s'pose?" And Ransom's new acquaintance entered into his humor. "I guess Miss Chancellor isn't her nigger."

"She has sent her father, or perhaps even her mother. They are in there too."

"How do you know that?" asked the policeman, consideringly.

"Oh, I know everything," Ransom answered, smiling.

"Well, I guess they didn't come here to listen to that organ. We'll hear something else before long, if he doesn't stop."

"You will hear a good deal, very soon," Ransom remarked.

The serenity of his self-confidence appeared at last to make an impression on his antagonist, who lowered his head a little, like some butting animal, and looked at the young man from beneath bushy eyebrows. "Well, I *have* heard a good deal since I've ben in Boston."

"Oh, Boston's a great place," Ransom rejoined, inattentively. He was not listening to the policeman or to the organ now, for the sound of voices had reached him from the other side of the door. The policeman took no further notice of it than to lean back against the partition with folded arms; and there was another pause between them, during which the playing of the organ ceased.

"I will just wait here, with your permission," said Ransom, "and presently I shall be called."

"Who do you suppose will call you?"

"Well, Miss Tarrant, I hope."

"She'll have to fix the other one first."

Ransom took out his watch, which he had adapted on purpose, several hours before, to Boston time, and saw that the minutes had sped with increasing velocity during his *tête-à-tête* with Miss Chancellor's warden, and that it now marked five minutes past eight. "Miss Chancellor will have to fix the public," he said in a moment; and the words were far from being an empty profession of security, for the conviction already in possession of him, that a drama in which he, though cut off, was an actor, had been going on for some time in the apartment he was prevented from entering, that the situation was tremendously strained there, and that it could not come to an end without an appeal to him — this transcendental assumption acquired an infinitely greater force the instant he perceived that Verena was even now keeping her audience waiting. Why didn't she go on? Why, except

that she knew he was there, and was gaining time?

"Well, I guess she has shown herself," said the door-keeper, whose discussion with Ransom now appeared to have passed, on his own part, and without the slightest prejudice to his firmness, into a sociable, gossiping phase.

"If she had shown herself, we should hear the reception, the applause."

"Well, there they air; they are going to give it to her," the policeman announced.

He had an odious appearance of being in the right, for there indeed they seemed to be — they were giving it to her. A general hubbub rose from the floor and the galleries of the hall — the sound of several thousand people stamping with their feet, and rapping with their umbrellas and sticks. Ransom felt faint, and for a little while he stood with his gaze interlocked with that of the policeman. Then suddenly a wave of coolness seemed to break over him, and he exclaimed: "My dear fellow, that isn't applause — it's impatience. It isn't a reception — it's a call!"

The policeman neither assented to this proposition nor denied it; he only transferred the protuberance in his cheek to the other side, and observed:

"I guess she's sick."

"Oh, I hope not!" said Ransom, very gently. The stamping and rapping swelled and swelled for a minute, and then it subsided; but before it had done so Ransom's definition of it had plainly become the true one. The tone of the manifestation was good-humored, but it was not gratulatory. He looked at his watch again, and saw that five minutes more had elapsed, and he remembered what the newspaper man in Charles street had said about Olive's guaranteeing Verena's punctuality. Oddly enough, at the moment that the image of this gentleman recurred to him, the gentleman himself burst through the other door, in a state of the liveliest agitation.

"Why in the name of goodness don't she go on? If she wants to make them call her, they've done it about enough!" Mr. Pardon turned, pressingly, from Ransom to the policeman and back again, and in his preoccupation gave no sign of having met the Mississippian before.

"I guess she's sick," said the policeman.

"The public 'll be sick!" cried the distressed reporter. "If she's sick, why doesn't she send for a doctor? All Boston is packed into this house, and she has got to talk to it. I want to go in and see."

"You can't go in," said the policeman, dryly.

"Why can't I go in, I should like to know? I want to go in for the 'Vesper'!"

"You can't go in for anything. I'm keeping this man out, too," the policeman added, genially, as if to make Mr. Pardon's exclusion appear less invidious.

"Why, they'd ought to let *you* in," said Matthias, staring a moment at Ransom.

"Maybe they'd ought to, but they won't," the policeman remarked.

"Gracious me!" panted Mr. Pardon; "I knew from the first Miss Chancellor would make a mess of it! Where's Mr. Filer?" he went on, eagerly, addressing himself apparently to either of the others, or to both.

"I guess he's at the door, counting the money," said the policeman.

"Well, he'll have to give it back if he don't look out!"

"Maybe he will. I'll let *him* in if he comes, but he's the only one. She is on now," the policeman added, without emotion.

His ear had caught the first faint murmur of another explosion of sound. This time, unmistakably, it was applause — the clapping of multitudinous hands, mingled with the noise of many throats. The demonstration, however, though considerable, was not what might have been expected, and it died away quickly. Mr. Pardon stood listening, with an expression of some alarm. "Merciful fathers! can't they give her more than that?" he cried. "I'll just fly around and see!"

When he had hurried away again, Ransom said to the policeman, "Who is Mr. Filer?"

"Oh, he's an old friend of mine. He's the man that runs Miss Chancellor."

"That runs her?"

"Just the same as she runs Miss Tarrant. He runs the pair, as you might say. He's in the lecture-business."

"Then he had better talk to the public himself."

"Oh, *he* can't talk; he can only boss!"

The opposite door at this moment was pushed open again, and a large, heated-looking man, with a little stiff beard on the end of his chin, and his overcoat flying behind him, strode forward with an imprecation. "What the — are they doing in the parlor? This sort of thing's about played out!"

"Ain't she up there now?" the policeman asked.

"It's not Miss Tarrant," Ransom said, as if he knew all about it. He perceived in a moment that this was Mr. Filer, Olive Chancellor's agent; an inference instantly followed by the reflection that such a personage would have been warned against him by his kinswoman, and would doubtless attempt to hold him, or his influence, accountable for Verena's unexpected delay. Mr. Filer only glanced at him, however, and to Ransom's surprise ap-

peared to have no theory of his identity; a fact implying that Miss Chancellor had considered that the greater discretion was (except to the policeman) to hold her tongue about him altogether.

"Up there? It's her jackass of a father that's up there!" cried Mr. Filer, with his hand on the latch of the door, which the policeman had allowed him to approach.

"Is he asking for a doctor?" the latter inquired, dispassionately.

"You're the sort of a doctor he'll want, if he doesn't produce the girl! You don't mean to say they've locked themselves in? What the plague are they after?"

"They've got the key on that side," said the policeman, while Mr. Filer discharged at the door a volley of sharp knocks, at the same time violently shaking the handle.

"If the door was locked, what was the good of your standing before it?" Ransom inquired.

"So as you couldn't do that"; and the policeman nodded at Mr. Filer.

"You see, your interference has done very little good."

"I dunno; she has got to come out yet."

Mr. Filer meanwhile had continued to thump and shake, demanding instant admission, and inquiring if they were going to let the audience pull the house down. Another round of applause had broken out, directed perceptibly to some apology, some solemn circumlocution, of Selah Tarrant's; this covered the sound of the agent's voice, as well as that of a confused and divided response proceeding from the parlor. For a minute nothing definite was audible; the door remained closed, and Matthias Pardon reappeared in the vestibule.

"He says she's just a little faint — from nervousness. She'll be all ready in about three minutes." This announcement was Mr. Pardon's contribution to the crisis; and he added that the crowd was a lovely crowd; it was a real Boston crowd, it was perfectly good-humored.

"There's a lovely crowd, and a real Boston one too, I guess, in here!" cried Mr. Filer, now banging very hard. "I've handled prima donnas, and I've handled natural curiosities, but I've never seen anything up to this. Mind what I say, ladies: if you don't let me in, I'll smash down the door!"

"Don't seem as if *you* could make it much worse, does it?" the policeman observed to Ransom, strolling aside a little with the air of being superseded.

XLII.

RANSOM made no reply; he was watching the door, which at that moment gave way

from within. Verena stood there,—it was she, evidently, who had opened it,—and her eyes went straight to his. She was dressed in white, and her face was whiter than her garment; above it her hair seemed to shine like fire. She took a step forward; but before she could take another he had come down to her, on the threshold of the room. Her face was full of suffering, and he did not attempt—before all those eyes—to take her hand; he only said in a low tone, “I have been waiting for you—a long time!”

“I know it—I saw you in your seat—I want to speak to you.”

“Well, Miss Tarrant, don’t you think you’d better be on the platform?” cried Mr. Filer, making with both his arms a movement as if to sweep her before him, through the waiting-room, up into the presence of the public.

“In a moment I shall be ready. My father is making that all right.” And, to Ransom’s surprise, she smiled with all her sweetness at the irrepressible agent—appeared to wish genuinely to reassure him.

The three had moved together into the waiting-room, and there at the further end of it, beyond the vulgar, perfunctory chairs and tables, under the flaring gas, he saw Mrs. Tarrant sitting upright on a sofa, with immense rigidity, and a large, flushed visage, full of suppressed distortion, and beside her, prostrate, fallen over, her head buried in the lap of Verena’s mother, the tragic figure of Olive Chancellor. Ransom could scarcely know how much Olive’s having flung herself upon Mrs. Tarrant’s bosom testified to the convulsive scene that had just taken place behind the locked door. He closed it again, sharply, in the face of the reporter and the policeman, and at the same moment Selah Tarrant descended, through the aperture leading to the platform, from his brief communion with the public. On seeing Ransom, he stopped short, and, gathering his waterproof about him, measured the young man from head to foot.

“Well, sir, perhaps *you* would like to go and explain our hitch,” he remarked, indulging in a smile so comprehensive that the corners of his mouth seemed almost to meet behind. “I presume that you, better than any one else, can give them an insight into our difficulties!”

“Father, be still; father, it will come out all right in a moment!” cried Verena, below her breath, her voice stifled in her agitation.

“There’s one thing I want to know: are we going to spend half an hour in doing the family-circle business?” Mr. Filer demanded, wiping his indignant countenance. “Is Miss Tarrant going to lecture, or ain’t she going to lecture? If she ain’t, she’ll please to show

cause why. Is she aware that every quarter of a second, at the present instant, is worth about five hundred dollars?”

“I know that—I know that, Mr. Filer. I will begin in a moment!” Verena went on. “I only want to speak to Mr. Ransom—just three words. They are perfectly quiet—don’t you see how quiet they are? They trust me, they trust me, don’t they, father? I only want to speak to Mr. Ransom.”

“Who the devil is Mr. Ransom?” cried the exasperated, bewildered Filer.

Verena spoke to the others, but she looked at her lover, and the expression of her eyes was ineffably touching and beseeching. She trembled with nervous excitement, there were tears and confidences in her voice, and Ransom felt himself flushing with pity for the agony he had forced upon her. But at the same moment he had another perception, which brushed aside remorse; he saw that he could do what he wanted, that she begged him, with all her being, to spare her, but that so long as he should protest she was submissive, helpless. What he wanted, in this light, flamed before him and challenged all his manhood, tossing his determination to a height from which not only Doctor Tarrant, and Mr. Filer, and Olive, over there, in her sightless, soundless shame, but the great, expectant hall as well, and the mighty multitude, in suspense, keeping quiet from minute to minute and holding the breath of its anger—from which all these things looked small, surmountable, and of the moment only. He didn’t quite understand as yet, however; he saw that Verena had not refused, but temporized; that the spell upon her—thanks to which he should still be able to rescue her—had been the knowledge that he was near.

“Come away, come away,” he murmured quickly, putting out his two hands to her.

She took one of them, as if to plead, not to consent. “Oh, let me off, let me off—for *her*, for the others! It’s too terrible, it’s impossible!”

“What I want to know is, why Mr. Ransom isn’t in the hands of the police!” wailed Mrs. Tarrant, from her sofa.

“I have been, madam, for the last quarter of an hour.” Ransom felt more and more that he could manage it, if he could only keep cool. He bent over Verena with a tenderness in which he was careless, now, of observation.

“Dearest, I told you, I warned you. I left you alone for ten weeks; but could that make you doubt it was coming? Not for worlds, not for millions, shall you give yourself to that roaring crowd. Don’t ask me to care for them, or for any one! What do they care for you

but to gape and grin and babble? You are mine, you are not theirs."

"What under the sun is the man talking about? With the most magnificent audience ever brought together! The city of Boston is under this roof!" Mr. Filer gaspingly interposed.

"The city of Boston be d——!" said Ransom.

"Mr. Ransom is very much interested in my daughter. He doesn't approve of our views," Selah Tarrant explained.

"It's the most horrible, wicked, immoral selfishness I ever heard in my life!" exclaimed Mrs. Tarrant.

"Selfishness! Mrs. Tarrant, do you suppose I pretend not to be selfish?"

"Do you want us all murdered by the mob, then?"

"They can have their money—can't you give them back their money?" cried Verena, turning frantically round the circle.

"Verena Tarrant, you don't mean to say you are going to back down?" her mother shrieked.

"Good God! that I should make her suffer like this!" said Ransom to himself; and to put an end to the odious scene he would have seized Verena in his arms and broken away into the outer world, if Olive, who at Mrs. Tarrant's last loud reflection had sprung to her feet, had not at the same time thrown herself between them with a force which made the girl relinquish her grasp of Ransom's hand. To his astonishment, the eyes that looked at him out of her scared, haggard face were, like Verena's, eyes of tremendous entreaty. There was a moment during which she would have been ready to go down on her knees to him, in order that the lecture should go on.

"If you don't agree with her, take her up on the platform, and have it out there; the public would like that, first-rate!" Mr. Filer said to Ransom, as if he thought this suggestion practical.

"She had prepared a lovely address!" Selah remarked, mournfully, as if to the company in general.

No one appeared to heed the observation, but his wife broke out again, "Verena Tarrant, I should like to shake you! Do you call such a man as that a gentleman? I don't know where your father's spirit is, to let him stay!"

Olive, meanwhile, was literally praying to her kinsman. "Let her appear this once, just this once: not to ruin, not to shame! Haven't you any pity? do you want me to be hooted? It's only for an hour. Haven't you any heart?"

Her face and voice were terrible to Ransom; she had flung herself upon Verena and was holding her close, and he could see that her friend's suffering was faint in comparison to her own. "Why for an hour, when it's all false and damnable? An hour is as bad as ten years! She's mine or she isn't; and if she's mine, she's all mine!"

"Yours! yours! Verena, think, think what you're doing!" Olive moaned, bending over her.

Mr. Filer was now pouring forth his soul in oburgations and oaths, and brandishing before the culprits—Verena and Ransom—the extreme penalty of the law. Mrs. Tarrant had burst into violent hysterics, while Selah revolved vaguely about the room and declared that it seemed as if the better day was going to be put off for quite a while. "Don't you see how good, how sweet they are—giving us all this time? Don't you think that when they behave like that—without a sound for five minutes—they ought to be rewarded?" Verena asked, smiling divinely at Ransom. Nothing could have been more tender, more exquisite, than the way she put her appeal (that he should remit his veto) on the ground of simple charity, kindness to the great, good-natured, childish public.

"Miss Chancellor may reward them in any way she likes. Give them back their money and a little present to each."

"Money and presents? I should like to shoot you, sir!" roared Mr. Filer. The audience had really been very patient, and up to this point deserved Verena's praise; but it was now long past eight o'clock, and symptoms of irritation—cries and groans and hisses—began again to proceed from the hall. Mr. Filer launched himself into the passage leading to the stage, and Selah rushed after him. Mrs. Tarrant extended herself, sobbing, on the sofa, and Olive, quivering in the storm, inquired of Ransom what he wanted her to do, what humiliation, what degradation, what sacrifice he imposed.

"I'll do anything—I'll be abject—I'll be vile—I'll go down in the dust!"

"I ask nothing of you, and I have nothing to do with you," Ransom said. "That is, I ask, at the most, that you shouldn't expect that, wishing to make Verena my wife, I should say to her, 'Oh yes, you can take an hour or two out of it!' Verena," he went on, "all this is out of it—dreadfully, odiously—and it's a great deal too much! Come, come as far away from here as possible, and we'll settle the rest!"

The combined effort of Mr. Filer and Selah Tarrant to pacify the public had not, apparently, the success it deserved; the house con-

tinued in uproar and the volume of sound increased. "Leave us alone, leave us alone for a single minute!" cried Verena; "just let me speak to him, and it will be all right!" She rushed over to her mother, drew her, dragged her from the sofa, led her to the door of the room. Mrs. Tarrant, on the way, reunited herself with Olive (the horror of the situation had at least that compensation for her), and, clinging and stumbling together, the distracted women, pushed by Verena, passed into the vestibule, now, as Ransom saw, deserted by the policeman and the reporter, who had rushed round to where the battle was the thickest.

"Oh, why did you come — why, why?" And Verena, turning back, threw herself upon him with a protest which was all, and more than all, a surrender. She had never yet given herself to him as much as in that movement of reproach.

"Didn't you expect me, and weren't you sure?" he asked, smiling at her and standing there till she arrived.

"I didn't know — it was terrible — it's awful! I saw you in your place, in the house, when you came. As soon as we got here I went out to those steps that go up to the stage and I looked out, with my father, — from behind him, — and saw you in a minute. Then I felt too nervous to speak! I could never, never, if you were there! My father didn't know you, and I said nothing, but Olive guessed as soon as I came back. She rushed at me, and she looked at me — oh, how she looked! and she guessed. She didn't need to go out to see for herself, and when she saw how I was trembling she began to tremble herself, to believe, as I believed, we were lost. Listen to them, listen to them, in the house! Now I want you to go away. I will see you to-morrow, as long as you wish. That's all I want now; if you will only go away it's not too late, and everything will be all right!"

Preoccupied as Ransom was with the simple purpose of getting her bodily out of the place, he could yet notice her strange, touching tone, and her air of believing that she might really persuade him. She had evidently given up everything now — every pretense of a different conviction and of loyalty to her cause; all this had fallen from her as soon as she felt him near, and she asked him to go away just as any plighted maiden might have asked any favor of her lover. But it was the poor girl's misfortune that whatever she did or said, or left unsaid, only had the effect of making her dearer to him and making the people who were clamoring for her seem more and more of a rabble.

He indulged in not the smallest recognition

of her request, and simply said, "Surely Olive must have believed, must have known, I would come."

"She would have been sure if you hadn't become so unexpectedly quiet after I left Marmion. You seemed to concur, to be willing to wait."

"So I was, for a few weeks. But they ended yesterday. I was furious that morning when I learned your flight, and during the week that followed I made two or three attempts to find you. Then I stopped — I thought it better. I saw you were very well hidden; I determined not even to write. I felt I *could* wait — with that last day at Marmion to think of. Besides, to leave you with her awhile, for the last, seemed more decent. Perhaps you'll tell me now where you were."

"I was with father and mother. She sent me to them that morning, with a letter. I don't know what was in it. Perhaps there was money," said Verena, who evidently now would tell him everything.

"And where did they take you?"

"I don't know — to places. I was in Boston once, for a day; but only in a carriage. They were as frightened as Olive; they were bound to save me!"

"They shouldn't have brought you here to-night then. How could you possibly doubt of my coming?"

"I don't know what I thought, and I didn't know, till I saw you, that all the strength I had hoped for would leave me in a flash, and that if I attempted to speak — with you sitting there — I should make the most shameful failure. We had a sickening scene here. I begged for delay, for time to recover. We waited and waited, and when I heard you at the door talking to the policeman, it seemed to me everything was gone. But it will still come back if you will leave me. They are quiet again — father must be interesting them."

"I hope he is!" Ransom exclaimed. "If Miss Chancellor ordered the policeman, she must have expected me."

"That was only after she knew you were in the house. She flew out into the lobby with father, and they seized him and posted him there. She locked the door; she seemed to think they would break it down. I didn't wait for that, but from the moment I knew you were on the other side of it I couldn't go on — I was paralyzed. It has made me feel better to talk to you — and now I could appear," Verena added.

"My darling child, haven't you a shawl or a mantle?" Ransom returned, for all answer, looking about him. He perceived, tossed upon a chair a long, furred cloak, which he caught up, and, before she could resist, threw

over her. She even let him arrange it, and, standing there, draped from head to foot in it, contented herself with saying, after a moment:

"I don't understand. Where shall we go? Where will you take me?"

"We shall catch the night-train for New York, and the first thing in the morning we shall be married."

Verena remained gazing at him with swimming eyes. "And what will the people do? Listen, listen!"

"Your father is ceasing to interest them. They'll howl and thump, according to their nature."

"Ah, their nature's fine!" Verena pleaded.

"Dearest, that's one of the fallacies I shall have to woo you from. Hear them, the senseless brutes!" The storm was now raging in the hall, and it deepened to such a point that Verena turned to him, quickly, passionately.

"I could soothe them with a word!"

"Keep your soothing words for me — you will have need of them all, in our coming time," Ransom said, laughing. He pulled open the door again, which led into the lobby, but he was driven back, with Verena, by a furious onset from Mrs. Tarrant. Seeing her daughter fairly arrayed for departure, she hurled herself upon her, half in indignation, half in a blind impulse to cling, and with an outpouring of tears, reproaches, prayers, strange scraps of argument and iterations of farewell, closed her about with an embrace which was partly a supreme caress, partly the salutary shaking she had, three minutes before, expressed the wish to administer, and altogether for the moment a check upon the girl's flight.

"Mother, dearest, it's all for the best, — I can't help it; I love you just the same; let me go, let me go!" Verena stammered, kissing her again, struggling to free herself, and holding out her hand to Ransom. He saw now that she only wanted to get away, to leave everything behind her. Olive was close at hand, on the threshold of the room, and as soon as Ransom looked at her he became aware that the weakness she had just shown had passed away. She had straightened herself again, and she was upright in her desolation. The expression of her face was a thing to remain with him forever; it was impossible to imagine a more vivid presentment of blighted hope and wounded pride. Dry, desperate, rigid, she yet wavered and seemed uncertain; her strange, pale, glittering eyes straining forward, as if they were looking for death. Ransom had a vision, even at that crowded moment, that if she could have met it there and then, bristling with steel or lurid with fire, she would have rushed on it without

a tremor, like the heroine that she was. All this while the great agitation in the hall rose and fell, in waves and surges, as if Selah Tarrant and the agent were talking to the multitude, trying to calm them, succeeding for the moment, and then letting them loose again. Whirled down by one of the fitful gusts, a lady and a gentleman issued from the passage, and Ransom, glancing at them, recognized Mrs. Farrinder and her husband.

"Well, Miss Chancellor," said that more successful woman, with considerable asperity, "if this is the way you're going to reinstate our sex!" She passed rapidly through the room, followed by Amariah, who remarked in his transit that it seemed as if there had been a want of organization, and the two retreated expeditiously, without the lady's having taken the smallest notice of Verena, whose conflict with her mother prolonged itself. Ransom, striving, with all needful consideration for Mrs. Tarrant, to separate these two, addressed not a word to Olive; it was the last of her, for him, and he neither saw how her livid face suddenly glowed, as if Mrs. Farrinder's words had been a lash, nor how, as if with a sudden inspiration, she rushed to the approach to the platform. If he had observed her, it might have seemed to him that she hoped to find the fierce expiation she sought for in exposure to the thousands she had disappointed and deceived, in offering herself to be trampled to death and torn to pieces. She might have suggested to him some feminine firebrand of Paris revolutions, erect on a barricade, or even the sacrificial figure of Hypatia, whirled through the furious mob of Alexandria. She was arrested an instant by the arrival of Mrs. Burrage and her son, who had quitted the stage on observing the withdrawal of the Farrinders, and who swept into the room in the manner of people seeking shelter from a thunder-storm. The mother's face expressed the well-bred surprise of a person who should have been asked out to dinner and seen the cloth pulled off the table; the young man, who supported her on his arm, instantly lost himself in consideration of Verena disengaging herself from Mrs. Tarrant, only to be again overwhelmed, and of the unexpected presence of the Mississippian. His handsome blue eyes turned from one to the other, and he looked infinitely annoyed and bewildered. It even seemed to occur to him that he might, perhaps, interpose with effect, and he evidently would have liked to say that, without really bragging, he would at least have kept the affair from turning into a row. But Verena, muffled and escaping, was deaf to him, and Ransom didn't look like the right person to address such a remark as that to.

Mrs. Burrage and Olive, as the latter shot past, exchanged a glance which represented quick irony on one side and indiscriminating defiance on the other.

"Oh, are *you* going to speak?" the lady from New York inquired, with her cursory laugh.

Olive had already disappeared; but Ransom heard her answer flung behind her into the room: "I am going to be hissed and hooted and insulted!"

"Olive, Olive!" Verena suddenly shrieked. But Ransom had already, by muscular force, wrenched her away, and was hurrying her out, leaving Mrs. Tarrant to stagger into the arms of Mrs. Burrage, who, he was sure, would within the minute loom upon her attractively through her tears, and supply her with a reminiscence, destined to be valuable, of aristocratic support and clever composure. In the outer labyrinth hasty groups, a little scared, were leaving the hall, giving up the game. Ransom, as he went, thrust the hood of

Verena's long cloak over her head, to conceal her face and her identity. It quite prevented recognition, and as they mingled in the issuing crowd he perceived the quick, complete, tremendous silence which, in the hall, had greeted Olive Chancellor's rush to the front. Every sound instantly dropped, the hush was respectful, the great public waited, and whatever she should say to them (and he thought she might indeed be rather embarrassed), it was not apparent that they were going to hurl the benches at her. Ransom, palpitating with his victory, felt now a little sorry for her, and was relieved to know that, even when exasperated, a Boston audience is not ungenerous. "Ah, now I am glad!" said Verena, when they reached the street. But though she was glad, he presently discovered that, beneath her hood, she was in tears. It is to be feared that with the union, so far from brilliant, into which she was about to enter, these were not the last she was destined to shed.

THE END.

Henry James.

A LAND OF GLADNESS.

HOW softly flow, among Sonoma's hills,
The ice-cold springs, the merry-hearted rills;
Fragrance of pine my wandering fancy thrills,
Till, even through the city's noise-built walls,
I hear the chant of sudden waterfalls;
Once more, through cedar boughs the blackbird calls.

There are wild cliffs on Mendocino's shore,
And well I know the sea-weed on the floor
Of hidden caves, and many a marvel more.
Pacific's heart hath legends wise and old;
Go thou, and wait in voices manifold
When storms are loose, to hear the story told.

Again I see gray mountains, purely clad
With gleaming snow; vast peaks forever glad—
Such heights as these the elder singers had.
Again one hails the sunlight's burst of foam
On Lassen's peaks, on Shasta's snowy dome,
Where lilies bloom beneath the glacier's home.

But best the redwood shade, the peace it brings,
Where fancies rise as crystal mountain springs
Beneath tall trees; and dear each bird that sings
In rainless summers; dear the ferns which grow
By cool Navarro, where sea-breezes blow
And white azaleas touch the river's flow.

Charles Howard Shinn.

Our March Against Pope

It may be of interest at the outset to relate an incident which illustrates the pinched condition of the Confederacy even as early as 1862—

The Federals had been using balloons in examining our positions, and we watched with envious eyes their beautiful observations

as they floated high up in the air, and well out of the range of our guns. We longed for the balloons that poverty denied us. A genius arose for the occasion and suggested that we send out and gather together all the silk dresses in the Confederacy and make a balloon. It was done, and soon we had a great patchwork ship of many and varied hues. The balloon was ready for use in the Seven Days' campaign. We had no gas except in Richmond, and it was the custom to inflate the balloon there, tie it securely to an engine, and run it down the York River railroad to any point at which we desired to send it up. One day it was on a steamer down the

had assigned General Pope, fresh from the West, with clever laurels, to command this select organization. This army, under its dashing leader, was at the same time moving towards Richmond by the Orange and Alexandria railway, so that our move by the left had also in view the Army of Virginia, as the first obstacle in the way of relief to Richmond—an obstacle to be removed if possible, before it could be greatly reënforced from other commands.

The assignment of General Pope to command was announced in Richmond three days after the orders were issued in Washington, and the flourish of trumpets over the man-

ner in which the campaign was to be conducted, soon followed. He was reported to have adopted a favorite expression of General Worth's, "Headquarters in the saddle, sir!" and to be riding with as much confidence as that old chieftain when searching the everglades of Florida for the Seminole Indians.* Lee had not known Pope intimately, but accepted the popular opinion of him as a boastful man, quite ambitious to accom-

(BY EDWIN FORBES, AFTER HIS SKETCH MADE AT THE TIME.)

James when the tide went out and left vessel and balloon high and dry on a bar. The Federals gathered it in, and with it the last silk dress in the Confederacy. This capture was the meanest trick of the war and one I have never yet forgiven.

By the seven days' fighting around Richmond General Lee frustrated McClellan's plans for a siege. At the end of that campaign Lee retired to Richmond and McClellan withdrew his forces to Westover Landing, where intrenchments and gun-boats made him secure from attack. As his new position, thus guarded and protected by the navy, was not assailable, General Lee, resuming the defensive at Richmond, resolved to strike out by his left in the direction of Washington, with the idea that the Army of the Potomac might be forced to abandon the James River, in defense of its own capital, threatened by this move.

Contemporaneously with our operations on the Chickahominy, the Washington authorities had been organizing the Army of Virginia of three efficient Corps d'Armée; and continuing the search for a young Napoleon,

plish great results, but unwilling to study closely and properly the means necessary to gratify his desires in that direction. Pope was credited with other expressions, such as that he cared not for his rear; that he hoped in Virginia to see the faces of the rebels, as in the West he had been able to see only their backs.

When General Lee heard of these strange utterances his estimate of Pope was considerably lessened. The high-sounding words seemed to come from a commander inexperienced in warfare. For centuries there has been among soldiers a maxim: "Don't despise your enemy." Pope's words seemed to indicate that he had great contempt for his enemy. Unfortunately for him our troops, at that time, were not so well clad that they cared to show their backs. With the double purpose of drawing McClellan away from Westover, and of checking the advance of the new enemy then approaching from Washington by the Orange and Alexandria railroad, General Lee sent Stonewall Jackson to Gordonsville, while I remained near Richmond to engage McClellan in case he should attempt an advance upon the Con-

* See General Pope's article in the January CENTURY for his denial; also for additional maps and pictures.

Confederate prisoners were confined in the court house, which is the building with ball and vane above the tower.

federate capital. Jackson had his own division and that of Ewell, and later A. P. Hill was sent to reënforce him. McDowell was already in coöperation with Pope, part of his command, however, being still at Fredericksburg. On the 9th of August Jackson encountered the enemy near Slaughter or Cedar Mountain. (See map, page 609.) There the battle of Cedar Run was fought and the Federals were repulsed. In this fight, about five o'clock in the afternoon, the Federals, by a well-executed move, were pressing the Confederates back, when the opportune approach of two brigades changed the scene, and a counter-attack from our side drove them back in disorder and left us masters of the field. We followed them some distance, but Jackson thought them too strongly reënforced for us to continue the pursuit and risk severe battle in a disjointed way; so, after caring for our wounded and dead, we retired to a position behind the Rapidan to await the arrival of General Lee with other forces. Thus on his first meeting with the Confederates in Virginia the new Federal commander went to the rear—a direction he was wholly unused to. At that time General Lee was feeling very certain that Richmond was in no immediate danger from an advance by McClellan's forces. He therefore began at once preparations for a vigorous campaign against Pope. Divisions under Anderson, McLaws, Walker, and D. H. Hill were left to watch McClellan, with instructions to follow the main body of the army as soon as the Federals were drawn away from Westover.

On the 13th of August, my command

was ordered to Gordonsville, and General Lee accompanied me there. Jackson's troops were stationed on the left of the Orange and Alexandria railroad, and I went into camp on the right of Gordonsville. Eastward was the Rapidan River, several miles distant. Farther on, at Culpeper Court House, was the army of Pope, and farther still was the Rappahannock River. A little in advance of my position was Clark's Mountain, rising several hundred feet above the surrounding hills.

With General Lee I proceeded to the mountain, and climbing to its summit we raised our glasses and turned them to the east. There, between the two rivers, clustering around Culpeper Court House and perhaps fifteen miles away, we saw the flags of Pope's army floating placidly above the tops of the trees. From the summit of the mountain we beheld the enemy occupying ground so weak as to invite attack. Realizing the situation, General Lee determined on speedy work, and gave orders that his army should cross the Rapidan on the 18th

and make battle. He was exceedingly anxious to move at once, before Pope could get reinforcements. For some reason I have never known explained, our supplies were delayed and we did not cross the Rapidan until the 20th. In the mean time a dispatch to General Stuart was captured by Pope, and gave information of our presence and contemplated advance. This, with information Pope already had, caused him to withdraw to a very strong position behind the Rappahannock River, and there General Lee found him instead of at Culpeper Court House, where the attack was first meant to be made. I approached the Rappahannock at Kelly's Ford, and Jackson approached higher up at Beverly Ford, near the Orange and Alexandria railroad bridge.

We arrived there on the morning of the 21st without serious opposition and found Pope in an almost unassailable position, with heavy reinforcements summoned to his aid. General Lee's intention was to force a passage and make the attack before Pope could concentrate. We hoped to be able to interpose, and to strike Pope before McClellan's reinforcements could reach him. We knew at that time McClellan was withdrawing from Westover. I was preparing to force a passage at Kelly's Ford, when I received an order from General Lee to proceed to Beverly Ford and mask the movements of Jackson, who was to be sent up the river to cross by a left flank movement. On the 22d Jackson carefully withdrew and went on the proposed move. He sought an opportunity to cross farther up the stream, and succeeded in putting part of his command across at Warrenton Springs Ford and in occupying a position

there. The flooding rains interrupted his operations, making the river past fording and crippling all attempts at forcing a passage. Jackson therefore withdrew his forces at night by a temporary bridge. As the lower fords became impassable by reason of the floods, the Federals seemed to concentrate against Jackson's efforts.

On the 23d I had quite a spirited artillery combat at Beverly Ford with a force of the enemy that had crossed at the railroad bridge near where I was stationed. The superior position and metal of the Federals gave them an advantage, which they improved by skillful practice. We had more guns, however, and by equally clever practice at length gained the advantage. A little before night the Federals withdrew from the combat, and finding that we had gotten the better of them, spitefully and without excuse set fire to a number of farm-houses in the locality.

Pending our movements west of the Rappahannock, General Stuart had been making an effort to go around Pope's army, but fearing to remain on the Washington side of the river in the face of such floods as had come, recrossed with some important dispatches he had captured by a charge upon Pope's headquarters train. This correspondence confirmed the information we already had, that the Federal army on the James under McClellan and the Federal troops in the Kanawha Valley had been ordered to reinforce Pope. Upon receipt of that information, General Lee was more anxious than ever to cross at once. Pope, however, was on the alert, and Lee found he could not attack him to advantage in his stronghold behind the Rappahannock.

Lee therefore decided to change his whole plan, and was gratified, on looking at the map, to find a very comfortable way of turning Pope out of his position. It was by moving Jackson off to the left and far to the rear of the Federal army, while I remained in front

fought. When he arrived at Bristoe Station, just before night, the greater part of the Federal guard at that point fled, and two trains of cars coming from the direction of Warrenton were captured. Jackson sent a force forward seven miles and captured Manassas

STONEWALL JACKSON AS FIRST LIEUTENANT OF ARTILLERY.
(FROM AN AMBROTYPE TAKEN AUGUST 20, 1847, IN THE POSSESSION OF HIS NIECE, MISS ALICE E. UNDERWOOD.)

with thirty thousand men to engage him in case he offered to fight.

On the 25th Jackson crossed the Rappahannock at Hinson's Mill, four miles above Waterloo Bridge, and that night encamped at Salem. The next day he passed through Thoroughfare Gap and moved on by Gainesville, and when sunset came he was many miles in the rear of Pope's army, going in the direction of Washington City. This daring move must have staggered the Federal commander. From the Rappahannock, Jackson had gone without serious opposition to within a stone's throw of the field where the first battle of Manassas was

Junction, taking eight pieces of artillery, a lot of prisoners, and great quantities of commissary and quarter-master's stores. He left a force at Bristoe Station and proceeded to the junction, arriving there himself on the morning of the 27th. During the afternoon the enemy attacked our troops at Bristoe Station, coming from the direction of Warrenton Junction in such force that it was evident Pope had discovered the situation and was moving with his entire army upon Jackson. The Confederates at the station withdrew, and the Federals halted there. Jackson took all he wanted of the supplies captured at Manassas and burned

THE STONE BRIDGE ACROSS BULL RUN AS IT APPEARED IN 1884 — LOOKING TOWARD CENTREVILLE.

the rest. He then moved over to a position west of the turnpike leading from Warrenton to Alexandria. There on the old battle-field Jackson waited for the Federals. On the evening of the 28th King's division came moving eastward down the turnpike and Jackson met them. A bloody fight ensued, lasting until nine o'clock at night. The enemy withdrew, leaving the Confederates in possession of the field.

That same evening I arrived at Thoroughfare Gap. But I should say that during Jackson's march I had been engaging Pope at different points along the Rappahannock, to impress him with the idea that I was attempting to force a passage in his front. On the afternoon of the 26th, Pope's army broke away from its strong position to meet Jackson's daring and unexpected move. General Lee decided I should follow at once, and asked whether I would prefer to force a passage of the river,

now rapidly falling, or take the route Jackson had gone. From the crossing along the route to Warrenton were numerous strongly defensive positions where a small force could have detained me an uncertain length of time. I therefore decided to take the same route Jackson had gone over. On the 26th I also started to overtake Jackson. On the 28th, just before night, I arrived at Thoroughfare Gap. As we approached, a report was made to me that the pass was unoccupied, and we went into

bivouac on the west side of the mountain, sending a brigade under Anderson down to occupy the pass. As the Confederates neared the gap from one side, Ricketts's division of Federals approached from the other and got possession of the east side. Thoroughfare Gap is a rough pass in the Bull Run mountains, at some points not more than a hundred yards wide. A turbid stream rushes over its rugged bottom, on both sides of which the mountain rises several hundred feet. On the north the face of the gap is almost perpendicular. The south face is less precipitous, but is covered with tangled mountain ivy and projecting bowlders, forming a position unassailable when occupied by a small infantry and artillery force. Up to this moment we had received reports from General Jackson, at regular intervals, assuring us of his successful operations, and of confidence in his ability to baffle all efforts of the enemy till we should reach him. This sudden interposition of a formidable force at a mountain-pass indicated a stern resolve on the part of the adversary to make desperate efforts to hold me in check, while overwhelming forces were being brought against Jackson. This placed us in a more desperate strait than Jackson; for we were in relieving distance, and must adopt prompt and vigorous measures, that would burst through all opposition.

Three miles north was Hopewell Gap, but not so strong. It was necessary to get possession of this in advance of the Federals, in order to have that vantage ground for a flank movement at the same time that we forced our way by footpaths over the mountain heights at Thoroughfare Gap. During the night I sent Wilcox with three brigades through that pass, while Hood was climbing over the mountain by a trail. We had no trouble in getting over. Our apprehensions were relieved at the early dawn of the 29th by finding that Ricketts had given up the east side of the gap and was many hours in advance of us, moving in the direction of Manassas Junction. His force, instead of marching around Jackson, could have been thrown against his right and rear. If Ricketts had made this move and the forces in front of Jackson had coöperated with him, such an attack, well handled, might have given us serious trouble before I reached the field.

As we found the pass open at early dawn and a clean road in front, we marched leisurely to unite our forces on Manassas plains. Before reaching Gainesville we heard the artillery combat in front, and our men involuntarily quickened their steps. Our communications with Jackson were quite regular, and as he had not expressed a wish that we should hurry, our troops were allowed to take their natural swing under the inspiration of impending battle. As we approached the field the fire seemed to become more spirited, and gave additional impulse to our movements. According to

the diary of the Washington Artillery we filed down the turnpike at Gainesville at 11.30 A. M. The general impression was that we were there earlier; but as this is the only record of time made on the ground we cannot gainsay it. We marched steadily from daylight till we reached the field, with the exception of an hour's halt to permit Stuart's cavalry to file from west to east of us. There were many of Jackson's men—several thousand—straggling at points along the road, who were taken for my men, and reported as such.

Passing through Gainesville we filed off to the left down the turnpike, and soon came in sight of the troops held at bay by Jackson. Our line of march brought us in on the left and rear of the Federals. At sight of this favorable opportunity our artillery was ordered up, with the leading brigades for its support. Our advance was discovered, however, and the Federals withdrew from attack, retiring their left across the pike behind Groveton, and taking strong defensive ground. The battalion of Washington Artillery was thrown forward to a favorable position on Jackson's right, and from near its position my line was deployed, extending to the right some distance beyond the Manassas Gap railroad. An army corps was reported to be at Manassas Junction that morning, and we trail-traced Ricketts's division toward the same point; so that my line was arranged for attack in front and also to guard against the force in direction of the Junction. This preparation must have taken an hour, possibly more.

As soon as the troops were arranged, General Lee expressed his wish to have me attack. The change of position on the part of the Fed-

GENERAL RICHARD S. EWELL. (FROM A PHOTOGRAPH BY COOK.)

General Ewell, of Jackson's Corps, was severely wounded in the conflict with King's division on August 28.

erals, however, involved sufficient delay for a reconnoissance on our part. To hasten matters I rode over in the direction of Brewer's Spring, east of the Hampton Cole House (see map, page 611), to see the new position, and had a fair view of the Federal line, then extending some distance east of the turnpike. The position was not inviting, and I so reported to General Lee.

The two great armies were now face to face upon the memorable field of 1861; both in good defensible positions and both anxious to find a point for an entering wedge in the stronghold of the adversary. It appeared easy for us, but for the unknown quantity at Manassas Junction, to overleap the Federal left and strike a decisive blow. This force was a thorn in our side which could not be ignored. General Lee was quite disappointed by my report against immediate attack along the turnpike, and insisted that by throwing some of the brigades beyond the Federal left their posi-

tion would be broken up and a favorable field gained. While talking the matter over, General Stuart reported the advance of heavy forces from the direction of Manassas Junction against my right. It proved to be McDowell and Porter. I called over three brigades, under Wilcox, and prepared to receive the attack. Battle was not offered, and I reported to General Lee some time afterward that I did not think the force on my right was strong enough to attack us. General Lee urged me to go in, and of course I was anxious to meet his wishes. At the same time I wanted, more than anything else, to know that my troops had a chance to accomplish what they might undertake. The ground before me was greatly to the advantage of the Federals, but if the attack had come from them it would have been a favorable opportunity for me. After a short while McDowell moved toward the Federal right,

leaving Porter in front of my right with nine thousand men. My estimate of his force, at the time, was ten thousand. General Lee, finding that attack was not likely, again became anxious to bring on the battle by attacking down the Groveton pike. I suggested that, the day being far spent, it might be as well to advance just before night upon a forced reconnoissance, get our troops into the most favorable positions, and have all things ready for battle at daylight the next morning. To this he gave reluctant consent, and our plans were laid accordingly. Wilcox returned to position on the left of the turnpike. Orders were given for an advance, to be pursued under cover of night till the main position could be carefully examined. It so happened that an order to advance was issued on the other side at the same time, so that the encounter was something of a surprise on both sides. A very spirited engagement was the result, we being successful, so far at least as to carry our point, capturing a piece of artillery and making our reconnoissance before midnight. As none of the reports of the Federal positions favored attack, I so reported to General Lee, and our forces were ordered back to their original positions. The captured gun was ordered cut down, spiked, and left on the ground.

When Saturday the 30th broke we were a little apprehensive that Pope was going to get away from us, and Pope was afraid we were going to get away from him. He telegraphed to Washington that I was in full retreat and he was preparing to follow, while we were making arrangements for moving by our left across Bull Run, so as to get over on the Little River pike and move down parallel to his lines and try to interpose between him and Washington, thinking he was trying to escape. We had about completed our arrangements, and took it for granted that Pope would move out that night by the Warrenton and Centreville pike, while we moved along with him by the Little River pike. General Lee was still anxious to give Pope battle on Manassas plains, but had given up the idea of attacking him in his strong position.

Shortly before nine on the 30th Pope's artillery began to play a little, and not long afterward some of his infantry force was seen in motion. We did not understand that as an offer of battle, but merely as a display to cover his movements to the rear. Later a considerable force moved out and began to attack us on our left, extending and engaging the whole of Jackson's line. Evidently Pope supposed I was gone, as he was ignoring me entirely. His whole army seemed to surge up against Jackson as if to crush him with an overwhelming mass. At the critical moment I happened to

be riding to the front of my line to find a place where I might get in for my share of the battle. I reached a point a few rods in front of my line on the left of the pike where I could plainly see the Federals as they rushed in heavy masses against the obstinate ranks of the Confederate left. It was a grand display of well-organized attack, thoroughly concentrated and operating cleverly. So terrible was the onslaught that Jackson sent to me and begged for reinforcements. About the same time I received an order from General Lee to the same effect. To retire from my advanced position in front of the Federals and get to Jackson would have taken an hour and a half. I had discovered a prominent position that commanded a view of the great struggle, and realizing the opportunity, I quickly ordered out three batteries, making twelve guns. They were placed in position to rake the Federal ranks that seemed determined to break through Jackson's lines. In a moment crash after crash of shot and shell was being poured into the thick ranks of the Federals. In ten minutes the stubborn Federals began to waver and give back. For a moment the mass was chaos;

OUTLINE MAP OF THE CAMPAIGN.

then order returned and they re-formed, apparently to renew the attack. Again from the crest of my little hill the fire of the twelve guns cut them down. As the cannons thundered the ranks broke, only to be formed again with dogged determination. A third time the batteries tore the Federals to pieces, and as they fell back under this terrible fire, I sprung everything to the charge. My troops leaped forward with exultant yells, and all along the line we pushed forward. Back and still farther back we pressed them, until at ten o'clock at night we had the field; Pope was across Bull Run, and the victorious Confederates lay down on the battle-field to sleep, while all around were strewn thousands of friend and foe sleeping the last sleep together.

The next morning the Federals were in a strong position at Centreville. I sent a brigade across the stream under General Pryor and occupied a point over there near Centreville. As our troops proceeded to bury their dead, it began to rain just as it had done on the day after the first battle of Manassas. As soon as General Lee could make his preparations, he ordered Jackson to cross Bull Run near Sudley's and turn the position of the Federals occupying Centreville; and the next day, Sept. 1, I followed him. As soon as the enemy found we were turning his position at Centreville, he abandoned it and put out toward Washington. Jackson, toward evening, encountered at Ox Hill a part of the Federal force, and attacking it, had quite a sharp engagement. I came up just before night and found his men coming back in a good deal of confusion. I asked Jackson what the situation was, and added that his men seemed to be pretty well dispersed. He said, "Yes, but I hope it will prove a victory."

I moved my troops out and occupied the lines where he had been, relieving the few men who were on picket. Just as we reached there General Kearny, a Federal officer, came along looking for his line, which had gone. It was raining in the woods, and late in the day, so that a Federal was not easily distinguished from a Confederate. Kearny did not seem to know he was in the Confederate line, and our troops did not notice that he was a Federal. He began to inquire about some command, and in a moment or so the troops saw he was a Federal officer. At the same moment he realized where he was. He was called upon to surrender, but instead of doing so he wheeled his horse, lay flat on the animal's neck, clapped spurs into his sides and dashed off. Instantly a half dozen shots rang out, and before he had gone thirty steps poor Kearny fell. He had been in the army all his life, and we all knew and respected

him. His body was sent over the lines under a flag of truce.

The forces we had been fighting at Ox Hill proved to be the rear-guard covering the retreat of the Federals into Washington. They escaped and we abandoned further pursuit.

The entire Bull Run campaign up to Ox Hill was clever and brilliant. It was conceived entirely by General Lee, who held no such consultation over it as he did in beginning the Seven Days' campaign. The movement around Pope was not as strong as it should have been. A skillful man could have concentrated against me or Jackson, and given us severe battles in detail. I suppose Pope tried to get too many men to Jackson before attacking him. If he had been satisfied with a reasonable force he might have overwhelmed Jackson.

General Pope, sanguine by nature, was not careful enough to keep himself informed about the movements of his enemy. At half-past four on the afternoon of the 29th, he issued an order for Porter to attack Jackson's right, supposing I was at Thoroughfare Gap, when in fact I had been in position since noon, and was anxiously awaiting attack. It has been said that General Stuart, by raising a dust in front of Porter, so impressed him that he did not offer battle. I know nothing of the truth of the story, and never heard of it till after the war. If from any such cause Porter was prevented from attacking me it was to our disadvantage, and delayed our victory twenty-four hours. Porter knew I was in his front. He had captured one or two of my men, which gave him information of my position before he actually saw me. If Porter had not appeared when he did I would have attacked by our right early in the afternoon. In that event Porter would have had a fine opportunity to take me on the wing and strike a fearful blow. As it was, he was a check upon my move against Pope's main position. If I had advanced upon Pope I would have been under an enfilade fire from Porter's batteries, and if I had advanced upon Porter I would have been under a fire from the batteries on Pope's front as severe as the raking fire from my batteries the next day, when Pope was massed against Jackson. Had Porter attacked me between noon and night on the 29th, I should have received his nine thousand with about double that number. I would have held my line to receive the attack, and as soon as his line developed its strength, I would have thrown three brigades forward beyond his extreme left. When my line of battle had broken up the attack, as it certainly would have done, these three brigades would have been thrown forward at the flank,

SECOND BATTLE OF BULL RUN POSITIONS OF TROOPS AUG. 30, 1862.

MAP OF THE LAST DAY'S FIGHTING.

When darkness ended the battle the Confederates were somewhat in advance of the places indicated as their last positions.—EDITOR.

and at the same time my main line would have pushed on in the pursuit. The result would have been Porter's retreat in confusion, and I might possibly have reached Pope's left and rear in time to cut him off. When his army was well concentrated on the 30th he was badly cut up and defeated. It does not seem unreasonable to conclude that attack on the 29th in his disjointed condition would have been attended with more disastrous

results to him. If I had been attacked under the 4:30 order the result might have been less damaging, as Porter would have had the night to cover his retreat, and the Federal army could have availed itself of the darkness to screen its move back across Bull Run. But Porter's attack at night, if not followed by the retreat of the army, would have drawn me around the Federal left, and put me in a position for striking the next day.

Colonel Marshal, of General Lee's staff, in his evidence before the Fitz John Porter Board puts my forces on the 29th at thirty thousand. It is difficult to see how Porter with nine thousand men was to march over thirty thousand of the best soldiers the world ever knew. Any move that would have precipitated battle would have been to our advantage, as we were ready at all points and waiting for an opportunity to fight. The situation will be better understood when we reflect that the armies were too evenly balanced to admit mistakes on either side. I was waiting for an opportunity to get into the Federal lines close upon the heels of their own troops. The opportunity came on the 30th, but the Federal army was then concentrated; had it come on the 29th I would have been greatly pleased.

It is proper to state that General Lee, upon hearing my guns on the 30th, sent me word if I had anything better than reënforcing Jackson to pursue it, and soon afterward rode forward and joined me. Jackson did not respond with spirit to my move, so my men were subjected to a severe artillery fire from batteries in front of him. General Lee, seeing this, renewed his orders for Jackson to press on to the front. The fire still continued severe, however, and General Lee, who remained with me, was greatly exposed to it. As we could not persuade him to drop back behind it, I finally induced him to ride into a ravine which threw a traverse between us and the fire, which was more annoying than fire from the front.

On the 31st we were engaged in caring for our wounded and cleaning up the battle-field. General Lee was quite satisfied with the results of the campaign, though he had very little to say. He was not given to expressions of pride. Under all circumstances he was a moderate talker, and in everything was unassuming. His headquarters were exceedingly simple. He had his tents just as the other officers — perhaps a few more, to accommodate his larger staff. There was no display of position or rank about him. Only when specially engaged could a sentinel be seen at the door of his tent. On the march he usually had his headquarters near mine.

I graduated with Pope at West Point. He was a handsome, dashing fellow, a splendid cavalryman, sitting his horse beautifully. I think he stood at the head for riding. He did not apply himself to his books very closely. He studied about as much as I did, but knew his lessons better. We graduated in 1842, but Pope saw little of active service till the opening of the Civil War. When he assumed command of the Army of Virginia he was in the prime of life, less than forty years old, and

had lost little if any of the dash and grace of his youth.

D. H. Hill, Lafayette McLaws, Mansfield Lovell, Gustavus W. Smith, R. H. Anderson, A. P. Stewart, and Earl Van Dorn were among the Confederate commanders who graduated in the same class with me. Of the Federal commanders, there were of that class — beside Pope — Generals John Newton, W. S. Rosecrans, George Sykes, Abner Doubleday, and others less prominent.

Stonewall Jackson came on four years after my class, and General Lee had preceded us about fourteen years. General Ewell, who was hurt at Bull Run, was in the same class with Tecumseh Sherman, and George H. Thomas, than whom a truer soldier and nobler spirit never drew sword.

"Jeb Stuart" was a very daring fellow and the best cavalryman America ever produced. At the Second Manassas, soon after we heard of the advance of McDowell and Porter, Stuart came in and made a report to General Lee. When he had done so General Lee said he had no orders at that moment, but he requested Stuart to wait awhile. Thereupon Stuart turned round in his tracks, lay down on the ground, put a stone under his head and instantly fell asleep. General Lee rode away and in an hour returned. Stuart was still sleeping. Lee asked for him, and Stuart sprang to his feet and said, "Here I am, General."

General Lee replied, "I want you to send a message to your troops over on the left to send a few more cavalry over to the right."

"I would better go myself," said Stuart, and with that he swung himself into the saddle and rode off at a rapid gallop, singing as loudly as he could, "Jine the cavalry."

General Toombs, our Georgia fire-eater, was given to criticising pretty severely all the officers of the regular army who had joined their fortunes with those of the Confederacy. He was hot-blooded and impatient, and chafed at the delays of the commanders in their preparations for battle. His general idea was that the troops went out to fight, and he thought they should be allowed to go at it at once. An incident that occurred in the second Manassas campaign will serve to illustrate his characteristic hot-headedness. As we were preparing to cross the Rapidan, Stuart sent me word that he had cut off a large cavalry force and had all the fords guarded except one. He asked that I detail a force to guard that point of escape. The work was assigned to the command under General Toombs, who was absent at the time. He had met a kindred spirit in the person of a wealthy Virginian named Morton, whom he had known in Congress, and was out dining with him.

DEATH OF GENERAL PHILIP KEARNY, SEPTEMBER 1, 1862.

They were both good livers and loved to have their friends with them. In going back to his command General Toombs came upon his troops on the road and inquired what they were doing there. The explanation was made. Toombs had had a good dinner and felt independent. He said he would give the

general to understand that he must consult him before sending his troops out to guard a ford, and thereupon ordered them back to camp. As the mystified troops marched solemnly back, the matter was reported to me and I ordered Toombs under arrest. I allowed him to ride with his command as we

marched against Pope and expected that he would make some explanation of his conduct. He did not do so, and the next I heard of him he was stopping along the route making stump speeches to the troops and referring in anything but complimentary terms to the commander of his division. I sent him back to Gordonsville, with instructions to confine himself to the limits of that town in arrest until further orders. He obeyed the command and went to Gordonsville. Just as I was leaving the Rappahannock I received a long letter of apology from him, and directed him to join his command. As we were pre-

paring for the charge at Manassas, Toombs got there. He was riding rapidly, with his hat in his hand, and was much enthused. I was just sending a courier to his command with a dispatch.

"Let me carry it!" he exclaimed.

"With pleasure," I responded, and handed him the paper.

He put spurs to his horse and dashed off, accompanied by a courier. When he rode up and took command of his brigade there was wild enthusiasm, and everything being ready, an exultant shout was sent up, and the men sprang to the charge. I never had any more trouble with Toombs.

*We were soon afterwards
warm personal friends
James Longstreet.*

WITH JACKSON'S "FOOT-CAVALRY" AT THE SECOND MANASSAS.

IN the operations of 1862, in Northern Virginia, the men of Jackson's corps have always claimed a peculiar proprietorship. The reorganization of the disrupted forces of Banks, Frémont and McDowell under a new head seemed a direct challenge to the soldiers who had made the Valley Campaign, and the proclamation of the general with the itinerant head-

quarters betokened to the "foot-cavalry" an infringement of their specialty, demanding emphatic rebuke. Some remnant of the old *esprit de corps* yet survives, and prompts this narrative.

After the check to Pope's advance at Cedar Mountain, on the 9th of August, and while we awaited the arrival of Longstreet's troops, A. P. Hill's division rested in camp at Crenshaw's

Farm. Our brigade (Field's) was rather a new one in organization and experience, most of us having "smelt powder" for the first time in the Seven Days before Richmond. We got on the field at Cedar Mountain too late to be more than slightly engaged, but on the 10th and 11th covered the leisurely retreat to Orange Court House without molestation. When about a week later Pope began to retreat in the direction of the Rappahannock, we did some sharp marching through Stevensburg and Brandy Station, but did not come up with him until he was over the river. While our artillery was duelling with him across the stream, I passed the time with my head in the scant shade of a sassafras bush by the roadside, with a chill and fever brought from the Chickahominy low-grounds. In the latter connection, I improved the shining hours by inditing a pathetic request in my note-book, to whom it might concern, that my body might be decently buried.

For the next few days there was skirmishing at the fords, we moving up the south bank of the river, the enemy confronting us on the opposite side. The weather was very sultry, and the troops were much weakened by disorders induced by their diet of unsalted beef, eked out with green corn and unripe apples; as a consequence there was a good deal of straggling. I got behind several times, but managed to catch up from day to day. Once

some cavalry made a dash across the river at our train; I joined a party in arrears like myself, and we fought them off on our own hook until Trimble's brigade, the rear-guard, came up.

We were then opposite the Warrenton Springs, and were making a great show of crossing, Early's brigade having been thrown over the river and somewhat smartly engaged. I have since heard that this officer remonstrated more than once at the service required of him, receiving each time in reply a peremptory order from Jackson "to hold his position." He finally retorted: "Oh! well, old Jube can *die*, if *that's* what he wants, but tell General Jackson I'll be —— if this position can be held!"

The brigade moved off next morning, leaving me in the grip of my ague, which reported promptly for duty, and, thanks to a soaking over night, got in its work most effectually. The fever did not let go until about sundown, when I made two feeble trips to the porch of a house close by, where I passed the night without a blanket — mine having been stolen between the trips. I found a better one next morning thrown away in a field, and soon after came up with the command in bivouac, and breakfasting on some beef which had just been issued. Two ribs on a stump were indicated as my share, and I broiled them on the coals and made the first substantial meal for forty-eight hours. This was interrupted by artillery fire from beyond the river, and as I was taking my place in line, my colonel, whom I knew rather personally, considering our relative rank, ordered me to the ambulance to recruit. Here I got a dose of Fowler's solution, "in lieu of quinine," and at the wagon-camp that day fared better than for a long time before. Meanwhile, they were having a hot time down at Waterloo bridge, which the enemy's engineers were trying to burn, while some companies of sharpshooters under Lieutenant Robert Healey of "ours" — whose rank was no measure of his services or merit — were disputing the attempt. A concentrated fire from the Federal batteries failed to dislodge the plucky riflemen, while our guns were now brought up, and some hard pounding ensued. But at sunset the bridge still stood, and I "spread down" for the night, under the pole of a wagon, fully expecting a serious fight on the morrow.

I was roused by a courier's horse stepping on my leg, and found this rude waking meant orders to move. With no idea whither, we pulled out at half-past two in the morning, and for some time traveled by fields and "new cuts" in the woods, following no road, but by the growing dawn evidently keeping

up the river. Now Hill's "Light Division" was to earn its name, and qualify itself for membership in Jackson's corps. The hot August sun rose up, clouds of choking dust enveloped the hurrying column, but on and on the march was pushed without relenting. Knapsacks had been left behind in the wagons, and haversacks were empty by noon; for the unsalted beef spoiled and was thrown away, and the column subsisted itself, without process of commissariat, upon green corn and apples from the fields and orchards along the route, devoured while marching; for there were no stated meal-times and no systematic halts for rest. It was far on in the night when the column stopped, and the weary men dropped beside their stacked muskets and

CONFEDERATE CAMP-SERVANT ON THE MARCH.

were instantly asleep, without so much as unrolling a blanket. A few hours of much-needed repose, and they were shaken up again long before "crack of day," and limped on in the darkness, only half awake. There was no mood for speech, nor breath to spare if there had been — only the shuffling tramp of the marching feet, the steady rumbling of wheels, the creak and rattle and clank of harness and accouterment, with an occasional order, uttered under the breath and always the same: "Close up! close up, men!"

All this time we had the vaguest notions as to our objective: at first we had expected to

JACKSON'S TROOPS PILLAGING THE UNION DEPOT OF SUPPLIES AT MANASSAS JUNCTION.

strike the enemy's flank, but as the march prolonged itself, a theory obtained that we were going to the Valley. But we threaded Thoroughfare Gap, heading eastward, and in the morning of the third day (Aug. 27) struck a railroad running north and south—Pope's "line of communication and supply." Manassas was ours!

What a prize it was! Here were long warehouses full of stores; cars loaded with boxes of new clothing *en route* to General Pope, but destined to adorn the "backs of his enemies"; camps, sutlers' shops—"no eating up" of good things. In view of the abundance, it was no easy matter to determine what we should eat and drink and where-withal we should be clothed; one was limited in his choice to only so much as he could personally transport, and the one thing needful in each individual case was not always readily found. However, as the day wore on, an equitable distribution of our wealth was effected by barter, upon a crude and irregular tariff in which the rule of supply and demand was somewhat complicated by fluctuating estimates of the imminence of marching orders.

A mounted man would offer large odds in shirts or blankets for a pair of spurs or a bridle; and while in anxious quest of a pair of shoes I fell heir to a case of cavalry half-boots, which I would gladly have exchanged for the object of my search. For a change of underclothing and a pot of French mustard I owe grateful thanks to the major of the Twelfth Pennsylvania Cavalry, with regrets that I could not use his library. Whisky was, of course, at a high premium, but a keg of "lager"—a drink less popular then than now—went begging in our company.

But our brief holiday was drawing to a close, for by this time General Pope had some inkling of the disaster which lurked in his rear. When, some time after dark, having set fire to the remnant of the stores, we took the road to Centreville, our mystification as to Jackson's plans was complete. Could he actually be moving on Washington with his small force, or was he only seeking escape to the mountains? The glare of our big bonfire lighted up the country for miles, and was just dying out when we reached Centreville. The corduroy road had been full of pitfalls and

stumbling-blocks, to some one of which our cracked axle had succumbed before we crossed Bull Run, and being on ahead, I did not know of the casualty until it was too late to save my personal belongings involved in the wreck. Thus suddenly reduced from affluence to poverty, just as the gray dawn revealed the features of the forlorn little hamlet, typical of this war-harried region, I had a distinct sense of being a long way from home. The night's march had seemed to put the climax to the endurance of the jaded troops. Such specters of men they were,—gaunt-cheeked and hollow-eyed, hair, beard, clothing, and accouterments covered with dust—only their faces and hands where mingled soil and sweat streaked and crusted the skin, showing any departure from the whitey-gray uniformity. The ranks were sadly thinned, too, by the stupendous work of the last week. Our regiment, which had begun the campaign 1015 strong and had carried into action at Richmond 620, counted off that Thursday morning (Aug. 28) just eighty-two muskets! Such were the troops about to deliver battle on the already historic field of Manassas.

We were soon on the road again, heading west; we crossed Stone Bridge, and a short distance beyond, our ambulances halted, the brigade having entered some woods on the right of the road ahead,—going into camp, I thought. This pleasing delusion was soon dispelled by artillery firing in front, and our train was moved off through the fields to the right, out of range, and parked near Sudley Church. Everything pointed to a battle next day; the customary hospital preparations were made, but few, if any, wounded came in that night, and I slept soundly, a thing to be grateful for. My bedfellow and I had decided to report for duty in the morning, knowing that every musket would be needed. I had picked up a good "Enfield" with the proper trappings, on the road from Centreville, to replace my own left in the abandoned ambulance; and having broken my chills, and gained strength from marching unencumbered, was fit for service—as much so as were the rest at least.

Friday morning early, we started in what we supposed to be the right direction, gui-

ded by the firing, which more and more betokened that the fight was on. Once we stopped for a few moments at a field-hospital to make inquiries, and were informed that our brigade was farther along to the right. General Ewell was carried by on a stretcher while we were there, having lost his leg the evening before. Very soon we heard sharp musketry over a low ridge which we had been skirting, and almost immediately we became involved with stragglers from that direction—Georgians, I think they were. It looked as if a whole line was giving way, and we hurried on to gain our own colors before it should grow too hot. The proverbial effect of bad company was soon apparent. We were halted by a Louisiana major, who was trying to rally these fragments upon his own command. My companion took the short cut out of the scrape by showing his “sick permit,” and was allowed to pass; mine, alas! was in my cartridge-box with my other belongings in that unlucky ambulance. The major was courteous but firm; listened to my

JACKSON'S LINE ON THE AFTERNOON OF THE LAST DAY, AUGUST 30.

The topography is after General Beauregard's map, made from survey after the first battle of Bull Run. The deep cut, and the embankment as far as the "Dump," were the scene of the fighting with stones, illustrated on page 620. Here the unfinished railroad embankment is made of earth and blasted rock taken from the cut. A break in the embankment, or rather a space which was never filled in, is locally known as the "Dump," and near it several hundred Union soldiers were buried.—EDITOR.

story with more attention than I could have expected, but attached my person all the same. "Better stay with us, my boy, and if you do your duty I'll make it right with your company officers when the fight's over. They won't find fault with you when they know you've been in with the 'Pelicans,'" he added, as he assigned me to company "F."

The command was as unlike my own as it was possible to conceive. Such a congress of nations only the cosmopolitan Crescent City could have sent forth, and the tongues of Babel seemed resurrected in its speech; English, German, French, and Spanish, all were represented, to say nothing of Doric brogue and local "gumbo," and its voluble exercise was set off by a vehemence of utterance and gesture curiously at variance with the reticence of our Virginians. On the whole, I did not take to my comrades very kindly, and cordially consigned Company "F" to a region even more redolent of sulphur than the scene of our enforced connection. In point of fact, we burned little powder that day, and my promised distinction as a "Pelican" *pro tem.* was cheaply earned. The battalion did a good deal of counter-marching and some skirmishing, but most of the time we were acting as support to a section of Cutshaw's battery. The tedium of this last service my companions relieved by games of "seven up," with a greasy, well-thumbed

deck, and in smoking cigarettes, rolled with great dexterity between the deals. Once, when a detail was ordered to go some distance under fire to fill the canteens of the company, a hand was dealt to determine who

THE UNION MONUMENT NEAR THE "DEEP CUT."
FROM A SKETCH MADE IN 1884. (SEE MAP, PRECEDING PAGE.)

should go, and the decision was accepted by the loser without demur. Our numerous shifts of position completely confused what vague ideas I had of the situation, but we must have been near our extreme left at Sudley Church, and never very far from my own brigade, which was warmly engaged that day and the day following.* Towards evening we were again within sight of Sudley Church. I could see the light of fires among the trees as if cooking for the wounded was going on, and the idea occurred to me that there I could easily learn the exact position of my proper people. Once clear of my major and his polyglot "Pelicans," the rest would be plain sailing.

My flank movement was easily effected, and I suddenly found myself the *most* private soldier on that field; there seemed to be nobody else anywhere near. I passed a farmhouse which seemed to have been used as a hospital, and where I picked up a Zouave fez. Some cavalymen were there, one of whom advised me not to "go down there," but as he gave no special reason and did not urge his views, I paid no heed to him, but went on my way down a long barren slope, ending at a small water-course at the bottom, beyond which the ground rose abruptly and was covered by small growth. The deepening twilight and strange solitude about me, with the remembrance of what had happened a year ago on this same ground, made me feel uncomfortably lonely. By this time I was close to the stream, and while noting the lay of the land on the opposite bank with regard to

COLONEL W. S. H. BAYLOR, COMMANDING THE "STONEWALL"
BRIGADE; KILLED AUGUST 30, 1862.
(FROM PHOTOGRAPH BY J. H. BURDETTE.)

* A recent letter from Lieutenant Robert Healy, of the writer's regiment, the Fifty-fifth Virginia, says: "Thursday night we slept on our arms; Friday,

THE "DEEP CUT," FROM A SKETCH MADE IN 1884.

If this picture were extended a little to the left it would include the Union monument. General Bradley T. Johnson, commanding a brigade in Jackson's old division, in his official report describes Porter's assault on Saturday as follows:

"About 4 P. M. the movements of the enemy were suddenly developed in a decided manner. They stormed my position, deploying in the woods in brigade front and then charging in a run, line after line, brigade after brigade, up the hill on the thicket held by the Forty-eighth and the railroad cut occupied by the Forty-second. . . . Before the railroad cut the fight was most obstinate. I saw a Federal flag hold its position for half an hour within ten yards of a flag of one of the regiments in the cut, and

go down six or eight times; and after the fight one hundred dead men were lying twenty yards from the cut, some of them within two feet of it. The men fought until their ammunition was exhausted and then threw stones. Lieutenant ——— of the battalion killed one with a stone, and I saw him after the fight with his skull fractured. Dr. Richard P. Johnson, on my volunteer staff, having no arms of any kind, was obliged to have recourse to this means of offense from the beginning. As line after line surged up the hill time after time, led up by their officers, they were dashed back on one another until the whole field was covered with a confused mass of struggling, running, routed Yankees."—EDITOR.

choice of a crossing-place, I became aware of a man observing me from the end of the cut above. I could not distinguish the color of his uniform, but the crown of his hat tapered suspiciously, I thought, and instinctively I dropped the butt of my rifle to the ground and reached behind me for a cartridge.

"Come here!" he called;—his accent was worse than his hat.

we charged a battery and took it, and in the evening got considerably worsted in an engagement with the enemy in a field on the left. Saturday morning we lay in reserve in the edge of the woods (see Brockenbrough's brigade on the map, page 617); about half-past two o'clock we received urgent orders to reinforce a portion of our line in the center, which was about to give way. We proceeded at double-quick to a point in the woods behind the deep cut, where we formed line. . . . We came in sight of the enemy when we had advanced a few yards, and were saluted with cannon. We pushed on, however, to the old railroad cut, in which most of Jackson's

"Who are you?" I responded as I executed the movement of "tear cartridge."

He laughed and said something,—evidently not to me,—then invited me to "come and see." Meanwhile I was trying to draw my rammer, but this operation was arrested by the dry click of several gunlocks, and I found myself covered by half a dozen rifles, and my friend of the steeple-crown, with less urbanity in his

troops lay. The troops occupying this place had expended their ammunition and were defending themselves with rocks . . . which seemed to have been picked or blasted out of the bed of the railroad, chips and slivers of stone which many were collecting and others were throwing. Of course, such a defense would have been overcome in a very short time, but our arrival seemed to be almost simultaneous with that of the enemy. We had ammunition (twenty rounds to the man) and we attacked the enemy and drove them headlong down the hill, across the valley and over the hill into the woods, where we were recalled by General Starke.—*Robert Healy.*"

STARKE'S LOUISIANA BRIGADE FIGHTING WITH STONES AT THE EMBANKMENT NEAR THE "DEEP CUT."

intonation, called out to me to "drop that." In our brief intercourse he had acquired a curious influence over me. I did so.

My captors were of Kearny's division, on picket. They told me they thought I was deserting until they saw me try to load. I could not account for their being where they were, and when they informed me that they had Jackson surrounded and that he must surrender next day, though I openly scouted the notion, I must own the weight of evidence seemed to be with them. The discussion of this and kindred topics was continued until a late hour that night with the sergeant of the guard at Kearny's headquarters, where I supped in unwonted luxury on hard-tack and "genuine" coffee, the sergeant explaining that the fare was no better because of our destruction of their supplies at the Junction. Kearny's orderly gave me a blanket, and so I

passed the night. We were early astir in the morning, (Aug. 30) and I saw Kearny as he passed with his staff to the front,—a spare, erect, military figure, looking every inch the fighter he was—but with the shadow of his doom hovering over him even then. He fell three days later, killed by some of my own brigade.*

Near Stone Bridge I found about five hundred other prisoners, mostly stragglers picked up along the line of our march. Here my polite provost-sergeant turned me over, and after drawing rations—hard-tack, and coffee and sugar mixed—we took the road to Centreville, having to stand a good deal of chaff on the way at our forlorn appearance, for that thoroughfare was thronged with troops, trains, and batteries. We were a motley crowd enough, certainly, and it *did* look as if our friends in blue were having their return innings.

* Captain James H. Haynes, Fifty-fifth Virginia regiment, says he was on the skirmish line at Chantilly, in the edge of a brushy place with a clearing in front. It was raining heavily and growing dark when Kearny rode suddenly upon the line, and asked what troops they were. Seeing his mistake, he turned and started across the open ground to escape, but was fired on and killed. His body was brought into the lines and recognized by General A. P. Hill, who said

sadly, "Poor Kearny! he deserved a better death than this."

The next day General Lee ordered that the body be carried to the Federal lines, and in a note to General Pope he said: "The body of General Philip Kearny was brought from the field last night and he was reported dead. I send it forward under a flag of truce, thinking the possession of his remains may be a consolation to his family."—A. C. R.

More than once that day as I thought of our thin line back yonder, I wondered how the boys were making it, for disturbing rumors came to us as we lay in a field near Centreville, exchanging rude *badinage* across the cordon of sentries surrounding us. We received recruits from time to time who brought the same unvarying story, "Jackson hard-pressed — no news of Longstreet yet." (He was there, but keeping silent.) So the day wore on. Towards evening there was a noticeable stir in the camps around us, much riding to and fro of couriers and orderlies, and now we thought we could hear more distinctly the deep-toned, jarring growl which had interjected itself at intervals all the afternoon through the trivial buzz about us. Watchful of indications, we noted too that the drift of wagons and ambulances was *from* the battle-field, and soon orders came for us to take the road in the same direction. The cannonading down the pike was sensibly nearer now, and

at times we could catch even the roll of musketry, and once we thought we could distinguish, faint and far off, a prolonged, murmurous modulation of sound familiar to our ears as the charging shout of the gray people — but this may have been fancy. All the same, we gave tongue to the cry, and shouts of "Longstreet! Longstreet's at 'em, boys! Hurrah for Longstreet!" went up from the column, while the guards trudged beside us in sulky silence.

There is not much more to tell. An all-day march on Sunday through rain and mud brought us to Alexandria, where we were locked up for the night in a cotton-factory. Monday we embarked on a transport steamer, and the next evening were off Fort Monroe, where we got news of Pope's defeat. I was paroled and back in Richmond within ten days of my capture, and then and there learned how completely Jackson had eclipsed his former fame on his baptismal battle-field.

Allen C. Redwood.

MEMORANDA ON THE CIVIL WAR.

Comments on General Grant's "Chattanooga."

IN THE CENTURY for November is a most valuable and interesting article by General Grant on Chattanooga. Written at a time when he was enfeebled, and suffering intensely from a mortal malady, it has in it some statements which are at variance with official documents, and which may properly be attributed to any cause other than a desire to do injustice to others or to relate anything but facts. General Grant's description of the situation at Chattanooga at the time of his arrival is graphic, and might be added to without exaggeration. The condition of matters was known not only to all officers of rank and intelligence in the Army of the Cumberland, but was discussed among the soldiers, who expressed themselves as willing to starve before giving up Chattanooga, which was all that remained to them of the battle of Chickamauga. We were in truth short of food, medicine, ammunition, and clothing, and without prompt relief were rapidly drifting to utter destruction as an army, and to terrible loss of life.

On the 3d of October, 1863, having reported a day or two before to General Rosecrans, I was assigned to duty as chief engineer of the Army of the Cumberland, and it devolved on me as a part of my duty to lay out and construct the fortifications so as to enable a comparatively small force to hold the place, and also to look out for the communications by which the army was supplied. In the performance of that duty I was actively engaged in building boats and material for bridges, and was studying earnestly to find some way of restoring our short line of communications lost by the giving up of Lookout mountain and valley. I found a most excellent company of volunteers styled "Michigan Engineers and Mechanics," commanded by Captain Fox. They, before my arrival, had set up a saw-mill, and were engaged in making boats and flooring, etc.,

VOL. XXXI. — 64.

for military bridges. In pursuance of the one paramount necessity of finding some way of shortening our distance to the railroad at Bridgeport, on the 19th of October I started to make a personal examination of the north side of the Tennessee River below Chattanooga. The object was to find some point on the south side, the holding of which would secure to us the river from Bridgeport through the Raccoon Mountain, and the short road in the valley from there to Chattanooga. On returning unsuccessful in my search, to within about five miles of Chattanooga, I saw before me on a bluff, washed by the river, an earthwork in which was posted a field-battery commanding a road through a break in the hills on the opposite side, where had formerly been established a ferry, known as Brown's Ferry. The position struck me as worthy of close examination, and learning from the commanding officer of the battery that there was a tacit agreement that the pickets should not fire on each other, I left my horse in the battery and went down to the water's edge. There I spent an hour, studying the character of the hills, the roadway through the gorge, and marking and estimating the distances to the fires of the picket reserves of the enemy. I then rode back to headquarters, to find that during my absence General Rosecrans had been relieved from duty there and General Thomas put in command of the army.

The next morning, October 20th, General Thomas asked me what length of bridge material I had not in use, and directed me to throw another bridge across the river at Chattanooga. I asked him not to give the order till he had heard my report of my examination of the day before and had looked into a plan I had to propose for opening the river to our steamboats, of which there were two then partly disabled, but which had not been repaired by me lest they should eventually serve the purposes of the enemy. After a discussion which I think was finished in two days and by the 22d of October he gave his approval to the plan, and I

went to work at once, he giving the necessary orders for the coöperating movements from Bridgeport, which were a vital part of the operations. After that there was but one discussion between General Thomas and myself, which was as to the relative time Hooker's column was to move from Bridgeport. That took place after the arrival of General Grant at Chattanooga, all others having been concluded before General Grant made his appearance. Having now given my statement of the condition of matters prior to the arrival of General Grant, I will quote what General Grant says on the subject in the paper to which I refer.

"The next day we reached Chattanooga a little before dark. . . . The next day, the 24th of October, I started out to make a personal inspection, taking Thomas and Smith with me, besides most of the members of my personal staff. We crossed to the north side of the river, and moving to the north of detached spurs of hills, reached the Tennessee at Brown's Ferry, some three miles below Lookout Mountain, unobserved by the enemy. Here we left our horses back from the river and approached the water on foot. . . . That night I issued orders for opening the route to Bridgeport—a cracker line, as the soldiers appropriately turned it."

There is not a word in the above to indicate that General Thomas had already approved a plan for opening the route to Bridgeport, and issued the necessary orders. I will now quote from the "Official Records" to show that General Grant trusted too much to his memory. The following dispatches from Assistant Secretary of War Charles A. Dana, to Secretary Stanton, give the situation before and after the arrival of General Grant at Chattanooga. They are papers of record in the War Department.

"CHATTANOOGA, October 23d. To E. M. STANTON: No change in the situation here. Ten days' rations on hand. Thomas firmly resolved to hold at all events. Rain heavy since midnight, and roads worse to-day than yesterday. An immediate movement for the occupation of Raccoon Mountain and Lookout Valley is indispensable, but Hooker, though ordered" [by Rosecrans] "ten days since to concentrate his forces for the purpose, has not done so, but waits, on the ground that his wagons have not arrived from Nashville. The fact is that about one hundred have arrived, and besides *Thomas will not allow him to take any wagons at all in this movement.* But Hooker seems to show no zeal in the enterprise. *It will necessarily wait somewhat for the arrival of Grant, who will get in before night.* The interior line of fortifications is so far advanced that General Smith tells me only one day's work more is needed to make them tenable, and the place temporarily safe with a garrison of ten thousand men, though the works will still be far from finished. *The pontoons are done for a bridge across to Lookout Valley as soon as Hooker has entered into that position.*"

This dispatch shows that a move had been determined upon by Thomas both from Bridgeport and into Lookout Valley by a bridge, before the arrival of General Grant, although Mr. Dana was in error in stating that the bridge was to be thrown after the arrival of Hooker in that valley, as is shown by this dispatch:

"CHATTANOOGA, to A. M., October 24th. To E. M. STANTON: Grant arrived last night, * * * He is just going to reconnoiter an important position which General Smith has discovered at the mouth of Lookout Valley, which will be occupied from here simultaneously with Hooker's occupation of Raccoon Mountain. . . ."

Here it is shown that when Grant had been but about twelve hours in Chattanooga, and before he had even started on his trip to Brown's Ferry, Mr. Dana had sketched to the Secretary of War the substance of the whole movement. That General Thomas had, after General Grant's arrival, to put before him the plan

which he had determined upon, and that General Grant's approval was necessary, and that it was proper for him to go to Brown's Ferry at once to see the position before he gave his approval to it, cannot be gainsaid, but there is not the slightest reason for doubting that Thomas would have made the same move with the same men and with the same results, had General Grant been in Louisville, from which place he telegraphed the order putting Thomas in command of the Army of the Cumberland. General Grant does not overstate the importance of this movement to the army. It gave at once to the army food and clothing, with forage for the animals which were yet left alive, and last but not least, ammunition, of which General Grant says the Union army had "not enough for a day's fighting." From being an army in a condition in which it could not retreat,—for as General Grant says, "a retreat at that time would have been a terrible disaster," and "would have been attended with the loss of all the artillery. . . . and the annihilation of that army itself either by capture or demoralization,"—it became an army which, so soon as it was reinforced by the troops with Sherman, assumed the offensive, and under the leadership of General Grant helped to win the battle of Missionary Ridge, inflicting a mortal blow upon the army under Bragg. General Thomas was a man who observed strictly the proprieties and courtesies of military life; and had the plan "for opening the route to Bridgeport," and the orders necessary for its execution, emanated from General Grant, he would hardly have noticed the subject in the following words:

"To Brigadier-General W. F. Smith, chief engineer, should be accorded great praise for the ingenuity which conceived, and the ability which executed the movement at Brown's Ferry. The preparations were all made in secrecy, as was also the boat expedition which passed under the overhanging cliffs of Lookout, so much so that when the bridge was thrown at Brown's Ferry, on the morning of the 27th, the surprise was as great to the army within Chattanooga as it was to the army besieging it from without." [Voi. I., page 398, Van Horne's "History of the Army of the Cumberland."] .

With some hesitation I will give a copy of a letter from General Grant to the Secretary of War, which, though speaking of me in possibly much too high terms, is yet important in this connection from its date. It was written two weeks after the opening of the river, and two weeks before the battle of Missionary Ridge. It could hardly have been written from General Grant's previous knowledge of me, for he says he "had no recollection of having met me, after my" [his] "graduation, in 1843, up to this time,"—the night of his arrival at Chattanooga—October 23, 1863. It could not have been written because I had shown zeal in establishing a saw-mill, making a steamboat or any amount of bridge material, nor yet because I had commanded two brigades in a surprise attack at Brown's Ferry. No other movement than the successful opening of the river had been made from the time of General Grant's arrival to the date of this letter. Was it possible that it arose from any other reason than that General Grant, appreciating fully the great and prompt change in the condition of the army, arising from the opening of the river, had perhaps overestimated the ability of the one who within his own knowledge had planned the movement? Circum-

stances afterward occurred to change the relations between General Grant and myself, to which it is not necessary to refer, and his opinion of me may and probably did afterward undergo a change, but at the time at which the letter was written there was some striking reason which produced it :

"HEADQUARTERS MILITARY DIVISION OF THE MISS.

"CHATTANOOGA, TENN., Nov. 12, 1863.

"HON. E. M. STANTON, SECRETARY OF WAR.

"SIR: I would respectfully recommend that Brigadier-General William F. Smith be placed first on the list for promotion to the rank of major-general. He is possessed of one of the clearest military heads in the army—is very practical and industrious—no man in the service is better qualified than he for our largest commands.

"I have the honor to be, very respectfully, your obedient servant,

(Official)

"U. S. GRANT.
"Major-General.

"Signed, GEO. K. LEET, Assistant Adjutant-General."

Not only is it due to the truth of history that this evidence of General Grant's military appreciation of the movement on Brown's Ferry should appear, but it also establishes his generosity of character in giving credit where he felt it to be due.

At some future time I may have an opportunity of doing justice to the memory of General George H. Thomas, whose comparatively early death was so great a loss to the country. The civil war developed no higher character than his, viewed in all its aspects, either as soldier or civilian. There are no clouds on it to mar the brightness of his glory.

Wm. Farrar Smith.

NOTES AND CORRECTIONS.

MAJOR J. L. COKER of Darlington, South Carolina, says of General Grant's description of the fighting in Lookout Valley on the night of October 28-29, 1863: "The engagement of Wauhatchie, or Lookout Valley, was of minor importance; but it is well to have errors corrected. General Geary's Federal division was not attacked by Longstreet's corps, but by Jenkins's South Carolina brigade, commanded by Colonel (afterwards General) John Bratton. No other troops fired a shot at Geary's men that night. The battle lasted about one hour and a half, and was brought to a close on account of General Howard's advance threatening Bratton's rear, and not by a Confederate stampede caused by a 'mule-charge' in the dark. When the order to retire was received, the brigade was withdrawn in good order. The writer, acting A. A. G. on Colonel Bratton's staff, was wounded and taken from the field at the close of the battle, and did not observe any disorder. General Howard was opposed by a small force, and made such progress that Jenkins's brigade was in danger of being cut off from the crossing over Lookout Creek. They were ordered out when they seemed to be getting the better of General Geary, who was surprised by the night attack, and no doubt thought himself 'greatly outnumbered,' and reported himself attacked by a corps instead of a brigade."

LIEUTENANT J. S. OSTRANDER, formerly of the Eighteenth U. S. Infantry, writing from Richmond, Indiana, says: In General Grant's paper there is a strange omission in describing the assault on Missionary Ridge. The General states that his order for the assault was communicated to General Wood in person and the assaulting column, consisting of the

divisions of Wood and Sheridan, at once moved and carried the ridge. As a matter of fact, the signal to advance was the firing of six guns from the battery on Orchard Knob, and instead of two divisions the assaulting column, counting from left to right, consisted of four divisions,—Baird, Sheridan, Wood, and Johnson (less one brigade of Johnson's, left in the trenches). The column moved in line, and to this day it is an open question which division first crowned the ridge."

CAPTAIN BENJAMIN F. HEGLER of Attica, Indiana, who was second in command of the Fifteenth Indiana, in the assault on Missionary Ridge, writes: "General Grant says of the assault on Missionary Ridge:

'The fire along the rebel line was terrific. Cannon and musket balls filled the air; but the damage done was in small proportion to the ammunition used.'

"The inference might be that the assault, though brilliant, was after all a rather harmless diversion. The Fifteenth Indiana, of Sheridan's division, started up the ridge just to the left of Bragg's headquarters with 337 officers and men, and lost 202 killed and wounded, in just forty-five minutes, the time taken to advance from the line of works at the foot of the ridge and to carry the crest. This report I made officially to General Sheridan near Chickamauga Creek the morning after the battle."

General Leggett's Brigade before Vicksburg.

In my father's paper on "The Siege of Vicksburg," (September CENTURY, page 760) a sentence reads:

"At the point on the Jackson road in front of Ransom's brigade, a sap was run up to the enemy's parapet, and by the 25th of June we had it undermined and the mine charged."

This sentence should read:

"At three points on the Jackson road in front of Leggett's brigade," etc., etc.

These mistakes were probably made by me in copying my father's MS. Ransom commanded a division, and was not in Logan's command.

F. D. Grant.

[We have also received letters from General John A. Logan and General M. D. Leggett calling attention to this error.]—EDITOR.

The Rear-Guard after Malvern Hill.

A FEW days ago, in Switzerland, my attention was called to a communication in the August number of THE CENTURY, page 642, which falsifies history. It is under the heading, "The Rear-Guard after Malvern Hill," and is signed Henry E. Smith. Mr. Smith asserts that it was General Averell who commanded the rear-guard, and that to Averell, and not to Keyes, belongs the credit which General McClellan gives the latter in his article in THE CENTURY of May last. Mr. Smith cites authorities for his statements, and refers to the "Official Records of the Rebellion," Vol. XI., Part II., page 235, and to my report, page 193 same volume, in which he says there is "no mention of Averell." It is not unreasonable to suppose that Mr. Smith had read General McClellan's and my reports, since he refers to them, but it is certain that he discredits both, and that he rejects my claim to approval unceremoniously. General McClellan says

in his book, "Report * * * of the Army of the Potomac," etc., page 273 :

"The greater portion of the transportation of the army having been started for Harrison's Landing during the night of the 30th of June and the first of July, the order for the movement of the troops was at once issued upon the final repulse of the enemy at Malvern Hill.

"The order prescribed a movement by the left and rear, General Keyes's corps to cover the manoeuvre. It was not carried out in detail as regards the divisions on the left, the roads being somewhat blocked by the rear of our trains. Porter and Couch were not able to move out as early as had been anticipated, and Porter found it necessary to place a rear-guard between his command and the enemy. Colonel Averell, of the Third Pennsylvania cavalry, was intrusted with this delicate duty. He had under his command his own regiment and Lieutenant-Colonel Buchanan's brigade of regular infantry and one battery. By a judicious use of the resources at his command, he deceived the enemy so as to cover the withdrawal of the left wing without being attacked, remaining himself on the previous day's battle-field until about 7 o'clock of the 2d of July. Meantime General Keyes, having received his orders, commenced vigorous preparations for covering the movement of the entire army, and protecting the trains. It being evident that the immense number of wagons and artillery pertaining to the army could not move with celerity along a single road, General Keyes took advantage of every accident of the ground to open new avenues, and to facilitate the movement. He made preparations for obstructing the roads after the army had passed so as to prevent any rapid pursuit, destroying effectually Turkey Bridge, on the main road, and rendering other roads and approaches temporarily impassable, by felling trees across them. He kept the trains well closed up, and directed the march so that the troops could move on each side of the road, not obstructing the passage, but being in good position to repel an attack from any quarter. His dispositions were so successful that, to use his own words: 'I do not think that more vehicles, or more public property were abandoned on the march from Turkey Bridge than would have been left, in the same state of the roads, if the army had been moving toward the enemy, instead of away from him,'—and when it is understood that the carriages and teams belonging to this army, stretched out in one line, would extend not far from forty miles, the energy and caution necessary for their safe withdrawal from the presence of an enemy vastly superior in numbers, will be appreciated, * * *. Great credit must be awarded to General Keyes for the skill and energy which characterized his performance of the important and delicate duties intrusted to his charge."

The above extract defines General Averell's duties on the field of Malvern, and gives him credit, and it is equally distinct in reference to me, but General McClellan's article in *THE CENTURY* for May is vague in its expressions regarding the same subjects. As Mr. Smith's article is historically erroneous, I trust you will consider it just to give place to this explanation, and to the following short account of "The Rear-Guard after Malvern Hill."

After the battle of Malvern Hill, which was fought on the 1st of July, 1862, the Army of the Potomac retired to Harrison's Landing on the James River. Late in the evening of that day I received orders from Adjutant-General Seth Williams to command the rear-guard. I spent nearly the whole night making preparatory arrangements; dispatched a party to destroy Turkey Bridge, with two of my aides, Jackson and Gibson, to see that it was done promptly; selected twenty-five expert axe-men under Captain Clarke, Eighth Illinois Cavalry, with orders to chop nearly through all the large trees that lined the road below the bridge. All my orders were well executed, and within fifteen minutes after the tail of the column passed, the bridge was destroyed without blowing up, and the road blocked

beyond the possibility of passage by wheels and cavalry, and made difficult for infantry for several hours.

The force composing the rear-guard consisted of Peck's division of infantry, and four batteries of artillery of my own corps; Gregg's Eighth Pennsylvania Cavalry, and Farnsworth's Eighth Illinois Cavalry. Averell's regiment of cavalry was also designated in a dispatch sent me by Adjutant-General Williams, and he may have taken part below the bridge, but I do not remember to have seen him during the day.

The danger to the trains arose from the fact that the narrow country roads were insufficient in number, and their composition was mostly clay, which was soon converted into mud by the torrents of rain which fell nearly the whole day, and from the liability to attack on the flank. The main road was skirted with woods on the left the entire distance, which is about seven miles from Turkey Bridge to Harrison's Landing. The opposite side of the main road was open, and the columns of troops could move parallel with the wagons. When General W. F. Smith came along at the head of his division, I was opposite an opening in the woods at the highest point of the road. Smith exclaimed to me: "Here's a good place for a battle!" "Would you like to have a fight?" said I. "Yes, just here, and now!" While the columns of troops were moving alongside the trains I felt no apprehension, but after they had all passed there still remained in rear not less than five hundred wagons struggling in the mud, and it was not above ten minutes after the last vehicle had entered the large field bordering the intended camp when the enemy appeared and commenced a cannonade upon us. Fortunately I had in position Miller's and McCarthy's batteries, and they replied with such effect that the attack was discontinued.

The anxiety at headquarters was such that I was authorized, in case of necessity, to cut the traces and drive the animals forward without their loads. Nothing of that kind was done, and we saved all the wagons except a small number that broke down and were as necessarily abandoned as a vessel in a convoy would be after it had sunk in the ocean.

About the middle of the day I received a note from headquarters at Harrison's Landing, of which the following is a copy :

"GENERAL : I have ordered back to your assistance all the cavalry that can be raised here. It is of the utmost importance that we should save all our artillery, and as many of our wagons as possible; and the commanding general feels the utmost confidence that you will do all that can be done to accomplish this. Permit me to say that if you bring in everything you will accomplish a most signal and meritorious exploit, which the commanding general will not fail to represent in its proper light to the Department. Very respectfully,

"(Signed) R. B. MARCY,
Chief of Staff, July 2d."

"BRIGADIER-GENERAL KEYES.

General McClellan came out half a mile and met me. I was engaged sending forward sheaves of wheat to fill the ruts in the road near camp, which were so deep that in spite of all efforts to fill them, about 1200 wagons were parked for the night under guard outside. The general appeared well satisfied with what had been done by the rear-guard, and after all the proofs cited above, it is scarcely probable that he made a mistake in the name of its commander.

D. Keyes.

BLANGY, SEINE-INFÉRIEURE, FRANCE, August 20, 1885.

TOPICS OF THE TIME.

The Demand of American Authors.

IN nothing is the progress of civilization more marked than in the prompt recognition by the law-making power of offenses against persons and property that have become such in the estimation of the best public opinion. Every generation stamps as crimes certain laws which were not crimes to the generation that went before. Time was when cruelty to wife, child, or animal was thought to be but a foible in man; and the punishment of such offense is even yet in some quarters thought to be an invasion of domestic and personal rights. This is true, similarly, of many acts which, as their evil effect upon the constitution of society becomes apparent, fall under the scope of the law.

Can any one, considering the consensus of opinion on the question of International Copyright, which we present in this issue of *THE CENTURY*, doubt that it is now time to put the legal brand of theft upon the appropriation of the intellectual property of foreigners by Americans, and upon that of Americans by foreigners? The taunt is made by the foes of this movement that the people are against it, that they would rather save a few pennies on cheap English and French novels and other books than right the great wrong which for years has been a blight upon our national honor and a weight about the neck of our national literature. This aspersion we believe to be unfounded; but it behooves thoughtful and influential men and women to question whether their duty in this matter has been done till they have indicated forcibly to their representatives in both Houses of Congress a moral demand for an equitable copyright law.

It will be curious to note on what grounds, in the present session of Congress, senators and members can withhold their votes from any bill that abolishes the discrimination against foreign authors. Not only justice, but every consideration of policy will support a vote for such a bill:

1. It is demanded by an overwhelming proportion of the best sentiment in the press, by the body of American authors, leading divines, educators, and men of other professions, and by the enlightened opinion of the world. It has had the championship of Webster, Clay, Everett, Sumner, and others of our statesmen, and of all the prominent authors of America during the last fifty years; and has been recommended by successive Presidents.

2. It would open for American literary goods a ready-made foreign market, which lacks only the security of such a bill to become ours, and which would increase with great rapidity.

3. It would cheapen the best solid literature, by enabling authors and publishers to feel secure in the proceeds of their labor; the literature already cheap would still remain so, since no bill could be made retroactive. Thus:

4. It would not even be a hardship to those who are

now "pirating" foreign books. These they would still lawfully continue to print, every year adding new publications to the list of those whose copyrights have expired by the limitation of forty-two years. Into competition with this body of literature would come all new publications, thus insuring that in general books would not be dear.

5. It would in our opinion do more than any other single measure to restore the confidence of the educated classes in Congress. Burke, in his speeches on the American war, warned his government against alienating the sympathy of the colonies by permitting them to have reasonable grounds for doubting the justice of the governing power. Is this folly any the less when the aggrieved are the most influential power in the formation of public opinion? And is it any wonder that the American writer—whose literary work is the only American product to which is refused the protection of the American flag abroad—should fall short of an ideal confidence in American institutions?

6. It would establish a bulwark against communism, a danger that has yet to be encountered in America. Those who oppose International Copyright do so on the ground that though it take the property of others it does so for the general good—by making books cheap. We deny the conclusion; but can American legislators afford to reason thus?

7. It would carry out the evident intent of the Constitution, by which Congress is empowered "*to promote the progress of science and useful arts,*" by means of patents and copyrights. Will legislators be less zealous in carrying out the positive designs of that instrument than in guarding against its invasion or perversion?

To the great body of American authors, it may be said with confidence, "This matter is wholly in your hands. Your committee has done much in the agitation of the subject and in the organization of your forces. Congress must certainly yield, if not now, then with the growth of a better political sentiment and a more active public spirit. You must leave no word unsaid to awaken the conscience of your legislators. If you shall not be successful at the present session of Congress, you will only have to buckle on the armor more firmly. Generations of injustice and neglect at the hands of those who should be the guardians of the national honor must not be allowed to discourage the literary craft in the effort now being made to right gigantic wrong; and whether successful or not your efforts will be, to those that come after you, an inheritance and tradition of honor so long as books are written and read.

"Say not, the struggle naught availeth,
The labor and the wounds are vain,
The enemy faints not, nor faileth,
And as things have been they remain.

"If hopes were dupes, fears may be liars;
It may be, in yon smoke concealed,
Your comrades chase e'en now the fliers,
And, but for you, possess the field."

An "American Westminster."

THE question whether the United States should have a "Westminster Abbey" has been widely discussed in the magazines and other periodicals lately. The most eloquent plea for some such place of repose for our great dead has come from Canon Farrar, in a recent contribution to "The Brooklyn Magazine." This learned and persuasive preacher and writer rapidly reviews the history and uses of Westminster, and points out numerous "advantages which would accrue to the American nation from the possession of such a building." He sees the difficulty of the establishment of an ecclesiastical edifice devoted here to such purposes, but urges the high uses of a secular Valhalla. He thinks correctly "that the mere fact that such a building was in contemplation would fire the imagination of many artists," but mistakenly supposes that we now have no architects, sculptors, or painters equal to the building and decoration of such an edifice. The array of reasons for the erection of an American Valhalla presented by Canon Farrar leaves little to be said by others in favor of so glorious a scheme.

Nevertheless we do not believe there will ever be a single structure in America, sacred or profane, where all our great men will be buried. Furthermore it seems to us to betray a certain ignorance of the character and needs of our wide-spread, democratic nation to suppose such a building necessary or desirable. Is not, indeed, the custom already evolved the most natural, fitting, and advantageous? Our leading statesmen and generals are already being commemorated in bronze, marble and otherwise in the Capitol building itself; the public places of Washington are also largely devoted to the same purpose; as well as the capitol buildings of the various States and the public parks and places of all our cities. Our poets, authors, scientists, inventors, benefactors, have their memorials in appropriate localities; and the time may come when there will be found a place for a still wider range of representative citizens of national fame, either in the Capitol at Washington or in some other building there. But it is the custom in America when a great man dies to carry him back to the home of his birth or adoption, and to bury him among his own kindred and people. This is a custom which we believe is not likely ever to be superseded. Who would wish the tomb of Washington anywhere else than at Mount Vernon; of Lincoln elsewhere than at Springfield. In every part of the country pilgrimage can be made to the graves of the great and the good; our public men, our great writers are, as a rule, buried in the very soil that nurtured them. Emerson and Hawthorne under the pines of New England, Irving on the banks of the Hudson, Clay in the beautiful Blue Grass region of Kentucky;—you can stand at the entrance of his rebuilt home and look straight across the fields to his high monument that towers above the trees of the Lexington cemetery.

Thus in America the same rule holds good alike for the obscure and the distinguished; the dead are carried home to be buried. They are laid to rest not in some central city and structure, but where they have lived, and where their families and neighbors may accompany them in their long sleep. Their tombs may be more noble in appearance,—just as in deeds and char-

acter they towered above their surroundings; but the remoteness is not too distant and unfriendly. The burial of Grant in an unusual and conspicuous position is not essentially a departure from the prevailing custom, for he lies where his wife can be laid to rest by his side, in the midst of the city he chose as his home, and to which he felt bound by ties of gratitude.

Westminster Abbey has been and is a great possession, a continual inspiration, for England, for America, and for all the world. But the attempt to imitate it under entirely different conditions in the New World would, we are inclined to believe, prove a conspicuous and not altogether unfortunate failure.

Postal Savings-Banks.

SOME years ago, before there had been much discussion in America of the subject of postal savings-banks, in writing of the condition and needs of the working people of the Southern States, the Rev. J. B. Harrison suggested some features for a system of such banks which are worth consideration at this time. The essential object to be provided for is absolute security of deposits, and their prompt return whenever depositors wish to withdraw them. According to Mr. Harrison's view the matter of interest is comparatively unimportant. What the working people need is not interest on their savings so much as the certainty that the savings themselves will not be lost. It is not unlikely that the rate of interest on deposits in savings-banks will continue to decline, as it has done for some years past, thus becoming less and less important to depositors. It is a question whether any sound reason for the nation's paying interest on deposits in times of peace and prosperity, when the government does not need loans, has ever been brought forward. To tax the rich to pay interest on the savings of the poor would be an unjustifiable communistic measure. To tax poor men for their own benefit might be a doubtful expedient (though it would not be the first experiment of the kind).

Only the national government has the power to guarantee, with absolute certainty, the safety of the savings of the people, and this is the only service which it can properly render in this matter. Many arguments could be advanced to show, not only that no interest should be paid, but that depositors should be required to pay for the clerical labor involved, as we now pay a small fee for postal money-orders. The nearer we can come to a state of things in which every man would pay its full value for everything he received, the better for all concerned. Government charity is more corrupting than any other. Everything that tends to pauperize people should be avoided, and it is better that the laboring people should themselves pay the slight expenses involved in the government's care of their savings than that this service should be rendered free of cost. The objection is not against the payment of interest by private borrowers, nor by the government when it needs loans; we mean simply to call attention to the suggestion that a system of non-interest paying government savings-banks, with absolute security for deposits, would probably be more useful to the people than any possible payment of interest.

We suppose that deposits could be received at all

post-offices. If deposits are few, but little additional clerical work would be required. If they are numerous the fees would pay for the new work, and in any case the system would be self-sustaining.

It has been feared by some that such a system of national savings-banks would seriously reduce the business of the savings-banks already established, which pay interest on deposits; but is it not quite as likely to increase it? Our people think so much of interest that many of them would be likely, whenever their deposits become considerable, to withdraw them from the non-interest-paying government banks and put them into private banks which would pay interest.

When government bonds are no longer available as securities, some modifications in existing systems of banking will be necessary; and such a system of savings-banks as is here described would, it is thought, be adapted to the new order of things.

The government should do nothing for its citizens which they can as well do for themselves; but the establishment of non-interest-paying savings-banks, with absolute security of deposits, can be accomplished only by the national government, and it is urged with great force that the system would tend to habits of economy, and to improved conditions of life, for large numbers of people.

OPEN LETTERS.

International Copyright.

PLAIN SPEECH FROM AMERICAN AUTHORS.

*In vain we call old notions judges
And bend our conscience to our dealing;
The Ten Commandments will not budge,
And stealing will continue stealing.*

J. H. Bowler.

20th Nov: 1885.

THE demand for International Copyright is based, primarily, on principles of simple justice. The right of an author to the product of his brain, like the right of the mechanic to the product of his hands, does not depend upon national or geographical conditions. I would not myself make it depend upon international treaty, or the legislation of other countries. Whatever privilege our present copyright law gives to citizens should be given to persons. America is too rich to be a pauper, and ought to be too honorable to be a robber, and should be willing to pay to authors who contribute to its enlightenment or its enjoyment a fair remuneration for their work.

But this consideration of justice is enforced by a consideration of self-interest. We protect by our legislation every form of industry except that of the brain; the industry of the brain we subject to an unequal competition. The American author, in order to

secure the publication of his book, must not only write a good one, but he must write one so much better than any that a foreign author can write, that the publisher can better afford to pay him for the privilege of publishing it than to publish his competitor's book for nothing. This system is dwarfing American literature, and would have done much to destroy it, if it had not been nurtured and kept alive by our popular periodicals. A vote for justice does not require much explanation; and I think this simple statement is all the explanation which this vote, for what I should prefer to call Universal Copyright, requires.

Lyman Abbott.

I AM heartily in favor of any effort that promises to be successful in securing International Copyright. Our present methods are disheartening to all authorship in America, and, consequently, we can never have

an adequate national literature as long as foreign works are reprinted and sold in this country for next to nothing. If we had been allowed to pirate the works of foreign inventors, we never should have had the abundant machinery that now does so much for our civilization. I see no good reason why the writer of a book should not have the same protection as the inventor of a machine. It is, in my judgment, discreditable to us as a nation that we are willing to appropriate the works of others simply because we are a nation of readers rather than a nation of writers. Books are for the mind what machines are for the body, and the protection of writers cannot be regarded as of less importance than the protection of inventors, except on the preposterous assumption that our spiritual and moral natures are of less importance than our temporal affairs.

C. K. Adams.

President of Cornell University.

IF women are allowed a vote in the matter, I decidedly cast mine for International Copyright.

L. M. Alcott.

THE fact that no Copyright Treaty exists between the United States and England is so shameful that I don't care to discuss it.

T. B. Aldrich.

THE right of property in the productions of the intellect is everywhere recognized throughout the civilized world; but it is held under common law to be defensible only so long as the producer keeps his production to himself, so that it is lost by the act of publication. It only becomes of value to its possessor, therefore, by virtue of statute law. Being a natural right, it would seem that its protection should be perpetual, as it formerly was in Holland, Belgium, Denmark, and Sweden; but it is nowhere now secured except for a limited period, and in this country under the Constitution it cannot be. The statute law of one country, however, cannot secure the rights of the citizens of that country in any other; hence the desirability and the justice of an international law to protect copyright everywhere. From the futility of the efforts thus far put forth to attain this object by treaty between English-speaking peoples, it might almost seem as if we had here a survival of the spirit of the earlier centuries, in which the normal condition of neighboring tribes was a state of war. Under the Roman republic a foreigner was called *hostis*, and the same word signified equally an enemy. "*Hostis enim*," says Cicero, "*apud majores nostros dicebatur quem nunc peregrinum dicimus*." Between Great Britain and the United States there has been a war in the literary field of a century's standing, signalized by incessant acts of privateering on both sides. The spectacle is discreditable in the eyes of the world. It is time it came to an end. "Let us have peace."

F. A. P. Barnard.

President of Columbia College.

THE abstract justice of granting International Copyright to authors has seldom been questioned, even by those literary plunderers who affect to be opposed to

it as a matter of policy; for that must be an affectation which utters sentiments in opposition to the public conscience. I have known but one author, and he was an ex-publisher, who upheld the broad principle that no man is entitled to the protection of his ideas,—an assertion which, in the case of that author, I was always willing to concede.

Among men of letters there can hardly be two opinions as to the justice or the good policy of the cause of International Copyright. I wish the complete success of the effort to educate our people to that point of interest in one of the greatest hardships of authors as may, in the end, impel them to enforce legislation from the governments of the United States and of Great Britain as will enable the authors of both countries to obtain at least the whole of the small remuneration which is due them for their hard and ill-paid work.

George H. Boker.

I FIND it difficult to speak dispassionately on the subject of "International Copyright," because my experience has made me feel the injustice of the present state of things most keenly. A man who constructs an improved button-hook or darning-needle may patent his invention in nearly every country of the civilized world, while the man who embodies the best results of his thought and culture in a book is exposed to depredations from any one (outside of his own country) who chooses to steal from him. In the space you have allotted me there is no opportunity for arguing the question. All I can do is to give an expression of sentiment in favor of International Copyright, and this I do with all possible emphasis; first, because the present system of mutual stealing is ethically wrong, and will in the end benefit nobody; and secondly, because I have myself suffered in many ways from the liberties taken with my writings in foreign countries.

Hjalmar H. Boyesen.

I HAVE the strongest conviction of the need and justice of speedy and effective legislation on the subject.

Phillips Brooks.

A RIGHT to the control and the protection of the product of one's brain, it seems to me, cannot be questioned from any point of view in an age which recognizes in so many other ways the liberty of the individual.

For any country to say that its subjects may use, without a proper compensation based on a mutual agreement as to its value, the results of the intellectual activity of those of another, is but a remnant of those barbaric times when physical strength was the sole basis of right, and government only an organized power of oppression.

Frances Hodgson Burnett.

TO ME this question of granting American copyright to foreigners is simply, Shall we buy their product or steal it? To a large nation the interests involved may seem small; but is any kind of stealing a small matter? Why do we dwarf this question by making

it a matter of protection to the American author? That point is a mere accident of the situation.

True, it would be a material protection to him. It would not force the foreign author into the high-price-book market, for full copyright would add only one cent to every ten cents of gross price; but it would make way for the American author to compete in the market of cheap editions, from which a paltry margin of one cent on ten practically shuts him out. But why should we lay stress upon this point? Suppose International Copyright did not protect the American author; what of that? Shall we continue in injustice and dishonesty?

Fancy the case turned around. Fancy this American nation of ours rising to its proper stature, putting forth its hand in legislation and saying to its pilferers of foreign books, "Steal no more; we will pay, through you, with every ten cents of book-price one cent more for decency, good manners, and common honesty." Then fancy this little bunch of men and women that we call "the American author" objecting—if such a thing could be—that somehow this left us unprotected. It seems to me an honest nation would blow us forever out of sight and hearing with one puff of laughter.

So, then, what have American authors to do with this question *more* than the vast army of American readers? Indeed, the American author is almost or quite the only American who might, if he chose, plausibly remain silent. He could say, "The protection of the foreign author carries with it my protection. I recuse myself." But you—American reader, book-buyer, citizen—with you it is simply the question whether, all things considered,—private self-regard, public decency, national honor, Christian morals, modern good manners,—whether it is better to read ten books honestly bought, or eleven dishonestly got. It is the American citizen's question, be he author or what not, and the shame of American citizens, authors and all, until it is settled right.

G. W. Cable.

If the interest of all publishers and authors concerned were clearly seen to be coincident, probably long since an International Copyright would have existed. Between two countries of equal size, productiveness, and culture, and employing the same language, an identity of interests for publishers and authors would probably be seen to exist. But as between England and America, it is undoubtedly true that several English novels are read in America where one American novel is read in England, and a similar disproportion probably holds in regard to works of poetry, history, and general discussion. It follows that bookmaking and bookselling are temporarily promoted in this country by a freedom from restriction; in other words, by opportunities for piracy. That there are many publishers who despise such piracy and uniformly share with foreign authors the profits on their publications, does not remove the presumption that publishers and papermakers have been influential opponents of an equitable arrangement. That productivity in literature and scholarship in all countries would be promoted by an International Copyright is demonstrable. These are the primary interests, and if a copyright would quicken the true sources of intellectual growth and progress,

not merely honesty and the recognition of an immense debt due from this country to England, but a true regard for self-interest, demands it; and that the interests of the publishers in both countries will be found in the long run to be identical with the honorable promotion of the best literature and the encouragement of the highest scholarship does not admit of question. It is one of those cases, so numerous in the history of this country, where honesty and self-denial on the part of one generation would issue in immense gains for those coming later.

Franklin Carter.

President of Williams College.

I MEANT sooner to have answered your note by reaffirming my conviction that nothing can be more just or more agreeable to the instinct of every honorable man who speaks the English language, than that the books of all who write in that language shall be treated equally by the law. Even when copyright is regarded merely as a grant of the state for its own advantage, it is expedient that all contributions to the literature of the language shall be recognized as having the same right to protection. Cheap books are good things, but cheapening the public conscience is a very bad thing; and if Congress clearly understands that American authors ask nothing which the public conscience does not approve, Congress will not refuse to recognize the expediency of an International Copyright.

George William Curtis.

I AM afraid that all the arguments of authors and publishers in support of International Copyright are as hackneyed to the public ear as the eighth commandment, of which they necessarily are only variations.

But is there not an advantage to the public itself in such a law, which it overlooks?

It would serve to keep the lower mass of worthless literature in each country at home where it originates. If the experiment of publishing a foreign book cost more here, we should be spared much that is puerile and poisonous. Unfortunately, we cannot now keep out these printed paupers and criminals, nor send them back, as we do their human kinsfolk.

In every way, therefore, this, our late effort at honesty, would help our morals.

Rebecca Harding Davis.

I HAVE given very little thought to the subject of an International Copyright and can offer nothing especially important as to the form and feature such a law should embody; but I can very readily assent to the justice of the principle upon which such a law is desired and demanded. Whatever by mind or by muscle, by thought or by labor, a man may have produced, whether it shall be useful or ornamental, instructive or amusing, whether book, plow, or picture, the said producer has in it a right of property superior to that of any other person at home or abroad. If any arrangement can be devised which will secure this superior and fundamental right to authors, without imposing unreasonable restrictions upon the spread of knowledge, and without operating unequally and unfairly towards the authors and artists of the respective countries concerned, I am for such an International Copyright.

Fred'k Douglass.

IN the present stage of civilization, a great republic — unless it is willing to be a moral anomaly — must allow and secure International Copyright. It is high time that on this question our law-makers should cease to interpret "the rights of man" as meaning only the rights of Americans.

Mary Mapes Dodge.

IN regard to International Copyright the following propositions are indisputable:

1. In a civilized community the same judicial vindication of rights of property should be accorded by law to a foreigner as to a citizen.

2. It is now the law in this country that the legal rights of a domestic and a foreign author in an *unpublished* literary work are precisely the same. Courts of justice will not permit either to be robbed of his literary property by a piratical wrong-doer.

3. But when a foreign author publishes his work, a mischievous and shameless fiction is recognized, to the effect that he has *dedicated* or *abandoned* it to the American public, even though his strong protestations and expressed willingness to comply with the rules to which our own authors are subjected in matters of copyright prove directly the contrary.

4. By this theory we really violate a right of property vested in the foreign author while professing, judicially, to maintain it; for of what value, in general, is a literary work to its author unless he can print and multiply copies and have an exclusive right of sale?

5. It was time long ago to abandon this unjust distinction, and to ground our copyright laws on broad principles of natural justice. What is dedication or abandonment for the citizen should be dedication or abandonment for the foreigner, — no more, no less.

Theodore W. Dwight.

[IN the absence of Dr. Eggleston (in Europe) we reprint here a few words from his essay on "The Blessings of Piracy," which appeared in THE CENTURY for April, 1882.—EDITOR.]

It is a disgrace which the law-makers of America will have to bear, that men of letters in this late age should have to persuade reluctant legislators to give, through an intricate diplomacy, a partial protection from pillage to the productions of brain-labor, that ought to stand on the common footing of all property. The nineteenth century is drawing toward its close while yet Jews in Russia and writers in America are alike excluded from the equality before the law accorded to other classes.

Edward Eggleston.

I AM in hearty sympathy with the efforts making to secure International Copyright.

D. C. Gilman.

President Johns Hopkins University.

IT is curious that a man's brain should be considered a lumber-room which anybody is at liberty to plunder; and yet this brain, put into concrete shape, cast into an "invention," is guarded as the most sacred and inviolable of human possessions! A man sits down and "invents" a surgical saw which may be at once patented as an inestimable boon to the human race, while his *confrère* writes a book swarming with the germs and suggestions of a dozen such "inven-

tions," and — anybody may steal the book, germs, suggestions, and all! Right on this side of a parallel of latitude, wrong on that side, quoth Pascal. Honesty on this side of the Atlantic is theft on the other, it seems.

James A. Harrison.

WASHINGTON AND LEE UNIVERSITY, Lexington, Virginia.

I HAVE no hesitation in saying that I hold the opinion, in common as I suppose with most of the authors on both sides the Atlantic, that, whatever may have been true of the past, it is now for the interests of both authors and their readers that some scheme of International Copyright should be speedily agreed upon and put into operation.

Noah Porter.

President of Yale College.

HE who said "Let me make a nation's songs, and I care not who makes its laws," might have added, "Let Congress make Copyright Laws, and I care not who denounces their immorality." Interest, not justice, controls this matter. Artists, sculptors, and architects are secure from theft only because he who would rob them must first possess genius and patience equal to their own. The author is robbed because his sole vehicle is language, and any fool can run a felonious printing-press. Although this facility of language enables authors to reach a larger audience than is accessible to other men of ideas, that same fatal facility exposes them to be defrauded of the fruits of their labor. The means whereby they benefit mankind is the means whereby mankind starves them. Therefore let authors learn to fatten on fame, — or write only what is worth nobody's while to steal.

Julian Hawthorne.

I AM a firm advocate of International Copyright laws. The injury done to the progress of American literature by their absence seems to me often overstated; but the harm done to authors by the garbling and mutilation of their books under the present system is a very serious thing. I have suffered from it myself, and have seen others suffer; and it is a loss not to be measured by money. It is this consideration, and not the merely financial aspect of the matter, which has most weight in my own mind.

Thos. Wentworth Higginson.

CAN literary property be protected against theft and piracy? If so, it needs no argument to show that it should be; and if it be not done, the law-making power is in fault. Only by an impossibility can the law-making power be absolved from its obligation.

Mark Hopkins.

WILLIAMS COLLEGE, Williamstown, Mass.

YOU invite from me some expression in regard to International Copyright. I am in favor of any and every device for securing to the foreign author that property in his writings which our country nobly bestows on native authors for forty-two years before suffering them to become public pillage.

W. D. Howells.

OF all existing brutalities, of all legislative cruelties, of all cruelties inflicted by a civilized people upon a particular class, of all contemptible thefts known to mankind the meanest, the lowest, the pettiest, the most debased and despicable, is the brutality, the cruelty, the theft, practiced against authors by the United States of America. The United States of America professes to be a republic devoted to the freedom of men and to fair play for all citizens and aliens. The Government of the United States of America is untrue to this profession: it commits itself to a pitiable falsehood, and will remain so committed just as long as it refuses copyright to foreign authors whose books are published in this country.

George Parsons Lathrop.

I AM familiar with all the arguments which have been advanced in favor of refusing a copyright to foreign authors, and it seems to me that when they are not disgraceful in dishonesty, they are simply silly in their sophistry. We are struck by the infamous meanness of the *droit d'aubaine* by which a century ago all the personal effects of strangers dying in France were taken by the king. We, more ingenious, rob the author of his property on a far greater scale at a distance, without waiting for his death. There are few great nations which have not one crying infamy to disgrace them. England has the opium trade; we have had two. The first, slavery, we have abolished; the meaner and pettier outrage against the rights of a class we still retain. For all these wrongs there is retribution; and if inordinate national vanity did not blind us to the fact, we might see that our Nemesis is already overtaking us. It is not long since an American publisher wrote to me that there is a rapidly growing dislike in "the trade" to publish "literary" works by American authors, or anything, in fact, in which a large and certain sale could not be secured at little outlay. It is not the best intellectual training for a people to be confined to educational and technological books, or even magazines and newspapers, eked out by foreign pilferings. All of this, even if disseminated by millions at a cent a volume, will not make sound thinkers or cultivated minds. The average American believes, of course, that we "whip all creation" in poetry, philosophy, fiction, and art; but it is not true. Our position as respects these branches is creditable; in fact, it is remarkable considering the circumstances; but it is very far from being commensurate to our advance in what are foolishly called "practical" matters. And this backwardness is chiefly due to the absence of an International Copyright law. It was said of old that when the serpent devoured the brood of another, her own young died within her, and we are carrying out the simile in full.

Charles G. Leland.

THE position of the United States in regard to International Copyright is something that brings to every high-minded American a sense of shame. From the beginning of our national existence we have presented the spectacle of a great and wealthy people systematically plundering a never well-paid body of men, while at the same time it professes to hold them in special honor. No devices can cover up the fact, no

apologies can explain away the disgrace of it. Of the flimsy pretexts constantly urged for the perpetuation of this injustice, the most unintelligent is that which insists that while this spoliation may lower the general standard of morality, it raises the general standard of intelligence. One of the greatest literatures in the world is ours, abounding in works that inform and elevate. They are uncopyrighted and within the means of the poorest. If these will not diffuse intelligence, we may be sure it will never be done by flooding the land with books which are sold cheap because they are stolen, which are bought and read to the exclusion of better books merely because they are cheap, and which are then thrown away because they are not worth reading twice.

T. R. Lounsbury.

OUR copyright legislation should be reformed for the sake of (A) the American author and (B) the American reader.

(A). The present absence of International Copyright unfairly forces on the American author a competition with stolen goods. The lot of the foreign author, whose works are pirated here, is hard enough; but he has at least his home market. Far harder is the lot of the American author, who is robbed abroad and who is forced to sell his wares at home in cut-throat competition with the pirated works of the foreigner.

(B). Under the present state of the law the American reader is not able to get the best—although to get the best is the aim of most Americans. He does not get the best from American authors because some, becoming discouraged, have quit work, and because some are tempted to sacrifice quality to quantity; and both of these causes are due to the competition with stolen goods. He does not get the best from the foreigner because most foreign books, when now republished here, are ill-made pamphlets, shabby in paper, press-work, and type, and to be described only by the convenient Britishism "cheap and nasty."

Brander Matthews.

THE question of International Copyright seems to me rather one of national morals than of the interest of authors or of publishers. It is whether the highest results of labor, of education, and of intellect shall be stolen with immunity, or not.

Charles Eliot Norton.

If foreign work is to be the cheapest here, and if that is to become the universal principle, what is to be the result? Is it not perfectly plain that as the literature of the age begins to show its effects upon those who read it, and as every one will naturally buy and read what he can get the cheapest throughout the civilized world, every one will read the works of foreign authors, and at last, as the reader partakes of this foreign literature and becomes more and more impregnated with it, will he not become at last a foreigner himself? That is the great question underlying International Copyright. It is a question whether we shall or shall not become not only a nation of foreigners, but a universe of foreigners. The only safe way, in order to remain a native, will be to refrain from learn-

ing to read. Of course there will be advantages connected with being foreigners here in America. We should have more political influence for one thing, and there would be other minor advantages, but not sufficient to counterbalance the disadvantages.

Bill Nye.

In my judgment the demand for International Copyright is just and reasonable, and the time is ripe for the legislation needed to secure it.

Frederick Law Olmsted.

FOR the sake of American writers and American readers the cheap pirated editions of foreign books should be stopped. No element is stronger than literature (*i. e.*, the novel and the drama) in the forming and cementing of a native social life. It is probable that ninety per cent. of the stories and plays offered the American people to-day are European in study or suggestion. Young people here are learning to make ideals of men and women and ways far removed from their own country. This has already gone so far that many American writers are induced to depict a bastard aristocracy here; and this in turn is becoming the ideal social order of a large class of American readers.

This is not more lamentable than the wretched condition in which our professional *littérateurs* are left through the cheap reprints and translations of European books. While all kinds of trade and material interests are protected, the literary man, the most defenseless and surely one of the most precious possessions of the country, is literally robbed and disregarded.

John Boyle O'Reilly.

THE late Mr. Frelinghuysen spoke the truth when he told you that there was no strong popular demand for International Copyright, which you urged upon his attention. Such a measure would directly and obviously benefit only a small number of our fellow-citizens, a few artists, dramatists, composers of music, poets, novelists, essayists, philosophers, and some other authors, the men and women who originate beautiful and noble things. Shall I say of this small number that they are the flower of the human race? Without insisting upon that, I may assert with confidence that they assist more than any other class to make life worth living. Over the door of a noted man of action of our time was written the sentiment from an ancient author: "Life without letters, death." The men and women who create literature and art are a priceless possession and a universal good, for they benefit and enliven, indirectly, myriads who never know their names. They confer upon a country the only part of its glory which survives its ruin.

These illustrious persons produce a kind of property (and many of them live by producing it) which becomes available only by its being exposed to robbery. If that property is locked up in an iron safe, it might as well not exist. Poetry must be published; a comedy must be played; music must be performed; a picture must be exhibited; and being thus exposed to view, they can be copied and reproduced in cheaper forms, so as to deprive the author of his just compensation. Hence the need of legal protection of a special character,

such as copyright and International Copyright. The United States alone among the nations of Christendom refuses to protect the rights of its authors in other lands, and the rights of foreign authors who confer upon us incalculable good. Till we remedy this defect we are self-excluded from the honors of advanced civilization; we consent to remain provincial. We may adore prestige even to meanness, but we cannot confer it.

James Parton.

YOU ask for my opinion on the subject of International Copyright. It seems to me there can be but two opinions on such a matter, and that they cannot be unlike those of the burglar and of the burglarize.

I cannot suppose my experience to be very different from that of other writers (one's own experience is apt to be like other people's in most things), and mine has been that England is the only country across seas in which my right to my own books has been even nominally recognized. Several well-known English publishing firms have treated me honorably in the matter of royalty or bonus. One of them complained that after so doing the story in question was pirated into two British magazines,—one of them, I think, in Scotland,—and run as a serial, to the injury of the sales of the book.

From France, from Holland, from Italy, from Germany, where my books have been translated for fifteen years, I have never received one dollar. Let me say to the credit of one German publisher who negotiated on a business basis with the author, that his righteous effort was defeated by the competition of a less conscientious fellow-countryman before we could sign our contract. In many cases I do not even receive a copy of the volume of whose translated existence I am told. The last that I did receive I wished I hadn't, for it came under a title that I would not have owned for all the copyright of the country.

Elizabeth Stuart Phelps.

THE question of International Copyright is one which, by its being raised at all, marks an encouraging progress in that better civilization which consists in higher standards of equity, and more explicit legislation for their maintenance. The conception of property is at first a very coarse one, and it has not been honorable to our history as a people that there has been such wide indifference to the right of property in the productions of a man's brain. True, we had, as a people, not much of this sort of property in the beginning to protect; and there is a wholesome element of retribution in the fact that our own free-handed appropriation of other men's literary labors has returned to plague us, now that we have ourselves so much more of such property to be protected. But the selfish aspect of the question is the lowest, and it is one that I do not care to urge. It ought to appeal to every chivalric sentiment in those who are not men of letters, that there is a large, and certainly most valuable class of their fellow-citizens who are inadequately protected in their plain rights by the law as it at present exists, and whose title to the fruit of their own literary labors they themselves are by training and position poorly fitted to maintain. Their very defenselessness, their ignorance of business methods, their sensitive reluctance to appear grasping or calcu-

lating, are considerations which, I think, will appeal to all right-minded people as a claim upon their coöperation in an effort which, it cannot be denied, is based upon essential principles of justice and righteousness.

Henry C. Potter.

Assistant Bishop of New York.

THE unblushing robbery of authors among civilized nations is one of the most amazing relics of barbarism. The fact that such robbery is complicated with other interests does not affect its moral aspect in the least. This would be true of any long-continued and systematic phase of theft. The present laws practically subject American authors to a double wrong. Our books are stolen immediately on publication and sold in other lands without any regard to our interests or wishes. We suffer even greater loss in having to compete with foreign literature that is unpaid for. Suppose the farming class, when offering wheat, were told: We can buy all we wish at twenty cents a bushel. What wheat could be bought at such a price? Wheat stolen from Canada.

If such a state of affairs were possible, it would illustrate precisely the position in which existing laws place the literary class and interests.

E. P. Roe.

In reply to your circular letter permit me to copy, from a book just published, one of my various references to the wrongs inflicted upon our native authors through the want of International Copyright:

All classes of literary workmen, however, still endure the disadvantage of a market drugged with stolen goods. Shameless as is our legal plundering of foreign authors, our blood is most stirred by the consequent injury to home literature, by the wrongs, the poverty, the discouragement, to which the foes of International Copyright subject our own writers. The nerve and vitality of the latter can have no stronger demonstration than by the progress which they make while loaded with an almost insufferable burden.

Edmund C. Stedman.

If the people in this country who are opposed to an International Copyright law because they think it would deprive them of cheap reading matter, would agree that all of them who make anything, sell anything, or do anything for pay, would make, sell, and do for the authors of their country at about one-fifth the prices they charge other people, then might American authors feel satisfied that although literature was very cheap, still, so far as they were concerned, wheat, beef, shoes, rents, and professional services were also very cheap, and thus might consider themselves on a par with the other workers of the country, and able to afford to wait until sentiments of simple justice brought about a law which would make the work of every writer, native or foreign, his own property.

Frank R. Stockton.

[A FRIEND of Mrs. Harriet Beecher Stowe writes: "All her friends know that in the matter of International Copyright she feels just as do Mr. Whittier and

all other honest-minded people; but I cannot speak to her on the subject at this time, for Professor Stowe's health is so bad that he needs constant watching, and the writing of even so much as a line would be a tax which I would not willingly help to add to her labors."—EDITOR CENTURY.]

THE stimulus and encouragement that International Copyright would give to American authors could not fail to be productive of good. What we as a people read is perhaps the largest element of our national education, and the influence of foreign literature, whose spirit is opposed to our institutions, should be counteracted by a home literature urged to its best development. All the terms being equal, Americans will read American books, and of these the most popular will be the ones reflecting American manners, customs, opinions, and character, and tempered with a wise patriotism. In fact, if literature is worth having, the best is the most worth having; but in order to get the best fruits of the best minds, literary labor must be productive of property; that is, its results must belong to the producer. Moreover, honesty as well as policy demands that the author have the fullest proprietary control of his creations.

Maurice Thompson.

I STRONGLY believe in International Copyright as a matter—1. Of justice, gratitude, and courtesy to foreign authors;

2. Of justice, gratitude, and courtesy to American authors;

3. Of proper and needful stimulus to the cultivation and practice of literature in this country;

4. Of proper and needful encouragement and protection to all literature;

5. Of common integrity, civility, and even commercial decency between nations;

6. Of immediate, continuous, and ever-increasing benefit to the human race, by its larger multiplication and improvement of intellectual products, by its adoption of a standard of international rectitude higher than any yet insisted upon with physical force, by its recognition of the republic of humanity through its recognition of the republic of letters, and by its consequent amelioration of international selfishness, prejudice, jealousy, meanness, and spite,—the very things hitherto that have kept down human souls, and kept up wars, and kept back the higher life of the world.

Moses Coit Tyler.

THAT the facility with which a thing may be stolen is no valid excuse for the theft, and that simple justice to the author requires that literary property should be protected like any other property,—this seems too plain to admit of question. The argument in favor of International Copyright covers broader grounds. No individual, no country, can afford to favor injustice. The easy plunder of authors' rights is detrimental to the literature and the morals of a people, and should be abolished, along with all forms of dishonest repudiation and public fraud.

J. T. Trowbridge.

No one denies the foreign author's simple moral right to property in the product of his brain; so we may waive that feature and look at non-existent International Copyright from a combined business and statesmanship point of view, and consider whether the nation gains or loses by the present condition of the thing.

As for the business aspect, a great argument of politicians is that our people get foreign books at a cheap rate. Most unfortunately for the country, that is true: we do get cheap alien books — and not of one kind only. We get all kinds — and they are distributed and devoured by the nation strictly in these proportions: an ounce of wholesome literature to a hundred tons of noxious. The ounce represents the little editions of the foreign masters in science, art, history, and philosophy required and consumed by our people; the hundred tons represent the vast editions of foreign novels consumed here — including the welcome semi-annual inundation from Zola's sewer.

Is this an advantage to us? It certainly is, if poison is an advantage to a person; or if to teach one thing at the hearthstone, the political hustings, and in a nation's press, and teach the opposite in the books the nation reads is profitable; or, in other words, if to hold up a national standard for admiration and emulation half of each day, and a foreign standard the other half, is profitable. The most effective way to train an impressionable young mind and establish for all time its standards of fine and vulgar, right and wrong, and good and bad, is through the imagination; and the most insidious manipulator of the imagination is the felicitously written romance. The statistics of any public library will show that of every hundred books read by our people, about seventy are novels — and nine-tenths of them foreign ones. They fill the imagination with an unhealthy fascination for foreign life, with its dukes and earls and kings, its fuss and feathers, its graceful immoralities, its sugar-coated injustices and oppressions; and this fascination breeds a more or less pronounced dissatisfaction with our country and form of government, and contempt for our republican commonplaces and simplicities; it also breeds longings for something "better," which presently crop out in diseased shams and imitations of that ideal foreign life. Hence the "dude." Thus we have this curious spectacle: American statesmen glorifying American nationality, teaching it, preaching it, urging it, building it up — with their mouths; and undermining it and pulling it down with their acts. This is to employ an Indian nurse to suckle your child, and expect it not to drink in the Indian nature with the milk. It is to go Christian-missionarying with infidel tracts in your hands. Our average young person reads scarcely anything but novels; the citizenship and morals and predilections of the rising generation of America are largely under foreign training by foreign teachers. This condition of things is what the American statesman thinks it wise to protect and preserve — by refusing International Copyright, which would bring the national teacher to the front and push the foreign teacher to the rear. We do get cheap books through the absence of International Copyright; and any who will consider the matter thoughtfully will arrive at the conclusion that these cheap books are the costliest purchase that ever a nation made.

Mark Twain.

I SHOULD be content to rest the argument for International Copyright upon justice, and it would seem that an appeal to the sense of fair dealing ought to be enough. In every civilized country the law recognizes an author's published books as his property for a limited term of years, and gives him a remedy for the invasion of his rights. In all civilized countries a person may go and be protected in what is universally recognized as his property; more, he may hold property and be protected in it in countries where he is not a resident, and where he has never been; he may hold any sort of personal property — even the right of royalty on an invention — except in one case: the author has no property in his books beyond the territory in which he is a citizen. Is it just that this exception should be made against the author? No one contributes more to the entertainment and elevation of mankind.

But the argument stands with equal solidity upon expediency. Take the case of England and America. If our legislators are unwilling to do justice to English authors, they certainly ought to protect the American authors. The latter have a right to ask that their government should secure for them in England the same rights there that American inventors have. But this is not all. We want in this country a literature *sui generis*, the influence of American and not of English ideas upon our increasing millions. But as long as publishers can get for nothing English material, they can not afford to pay for American production. The American author asks to be put upon an equality in this country with the English producers of literature. He does not ask for protection. He is in the position of a cotton manufacturer in Connecticut, who might be able to compete with one in Manchester without a tariff, but who could not hold the market against goods made in Manchester that had been stolen and brought to this country.

Charles Dudley Warner.

THERE seems little need of words on the subject of an International Copyright Law. Justice and fair dealing demand it. I have seen no argument against it which was not, logically and morally, too weak to need refutation. The measure commends itself to every man who is honest enough to keep his hands out of his neighbor's pocket.

John G. Whittier.

Christian Union.

LETTERS FROM EPISCOPAL DIVINES.

From Bishop Dudley.

IT has been a real pleasure to read Dr. Shields's paper in the November CENTURY. His rainbow words of hope must bring a more than momentary delight to the Christian heart that is weary of the "wars and fightings" among us, the stormy controversies about matters of little moment, albeit our joy be but the recollection of the covenant of promise, and our eyes can see no sign of its speedy fulfillment in the oneness that shall be.

Grant that the dogmatic ferocity of the last century has been somewhat tamed, and that sectarian shibboleths are not sounded so loudly as then; grant that the time is near at hand, which, alas, we fear is far distant,

when "the American churches, leaving their existing standards unchanged," can be "simply confederated in a formal profession of the Nicene or Apostles' creed," still how far would we still be from *organic unity*! They might, indeed, "appear to the world as the united churches of the United States"; but a confederation cannot be an organic unity, be the bond of the confederacy identity of theological opinion or identity of devotional expression. Dr. Shields well adduces the political confederation of the American colonies as illustrative of the weakness and worthlessness of such an ecclesiastical union. There was no organ of the confederated colonies through which might be put into operation their united strength; there was no *organic* unity, and so there was no real union. Equally valueless would be a union of ecclesiastical bodies resting upon a consensus of opinion.

And even less stable and less powerful were a merely sentimental association based upon a common liturgical worship. I doubt not that the soldiers of the confederated colonies shouted all the same battle-cry, that the drums and fifes of all confined themselves strictly to the same patriotic tunes, that the officers and men were all arrayed, as far as possible, in the same uniform, and yet the commander-in-chief of the armies was often pleading that his empty chest might receive the supplies which each State owed, and whose payment he was powerless to compel. And his righteous soul was often vexed by the obstructions placed in his path by the interference of wiseacres over whom he had no control. Unity of sentiment, unity of the expression of that sentiment, is not organic unity, and so is unequal to bring to bear the whole strength of the associated units.

Organic unity is unity of organization; it is the oneness of government, despite differences of sentiment, differences of opinion, and differences of expression both of opinion and of sentiment; and it is powerful because the one life puts forth its strength through the organs that are its appointed instruments. When the confederated States had adopted the Constitution, then they became *united*, and then they were strong, although a watchful jealousy sought successfully to hinder their perfect union by the restraints it imposed upon the activity of the one common life. Doctor Shields well says, "Ever since then they have been racked with internal conflicts, until at last welded together by the fiery blows of civil war." Necessity compelled the removal of the hindering reservations; to protect its own life the nation must exert its whole strength through its own organs, and so the restraints of individual State action were practically and quickly removed. The United States are to-day more than ever before, and in a very real sense, organically one. The world recognizes this fact, this changed condition; and to-day, in consequence, the name of "American citizen" is respected as never before. More than this, to-day the bonds of the United States Government are at a premium in the world's markets, though our national debt is of enormous magnitude, while before the Civil War, when the debt was nothing, the bonds of our government were to be bought at a discount.

Shall the illustration teach us, then, the necessity for ecclesiastical war as the alone creator of ecclesiastical unity? But is it not a possible lesson to be learned without pushing "a mere political analogy too far,"

that the organic unity we long for and pray for shall come at last, in the good providence of God, from the ever-fiercer onslaught of the enemies of Jesus and His truth, and from the compelling necessity that Christendom shall be enabled to put forth her whole strength to resist this assault and to save her own life.

To the question, What shall be the form of this organization which shall include the great company of believers now separated into so many divisions? it would seem that there can be but one reply. Leaving out of our view entirely the question of Scriptural revelation, and granting that there is no definite ecclesiastical polity laid down in Scripture, yet none other than a threefold Ministry of Apostolic Succession can by any possibility be made satisfactory to the great and ancient Churches of the East and of the West, even could the Anglican Communion be induced for the sake of unity to accept another.

But this one element admitted, of the Episcopal Succession which shall insure the continuous witness of the never-dying Apostolate, there may be large room for concession and change in the details of the organization, and it may be that Dr. Shields's vision shall be realized of a "comprehensive polity which shall be at once Congregational, Presbyterian, and Episcopal." But whatever be the polity under which all Christendom shall be organized, when it shall be thus organized, and not until then, will it be *organically one*.

So much I have felt called upon to say, because I believe that it is all-important we shall have full understanding of the end we seek, that we shall know what we mean by organic unity. This end clearly set before us, then may we labor for union of lower and less real character, because subsidiary and helpful to that which is higher and alone satisfying.

Yes, let us labor that we may agree in theological opinion with our brothers of every name; let us minimize our differences and emphasize our agreements,—not because we believe community of opinion to be organic unity, but because we can hope that the more nearly we can approach the confession of a common creed, the more possible becomes the recognition that we may and that we should be members of one household of faith, speak with one voice the one message, and battle in one army for its defense.

Let us rejoice to mark every evidence of intelligent devotional progress, that dissatisfaction with the crudities of extemporized worship is calling to its aid as the vehicles of its prayer and praise, the liturgies consecrated by the use of the centuries,—not because the use of a common form is organic unity, but because the appreciation and employment of the treasures of ancient devotional literature and of the ancient system of Christian worship tends to soften the fierce demand for a narrow sectarian theology and practice, and so tends to create the comprehensive spirit which alone can make organic union possible.

Above all let us strive to love "all them who love our Lord Jesus Christ in sincerity." Let us strive to "keep the unity of the spirit in the bond of peace." Let us join hand in hand with all Christian men in works of practical beneficence, of moral reform, of popular education. Let us rejoice to learn from their knowledge, to drink of the living water which they have drawn from the wells of salva-

tion. And let us pray with ever-increasing earnestness of supplication that the Master will haste the day when we shall all be one. As He is in His Father, and His Father in Him, that so the world may believe that God did send Him.

T. U. Dudley.

LOUISVILLE, KY.

From Rev. J. H. Hopkins, S. T. D.

As a churchman, I cannot but express my delight at the general drift and tone of the article of Professor Shields; and especially at his clear-sightedness in perceiving that *organic* unity — not sentimental unity only — must be our true objective point, towards which we must strive to work, no matter how distant its full realization may seem to be. Another point for special thankfulness is, that he does *not* contemplate a union of Protestants only. To begin an attempted reunion of the whole body by leaving out by far the greater part of its members (the Roman and the Oriental churches) is an absurdity which finds no favor with him.

As to doctrinal unity, he does not overstate the difficulties, *if* all present points of difference are to be adjusted before the organic unity is accomplished. But this is, on historic grounds, by no means necessary. The *true* ground is, that no one portion of Christendom has any right to make the acceptance of any doctrinal formula a term of communion in the Holy Catholic Church, unless that whole church has itself set it forth for that purpose. This principle would *at once* subordinate all disputed points that have arisen since the ancient Catholic Church spoke through her General Councils. As for ourselves, no intelligent churchman would dream of insisting upon our thirty-nine articles as terms of communion. Nothing could make this clearer than the noble declaration of the first Lambeth Conference in 1867, which omits all allusion to the thirty-nine articles. This declaration was subsequently accepted by our American House of Bishops, so that it may fairly be styled the *unanimous* voice of the Anglican Episcopate throughout the world, without so much as a single voice raised in opposition. And they said: "We do here solemnly record our conviction that unity will be most effectually promoted by maintaining the faith in its purity and integrity,—as taught in the Holy Scriptures, held by the Primitive Church, *summed up in the Creeds, and affirmed by the undisputed General Councils*,—and by drawing each of us closer to our common Lord, by giving ourselves to much prayer and intercession, by the cultivation of charity, and a love of the Lord's appearing." In this, the Roman and Oriental churches might agree, as heartily as our own. And Professor Shields, when he says that "most of the American churches might readily join in a formal profession of the *Nicene or Apostles' Creed*," proves that the only doctrinal unity which ought to be insisted on is really much nearer than he supposes.

As to church government — practically the toughest of all the problems to be settled — the Apostolical Succession is possessed by the entire body of Oriental, Roman, and Anglican churches, and *cannot* be surrendered without defeating the very unity which is desired to be accomplished. If the churches which have that succession should allow an equal validity in those who have it not, this allowance would simply conse-

crate the *germinal principle of all past and present schisms* and lay the nest-egg for any number of other schisms *in time to come*. A ministry of Divine origin and one of purely human origin can never be put upon the same level. But while this principle of Divine authority must be maintained, charity and prudence require that, in order to facilitate the restoration of a visible unity, the *exercise* of that authority should voluntarily be restricted to those things only which are *essential* to a *vital* unity.

As to worship, I have very little to add to the glowing language of Professor Shields, except to accentuate *greatly* the importance of the Holy Eucharist, as the great sum of all worship,—a preponderating importance not yet fully realized among ourselves, but of which we are becoming more and more conscious as we advance towards unity. And also, that his admiration of our prayer-book is rather more unqualified than our own. There are many glorious things in the ancient liturgies which we have not retained; and it is to be hoped that among the many liturgies likely to be compiled and used among the denominations around us, not a few of these may be appropriated, and may so commend themselves in actual use that by and by *we* may get the benefit of them also.

The point of government, as I have said, is the toughest. *Faith* and *Worship* alone will not do. In Scotland there are, I believe, *eleven* distinct Presbyterian bodies. In *Faith* they are identical. In *Worship* they are identical. Yet they are not *one* church, but *eleven*. And so long as the ministry is confessedly *human*, the human tree will bring forth the human fruit.

Of one thing I am certain. If, at the time of any of the great separations among Christians in the past, the condition of the church had been what it is to-day, and if the mind and temper of those who became separatists *then* had been the same as that of their representatives *now*, no separation would have taken place at all. This change on *both* sides is a proof, to me, that the God of Unity and Love is, in His own time and way, bringing us all together again, in Him.

J. H. Hopkins.

WILLIAMSPORT, PA

"Danger Ahead."

In the November CENTURY appears an able article by Dr. Lyman Abbott, entitled "Danger Ahead," in which, in the main, there is the best of argument; but the author shows an evident misconception of the province of government. At the close, in writing of government control of the telegraph, he says: "Government in England can conduct a great telegraphic enterprise. If government in America cannot, it is time that we found out the reason why." In relation to the Erie Canal he says: "If we can own, administer and control a great water-way, why not a great highway?" Again, in contrasting the Union Pacific railway with the English India railway, he asks: "If England can do this [make two per cent. profit] in India, why cannot we do it in America?" Without, at the present, disputing the conclusion Dr. Abbott would have us reach, we ask, what of it?

If government in America cannot manufacture a purer and better article of baking-powder, to enable

the people to eat more wholesome bread, it is time that we found out the reason why. If we can own and control great penitentiaries for the accommodation of the lawless, why not great hotels for the accommodation of the law-abiding? If great manufacturing establishments can make money out of patented inventions, why should not government go into the same line of business? Are these three questions absurd? Yes. But no more so in principle than the questions of Dr. Abbott. Why absurd? Because all these things are beyond the province of government.

We are very liable to be misled by unauthorized acts of government, and to suppose them right and done by authority; and when we have taken unauthorized acts as a basis of action, we are most certain to run into great error. The government was established solely for the protection of the people. Its departments were organized for this purpose only. For the protection of life, liberty, and property. Our fundamental law makes the government a protector, not a guardian. It is not for government to assume the functions of the individual, and engage in pursuits other than those necessary for this protection. What the people can do for themselves it is not necessary for the government to do for them; for it would be useless to form a government for the doing of what could be done before it was formed. Because, perchance, the government can carry on some work better than an individual, is no reason it should do so; for by so doing it becomes a dictator. If government would give full and complete protection to the people in their person and property, and allow them to develop the country and manage their own enterprises, many of the "dangers ahead" would be avoided.

A strong government is a necessity, but complex departments necessitating an army of officers, and built up on the false idea that a government is a huge organization for business, debases politics, substitutes the desire for office in place of the desire for the welfare of the nation, and thus leads to that corruption of which we have had glaring examples, and which

may work great injury. This is a "danger ahead" which it is well for us to guard against.

The opening up of new portions of the country should be left to the people, that they may act as necessity requires. The forcing process by government aid and credit, which throws open vast areas which cannot be occupied excepting by calling for, and inducing the Old World to unload its surplus, and oftentimes lawless population upon us, leads to the growth of socialism. If socialism is a "danger ahead," the government may take part of the blame for not leaving the law of increase and progress to work out its own natural result. Our desire for increase of population, and the settling up of the country, to a degree beyond that afforded by increase within, and through natural immigration, has made it necessary to call upon government to do that which was not contemplated by our organic law, and which cannot properly be considered a duty of government. And this has led to inviting "danger ahead," by indiscriminately opening our doors to the world, and drawing to us the lowest disturbing elements of Europe, and placing the ballot in the hands of those absolutely unfit to govern themselves, and much less fitted to have a voice in the government of others. By this process we have not strengthened our government. A country may grow beyond its strength. Material may be gained which adds to the growth, but injures the stability. When government keeps within the line of its duty, and protects the people, while they build such avenues of communication, open up such sections of the land, and engage in such other enterprises as they may deem proper and required by the natural growth of the country, there will be found less "danger ahead" than when the government assumes the functions of a gigantic monied corporation, engages in all sorts of business, and comes into competition with private enterprise. The question is, not what government can do, but what government may do, consistent with the purposes for which it was established.

H. C. Fulton.

BRIC-À-BRAC.

Uncle Esek's Wisdom.

WIT and humor are born of sober parents.

A LITTLE authority is a dangerous thing. A terrible fellow to meet is a country constable with half-a-dozen subpœnas to serve.

PRECOCIOUS children are not only nuisances, but they are generally as stupid at twenty as they are starting at ten.

THE man who can't find anything to do is generally afraid he will.

THE more a man knows, the more he suspects what he has already learned.

IT is possible that friendship may be disinterested; but it is hardly possible to separate love from self-love.

INTELLIGENCE is the leading feature of beauty; almost anything will answer for the background.

IF the Devil were as lazy as many Christians are, he could count his proselytes for each year on his fingers.

GAMBLING ends in poverty and disgrace. It is only a question of time and strict attention to business.

A MAN has a right to his opinions as long as he keeps them to himself.

FLATTERY is like treason; we like the treason well enough, but we despise the traitor.

MANY men fail by being too much for the occasion. The lion and the lamb may lie down together, but I don't think the same lamb will do it the second time.

A MAN may be a fool for yielding to the importunity of his passions, but if he had no passions he certainly would be a fool.

ALL snobs are toadies, and toady to some other snob.

THERE are plenty of people who mix their religion with their business, but who don't stir it up well. The business invariably rises to the top.

Uncle Esek.

Out on a "Scurdgeon."

"OH, Mammy Lindy! how glad—*glad* I am to see you back home in your kitchen again!" and Dora dropped the rolling-pin in the bread-tray, and clapped her hands. "And how did you enjoy your excursion to Washington?"

"Ah, chile! and well mought you be glad to see your pore ole mammy back ag'in! I 'scaped away wid my life; but dey got my new parm-leaf fan, and de umberil, and mo'n ha'f a yard o' dat green veil Jake bought me when Betsy Ann was a baby."

"Dear! dear! what misfortunes! Light your pipe, Mammy Lindy, see,—here is your corn-cob, stuck in the crack, just as you left it—and tell me all about your visit while it is fresh in your mind."

"Well, honey, I tote my son Mose, when I bid him far'well, dat I had be'n froo tarments and haggermarizin's enuff to last one lifetime, and de scurdgeons mought *come*, and de scurdgeons mought *go*, but dey'd git nare 'nother fi' cint out o' his mammy's pocket ag'in."

"You see de haggermarizin' 'menced at de berry depot. I and Hinry, we got dar wid our gums and godes [gourds] 'bout two hours 'fo' de train come in. I was totin' one o' dese round half-bushel godes full o' soap uz a present for Vi'let. Hinry, he's mighty 'bejunt and humble, so I han's him de gode o' soft soap and tote him to wrop his arms 'round it and spill nare drap till we got to Mose's house in Wash'n't'."

"A round soap-gode is a' awful handy thing to tote on de head, but I had artifi'shul flow's on my bonnet, and 'twood 'a' mashed 'em. Hinry hilt dat gode like 'twas a baby, and uz he seemed so studdy and sinsible like, I laid de bundle o' roots and yarbs and de umberil alongside, and de ruffle pillar-case o' dried apples on top, and he stood dar loaded up like a statcher till de kyars come a-ramblin' 'long. Dat lef me wid nothin' to tote, scuzin' de bandbox and de willow basket wid de two yaller pullets, and de duck in it fer de chilluns, and de fan. 'Twar mighty hot and crowded up wid de things in de kyar, and de chickens and de duck got mighty restless. We sot dar on de bench a right smart while, when de cap'en o' de kyar come along, and fust he axes Hinry mighty perlite fer 'tickets,' but he mought jest as well 'a' axed de soap-gode, for Hinry was dat sound asleep dat nuthin' but a grubbin'-hoe could ha' woke him; and, Miss Dora, honey, as I didn't keer to corrate a disturbance, I had to retch down in my pocket, and pay dat nigger's kyar-hire!"

"I axes de cap'en when he comes along ef he would be so gentmanfied as to gib me two hours' notice 'fore gittin' to Wash'n't', dat I mought hab time to woke up Hinry. He laughed; but he gint de notice, and 'twar all I *could* do to git Hiary on his legs when we druv inter de city. He had sno'ed froo de confrigation same uz a dog, but he hilt on ter dat soap-gode like a 'possum to a 'simmon tree."

"Arter eberybody leff de kyar 'ceptin' I and Hinry, a ve'y likely cullud man in a uniform ast us to take seats in de 'ception-room, and he axed ef we had writ to any one to meet us dar. Hinry nuver made no arnsers at all, so I ups and sez: 'No; but I see sich a stream comin' in, and goin' out, dat Mose or Vi'let or some o' de chillun's mighty apt to come along presently, and we'd wait.'"

"But, Miss Dora, dough I seed mo'n a hundred folks

pass by o' all kinds o' nations, I never see nobody I ever laid eyes on afore in my bawn days."

"So I stepped to de flatfom and hollered, 'Hacker! Hacker!' four times, or may be five."

"A sumptious-lookin' black Afrikin, wid a whip, comed grinnin' up, and sed he guess he was de one I was arter."

"Why did you call him *Hacker*, Mammy Lindy?" inquired Dora.

"'Case it stan' to reason, Miss Dora. When a pusson smokes, you calls him a smoker, and de long and short of hack-drivin' am 'hacker.'"

"Oh, yes, certainly. Go on."

"Den why couldn't you arnser when I fust called you?" I sez, pretty sharp.

"Den he scratch his head."

"'You gwine to put all dat truck in my hack?' he say, uz I was shovin' in de chicken-basket."

"'Look a-here, nigger!' I sez, 'I'll hab you to know I comed out o' Kunnel Porter's famby, and was ridin' in de kerridge wid my mistess, and little Miss July in my lap, to de white Sulphy Springs, when you was kyverin corn in King-and-Queen wid your rusty black toes.' I spoke so ambitious, I skeered him; and he swumpted right up, and he say:

"'Hi! how you know whar I come fum? Specks you's one o' dem fortune-tellers.'"

"But I knowed it, 'cause dat nation o' niggers is so mon'sous black."

"He driv right along tell presently he stop and say:

"'Whar is I to set you down, marm?'"

"Seein' as his sumptiousness was clean gone, I arnsers:

"'You's under obligation, sah, to kyar me and my baggidge to my son Mose's house, and I'm not gwine to pay you de fust cint, and I'm not a-gwine to stir out o' dis kerridge, tell you does it.'"

"He say mighty humble: 'Whar does your son Mose lib, marm?'"

"'You is a fool, nigger,' I arnsers, quite dignified. 'Ef I knowed whar my son Mose libs, I'd 'a' walked dar long 'fore dis time o' day. Specks you jest got to de city yourself, uz you've never heard o' Mose Porter.'"

"He swumpted up ag'in, and I sez: 'Drive along slow, and maybe we'll come acrost Mose or Vi'let or some o' de chillun; dey is always foolin' round de brickyard.'"

"He say, 'Do Mose lib at a brickyard?'"

"Den I got mad, and I bust out: 'Good Lordy mussy, nigger! what you s'paze Mose learn de trade fur, scuzin he was gwine to run a brickyard? Ef you don't quit dis foolin' I'll hab you 'rested.' I spoze dat ig'n'ant hacker druv to mo'n leben brickyards fo' he sot me down at de right do'."

"In gittin' out, Hinry slumped a pile o' de soft soap on de flo', and I sez to de hacker, 'Ef you don't scrope up dat soap and put it back in dat gode, sah, I'll show wh'er I am a fortune-teller or not, and you'll git nare cint pay.'"

"He scrope and he scrope, and looked so anxious about it dat uz we got de *mo-est* o' it back, I didn't had de heart to make no complaint, but jest paid him twenty-three cint, and he say, 'Thanky marm,' mighty grateful; and well he mought be, arter drivin' me 'bout a hundred mile out o' my way; but I hear hacker say as he druv off:

"NEEDN'T TOLE ME DEM ANIMALS WAS STUFFED AND DEAD."

"I ain't be'n so cowed and sot back sence I were a pickaninny, and granny whopped me for stealin' a *green* watermillion. Less'n a quarter for a whole artemnoon's work! Gullion dar, hosses! what I feed you for?"

"Peared like Hinry must 'a' got holt o' some sperrits unbeknownst to me. Arter a while he strotch hisself acrost two cheers in a stupe, and looked so doggish I 'buked him.

"Dar you is!" I says. 'A deacon in de church, wid your head hung down. How you gwine to catarimize de young members at jinin' time?"

"Ooman," he arnsers rite solemn, 'you know 'tis de onliest sin I does commit. *When* you see me cross my foots? *When* is I took a' ungodly fiddle in my two hands? Does *I* prowl round hen-rooses? Does *I* darnse? Dar's 'ligi'n in dis, I tell yer.'

"We sot talkin' mighty late dat night, and Mose was full of showin' off de city sights to his parrents.

"He tole us de awfulest tales about bugglers, and dem skip-doctors, whar go slippin' around arter der debble works, in injun-rubber shoes; he say you can't tell 'em fum folks tell you see 'em eat. Dey takes a chaw

o' apple, and den a swaller o' coffee, and you know, chile, 'tis unnatchel to eat coffee and apple together."

"Skip-doctors?" said Dora.

"Lor', honey! sholy you'se be'n heerd o' dem turrible nation o' cre'tur's, dough some folks calls 'em 'kidnappers,' and 'snatchers,' and de like o' dat.

"Next mornin' Mose 'sisted we was to go to de Smiff-sone Inschute,—a great big kind o' meetin'-house like whar a mighty fine man named General Smiffso buys up all kinds o' cur'us truck and keeps 'em for a free sho'.

"I and de ole man was kinder skeered 'bout de bugglers and dem skip-doctors, but Mose 'peared mighty sho' o' hisself.

"So we sot out; and, Miss Dora, honey, I didn't thought dar was sich a mixtry on top o' de yea'th. De house was bigger'n your pa's barn, and all sot off from top to toe with witchcraft and debblement. Needn't tole me dem animals was stuffed and dead.

"I see de cunnin' in der twinklin', shinin' eyes all de time; watchin' out for der chance to make a spring.

"Dead varmint no twitch no tails; you know dat yourself, Miss Dora, and I see *four men wid injun-rubber shoes on*.

"De 'fusement gint me sich a swimmin' in de head, I felt mighty sick at my stomach, but I didn't keer to spile de meetin', uz Mose was a-showin' off, same uz de things was his'n. My jaw 'menced to jump, and I knowed some plot was a-brewin'; so I drewed down my green veil, and tole 'em I had de toothache.

"Hinry didn't 'pear to take in nothin' till he come ramblin' acrost a' ole har' and a 'possum in a glass box, and dar he tuk his stan' wid his eyes glued to 'em; bein' dey was de onliest things he see whar he know de ginerations on. Mose rambled round mighty skittish and free, and 'suaded us up a long pa'r o' star-steps; and great king, honey! 'twas wusser and wusser.

"Hinry come stumblin' along behind me, and whin he open his eyes and see *what he did see*, he whirl hisself around, wid de crook-handle umberil under his arm, and *jest den* glass begin to scraash, and he heerd a screech like de Day o' Judgment had come, and he saw a slammy hell-sarpint, mo'n a yard long, wid fiery eyes and de awfullest smell o' brimstone and whisky, come a-slushin' ober his Sunday breeches, and all dem turrible teeth and bones and horns 'menced a-hornin' and a-p'intin', and a *whole row o' de dead sot a-lookin' on*. Some hollered 'Skip-doctors!' some hollered 'Murder!' but sech a' uproar I hope I'll never see ag'in.

"Mose come by like a shot, and uz we broke for de do', somepin' wid claws and a forked tail made a snatch at my green veil, and got de best part on it. But I hilt my course; for I 'clar' 'fore gracious, Miss Dora, ef dat umberil and dat green veil had been made o' gold and strung wid di'monds I wouldn't 'a' looked back at 'em. And I hope dem dry goods will prove a tarment and a heartache to Gener'l Smiffso, whensomever he uses 'em. I s'poze he make his libin' by dem witchcrafts; skeerin' folks into drappin' der valuables. We fa'r flew down dem streets, and had 'menced to slow down when a good little boy hollered out, 'De skip-doctors is got you!' *Den* we never fetch breff tell we got inside Mose's house wid de do' locked.

"I never see Hinry in sich a trimble and a turmoil. He flung hisself on his knees and 'plored de Lord to spar' him dis time and he'd never tetch another drap; den he 'zorted Vi'let and de two little gals, and put up a pow'ful pra'r; den he swarr'd out he'd beat de breff out o' Mose for car'in' us to such a venturesome place. Den we kyarmed down.

"By Chuseday Mose got us a-goin' ag'in. City niggers is like de city white folks,—dey ain't satisfied wid a cake-walk, *ur* a funeral, *ur* a picknake now and den; dey hankers arter 'musement all de time.

"Dar were a maskyrade, and Mose, bein' top o' de pot like, called hisself Gener'l Wash'n't'. He stropped on a' ole swode and a pa'r o' spurs, and axed Vi'let to dress de two little gals in blue and yaller rice cambric and call derselves Fairroes.

"I wish you could 'a' be'n see Mose at dat party. He were de wildest hoss in de dance, and his swode caused so much bewilderment, a committee 'spectfully axed him to lay it on a cheer; but Mose swarred out he was gwine to tote dat weepoon, and de niggers must

cle'r de track when dey see General Wash'n't' chargin'. He hung dem spurs on de Queen o' Sheba's coat-tails and flung a pile o' niggers all kickin' and scramblin' in de middle o' de ball-room flo'.

"I see one mighty black cullud lady corketin' wid a' Afrikin; and I say to Vi'let:

"'Vi'let, dar's de pot flirtin' wid de kittle.'

"He heerd me, and when he turn round, I see it were Hacker.

"He 'peared oberjoyed to see me, and fotch' me some ice-cream, but I thanked him, 'It would start my jaw jumpin'.' Then he eat it hisself, dough de gal looked mighty wishful at de saucer.

"Now, Miss Dora, what you reckon was de grandest and sweetest sight I see in Wash'n't'?

"'Twere a sto' sot out wid de funniest little candy animils, and hearts and apples, and I couldn't pass by nohow tell I had axed de price.

"De sto'keeper looked mons'ous cheately, but he say twenty-fi' cint a pound, *er* fi' cint apiece.

"Den I axed him could he change a fi'-cint into fi' cints; and he done it. Den I lay seben fi' cints side and side o' seben o' dem figgurs, and tole him to wrop 'em up wid six hoss-cakes, and I put 'em in my pocket for de chillum at home; but what wid sittin' on de bundle and de heat meltin' 'em, you can't tell de animils from de hosses, dough dey tas'e mighty well.

"Den we come home, and 'fore de Lor', Miss Dora, when I see de barrel gone from de top o' my chimley, I thought dar had be'n a yearthquake. Den I see de larther [ladder] leanin' 'g'inst de lychopper, and I sez, 'Great king, Hinry! de bugglers is be'n here!' I runned and onlocked de do', and dar was my yaller sunflower bed-quilt dat deep in soot and ashes you mought 'a' wrote your name; den I *knowed* it, and I drapped down on de stool by de do' and bust out cryin' till Jerry's Creechy heerd me, and come to tell me dem chillum had tried to sweep out der old mammy's chimby, and little Dick wid his neck most broke, and ole marster had whoopped 'em all round, and it chirked me up entirely. And now I must put up dis pipe and see 'bout gittin' dinner."

Eva M. De Jarnette.

The Difference.

'Tis easy to be brave,
When the world is on our side;
When nothing is to fear,
Fearless to bide.

'Tis easy to hope,
When all goes well;
When the sky is clear,
Fine weather to foretell.

But to hope when all's despaired,
And be brave when we are scared,—
That's another thing, my dear!
And will do to tell.

Anthony Morehead.

No. 5.

ITALY FROM A TRICYCLE.

"They are a couple of far-country men, and, after their mode, are going on pilgrimage."

AN ITALIAN TANDEM.

WE staid in Florence three days before we started on our pilgrimage to Rome. We needed a short rest. The railway journey straight through from London had been unusually tiresome because of our tricycle. From the first mention of our proposed pilgrimage, kind friends in England had warned us that on the way to Italy our tricycle would be a burden worse than the Old Man of the Sea. Porters, guards, and custom-house officials would look upon it as lawful prey, and we would pay more to get it to Italy than it had cost in the beginning.

Our first experience, at the station at Holborn Viaduct, seemed to confirm their warnings. We paid eight shillings to have the tricycle carried to Dover, and crossing the Channel, we paid five-and-sixpence more, and the sailors told us condolingly we would have an awful time of it in the custom-house at Calais. This, however, turned out a genuine seaman's yarn. The tricycle was examined carefully, but to be admired, not valued. "*C'est bien fait, ça!*" one guard declared with appreciation, and others playfully urged him to mount it. To make a long story short, our friends proved false prophets. From Calais to Florence we only paid nine francs freight and thirty-five francs duty on entering Italy. Unfortunately we never knew what might be about to happen, and it was not until the cause of our anxiety was safe in Florence that our mental burden was taken away.

But here were more friends who called our pilgrimage a desperate journey, and asked if we had considered what we might meet with in the way we were going. There was the cholera! But we would not go near the stricken provinces, we told them. Our road, they persisted, lay through valleys reeking with malaria until November at least. We would not reach these valleys before November, was our reply. But did we know that we would pass through lonely districts where escaped convicts roamed abroad, and in and out of villages where fleas were like unto a plague of Egypt, and good food as scarce as in the wilderness? Perhaps it was because so little had come of the earlier prophecies that we gave slight heed to these, and on October 16th, the third morning after our arrival, we rode forth, *sans* flea-powder or brandy, *sans* quinine or beef-extract, right into the jaws of death.

The *padrone* who had helped us with our baggage, and Mr. Mead, the one friend who foretold pleasure, stood at the door of the Hotel Minerva to see us off. The sunlight streamed over the Piazza Santa Maria Novella, and on the beggars on the church-steps, and on the cabmen who good-naturedly cried "*Niente vettura!*" (No carriage for you), as we wheeled slowly on, crossing the Via Tornabuoni, by the Palazzo Strozzi, to the crowded Ponte Vecchio, by the Via de' Bardi, through the Borgo San Jacopo along the Lung' Arno,

and then around with the twisting tram-tracks through the Porta San Frediano, and out on the broad white road which leads to Pisa. Here, at the very start, the "luggage-carrier" swung around from the middle to the side of the backbone, and made necessary a half-hour delay at a blacksmith's shop just beyond the city's gate. Had either of us known the Italian word for wire, the delay might have been shorter, and elaborate pantomime was necessary to make our meaning clear. Then the proprietor of the shop took the matter in his own hands, unstrapped the bags, and went to work with screw-driver and wire, while the entire neighborhood, backed by passing peddlers and tram-drivers and citizens, pronounced the tricycle "*bellina!*" (beautiful) "*un nuovo cavallo!*" (a new horse), "*una tranvai!*" The blacksmith, when he had fastened the luggage-carrier securely and loaded it again, was so proud of his success that he declared "*niente*" (nothing) was his charge. But he was easily persuaded to take two or three francs to drink the Signore's health. After this there were no further stops.

Our road for some distance went over streets laid with the great stones of the old Tuscan pavement, between tall gray houses, with shrines built in them, and those high walls which radiate from Florence in every direction and keep one from seeing the gardens and green places within. Women, plaiting straw, great yellow bunches of which hung at their waists, and children greeted us with shouts. Shirtless bakers, their hands white

with flour, and barbers holding their razors, men with faces half shaved and still lathered, and others with wine-glasses to their lips, rushed to look at this new folly of the *forestieri*. On the steep up-grade just outside a town, we had a lively spurt with a steam-tram, the engineer apparently trying to run us down as we were about to cross the track. After this we rode between olives and vineyards where there were fewer people. There was not a cloud in the sky, so blue overhead and so white above the far hill-tops on the horizon. The wind in the trees rustled gently in friendliness. Solemn, white-faced, broad-horned oxen stared at us sympathetically over the hedges. One young peasant even stopped his cart to say how beautiful he thought it must be to travel in Italy after our fashion. All day we passed gray olive-gardens and green terraced hill-sides, narrow Tuscan-walled streams, dry at this season, and long rows of slim, straight poplars,—white trees, a woman told us was their name. Every here and there was a shrine with lamp burning before the Madonna, or a wayside cross bearing spear and scourge and crown of thorns. Now we rode by the fair river of Arno, where reeds grew tall and close by the water's edge, and where the gray-green mountains rising almost from its banks were barren of all trees save dark stone-pines and towering cypresses, like so many mountains in Raphael's or Perugino's pictures. Now we came to where the plain broadened and the mountains were blue and distant. Mulberries the peasants had stripped

IN THE SUNLIGHT.

OVER THE PONTE VECCHIO.

of their leaves before their time, but not bare because of the vines festooned about them, broke with their even ranks the monotony of gray and brown plowed fields. Here on a hill was a white villa or monastery, with long, lofty avenue of cypresses; there, the stanch unshaken walls and gates of castle or fortress, which, however, had long since disappeared.

VOL. XXXI.—67.

Later in the afternoon, with a turn of the road, we came suddenly in view of Capraia, high up above, and far to the other side of the river; so far, indeed, that all detail was lost, and we could only see the outline of its houses and towers and campanile, marked against the whitish-blue sky. And all the time we were working just hard enough to feel that joy of

A STREET BARBER.

mere living which comes with healthy out-of-door exercise, and, I think, with nothing else.

Sometimes we rode, meeting no one and hearing no other sound than the low cries of a cricket in the hedge and the loud calls of an unseen plowman in a neighboring field. Then an old woman went by, complimenting us on going so fast "*senza cavallo!*"—without horse; and then a baker's boy in white shirt and bare legs, carrying a lamb on his shoulders. But then, again, we were passed by wagon after wagon, piled with boxes and baskets, poultry and vegetables, and sleeping men and women, and with lanterns swinging between the wheels;—for the next day would be Friday and market-day, and peasants were already on their way to Florence. There were peddlers, too, walking from village to village, selling straw fans and gorgeous handkerchiefs.

Would not the signora have a *fazzoletto*? one asked, showing me the gayest of his stock. For answer I pointed to the bags on the luggage-carrier and the knapsack on J——'s back. *Sicuro* (of course), he said. We already had

enough to carry. Would the signora forgive him for troubling her? And with a polite bow he went on his way.

We came to several villages and towns,—some small, where pots and bowls, fresh from the potter's wheel, were set out to dry; others large, like Lastra, with heavy walls and gates, and old archways, and steps leading up to crooked, steep streets, so narrow the sun never shines into them; or like Montelupo, where for a while we sat on the bridge without the farther gate, looking at the houses which climb up the hill-side to the cypress-encircled monastery at the top. Women were washing in the stream below, and under the poplars on the bank a priest in black robes and broad-brimmed hat walked with a young lady. But whenever we stopped, children from far and near collected around us like so many flies about a honey-pot. There were little old-fashioned girls, with handkerchiefs tied over their heads in womanly fashion, who kept on plaiting straw, and small boys nursing big babies, their hands and mouths full of bread and grapes. If, however, in their youthful curiosity they pressed upon us too closely, polite men and women, who had also come to look, drove them back with terrible cries of *Via, ragazzi!* (go away, children!), before which they retreated with the same speed with which they had advanced.

Just beyond Montelupo, when a tedious up-grade had brought us to a broad plateau, a cart suddenly came out a little way in front of us from a side road. A man was driving, and on the seat behind, and facing us, were two nuns who wore wide flats, which flapped

THE NUNS' VEHICLE.

THE BAKER'S BOY.

OLIVE-TREES.

slowly up and down with the motion of the wagon. When they saw us, the younger of the two covered her face with her hands as if she thought us a device of the devil. But the other, who looked the Lady Abbess, met the danger bravely and sternly examined us. This close scrutiny reassured her. When we drew nearer she wished us *buona sera*, and then her companion turned and looked. We told them we were pilgrims bound for Rome. At this they took courage, and the spokeswoman begged for the *bambini* they cared for in Florence. We gave her a few sous. She counted them quite greedily, and then—but

not till then—benevolently blessed us. They were going at jog-trot pace, so that we soon left them behind. "*Buon viaggio*," the Abbess cried, and the silent sister smiled, showing all her pretty white teeth, for we now represented a temptation overcome.

We put up that night at Empoli. The Albergo Maggiore was fair enough. The only drawback to our comfort was the misery at dinner of the black-eyed, blue-shirted *cameriere* at our refusal to eat a dish of birds we had not ordered. He was very eager to dispose of them. He served them with every course, setting them on the table with a

A PERUGINO LANDSCAPE.

LASTRA.

triumphant cry of *Ecco!* as if he had prepared a delicious surprise. It was not until he brought our coffee that he despaired. Then he retired mournfully to the kitchen, where his loud talk with the *padrona* made us fear their wrath would fall upon us or the tricycle. But later they gave us candles, and said good-night with such gracious smiles that we slept the sleep which knows neither care nor fear.

It was good to be in the open country again, warming ourselves in the hot sunshine. The second morning of our ride was better than the first. We knew beforehand how beautiful the day would be, and how white and smooth the road lay before us. The white oxen behind the plows, and the mules in their gay trappings and shining harness, seemed like old acquaintances. The pleasant good-morning given us by every peasant we met made

us forget we were strangers in the land. A little way from Empoli we crossed the Ponte d'Elva, and then after a sharp turn to the right we were on the road to "fair and soft Siena." It led on through vineyards and wide fields lying open to the sun, by sloping hill-sides and narrow winding rivers, by villas and gardens where roses were blooming. In places they hung over the wall into the road. We asked a little boy to give us one. For the signora, J—— added. But the child shook his head. How could he? The roses were not his, he said. Sometimes we heard from the far-away mountains the loud blasting of rocks or the soft bells of a monastery; sometimes the cracking of the whip of a peasant behind us, driving an unwilling donkey. Then we would pass from the stillness of the country into the noise and clamor of small villages, to hear the wondering cries of the women to which

MONTELUPO.

we were already growing accustomed, the piercing yells of *bambini*, who, well secured in basket go-carts, could not get to us quickly enough, and the sing-song repetition of older children saying their lessons in school, and whom we could see at their work through the low windows.

About noon we rode into Certaldo, Boccaccio's town. We went at once to a *trattoria* on the piazza where Boccaccio's statue stands. I doubt if that great man himself ever gathered such numbers about him as we did. Excited citizens, when the tricycle was put away, stood on the threshold and stared at us until the *padrona* shut the door upon them. Then they pressed their faces against the windows and peered over piles of red and yellow pears, and every now and then one, bolder than the rest, stealthily thrust his head in and then scampered off before the *padrona* could capture him. This gave a spice of novelty and excitement to our midday meal.

We spent an hour wandering through the old town on top of the hill in which Boccaccio really lived. The sun was shining right down into the streets in which the gay kerchiefs of the women, the bunches of straw at their waists, and their cornstalk distaffs made bright bits of color. Though we left the tricycle at the *trattoria*, our coming made a stir in the little place. Our clothes were not like unto those of the natives, and J——'s knee-breeches and long black stockings made them wonder what manner of priest he might be. The Palazzo Comunale, at the highest point of the town, is still covered with the arms and insignia of other years, of the Medici and Piccolomini,

of the Orsini and Baglioni. Its vaulted doorway is still decorated with frescoes of the Madonna, and saints and angels. But everywhere the plaster is falling away, and in the courtyard grass grows through the bricks of the pavement, and instead of pages and men-at-arms we there saw only a little brown-faced ragged child climbing cat-like over the roofs, and a woman scolding him from below. We left the town by the frescoed gateway through

which we saw the near hills gray, bare, and furrowed, the long lines of cypresses, the stretches of gray olives, the valley below with its vineyards, and the far mountains, purple and shadowy, the highest topped with many-towered San Gimignano.

It is better not to be jocund with the fruitful grape in the middle of the day when one is tricycling. The cognac we had taken at lunch, weak as it was, and the vermouth made us sleepy and our feet heavy. I sympathized with the men who lay in sound slumbers in every cart we met. But their drowsiness forced us into wakefulness. Of the ride from Certaldo to Poggibonsi, I remember best the loud inarticulate cries of J—— and his calls

AT THE FOOT OF THE CROSS.

WASHING-PLACE NEAR EMPOLI.

of "Eccomi!" as if he were lord of the land, to sleeping drivers. The Italian cry of the

roads, rising to a high rate and then suddenly falling and ending in a low prolonged one, which is indispensable to travelers, is not easy to learn. J——'s proficiency in it, however, made him pass for a native. But often donkeys darted into ditches and oxen plunged across the road before the peasants behind them awoke. Like Sancho Panza they had a talent for sleeping. Once, after we had climbed a short but steep hill and had passed by several wagons in rapid succession, we stopped under the shade to take rest. It was a pleasant place. We looked over the broad valley, where the vines were festooned, not as Virgil saw them, from elm to elm, but from mulberry to mulberry, and up to San Gimignano beginning to take more

definite shape on its mountain-top. A peasant in peaked hat and blue shirt, with trousers rolled up high above his bare knees, crossed the road and silently examined the tricycle. "You have a good horse," he then said; "it eats nothing." We asked him if they were at work in his vineyard. No, he answered; but would we like to look in the wine-press opposite? And then he took us through the dark windowless building, where on one side the grape-juice was fermenting in large butts, and on the other fresh grapes had been laid on sets of shelves to dry. He picked out two of the finest bunches and gave them to me. When I offered to pay him he refused. The signora must accept them, he said.

When Poggibonsi was in sight we drew up on a bridge where a man was standing, to ask him if he knew of a good albergo. He recommended the Albergo dell' Aquila. "It is good," he went on, "and not too dear. This

"NOBODY KNOWS HOW HARD WE WORK."

SAN GIMIGNANO—ON ITS MOUNTAIN-TOP—FROM THE HIGHROAD.

is not a town where they take one by the neck," and he clutched his own throat. So to the Albergo dell' Aquila we went. We had only to ride through the wide avenue of shady trees, past a row of houses, out of one of which a brown-robed monk came, to rush back at sight of us, past a washing-place surrounded by busy chattering women, and we were at the door of the inn.

The albergo was even more comfortable than the one we had left in Empoli. The *padrona* came up with the salad, and she and the *cameriera* in a cheerful duet told us about the visit to their house of the American consul from Florence, of the hard times the cholera had brought with it for all Italy, of the bad roads to San Gimignano and the steep ones to Siena, along which peasants never traveled without bearing in mind the old saying: "All' ingiù tutti i santi ajutano; ma all' insù ci vuol Gesù." ("Going down hill, call upon the saints; but going up one needs still higher powers.") Before long J—— joined in the talk, and the duet became a trio. Never had I been so impressed with his fluent Italian. Even the *padrona* was not readier with her words than he with his. When I spoke to him about it afterwards, he said he supposed it was wonderful; he had not understood half of it himself.

Though we left Poggibonsi in the beginning of the morning, a large crowd

which we looked forth upon mountain rising beyond mountain,—some treeless and ashen gray, others thickly wooded and glowing with golden greens and russets, and still others white and mist-like, and seeming to melt into the soft white clouds resting on their highest peaks. All along, the hedges were covered with clusters of red rose-berries and the orange berries of the *pyracanthus*. The grass by the roadside was gay with brilliant crimson pinks, yellow snapdragons and dandelions, and violet daisies. Once we came to a vineyard where the ripe fruit still hung in purple clusters from the vines, and where men and women, some on foot and others on ladders, were gathering and filling with them large buckets and baskets. At the far end of the field white oxen, their great heads decorated with red ribbons, stood in waiting. Boys with buckets slung on long poles were coming and going between the vines. In all the other vineyards we had passed the vintage

ON THE ARNO—NEAR EMPOLI.

had been over, so we waited to watch the peasants as, laughing and singing, they worked away. But when they saw us, they too stopped and looked, and one man came down from his ladder and to the hedge to offer us a bunch of grapes.

The only town through which we rode was Staggia, where workmen were busy restoring

A SIENESE CHARIOT.

the old tower and making it a greater ruin than it had ever been before. It is a degenerate little town, and its degeneracy, paradoxical as it may sound, is the result of its activity. For its inhabitants have not rested content like those of Certaldo with the mediævalism that surrounds them. They have striven to make what is old new by painting their church and many of their houses in that scene-painting style which to-day seems to represent the art of the people in Italy. Often during our journey I saw specimens of this vile fashion,—houses with sham windows and shutters, churches with make-believe curtains and cords,—but nowhere was it so prominent as in Staggia.

Beyond Monteriggione, whose towers alone showed above its high walls, the road began to wind upward on the mountain-side. It was such a long, steady pull that we gave up riding and walked. Our machine was heavily loaded and not too easy to work over prolonged up-grades. Besides, we were not time nor record makers, and we had the day before us. We were now closed in with woods, and occasional openings showed near mountain-tops covered with downy gray grass and a low growth like heather, and here and there were groups of dark pines. For an hour at least we were alone with the sounds and silence of the mountains. The wandering wind whispered in the wood, and black swine rooted in the fallen leaves, but of human life there was no sign. Then there came from afar a regular tap-tap, low at first, but growing louder and louder, until, as we drew closer to it, we knew it to be the steady hammering of stone-breakers. There were two men at work in this lonely pass, and as we stood talking to them two more came from under the chestnuts. These had guns on their shoulders, and wore high boots and the high-crowned conventional brigand hat. Ever since we had left Florence we had seen at intervals in the fields and woods a notice with the words, "*È vietata la bandita*," which we had interpreted as a warning against the bandits or

JUST OUTSIDE OF FLORENCE.

convicts, for whom our Florentine friends had prepared us. These men were harmless, however, and later we learned that the alarming signs merely forbid the trespassing of sportsmen.

A mile or two farther on the road began to go down again, and we were glad to be on the machine after our walk. We could see to the bottom of the hill, and there was no one in sight; J—— let go the brake. Those who understand the delights of down-grades will sympathize with our pleasure in the mountains near Siena. But when our pleasure was at its fullest, and the machine was going at the rate of about twenty miles an hour, and neither brake nor back-pedaling could bring it to a sudden halt, a man drove a flock of sheep out from the woods a few feet in front of us. When we reached them only the first had crossed the road. Of course, all the rest had to follow. They tried to go on right through the wheels, but only succeeded in getting under them, setting the machine to pitching like a ship in a heavy sea. But I held on fast. J—— stood on the pedals and screwed the brake down, the little wheel scattered the sheep like the cow-catcher of an engine, and we brought up in the gutter. Before we had stopped J—— had begun a moral lecture to the shepherd.

A SLIGHT OBSTRUCTION.

Once beyond the woods we came out by fields where men and women were at work, their oxen whiter than any we had yet seen by contrast with the rich red of the upturned earth. In olive-gardens peasants were eating their mid-day meal, men with white aprons, women with enormous Siennese hats, and dogs and oxen all resting socially together. By the roadside others were making rope, the men twisting and forever walking backwards, a small boy always working at the wheel. Scattered on the hill-tops and by the road were large red-brick farm-houses, instead of the white ones we had seen near Florence.

It was noon when we first saw Siena, and we were then at the very walls. In the old

NOONTIME.

A STRAW-PLAITER.

days it was always said, "More than her gates, Siena opens her heart to you!" But the heart of a *gendarme*, the representative of his city, was shut against us. When we rode through the gate he bade us descend. To our "Perchè?" he said it was the law. Oh the vanity of these Sienese! Through the streets of Florence and over the crowded Ponte Vecchio we had ridden undisturbed, but in this mountain town, which boasts of but two hacks, and where donkeys and oxen are the only beasts to be frightened, we must needs dismount. So we two weary pilgrims had to walk along the narrow streets, between the tall palaces, while tanners in red caps, and women in flowered, white-ribboned *fiesta* hats, and priests and soldiers stared, and one man, with a long push-cart, kept close to us like an evil genius in a dream. He was now on one side, and now on the other, examining the wheels, asking endless questions, and always getting in the way. At all the street corners he hurried on before, and with loud shouts called the people to come and see. Then he was at our heels again, shrieking his loud, shrill trade cry into our very ears. J—— as a rule is not ill-tempered; but there is a limit to all things. The stupid sheep, the watchful *gendarme*, and now this plague of a flower-peddler brought his patience to an end,

and on our way through the town he said much in good plain English which it was well the citizens could not understand.

Even pilgrims of old, on their way to Rome, sometimes tarried on the way in castle or village. We could not pass through Siena, discourteous though her first welcome had been, as we had through smaller and less fair towns. So for a day or two we put away our tricycle, and the "cockle-shells and sandal shoon" of our pilgrimage. We went to a *pension*, one at which J—— had staid before, and which he liked. I admit it was better in many ways than the inns in which we had hitherto slept and eaten. There was carpet on the floor of our room, and in it easy-chairs and a lounge. There were elaborate breakfasts at one and still more elaborate dinners at six, and there was always a great plenty, as the Englishwoman who sat next me, and who, I fear, had not always fared so well, said when she urged me to eat and drink more of the fruit and wine set before me. But we both thought regretfully of the dining-rooms with the bad prints on the walls, and the more modest dinners of our own ordering. I think, too, we had found more pleasure in the half-understood talk of *padroni* and *camerieri* than we did now in the elegant and learned conversation of our fellow-boarders, for they were all, it seemed, persons of learning and refinement. There was the retired English major-general who sat opposite, and who had written a book, as he very soon let us know. He recognized us as Americans before we had opened our mouths to speak, and gave our neighbors at table reminiscences of travels in Spain with Mr. Fillmore, the ex-President; he said he well knew Mr. Marion Crawford, the talented novelist, and his uncle, "dear old Sam Ward"; he had counted among his best friends Bayard Taylor, "as you remember I have said in my book," he added. Then there was the elderly English lady traveling abroad with her daughter, who "has just taken up architecture." And there was the Swedish lady, who could talk all languages, speaking to us in something supposed to be English, and who was as eager in her pursuit of food for her body as for her mind. I count the way in which she greedily swallowed the *vino santo* in her glass, when our host passed around the table the second time with his precious bottle, one of the wonders of my visit to Siena. It was pathetic too to see her disappointment when he turned away, just before he reached her, his bottle empty. And there were still others who knew much about pictures and palaces, statues and studios, and no doubt we might greatly have profited thereby; but we liked it better upstairs, where

we were alone and there was less culture. Our window overlooked a high terrace in which marigolds and many-colored chrysanthemums were blooming, the gardens of the Piccolomini Palace full of broad-leaved fig-trees and pale olives, and the wide waste of mountain and moorland stretching from the red city walls to the high, snow-capped Apennines on the horizon. All the morning the sun shone in our windows, and every hour and even oftener we heard the church-bells, and the loud, clear bugle-calls from the barracks, once a monastery, whose mass of red and gray walls rose from the near olives. They say it snows in Siena in the winter-time, and that it is cold and bleak and dreary, but I shall always think of it as a place of flowers and sunshine and sweet sounds.

But best of all were the hours when we wandered through the town, up and down dark alley-ways and flights of steps, under brick arches, along precipitate, narrow streets where we had to press close to the houses, or retreat into an open door, to let the wide-horned oxen pass by with their load; now coming out at the very foot of La Mangia, on the broad, sunny Piazza; now by the tanneries, where little streams of brown water trickle down towards the washing-place at the foot of the hill, and where the walls are hung with dripping brown skins, probably just as they were when the little Catherine, her visions already beginning, and Stefano walked by them and towards home in the fading evening light, from a visit to the older and married sister Bonaventura. One hour we were with the past in the shadowy aisles of the Duomo, where Moses and Hermes Trismegistus, Solomon and Socrates, Sibyls and Angels looked up at us from the pavement, and rows of popes kept watch from above the tall black and white pillars, while in the choir beyond priests chanted their solemn psalms. Next we were with the present in the gay Lizza, under the acacias and yellow chestnuts, by flower-beds full of roses and scarlet sage, and walls now covered with brilliant Virginia creepers; and out on the fort above to see a golden sky, and the sun disappearing behind banks of purple, golden-edged, and red clouds, and pale, misty hills; while from every side came the voices of many people, of soldiers in the barracks, of women and children under the trees, of ball-players in the old court below,

and of applauding lookers-on lounging on the marble benches.

There are no Spendthrift Clubs in Siena now, nor any gay Lanos, like him Dante met in the "Inferno." But there are still laughter and song loving Sieneese, who, in their own simple fashion, go through life gathering rose-buds while they may. It seemed to me a very pretty fashion when I saw them holiday-making on Sunday afternoon, peasants, priests, officers, townspeople, all out in their Sunday best, and when on the Via Cavour, near the Loggia, I met two wandering minstrels singing love-songs through the town. One played on a mandolin which hung from his neck by a wide red ribbon, and as he played he sang. His voice was loud and strong and very sweet, and like another Orpheus he drew after

BY THE RIVER.

AMONG THE VINES IN TOCCANE.

him all who heard his music. His companion sold copies of the song, printed on pink paper, gay as the words. He went, bowing and smiling, in and out of the crowd, and when the first singer rested he, in his turn, sang a verse. There was with them a small boy who every now and then broke in in a high treble, so that there was no pause in the singing.

Wherever we went that afternoon, whether by the Duomo or out by the Porta Romana, on the Lizza or near San Domenico, we saw large written posters, announcing that at six in the evening there would be, at No. 17 Via Ricasoli, a great marionette performance of the "Ponte dei Sospiri." Apparently this was to be the event of the day, and to it we determined to go. When a little before the appointed hour we came to the Via Ricasoli, I half expected to see a theater ablaze with light. What we did find, after much difficulty, was a low doorway on the ground floor of a many-storied palace, and before it a woman by a table, lighting a very small lamp, to the evident satisfaction of half a dozen youngsters. Over the open doorway was a chintz curtain. Behind it, darkness. This was not encouraging. But presently a woman with a child came to buy tickets. One of the group of youthful admirers was then sent up and a second down the street, and after they had come back with mysterious bundles, another lamp was produced, lit, and carried inside, and the first two of the audience followed. It was now five minutes of six, so we also bought our tickets, three soldi, or cents, for each, and the curtain was drawn for us. A low, crypt-like room with vaulted ceiling; at one end two screens covered with white sheets; between them a stage somewhat larger than that of a street Punch, with a curtain representing a characteristic Sieneſe brick wall inclosing a fountain; several

rows of rough wooden benches, and one of chairs; — this was what we saw by the dim light of one lamp. We sat on the last bench. The audience probably would be more entertaining than the play. But the humble shall be exalted. The woman on the front row bade us come up higher. The small boy, who acted as usher, told us we might have two of the chairs for two soldi more. The ticket-seller even came in, and in soft, pleading tones said that we might have any place we wanted; why then should we choose the worst? But we refused the exaltation. The audience now began to

arrive in good earnest. Five ragged boys of the *gamin* species, one of a neater order with his little sister by the hand, two soldiers, a lady with a blue feather in her bonnet and her child and nurse, two young girls, — and the benches were almost filled. Our friend the ticket-seller became very active as business grew brisk. She was always running in and out, now giving this one a seat, now rearranging the reserved chairs, and now keeping the younger members of the audience in order. Her manner was gentle and insinuating. *Ragazzini*, she called the unruly boys who stood up on the benches and whistled and sang, so that I wondered what diminutive she gave the swells on the front row. This was amusing enough, but our dinner hour was half-past six. J — looked at his watch. It was a quarter past. The ever-watchful keeper of the show saw him. "Ah! the signor must not be impatient. Ecco! the music was about to begin." Begin it did indeed, to be continued with a persistency which made me fear it would never end. The musicians were two. A young man in velveteen coat and long yellow necktie played the clarinet, and another the cornet. They only knew one tune, a waltz, I think it was meant to be, but that they gave without stint, playing it over and over again, even while the ticket-seller made them move from their chairs to a long, high box by the wall; and when a third arrived with a trombone they let him join in when and as it best pleased him. When we had heard at least the twenty-fifth repetition of the waltz, had looked at the scuffling of the *ragazzini* until even that pleasure palled, had seen the soldiers smoke *sigaro Cavour* after *sigaro Cavour* so that the air grew heavy with tobacco-smoke, and had watched the gradual growth of the audience until every place was filled, our patience was

exhausted. Behold! we said to the woman with the gentle voice, it was now seven. The play was announced for six. Was this right? In a house not far off every one was eating, and two covers were laid for us. But here we were in this dark room in our hunger, waiting for marionettes whose wires for aught we knew were broken! She became penitent. The signorini must forgive her. The wires were not broken, but he who pulled them had not come. There was yet time. Would we not go and

it. It was rather funny to see the villain of the piece after an outbreak of passion, or an elegant long-haired page in crimson clad, after a gentlemanly speech, suddenly vault over it. I could not discover what the play was about. Besides the two above-mentioned characters, there was a puppet with a large red face and green coat and trousers who gave moral tone to the dialogue, and another with heavy black beard and turban-like head-dress and much velvet and lace, whom I took

A GAME OF BOWLS—A DISPUTED POINT.

dine and then come back? She would admit us on our return.

And so we went and had our dinner, well seasoned with polite conversation. The ticket agent was true to her word. When we reappeared at her door, the curtain was pulled at once. In the mean time the musicians had been suppressed, not only out of hearing but out of sight. The room was so crowded that many who had arrived during our absence were standing. Indeed, by this time there must have been at least five francs in the house. All were watching with entranced eyes the movements of four or five puppets. The scene represented an interior which, I suppose, was that of the prison to one side of the Bridge of Sighs. That it was intended for a cell also seemed evident, because the one portable piece of furniture on the stage was a low flat couch of a shape which, as every one who has been to the theater but never to prisons knows, is peculiar to the latter. It was impossible to lose sight of it, as the *dramatis personæ* made their exits and entrances over

to be a person of rank. As they came in and out by turn, it was impossible to decide which was the prisoner. With the exception of the jumps over the couch, there was little action in the performance. Its only two noticeable features were: first, the fact that villain, page, moralist, and magnate spoke in exactly the same voice and with the same expression; and, secondly, that they had an irrepressible tendency to stand in the air rather than on the floor, as if they had borrowed Mr. Stockton's negative-gravity machine. The applause and laughter and rapt attention of the audience proved the play to be much to their liking. But for us inappreciative foreigners a little of it went a great way. As nothing but talk came of all the villainy and moralizing and grandeur and prettiness,—which may have been a clever bit of realism of which the English drama is not yet capable,—and as there was no apparent reason why the dialogue should ever come to an end, we went away after the next act. The ticket-seller was surprised at our sudden change from eagerness

MONTE OLIVETO.

to indifference, but not offended. She thanked us for our patronage, and wished us a *felice notte*.

With the darkness the gayety of the town had increased. In the large theater a play was being performed by a company of amateurs. We looked in for a few minutes, but found it as wordy as that of the puppets. In a neighboring piazza the proprietor of a large van, much like those to be seen in country fairs at home, was exhibiting a man, arrayed in a suit of leather with a large brass helmet-like arrangement on his head, who, it seemed, could live at the bottom of the sea, along with Neptune and the Naiads, as comfortably as on dry shore. *Ecco!* There was the tank within where this marvel could be seen,—a human being living under the water, and none the worse for it! Admission was four soldi, but *per militare e ragazzi*—for military and children—it was but two! So it seems that the soldiers, who abroad are to strike terror into the enemy, at home are ranked with the young of the land, since like them their name is legion! There were about a dozen in the crowd, and, all unconscious of the sarcasm, they hurried up the steps and into the show, while an old man ground out of a hand-organ the appropriate tune of *O que j'aime les militaires*.

But dramas and shows were not the only Sunday evening amusements. The *caff  s* were crowded. Judging from the glimpses I had into little black cavern-like wine-shops, another Saint Bernardino is needed to set makers of gaming tools in Siena to the manufacture of holier articles. And more than once,

as we walked homewards in the starlight, we heard the voices of the three minstrels singing of human passion in the streets where Catherine had so often preached the rapture of divine love.

We left Siena the morning after the marionette exhibition. On parting, the major-general said if we expected to pass through Cortona he would like to write a card of introduction for us to a friend of his there, an Italian who had married an English lady. Cortona was a rough place, and we might be glad to have it. He had forgotten his friend's name, but he would run upstairs and his wife could tell him. In a minute he returned with the written card. We have had many letters of introduction, but never one as singular as the major-general's. As he knew our name even less well than that of his Cortona friends, he introduced us as an "American lady and gentleman riding a *bicycle!*" Only fancy! as the English say. Our parting with him was friendly. Then he stood with Luigi and Zara until we disappeared around the corner of the street.

What a ride we had from Siena to Buonconvento! This time the road was all *gi  , gi  , gi  *. It was one long coast almost all the way, and we made the most of it. We flew by milestone after milestone. Once we timed ourselves: we had made a mile in four minutes. The country through which we rode was sad and desolate. On either side were low rolling hills, bare as the English moors, and of every shade of gray and brown and purple. Here rose a hill steeper than the others, with a black cross on its summit; and here, one crowned with a group of four grim

cypresses. Down the hill-sides were deep ruts and gullies, with only an occasional patch of green where women were watching sheep and swine. Once we came to where three or four houses were gathered around a small church, but they were as desolate as the land. We heard voices in the distance, but there was no one in sight. When on a short stretch of level road we stopped to look at this strange gray land, the gray because dark clouds covered the sky, we saw that above the barrenness the sun shone on Siena, and that all her houses, overtowered by the graceful Della

exclaimed, "but you frightened me!" He laughed, however, and whipping up his donkey rattled after us as if eager for a race, talking and shouting all the while and until we were out of hearing. One or two peasants passed in straw chariot-shaped wagons, and once from a farm-house a woman in red blouse and yellow apron, with a basket on her head and a dog at her heels, came towards us. It was at this same farm-house we found the first Didymus we had met on our pilgrimage. We had stopped, as we had a way of doing when anything pleased us, and he had come out to

INTERIOR OF MONTE OLIVETO.

Mangia and the tall Duomo Campanile, glistened in the bright light.

About five miles from the city the desolation was somewhat relieved, for there were hedges by the roadside, and beyond, sloping olive-gardens and vineyards. Poplars grew by little streams, and sometimes we rode under oaks. On the top of every gray hill, and giving it color, was a farm-house, rows of brilliant pumpkins laid on its red walls, ears of yellow corn hung in its loggia, and gigantic haystacks standing close by. There were monasteries too, great square brick buildings with tall towers, and below, spire-like cypresses. Now and then flocks of birds flew down in front of the tricycle, or large white geese came out from under the hedge and hissed at us. For a few minutes a man driving a donkey-cart made the way not a little lively. He did not see us until we wheeled by him. Then he jumped as if he had been shot. "Dio!" he

have a better look at the *tranvai*. And how far did we expect to go to-day? he asked. To Monte Oliveto, we told him, for, like pious pilgrims, we thought to make a day's retreat with the monks there. "To Monte Oliveto! and in a day, and on that machine!" and he laughed us to scorn. "In a week, the signore had better say." Later a stone-breaker's belief in us made some amends for the farmer's contempt. We were riding then. "Addio!" he cried, even before we reached him.

Before we reached Buonconvento the sun came out and the clouds rolled away. It had rained here earlier in the morning. The roads were sticky and the machine ran heavily, and trees and hedges were wet with sparkling rain-drops. There is an imposing entrance to the little town, a pointed bridge over a narrow stream, with a Madonna and Child in marble relief at the highest point, an avenue of tall poplars with marble benches set between, and

CHIUSURE.

then the heavy brick walls blackened with age, and the gateway, with high Gothic arch decorated with the Sienese wolf, above which, however, weeds wave in the breeze. Inside, the town seemed much less fine.

The fact that we were going to Monte Oliveto annoyed the *padrone* of the mean little inn we at last found. The monastery is a too successful rival to his albergo. Few travelers except those who are on their way to Monte Oliveto pass through his town, and few who can help it stay there over night. His list of the evils we would have to endure was the sauce with which he served our beefsteak and potatoes. But when he had said the worst he became cheerful, and even seemed pleased when we admired his kitchen, where brass and copper pots and pans hung on the walls, and where in one corner was a large fire-place with comfortable seats above and a pigeon-house underneath. But when we complimented him on the walls of his town, Bah! he exclaimed, of what use were they? They were half destroyed. They would be no defense in war times.

He was right. The walls, strong by the

gate, have in parts entirely disappeared, and in others houses and stables have been made of them. It is on the open space by these houses that the men have their playground. They were all there when we arrived, and still there when we left. Young men, others old enough to be their fathers, and boys were, each in turn, holding up balls to their noses, and then, with a long slide and a backward twist of the arm, rolling them along the ground, which is the way Italians play bowls.

We had so much difficulty with the road to Monte Oliveto, and saw the monastery from so many sides, that I began to feel as if we were the answer to the riddle I had so often been asked in my childhood, the

mysterious "What is it that goes round and round the house but never gets in?" Soon the sun set behind the hills, and the sky grew soft and pink. We met several peasants bearing large bunches of twigs on their heads. There were one or two shrines, a chapel, and a farmhouse, in front of which a priest stood talking to a woman. But on we went without resting, J— pushing the machine, and I walking behind, womanlike, shirking my share of the work. The road grew worse until it became nothing but a mass of ruts and gullies washed out by the rain, and led to a hill from which even Christian would have turned and fled. But we struggled up, reaching the top to see the gate of the monastery some sixty or seventy feet below. Finally we came to the great brick gateway which in the dull light, for by this time the pink had faded from the sky, rose before us a heavy black pile, beyond whose archway we saw only shadow and mystery. As we walked under it our voices, when we spoke, sounded unnatural and hollow. On the other side the road wound through a gloomy grove of cypresses, growing so close together that they hedged us about with im-

penetrable darkness. Once several silent figures, moving noiselessly, passed by. Had we, by mischance, wandered into a Valley of the Shadow of Death?

The cypress-grove, after several windings, brought us face to face with the building at which we had already so often looked from the distance. Even in the semi-darkness we could see the outline distinctly enough to know we were standing in front of the church, and that the detached building a little to our left was a barn or stable. But not a light shone in a window, not a doorway was in sight. I recalled my convent experience of by-gone years, and remembered that after eight o'clock in the evening no one was admitted within its walls. Was there a rule like this at Monte Oliveto, and was six the hour when its bolts and bars were fastened against the stranger? As we hesitated where to go or what to do next, three or four workmen came from the stable. J—— spoke to them, and one offered to show him the entrance to the monastery while I waited by the tricycle. It was strange to stand in the late evening and in the wilderness alone with men whose speech I could not understand and whose faces I could not see. For fully five minutes I waited thus while they talked together in low voices. At last came words I did understand. *Ecco!* cried one, here was the *padrone*; and they all took off their hats. A dog ran up and examined me, and then a man, who I could just make out in the gloom wore a cassock and the broad-brimmed priestly hat, joined the group. *Buona sera*, he said to me. "Could I speak to him in French?" I asked. "Yes," he assented. "What was it I wanted?" When I told him we wished to stay in the monastery, he said he had not expected us. We had not written.

"But," I exclaimed, "we thought strangers were allowed to stay here."

"Yes," he answered; "there is a *pension* in the monastery; but it is for artists."

"And my husband is an artist," I interrupted eagerly, for from his manner I feared he would refuse us admission. After all, what did he know about us, except that, vagrant-like, we were wandering in the mountains at a most unseasonable hour? Indeed, when later I reflected on the situation, I realized that we must have seemed suspicious characters. At this critical moment J—— returned. His guide had led him to a small side door beyond the church. There he had rung and rung again. The bell was loud and clear and roused many echoes within, but nothing else. The guide, perplexed, had then led him back. I told him with whom I was speaking, and he continued the conversation with the *padrone*.

Had they talked in Italian only or in French, they might have understood each other; but instead they used a strange mixture of the two, to their mutual bewilderment. If this kept on much longer we would undoubtedly spend the night in the open air. In despair I broke in, "But, *mon père*, cannot we stay this one night?"

"Certainly," he said, dropping all Italian, which fortunately he knew I could not understand. "That is what I was explaining to *monsieur*. You can stay, but of course we have nothing prepared. We will do our best."

If he had said he would do his worst, provided we were rid of the tricycle for the night, and where we might sit down, we would have been thankful.

The bags were unstrapped and given into the care of one of the men, a place was made for the machine in the stable, and then we followed the *padrone* or *Abate*—for this was his real title—to the door where J—— had rung in vain, and which he opened with his key. Within it was so dark that we groped our way through the hall and a small cloister. Then we came to a flight of steps where, at the bidding of the *Abate*, as if to reassure us that we were not being led to secret cells or torture chambers, the man carrying our bags struck a solitary match. By this feeble light we walked up the broad stone stairs, and through many passage-ways, not a sound breaking the stillness but our steps and their loud echoes, to a door where the *Abate* left us, and at the same time the match burnt out. But the next minute he reappeared with a lighted taper, and at the end of the hall opened another door, lit a lamp on a table within, and showed us four rooms, which, he said, were at our disposal. The beds were not made, but they would be attended to immediately. He had now to say Office, but at nine supper would be served. Here was a very comfortable solution to the mystery into which the massive gateway had seemed to lead. The Valley of the Shadow of Death had turned out to be a Delectable Land!

It was still more comfortable later when, his Office said, the *Abate* came back and sat and talked with us. Now he could examine us by a better light, I think he concluded we were not dangerous characters, probably only harmless lunatics. However that may be, after half an hour, when the supper-bell rang, and we started off for the refectory, again by the light of his taper, we were the best of friends. The long corridor, thus dimly seen, seemed interminable. We went down one stairway, to find the door locked against us, then up and down another. Here the light went out, leaving us in a darkness like un-

to that of Egypt. The Abate laughed as if it was the best of jokes. He took J——'s hand and J—— took mine, and thus like three children we went laughing down the stairway, and along more passages, and at last into a long refectory, at the farther end of which was a lamp, while a door, to one side of that by which we entered, opened and a second monk in white robes, holding a lighted taper, came in, and when he saw us made a low bow. As there were no other visitors, we were to eat with him and his brother monk, the Abate said; and then he gave me the head of the table, asking me if I were willing to be the Lady Abbess.

If we had been two prodigals, he could not have been kinder than he was, now he had given us shelter. If we had been starving like the hero of the parable, he could not have been more anxious to set before us a feast of plenty. Nor would any fatted calf have been more to our taste than the substantial supper prepared for us. We must eat, he said. We needed it. He had seen us coming up the hill as he talked with a peasant by the roadside. But monsieur was push-pushing the machine and looking at nothing else, and madame was panting and swinging her arms, staring straight in front of her; and before he had time we had passed. We must drink too. The wine was good for us. We must not mix water with it. It was Christian; why then should it be baptized? The white brother spoke little, but he never allowed J——'s plate to remain empty. When the meat was brought in we were joined by Pirro, a good-sized dog with no tail to speak of, and Lupo, an unusually large cat, and his numerous family, who all had to be fed at intervals. But even while Pirro jumped nimbly into the air after pieces of bread thrown to him, and Lupo scratched, and his progeny made mournful appeals to be remembered, and we talked, I looked every now and then down the long, narrow table to where it was lost in deep shadow. The cloth was laid its entire length, as if in readiness for the banished brothers whenever they might return. I would not have been surprised then to have seen the door open to admit a procession of white monks, all with tapers in their hands. The Abate must have realized that to a stranger there was something uncanny in his dark, silent, deserted monastery, and his last word as he bade us good-night was that we were to fear nothing, but to sleep in peace.

The days we spent at Monte Oliveto were golden days. For we not only slept there one, but several nights, and the Abate declared we could remain as long as we might care to. Nothing could be more melancholy and wild

than the country into which we had come. It is the most desolate part of all that strange desolation which lies to the south-east of Siena. The mountain on which the monastery is built is surrounded on every side but one by deep, abrupt ravines. Behind it rise higher mountains, bare and bleak and gray like gigantic ash-piles, and on the very highest peak is the wretched little village of Chiusure. The other hills around are lower, and from the road by the convent gateway one can see Siena, pale and blue on the horizon, and southward, over the barren hill-tops, Monte Amiata. But Monte Oliveto is a green place in the midst of the barrenness. The mountainsides are terraced, and olives and vines grow almost to the bottom of the ravine.

The first morning the Abate took us to see the frescoes representing the life of St. Benedict, painted on the walls of the large cloister. I will be honest and confess that they disappointed me. I doubt whether the artists were very proud of them. Luca Signorelli, before he had finished the first side of the cloister, gave up the work, as it is not likely he would have done had he cared much for it. Sodoma, when he took his place, was at first so careless that the then abbot took him to task, but the artist calmly told him more could not be expected for the price that was paid him. Certainly with neither were these frescoes a labor of love, and this one feels at once. One wonders if this could have been the same Sodoma who painted the St. Sebastian in Florence, and yet there is more beauty in his pictures than in those of Signorelli. But what I cared for most were his portraits of himself, with heavy hair hanging about his face, and wearing the cloak the Milanese gentleman, turned monk, had given him, and of his wife and child; and the pictures of the raven and the other pets he brought with him to the monastery, to the wonder of the good monks.

It is a pity every one cannot look at these frescoes with such loving, reverential eyes as the Abate. He had shown them probably to hundreds of visitors; he had seen them almost every day for the many years he had been at Monte Oliveto; but his pleasure in them was as fresh as if it dated but from yesterday. He told the story of each in turn,—of how in this one the great St. Benedict had set the devil to flight, and how in that he had by a miracle recalled an erring brother; and once he pointed to a palm-tree in a background. Sodoma, he said, had seen and admired a palm in the garden of the monastery, and so, after his realistic fashion, had painted it in just as he had his pets. That very tree was in the garden still. He would show it to us if we liked.

There never was such another garden! It

is close to the large brick house or palace by the gateway, where in old times lay visitors were lodged, and beyond which no woman was ever allowed to pass. It is small, but in it the monks only raised the rarest trees and plants. Here grew the precious herbs out of which in the pharmacy, whose windows overlook the quiet green inclosure, they prepared the healing draughts for which people came from far and near. The pharmacy is closed now. There is dust in the corners and on the quaint old chairs. Cobwebs hang from the ceiling. But brass scales are still on the heavy wooden counter, and pestle and mortar behind it, and glass retorts of strange shapes in the corners and above the doors. Majolica jars, all marked with the three mountains, the cross and olive-branch, the *stemma* of the monastic order, are ranged on the brown shelves, many of the large ones carefully sealed, while from the small ones came forth strange odors of myrrh and incense and rare ointments. As in the refectory, everything here is in order for the monks when they return. But they will find more change in the garden below. The rare plants, the ebony and the hyssop, the cactuses and the palm, which made me think even less of Sodoma's frescoes than I had before, the pomegranates and the artichokes, are all there. But weeds grow in the paths, and by the old gray well, and in among the herbs; roses have run riot in the center of the garden and turned it into a wild tangled growth. To us it seemed the loveliest spot in Monte Oliveto. The hours spent in it were like a beautiful idyl of Theocritus or Shelley. I hope if the monks ever do come back that, while they throw open the windows of the pharmacy and let the light in again upon the majolica and the dark wood-work, they will leave the gates of the garden locked. It is fairer in its confusion than it ever could be with weeded paths and well-clipped bushes.

The Abate took us everywhere,—through the empty guest-chambers of the palace to the tower, now a home for pigeons; through the monastery, with its three hundred rooms with now but three monks to occupy them; its cloisters, for there are two besides the large frescoed one; its *logge*, where geraniums and other green plants were growing; its great refectory, beyond the door of which fowl or flesh meat never passed, and which is now used no longer; and its library, at the very top of the house, where rows of white vellum volumes are ready for the students who so seldom come. Then he led us to the church, where there are more altars than there are monks to pray before them, and a wonderful choir with inlaid stalls; and in and out of

little chapels, one of which contains the grotto where blessed Bernardo Tolomei, the founder of the order, lived for many years after he came to the wilderness, while another was the first church used by the brotherhood, and the Virgin with angels playing to her on harps and mandolins, above the altar, was painted long before Signorelli and Sodoma began their work. Then there was the lemon-grove to be seen, where the Abate filled our pockets with the ripe fruit, and the wine-press to be visited, where men were filling small casks from large butts and then carrying them off on their shoulders to be weighed and stored above. We had to taste the wine, and I think it, together with the sunshine and the flowers, must have gone to my head that morning and staid there so long as I was at Monte Oliveto, for everything about me seemed to belong less to the actual world than to a dreamland full of wonder and beauty and sometimes of pathos.

It was the same in the afternoon, when the Abate had gone about his work,—for he is a busy man, like the centurion with many under him,—and J—and I wandered alone over the gray hills up to Chiusure. Life with its hardships must be real enough to the people of this little village. We saw melancholy figures there, old hags of women, with thin white hair and bent almost double under heavy bundles of wood, toiling up steep stony streets with bare feet, and others crouching in the gloom opposite open doorways. Even the little priest, who, in his knee-breeches and long frock-coat and braided smoking-cap with tassels dangling in his eyes, was humorous enough to look at, was pathetic in his way. For, after he had shown us his church with its decorations, poor as the people who worship in it, and offered us a glass of wine in his own parlor, he spread on the table before us some broken pieces of glass easily put together, on which a picture was painted. Was it of value? he asked, so eagerly that he told without further words the story of wants but ill supplied. He was willing to sell it, but he did not know what it was worth. Could we tell him? No, we could not, we said, for we really knew nothing about it, though we feared the hopes he had set upon it would never be realized. And then sadly he gathered together the pieces and put them away again in their newspaper wrapping. It was more cheerful outside the gateway. There, in the late afternoon, the gray olives by the way were more clearly defined against the sky, and the gray ravines below more indistinct. Beyond, the hills, now all purple and soft, rolled away to the horizon and to the brilliant red sky above. One or two lights were lit in

distant farm-houses, and once we heard a far-off bell. Before us the white road led by one green hill on whose top was a circle of cypresses, and in its center a black cross, as in so many old pictures.

But the strangest part of this dream-life was the friendship that sprang up between us and the monks. I would not have been more surprised if St. Benedict and Blessed Bernardo had come back to earth to make friends with us. It was not only that the Abate acted as our guide through the monastery. This he does for every visitor who comes, since the Government took possession of it and turned it into a public art gallery and *pension* for artists. But he came to our room early in the morning to drink his coffee with us, and in the evening, after he had said his Office, for a little talk. And when we had finished our supper we sat together long over our wine, talking now in French, now in English, now in Italian, and occasionally understanding each other. Like all good fellows, we too had our jokes. But the Abate's favorite was to tell how he had seen us coming up the mountain, monsieur push-pushing the *velocipede* and madame puff-puffing behind him. Even Dom Giuseppe, the other monk,—the third was away,—relaxed from the dignity with which he had first met us, and took part in the talk and the laughter. Unreal as seemed these late suppers in the long refectory in the dim light, with Pirro forever jumping after choice morsels while Lupo and his family growled with rage

and envy from under the table, we strayed even farther into Wonderland the second day after our arrival, when both monks went out for a ride on the tricycle along the mulberry walk and by Blessed Bernardo's grotto.

The last day of our stay a number of visitors arrived—a priest from Perugia, two nuns, and two English ladies. They were not expected, and dinner had to be prepared for them. The Abate is never pleased when guests come without giving him warning. When we met him in the refectory a little after twelve, we could see his patience had been tried. We must pardon him for being late, he said, but he had had to find something to eat for all these people. Were they to dine with us? we asked. No, indeed, was his answer. They were not members of the community. This confirmed our doubts as to whether we might not be monks without our knowing it; for the first morning the Abate had given us a key of the great front door by which we could let ourselves in at all hours, without any ringing of bells or calling of porters, so that we felt as if we belonged to the convent. These visitors were the thorns in his present life, the Abate continued, and we were his roses. He introduced us to the Perugian priest, who might possibly, he said, be of use to us in Perugia. The latter almost embraced J—in his protestations of good-will, and came running back several times to press his hand, and say in a French of his own invention that we must call often during our stay in his city.

(To be continued.)

IN EXILE.

SOME day I may retake the road
To Dreamland's sweet oblivion,
Though now I keep my bare abode
In streets my late companions shun.

To nooks below the greenwood tree
They call and call; in sweet disguise
Of bloom and song they beckon me,
And lure me in each maiden's eyes.

But nights they leave their haunts and throng
About me. When my tasks are done—
Some day—I'll put them into song,
And find my happy country won.

L. Frank Tooker.

JOHN BODEWIN'S TESTIMONY.

BY MARY HALLOCK FOOTE,

Author of "The Led-Horse Claim," "Friend Barton's Concern," etc.

XX.

A STAR IS HIDDEN.

THE low black aperture of a tunnel facing the valley and the sunset gave entrance to the underground territory of the Eagle Bird. Work was still going on in that portion of the mine not under dispute. All night and all day, at recurrent intervals, the figure of a miner appeared at the tunnel's mouth, pushing a loaded car along the tramway to the dump. He came out at high noon, when the sky glowed incandescent behind the blackened boles of the pine-trees, or when the shadow of the range lay half across the valley, or when the shadow had climbed the darkly wooded slopes opposite, and above it the loftiest peaks were entering solemnly into the glory of the sun's down-sinking. The miner was still coming and going, the roll of the car on the iron track was still heard, when the stars twinkled sharply in the long strips of sky between the pine trunks, and darkness, that all day lurked within the tunnel, stalked forth and possessed the land. The roll of the wheels, the clank of the bolt as the car reared on its axle, and the dull crash of the avalanche of earth and stones that followed, were sounds that could be heard a long way off in the stillness of the wood.

These were the sounds by which Babe knew when she had reached the end of her journey. She heard them first about sunset as she approached the mine by the trail from the pass. She had gone the long way round. Once only she had stopped to rest at the little ranch at the foot of the pass, where the woman was still baking pies in the outdoor oven for her wayfaring customers. Babe was not a customer. She had merely stopped to ask the way and the number of miles to the Eagle Bird mine, where, she told the woman, she had a brother employed as a miner. Seeing that she looked tired, and mistaking the expression of her face for that of physical suffering, the woman urged Babe to sit and rest awhile, and pressed her kindly to eat and drink. Babe gratefully accepted a glass of cool milk and consented to put in her pocket a piece of bread which she could not force herself to eat. The woman's questions, and fixed though not unfriendly

observation, troubled her, and shortened her rest. When she came at last within sight and sound of the mine it was still so light that she did not venture beyond the thin shelter of the wood. She lay down upon the ground to make herself less conspicuous. Slowly the shadows crept from the ground upward to the tree-tops, and a single star showed in the deepening blue. There were others in the sky, but this one only Babe looked at, as with her head low on her arm she rested and waited for darkness. Presently she saw a light at the dump station — other lights appeared in windows or moved about among the dark buildings.

The moon was an hour or more high. Babe started up, aware that she must have fallen asleep at the foot of the tree where she lay. She returned to the trail by which she had come, and followed it past the tunnel and up the steep and dusty path to the high-stoooped house built against the hill, which she had decided must be the dwelling of the superintendent. Here Mr. Newbold's daughter would be lodged, if she were living at the mine. Babe made no inquiries to assure herself of the fact. One or two men (seated on the steps of the miner's boarding-house) looked at her curiously as she passed, but she was questioned by no one.

An irregular pile of lumber was stacked close to the side of the superintendent's house; deep shadow filled the space between. Babe crept in over the boards, and climbed to a place where she could look into a bright, uncurtained window of the parlor. The room was empty. A lamp burned on the center-table and chairs were pushed out of their places. From the sound of voices talking, Babe concluded that the recent occupants of the room were now assembled on the piazza outside. She rose up cautiously and was groping her way forward for a better view, stepping lightly along the tiers of boards, when Bodewin and Josephine came to the end of the porch and leaned side by side on the railing above her. The moon shone full in their faces. Both were gazing upwards, their eyes fixed upon one spot in the heavens.

Babe looked up at the same place in the sky, but saw nothing more than the moon, nearly half full, and close to her shadowed side a small, bright star. It was this star

Josephine and Bodewin were watching, for from its position that night they knew it must be near its occultation by the moon. As the distance lessened imperceptibly between it and the undefined arc of shadow approaching it, the star seemed to throb and flash, red, gold, and sapphire, as if it were panting to its extinction. If anything could have made those two, standing in the light of heavenly bliss, as it seemed to Babe, more hopelessly far away from her, it was this mysterious, rapt attention fixed upon some object which to her had no existence. At first she thought they might be taking some silent vow together, but then she heard Josephine speaking, in a clear, even voice.

"It is only a little star, but we have looked at it so long it seems the only one in all the sky. Has it a name, do you know?"

"I think it is Antares," Bodewin replied.

"Antares," Josephine repeated, dwelling on the vowel syllable with satisfaction. "The occultation of Antares! — How imposing it sounds. And I suppose all the world is watching it with us to-night."

"We are the only watchers in this part of the world, I fancy," said Bodewin — "except Hillbury perhaps," he added sadly. His heart swelled with the pain of love unspoken. Josephine's white-clad shoulder was nearly touching his arm. If he were to put it out and draw her to him it might change both their lives forever. Yes, and it might ruin his. Why should he not speak to her, at least, and take his answer for life or death? There was not an atom of his flesh that did not worship her. And for his better part — who had ever appealed to that as she had done? Had she not found him in a slough of moral doubt and sophistry, and shown him his duty, without question of her right, as if she knew instinctively that she was born to be his soul's mistress, and the light of his dull, purposeless life? He was trembling with the intoxicating risk of speech. Josephine's eyes were still upon the star; her hand rested on the rail. The impulse to cover it with his own was so strong that for an instant he fancied he must have done so involuntarily, for suddenly she stepped back and dropped her eyes.

"It is gone!" she said. "Did you see how at the last it seemed to leap out of sight? I am so glad to have seen it — but now let us go in."

"Oh, no — not now — stay until we see it again on the other side." And silently he resolved that before they saw the star again he would know his fate.

"It will not seem like the same star when we see it again," said Josephine, "and if it did it would only be an anti-climax — like Juliet

coming before the curtain after the death scene."

Her light, cool words confused Bodewin and gave his passion a moment's check. Josephine was leaning on her crossed arms gazing down into the shadow cast by the pile of boards. Some object moving there had attracted her attention. She had seen a head emerge, as it were, from that well of darkness — a head framed in moonlight, the shadowed face invisible. The fair head of a young woman who crouched among the boards and looked upwards in a fixed agony of attention. At the instant Josephine's eyes rested on it, the head disappeared, but that brief look thrilled her with the sensation of having long been watched by some unknown person lurking in the darkness below.

She turned to Bodewin and said softly, "Look, who is that?" pointing downwards with her white-sleeved arm. "You will see her in a moment." Again the head emerged; this time it was bent and hidden by a shawl. The moon had climbed a little higher, and the shadow which had covered Babe had shrunk away, and left her cowering form exposed. It had stolen away so gradually that, absorbed in her unhappy watch, she had not been aware of its retreat. She was plainly trapped, with the precipitous bank behind her, the heap of boards on one side, and bright moonlight illuminating her only way of escape. If she could gain the trail the dip of the ground would hide her. She rose up, desperate, and with her shawl muffling her head and face, walked out into the light.

Bodewin had not seen the girl's face, and Babe, a moment before, had been far from his thoughts, but something within him foreboded that this was Babe, — Babe unhappy and desperate, — shelterless, homeless, perhaps through her service to him. Surely the figure, the height, the movement, was Babe's as she walked out into the light.

"I think I had better see who that is," he said; "excuse me a moment —"

If he were to see who it was, there was no time for ceremony. Josephine watched him down the steps and across the moonlit space, before the slope of the hill hid him from her sight. She walked up and down the piazza alone, once or twice. She stood and listened. The dead woods were still. There were no insect voices calling. It seemed as if she could almost hear Bodewin's retreating footsteps pounding along down the trail. The rumble of a car running out from the tunnel drowned the fainter sounds. The iron rails resounded as the car traveled swiftly down the track. — Was that a man's voice calling in the woods? Now came the crash of the car-

load over the dump. Why did they stay so long at the dump-station! She waited and listened mechanically for the roll of the returning car-wheels.

Why did Bodewin remain so long away — and why, in the meantime, was that car still waiting at the dump-station! She shivered and went into the house.

Bodewin had caught sight of the figure he was in chase of as it passed the light at the mouth of the tunnel. She was running wildly; the shawl had dropped from her head, and he saw that it was Babe. Should he let her go? He hesitated; then his heart smote him for the desolate young figure flying to the woods for shelter like a hunted creature. What man has not a tenderness for the woman he suspects of a hopeless attachment to himself — and Babe must be in trouble. Perhaps she had come with an intention of asking his help, and seeing him so preoccupied with another woman, had in her mad, foolish pride flung herself away from him into the night and the forest. She should not go in that way. He had hesitated but an instant, and now followed with greater speed, — down the steep, dim slope of the woods, slipping and stumbling. She was still some distance ahead of him. Now she fell, but was up and on again faster than before. He was close upon her, had called her by name, when she turned and looked back at him, motioned him back with a gesture of her arm, and then, doubling suddenly, she flew along the unused trail across the foot of the dump. It was scarcely wider than a man's two hands. Bodewin heard a car rumbling out from the tunnel — "Babe!" he shouted. "Come back, for God's sake! A car is coming!"

She was nearly half-way across the dump. Bodewin called and waved his arms frantically to the man above. The miner was running behind his car, and the noise of its wheels drowned Bodewin's cries. He started after Babe by the same impossible path she had taken, but at that moment the car reared on its pivot, and the avalanche came. The greater mass of earth clung to the slope of the dump, but stones and pieces of rock leaped and pelted and bounded down the steep. They fell all about Bodewin, but he was not conscious of being hurt. He slid off the trail, and down among the débris below he crawled about, searching for Babe. He found her lying as she had been hurled from the path by the stone that struck her in the breast. He spoke to her as he raised her in his arms and asked if she knew him. She assented with a motion of her head.

"Is there anything you wanted of me, Babe? Tell it me now, if there is, before I go for help."

"I don't want help," she said, speaking with short breaths of pain. "Nobody can help me."

"Don't say that, Babe. Where is your hurt?"

"It don't matter," she panted. "The hurt don't matter. Come closer." She put up her hand to his face. He bent lower to hear her difficult sentences. "Say you won't tell who I am!" she whispered. "Let it be like I was a stranger to you. If Dad finds me out — he'll 'low 't I was follerin' after you. I never went back that night — I come on alone through the woods — but I never meant to give you trouble. I 'lowed to see her jest once. — Now I'm done. This is the best way out of it. — Only say you'll be like you an' me was strangers! — Strangers!" she repeated, and her voice broke from its hoarse whisper into a cry.

Bodewin shuddered. "Don't ask me that, Babe, for God's sake! That would be impossible. You don't see how useless it would be. — But, child, you are not going to die." He spoke wildly, with the horror upon him that she was dying already, and help so near. She did not speak. Her eyes were losing their expression — her breast heaved strangely, and one hand that lay on the ground moved like a wounded bird struggling in the leaves. Bodewin knew that he would give the promise. The cold sweat pricked out upon his forehead as he stooped his lips close to Babe's ear.

"We will be strangers, Babe. No one shall ever hear of you from me — not if it costs me my good name," he groaned to himself.

Still she did not speak. — Still the fluttering hand and the long, struggling respirations. — He clasped her hand. "Babe, do you hear me?" The hand closed upon his and tightened with the hold of death upon life.

THE miners off duty for the night who were lounging about the boarding-house steps, heard Bodewin's cry — as Josephine fancied she heard it, piercing the rumble of the car. They discussed the sound for a moment and then hurried down into the woods in the direction from which it came. It was a lifeless burden they carried up the hill. Bodewin walked behind it, wiping the blood from his cheek where a stone had cut him, making a slight wound. As they came out from the blackened wood, and the sky arched clear overhead, he looked up and saw Antares shining, a point of light, close to the moon's bright side. Bodewin did not yet know his fate.

Two hours afterwards Mr. Newbold sat on the piazza with a cigar which he was trying to smoke between his fingers. Josephine

walked softly up and down ; from time to time she looked at Bodewin, as he sat on the steps, his head between his hands. No one had spoken for many minutes. At last Josephine stopped behind her father's chair.

"Papa, do you think I may see — her — before they take her away?"

"If you ask what I think — I have told you already — it is no place for you."

"I should think it was any woman's place," said Josephine.

"There have been women enough, Lord knows. The room was full of them till the doctor turned them all out."

Mr. Newbold's temper always suffered when his sympathies were attacked. They had just been subjected to an unusual shock. The affair, besides, was a most unfortunate one for the mine. The Eagle Bird was notorious enough already, in all unprofitable ways.

"Will they take her down to the camp to-night, Bodewin?" he asked, raising his voice a little that it might penetrate Bodewin's abstracted mood.

"Yes," said Bodewin, without looking up.

"How will they take her, do you know?"

"The undertaker's wagon, I suppose."

"Papa," said Josephine, laying her hands softly upon his shoulders as she stood behind him, "why do you let them take her away? Why not let her friends find her here, among friends?"

"What are you talking about, Josephine?"

"I am asking you not to let that young girl be taken down to the camp, for everybody to look at. She was laid here at our door; let us take care of her."

"Don't be silly, Josephine. What do you call *our door*? What have we to do with it, except to regret it as a most shocking and unnecessary accident? I don't myself understand yet how it happened." Mr. Newbold cast an irritated glance towards the motionless figure on the steps. "Besides," he continued, jerking his chair forward a little on the painted floor, "she has not been identified. No one knows what sort of a story she may have attached to her. It looks very peculiar, to say the least."

Bodewin went down the steps and walked away towards the stables. He had got his old horse back again, with the scar on his hip from Tony Keesner's bullet. He went out to him, as to the only creature who could give him comfort that night. The faithful old comrade who asked no questions, who had never doubted or disowned his friend. He felt for the bony white nose in the darkness. Baldy recognized his master's step and his touch, though he had not spoken. He greeted him with sedate whinnys, backing about in his stall

to show his readiness for a night-ride if his master required it of him.

Josephine on the piazza was saying to her father: "Papa, do you remember the cabin in the woods I told you of, that Mr. Craig saw when he was lost,— and the wonderfully pretty girl? Is this girl beautiful?"

"Remarkably beautiful, I should say, for that class of girl."

"There cannot be so many such beautiful girls in a place like this."

"She may not belong to this place."

"Papa, I think I must see her. She might be the same one, you know."

"I should think Craig would be the best judge of that. He will see her to-morrow. However, there is nothing to prevent your seeing her, if you want to,— only don't ask me to go with you."

"Is any one with her?" asked Josephine.

"I believe there are some men waiting in the office. They have put her in the next room — Reed's bedroom. By George, if I were Reed, I shouldn't half like it."

Josephine went down to the door of the office and knocked. Two or three men within ceased talking as she entered. One of them rose and laid down his cigar. This was Mr. Reed, the assayer and engineer of the mine.

"I came to see the young girl who was killed," Josephine said hurriedly, feeling half ashamed of the intention, now she was about to carry it out.

"The body is in here, Miss Newbold,— please excuse the looks of the room," Mr. Reed said politely, as he opened the door. He was about to follow her in, when she hurriedly thanked him and begged to be allowed to go in alone.

It was a small room with a low, board ceiling, painted white; the walls were merely wooden partitions, covered with hangings of a dark-red calico. Half of the room was occupied by the bed. A lamp on the floor behind it threw its shadow hugely over the wall and up on the ceiling above. In this shadow Josephine saw a motionless woman's form, partly covered by a shawl. The dust of the pass and the soot of the burnt forest were on her garments. Her travel-worn shoes were on her feet. As to her beauty there was no doubt. She lay on her back, at her fair length, her face turned a little aside showing the curve beneath the chin and the straightened line of neck behind the ear. The shadow of long lashes hid the sightless parting of the lids. Her long braids of hair, golden, with a silver light on it, were brought forward across her flattened shoulders, following the curve of her breasts and slipping out of sight between her arms and grandly sloping hips.

There was all the tacit, slumbering pride of Babe's personality in her death-pose. A princess lying in state could not have mutely commanded more respect than this victim of ill-conditions at the climax of her life's defeat.

It was impossible not to feel that some remnant of consciousness must linger here to suffer from the intrusion of a stranger's pity. It gave Josephine an almost hysterical sensation to think of the crowds that to-morrow would press around this form of sacred maidenhood, and stare at its beauty, and wonder at its history. Something that was not love nor pity, only a blind yearning of the human towards the human, across the impassable barrier, drew the living girl close to the dead. She laid her arms on each side of her, on the bed, her heart beating close above the one that was still, her breath warm on the white, half-averted face. She uttered no sound, but incoherent sobbing exclamations were struggling in her breast. The link between the lives of these two women, strangers to each other and subject alike to conditions others had made for them, was only made stronger by Babe's death.

Josephine stood awhile outside of the office door, looking out into the gray, melancholy moonlight. She saw Bodewin at a little distance, coming towards the house from the stables, walking unsteadily, with his head down. His unconscious figure seemed to bring upon her, all at once, a sense of all the unknown human misery that presses upon young lives and brings a sudden home-sickness in the midst of friends, and a pang of loneliness to the summer night. She burst into tears. Bodewin had seen her. He saw that she was weeping. He came to her quickly and took her hand in his. He knew where she had been.

"Don't cry so," he said. "There is so much trouble in this world that is worse than death."

"I know it—I feel as if there was trouble all around us to-night." She began to sob again.

"Not your trouble, I hope," he said, and then he murmured helplessly, "God bless you!" He lifted her hand and kissed it. The action startled her into stillness.

"Will you look at me?" he asked, still holding her by the hand. "Can you see my face?"—he turned it to the light.

"Yes," she said, trembling.

"Do I look like a man you could believe in, if his best friend deserted him,—if he were hunted for a villain?"

"Yes," said Josephine again.

His hand closed hard upon hers. "God bless you," he said again.

He walked beside her in silence to the steps of the porch, then he looked good-night or good-bye without speaking and left her. She saw him go back to the door of the office and sit down on the low step, in the moonlight.

"He does not know her," she said to herself; "yet, if he looks so when I am dead, I shall be satisfied."

She went to her room and lay upon her bed, in the white soft dress she had put on that evening because it was one of the dresses she had always been happy in,—and Bodewin had come home. She lay there, too miserable to light her lamp and undress herself; but at twelve o'clock the rattle of a wagon coming up the hill roused her. It stopped before the office door. Josephine sat up in bed, shuddering. She made the room light, drew her curtains close, and began hurriedly to take off her clothes. Her face was as pale as the sheets when she lay down in her bed again, leaving the lamp still burning.

She heard sounds below her window. Voices and footsteps of men, the grating of a heavy box pushed over the floor of the wagon, the click of the spring as the tail-board shut. The wagon drove away.

Bodewin walked behind it down the hill, and watched it out of sight along the dim, dusty, moonlit road to the camp.

XXI.

A MEETING IN THE WOOD.

CROWDS came and went the next day and looked at Babe, and no one spoke her name. No one came from the cabin in the wood. Mr. Craig had gone to Denver by the stage at four o'clock, before the Eagle Bird tragedy was generally known in the camp. There were two men who recognized her, but each, for his own reasons, kept the knowledge to himself. One was Harkins, who had arrived that morning by private team from the railroad terminus; the other was Hillbury. He had heard the particulars of the accident from Mr. Newbold.

"And Bodewin says he does not know her," he mused gloomily, when the story was finished.

"He does not say much of anything," Mr. Newbold replied, "but it is evident that he does not know her. It was a shocking thing for him. She was killed before his very face."

"Why did he follow her?"

"She was lurking around the house, as if she had some business she wanted to keep to herself. My daughter saw her first, crouching down among some boards close to the

parlor windows. She pointed her out to Bodewin, who was on the piazza with her. The girl ran off when she found she was discovered, and Bodewin followed her, very naturally, I think. Haven't you seen Bodewin to-day?"

"No," said Hillbury.

"Well, I'm not surprised he don't want to talk about it. He is all 'broke up,' as they say out here. Harkins is in town, I hear. Came in his usual splendor. Pete Harrison's barouche and best team ordered by telegraph to meet him at the end of the track."

"Yes, I saw his arrival."

"I suppose he has come to look up his 'affidavit men,' as Sammis calls them, for the trial."

Hillbury gave Mr. Newbold a sudden look. He wondered if that amiably discursive gentleman could be aware that he had himself received, that morning, a summons to appear, under penalty of the law, as a witness for the Uinta against the Eagle Bird.

Colonel Harkins had arrived in the morning. He had followed the stream of excitement to the undertaker's rooms and had looked at Babe, as Hillbury had looked at her, in silence. In the afternoon he ordered a horse saddled and rode away over the hills alone, to look at a "prospect" he had thought of buying for some Eastern parties, so he said. The way of his "prospect" was the way to the Keesner cabin, but before he came in sight of it he stopped and looked and listened intently, to make sure he was the only traveler in that part of the forest. While he was taking this precaution, he was aware of a horse's tread, muffled on the sodden pine-needles, but approaching distinctly from the direction of the pass. Harkins began whistling and looking about him at the trees, as if considering their value as timber. The horseman proved to be Tony Keesner,—Tony, more down-looking and sullen than usual, with a fierce spot of light in each of his narrow black eyes fixed on the distance.

"Tony is trailin' somebody," Harkins commented, quietly watching his approach.

Tony was in the mood to resent the unexpected appearance even of a friend. He transferred the gleam in his eyes from the indefinite distance to Harkins's face, without a change of expression.

"How are you, Anthony?" said Harkins, in a soft, grave voice. "How's the cabin, and how's all the folks?"

"Cabin's empty, all but Dad," Tony replied.

"What have you done with the rest of the family?" Harkins asked.

Tony appeared to swallow something hard in his throat. It might have been rage—it

could not have been tears. "They're clean gone; they lit out together las' night. I been huntin' 'em sence sun up; I been clear over the pass to Fairplay."

"You're off the scent, Tony. You're all off. I'm just from camp. Bodewin's there, sloshin' round as cool as quicksilver; and Babe is there. Tony, I've got some advice to give you and the old man, but I want to hear from you first. How did this thing happen?—You must 'a' been d—— careless."

They rode on slowly, side by side, towards the cabin, talking earnestly, Tony in quick hard sentences, dropping like hailstones in the rain of Harkins's words. As they dismounted in front of the cabin and looked about them, each uttered in his own manner his favorite formula of profanity. The corral was empty, the cabin door was shut; the young setter dog howled and leaped against the door when he heard footsteps outside, but no voice from within bade him be quiet. A scrap of soiled white paper fluttered from the crack of the door, in which it had been wedged with a splinter of wood.

Harkins jerked out the wedge and handed the paper to Tony, with the question—"Is that the old man's fist?"

Tony acknowledged his father's handwriting. It addressed him briefly, as follows:

"Tony I got word of her she aint livin I am goen down to Camp to clame the boddy."

Both men swore again, as if it were a kind of rite each felt bound to go through with, under the circumstances.

"How did he go? Has he got a horse?" Harkins asked sharply.

"Yes," said Tony, without moving his eyes from the paper in his hand. "He's took the black."

"Git after him, then, quick as you can! He couldn't have got word before noon. He's not to show himself in camp, or to open his head till I'm ready for him. Understand? Tell him if he busts up my scheme again with his nonsense I'll see every mine he's got in—and himself, too, before I'll touch one of 'em. Look sharp now! You *sabe*?"

Harkins delivered these words in his low utterance, commanding Tony with his eyes as well as his voice. Harkins had eyes with a heavy fold of the lid projecting over them, ophidian eyes, with a sluggish power in them which better men than Tony Keesner had defied to their cost.

Tony hesitated—"You understand we've got to get even with Bodewin. It ain't waitin' and talkin' that'll do it," he said.

Harkins cursed him. "Haven't I got to get even with him? Do as I tell you, or

by — I'll have the sheriff after the old man and you too. You know who you're talkin' to!"

Tony knew. He put spurs to his horse and galloped away into the woods.

MRS. CRAIG had asked Josephine to stay with her during Mr. Craig's absence, or until Miss Newbold herself left the camp with her father on their homeward journey, which was to include Denver and the trial. Josephine had gladly accepted the invitation for its own sake, and also because she wished to get away from the mine. The light comedy of Mrs. Craig's manner, her domestic confidences and foolish little household jokes, combined with her real sensitiveness and tact, were happily curative in their effect upon Josephine's excited nerves. She found herself laughing weakly, like a fever convalescent, on small occasion. It was a relief to talk about clothes, to put on her prettiest dresses for Mrs. Craig's benefit, and to experiment with her back hair at that lady's suggestions. She gave herself up to be petted and admired, as only a woman can pet and admire another woman who represents to her what her own youth has been or might have been. More than all was it a relief to hear Mrs. Craig talk about Bodewin in a frank, commonplace way which took away something of the painful mystery Josephine's imagination had surrounded him with ever since his return. Mrs. Craig laughed at the idea of anything formidable connected with his reticence about his late adventure. "My dear, Bodewin is just like those little land 'turtles,' we used to call them when we were children. We used to catch them and knock on their shells and call to them to put out their heads; and, of course, they pulled them in as tight as they could squeeze. Depend upon it, your father and my husband, begging their pardons, have been knocking Bodewin on the shell and calling to him to put out his head. I know just how Joe and Bodewin are, together; they each bring out the other's most unpleasant traits. If *we* could have got Bodewin to ourselves when he first returned, I am perfectly certain we should know the whole story by this time. Bodewin isn't a man's man. I don't mean that he isn't a manly man. But he was born to be led by women — into trouble, and out of it. If only one woman could get him into permanent trouble by marrying him, and so keep him out of insane and promiscuous trouble, it would be a great relief to my mind. Bodewin isn't a bit of a genius that I know of, but I always feel for him that kind of unreasoning tenderness that geniuses and willful, lovable children always inspire, — a predisposition which has no justice in it. I know that Bode-

win's wife, if he had one, would have ever so much to forgive; but she would dote on his very faults."

"Perhaps if you had ever tried —" Josephine began, and stopped, coloring suddenly.

"— Being the wife of a genius?" laughed Mrs. Craig. "Oh, my dear," she continued, with a slightly exaggerated gayety, "don't you know those little, reddish-blond men are *all* geniuses? Born to blush unseen, many of them, but that is an accident of fate." Mrs. Craig was talking recklessly, under the unwonted excitement of having another woman of surprising congeniality to listen to her. She would repent before she slept of half that she said to Josephine during the day, and then proceed to pile up more food for repentance the next day. Of two women who are intimate, as a rule, one talks and the other listens. Josephine listened and wondered a little, but was greatly amused and on the whole comforted and led away from her own unaccountable unhappiness.

Mrs. Craig was not so occupied with talking to Josephine that she did not see there was a change in her, since the early days of her visit to the camp. She was more interesting, more complicated. Has she had an experience, her hostess speculated; has she taken one of those sudden leaps of development girls of her age are subject to; or is it because she is away from home for the first time, in this exciting, consuming climate, among conditions altogether strange to her? Or is it because Bodewin never comes to ask her to ride in the valley?

Mrs. Craig was not so easy in her mind about Bodewin as she professed to be. And Hillbury, who had hitherto in her knowledge of him been the most sane and satisfactory of men, had developed an idiosyncrasy on his own account to match the general absurdity of things. He too, while hovering near them, avoided them, as if under a vow.

The quarters of the government survey were not far from the Craig cabin. Mr. Hillbury was obliged to pass its door on his walks to and from the camp, unless he abandoned the ditch-walk for the woods. He thus found frequent occasion to bow to Josephine as she sat on the steps of the porch in the morning, the reflection from the sunny walk making her dark eyes luminous under the shade of her hat, or at evening, in the glow of sunset, her hands and arms bare to the elbow gleaming white in her lap. Sometimes he yielded to a reluctant fascination, and came across the foot-bridge for a few words with her, or even took a seat on the step below her, with the half-protesting air of one who owes it to himself to resist a pleasure within reach. But he

never went in. Mrs. Craig, amused and puzzled by his cautious attitude, teased him a little with playfully reiterated invitations; but Hillbury kept his outward defenses secure against all her neighborly assaults, and the more subtly undermining influence of Josephine's repose,—a repose unlike the bright directness of her manner as he recalled his first impressions of her. Hillbury would not have permitted himself to use the word in speaking of a girl like Josephine, but it was a repose charged with passion, as electricity slumbers in still, deeply colored evening skies. She talked little, but there was a divine intelligence in her face. Her movements were softer, she carried herself less unconsciously, her very hands had a different expression. Her eyes were less widely opened, and even when they rested upon indifferent things were full of an anxious tenderness. When they rested upon Hillbury he looked away, and his blood behaved in a manner which would have interfered with the simplest scientific inquiry. Hillbury kept himself well under his own supervision, and these warnings did not escape his stern insight, but there were times when he rebelled against himself and asked himself why he had not an equal right with other men to make a fool of himself. Had he not already made a fool of himself about a man; why not then about a woman? The privilege of being inconsistent and probably unhappy was denied him by no one but himself. There were other stirrings and questionings in Hillbury's mind at this time. The unlaid ghost of his affection for Bodewin daily and nightly troubled his peace. On his way home along the ditch-walk one evening, close upon the eve of the trial, Hillbury's mind being full of that coming event, he was aware of a man standing on the foot-bridge opposite the Craig cabin, in an attitude that was painfully familiar. Hillbury approached more closely, and stopped when he had reached the bridge.

"Bodewin," he said, "may I have a few words with you?"

"Is that you, Hillbury? You know me then once more. That is kind of you."

Hillbury was not discouraged by the tone of Bodewin's words. "It is possible," he began,—and his fine accent and dispassionate manner at that moment were peculiarly irritating to Bodewin's morbid sensitiveness,—"that I may have done you some injustice in certain unhappy conclusions that have lately been forced upon me. There is strong evidence against you. I have had to admit to myself that it is very strong. But I find I have an obstinate sentiment towards you, which does not rest on evidence. It is this sentiment which appeals to you now. I hope the appeal

may not come too late. It should never be too late to acknowledge a wrong. Have I wronged you, Bodewin? You only can tell me if I have."

Hillbury waited for some sign from Bodewin. None came that could be interpreted as an answer to his appeal.

"Are you unwilling to confide in me? Do you consider the suffering you may be causing those who care for you, by a reticence that leaves such grave questions unanswered?"

"You say you have a sentiment still left for me which does not rest upon evidence?"

"I have. I have been suffering from it for many days."

"God prosperit, then, or else kill it quickly," said Bodewin rather wildly. "I have no evidence to give you."

"You have nothing to say to me, then?"

"Are you my friend, did you say?"

"Are you an honest man?"

"Hillbury," said Bodewin, in his more natural manner, "I would that all men were as honest as I am, except these bonds."

"What bonds?"

"That I cannot tell you."

"There are bonds our sins make for us; there are other bonds which come from our duties. Are you in bondage to your body or your soul?"

"Do you expect me to answer your ghostly conundrums? Wait, and they will answer themselves," said Bodewin, with a return of his bitter flippancy.

Hillbury looked at him sadly, trying in vain to read the expression of his face in the imperfect light, and then went on his way, past the cabin where Mrs. Craig and Josephine sat by the fire and talked of the coming trial.

"You must be *sure* to go!" Mrs. Craig was saying. "I'll never forgive you if you don't take the trouble to go and hear Joe's speech. It is a privilege his wife is debarred from because she is also the mother of his children;—and there is Bodewin's testimony. How *strange* it is that he hasn't been near us!" she exclaimed, suddenly forgetting her caution of many days.

Josephine's sigh echoed the word as she went to the window and looked out. The water wimpled along darkly, under the bridges and past the lighted windows. Bodewin still hung over the bridge rail where Hillbury had left him. His bitterness against Hillbury was intensified by the knowledge that to him in his calm deliberateness were open all the opportunities he felt obliged to deny himself, living, as he was, in the shadow of vengeance. His bonds were heavy upon him. It was incredible to him that Babe had not been publicly recognized. It was incredible that her

father's or her brother's bullet had so long been delayed. Bodewin knew the class of men they belonged to. He knew their unappeasable pride of vengeance; whether it would take the usual form of a bullet delivered at sight or a shameful story that would pursue him with a more deadly aim, or both bullet and scandal, he could only conjecture. In the meantime there was the trial, with Mr. Craig as counsel for the Eagle Bird.

XXII.

THE TRIAL.

THE case of the Uinta *versus* Eagle Bird was called in the afternoon. Mr. Newbold came back to his hotel to dinner that evening in high good humor. Harkins had made no fight at all, to speak of. He had rested his case on the records which Bodewin was ready to prove were not the true and original ones. His lawyer had talked through his nose and put his case before the jury in a slipshod way, on what he called its merits, without giving himself the trouble to make a speech. Thus said Mr. Newbold to Josephine, playing with her coffee-spoon, and dubious as to this easy victory. "This was not the way, surely, by which Harkins had won his ill-omened reputation."

Josephine dressed herself to go into court with her father on the second day of the trial, with a nervous foreboding that it was to be one of the memorable days of her life. Her traveling dress, which she would have chosen to wear for its plainness, had received hard usage in the mountains. She put on instead the black satin with a dark shimmer of beads over the front, which she had worn the evening Bodewin had been presented to her. A little bonnet of gold-colored straw inclosed the crown of her head, and was tied under the chin with black velvet strings. She was buttoning her gloves, and getting very red in the cheeks while doing it, when a servant knocked with a note for her and a message from her father that he waited for her in the ladies' parlor.

"Tell him I am coming in a minute," she said, opening the note. "Oh, wait, please; is an answer wanted to this?"

"No answer, miss," the man replied, closing the door softly.

The note was written in a masculine hand Josephine did not remember ever to have seen before. She knew Bodewin's close, angular characters and Mr. Craig's legal scrawl. She had no other acquaintances in the town that she knew of. The words of the note were:

"If Miss Newbold would not miss a scene of peculiar interest to herself for other reasons than those connected with her father's pocket, she will not fail to be in the court-room to-day."

The note was not signed. Josephine tore it up with the sensation of having received an insult, and dropped the pieces into a tall china jar that stood by her toilet bureau. She took up a fan, somewhat too heavily perfumed, and began fanning herself absently. It was nine o'clock in the morning, but the sun was already hot in the street outside. The windows of her room were open, the blinds darkened, and the noise of continuous passing came in as she had often heard it at home, when they staid in town after the summer heats began; only, instead of the heavy jar and rattle from the pavements it was the more exciting rush of light wheels, and the pounding of hoofs on a hard, resonant road. Perhaps, she said to herself tremulously, it would be better she should not go into court that day; but could she miss this chance, perhaps the last one, of seeing Bodewin!

"What a color you have got!" her father said, looking at her as if taking, for the first time, a dispassionate view of her appearance.

"These hot strings always make my face flush."

Josephine put up her hand to the bow of her bonnet-strings, lifting her chin and letting her lashes fall.

"Why don't you wear something different?"

"This is the only bonnet I have here."

"Wear a hat, then," Mr. Newbold suggested.

"A bonnet is the proper thing, papa. It is more conservative."

"If you want to be conservative, the thing to do is to stay at home."

"I promised Mrs. Craig I would hear her husband's speech," said Josephine, blushing at her own insincerity.

"Craig can't make a speech worth listening to! You will have to write her a lot of lies about it."

"Papa, I *wish* to go. I have always intended to go, since we first talked of the case. It cannot be so very unusual, or Mrs. Craig would not have asked me ——"

"Come on, then; but, by George ——!" Mr. Newbold left his sentence unfinished, except by another look of rueful admiration at his daughter.

MR. CRAIG in his opening speech gave a brief history of the dispute from the side of the defense, and said the defense would prove that the records by which the mine had been sold to Mr. Newbold were copies of the true and original ones; that the record of the original

survey would be produced in evidence and sworn to by the man who made it. He continued, that they could not prove the existing record on file, to have been willfully altered, but they could prove that the plaintiff had had an opportunity so to alter it, and they could also show the plaintiff to have been the author of a measure quite as arbitrary and illegal as the altering of loosely kept public records. They could prove that he had caused a man, traveling peaceably on the public highway, to be seized and forcibly detained out of reach of his friends, or of communication with them, at a time when that man's liberty of action was inconvenient to the plaintiff. Colonel Harkins at this point in his opponent's argument rose and left the courtroom, returning with the Keesners, father and son, preceding him, with a noise of heavy boots, to seats near his own. The elder Keesner was instantly recognized by a number of people in the court-room. Mr. Craig had alluded to him in his speech as one of Harkins's "affidavit men," who had conveniently disappeared when the sale of the mine in his name had been accomplished. His reappearance was regarded as a sign that Harkins had something in reserve for which the unexpected feebleness of his attack had been but a blind, — an impression which made itself felt in an agreeable stir of revived interest.

Jim Keesner's long, wolfish visage looked haggard in the strong light, among faces which showed better conditions. Tony's face was not generally known, but it excited attention for its sullen, picturesque beauty. As he took his seat, his head came between Josephine and her view of Bodewin, sitting at a distance, across the room. She had only ventured to look once at Bodewin, and had not been able to guess from the expression of his lowered eyes and pale set profile what his frame of mind might be.

The Keesners had entered the court-room with that exaggerated sense of isolation under observation which persons unused to a large assemblage of people are apt to have, appearing in one under circumstances momentous to themselves. Tony kept his eyes down, under an impression that everybody in the room was looking at him. When at length he raised them, with a forced air of defiant indifference, he met Josephine's eyes fixed upon him in wondering, startled recognition.

The expression of her face meant nothing to him. He only felt its beauty, with a shock of his savage blood as he had felt it for the first time on the rocks in the blinding sunlight of Mike's claim. He hated her for making him feel the distance between them. He hated Bodewin for being the man who had sat at

her side on the rocks and talked to her with a fullness and ease of expression which might be supposed to please women but could only excite the contempt of men.

Josephine was no longer looking at or apparently conscious of him. Since it was out of his power to produce any other kind of impression upon her, he fell into visions of how he might hurt her with brute force. How he might press the color out of her cheeks with his two hard hands and see it rushing back again with helpless tears to the proud dark eyes. He could see the shape of her arms defined by her close-fitting dress, as she sat opening and shutting her fan. He shuddered slightly and set his teeth, imagining himself crushing their firm roundness in his gripe.

Mr. Craig was closing his speech. "Gentlemen," he was saying to the jury, "what we are obliged to do is to consider the character of the plaintiff in the light of this most characteristic deed. Bear in mind, it was not done as to John Bodewin, but as to any man whom the plaintiff wished temporarily to get out of his way. Had he desired to get him out of his way permanently, doubtless means would have been found to accomplish it. If either you or I, gentlemen, should, in the peaceful conduct of our affairs, be so unfortunate as to get in the plaintiff's way, we might expect to be disposed of as summarily as our witness was disposed of. The plaintiff is well known, wherever speculation in mines is carried on, as a man whom it is not only useless but dangerous to balk in the accomplishment of his schemes. Why? Because he has no scruples that interfere with his pursuit of other men's property. He belongs to the predatory class of men. He has no responsibilities as to his future or regrets as to his past. He glories in his successful crimes. He boasts of the power he claims to have of bending even the law to his purposes. Are we preparing for him another triumph of this kind? We are Western men; we want to encourage Eastern capitalists to seek investments in the West. One way to do it will be to show them that their investments *in* the West can and will be protected *by* the West. The misfortune of one Eastern property-owner will be a warning to a hundred others. It is just such men as the plaintiff in this suit — and not many like him would be needed to do it — who ruin the business of legitimate mining in the West."

Another ill-omened pair of eyes had dwelt upon Josephine's face during a greater portion of the time Mr. Craig was speaking. Colonel Harkins considered himself a judge of female beauty, and decided on deliberate inspection that Josephine's charms had not been overstated by rumor. He was looking

at her when Mr. Craig unexpectedly brought forth the words, "Bear in mind, it was not done as to John Bodewin." The Colonel was not a sensitive observer, but he could not fail to see that Josephine's face turned scarlet, as if her own name had been suddenly called in court in an oratorical tone of voice. He saw that she kept her eyes upon the speaker's face with a slight knitting of the brows, while the flush in her cheek subsided, revived again, and faded into a marked paleness. "*She* is tender in that quarter, too.—What the devil ails the women, to take after a cold-blooded sneak who can't tell which girl he wants till he has lost them both!" The Colonel's large, light felt hat reposed on the angle of his crossed knees. A crimson rosebud rested against the silk lining of his coat-lapel. His jaws projected squarely on either side of his Napoleon III. moustache and imperial, grizzled like the short, stiff hair on his massive head. He nursed an unlit cigar between his lips, and occasionally changed it from one corner of his mouth to the other, or tipped it sarcastically upwards towards the blunt beak of his nose. He listened, with perfect equanimity, to Mr. Craig's theory of his character and exposition of his methods; this was, in fact, one of Harkins's great days.

Sammis, looking brilliantly sunburned, in a new suit of clothes, was the first witness for the defense. He testified to the burning of the Gem Saloon, where the records of the camp had been kept in the days of its infancy. To the fact that Harkins had the records in his undisturbed possession for a day and a night, and part of the following day. That the proprietor of the Gem Saloon was known to have no insurance on his property and no ready money. That, in spite of having lost everything, he was notoriously better off after the fire than before it. Sammis bore his cross-examination well; but a friend of his who remembered some suspicious circumstances connected with the fire, found, under the opposite lawyer's questioning, that he had remembered too much. Another gentleman, who testified as to the position of the boundary monuments and declared that they had been changed within the time of his residence in the camp, was brought to the verge of tears by the unsympathetic manner of the plaintiff's counsel and the confusion in his own dates. But this gentleman had escaped Mr. Craig's supervision during the morning hours and had stimulated his memory with unwise potations.

Bodewin took his place on the witness-stand in a general silence of expectation. The real contest was now understood to have begun.

He testified that he had surveyed the Uinta and Eagle Bird claims in the spring of 1877.

That he had believed Harkins to be the owner of both claims at that time, although the record of survey for the Eagle Bird was made out in the name of James Keesner.

The records of both surveys, preserved in Bodewin's note-book, were produced and sworn to by him and examined by the jury.

Bodewin was shown a copy of the present record, and swore that it was not a true representation of the two claims. He explained the points of difference, and the new record was also given to the jury to compare with the original one.

One of the jurymen asked how a change could be made in a record on paper without its being evident on examination. Bodewin replied that a new record could be substituted, giving an entirely different description of the same property, the records of the camp at that time not having been bound together, but kept loosely, each one folded separately, in a candle-box, as a former witness had testified.

Here Mr. Craig made a pause, during which the witness appeared to be slightly restless.

"Mr. Bodewin," the counsel for the defense began again, "you started to cross the range on horseback on the morning of the 5th of September?"

After a moment's hesitation, as if considering the date, Bodewin answered: "Yes."

"Was it your intention in starting on that ride to appear as a witness on this case, then called for the 6th?"

"It was."

"Why did you not fulfill that intention?"

"I was prevented from doing so."

"State the nature of the impediment, if you please."

"It was of the nature of two men, armed with pistols and rifles."

"With these weapons pointed at you?"

"The pistols, yes."

"And by these means they induced you to change the course of your journey?"

"They did."

"The inducement was sufficient, I presume."

Mr. Craig had asked his questions in quick succession, in his nervous manner; Bodewin replying in a much lower voice, with a curious, defensive expression in his heavy-lidded eyes raised not quite to the level of Mr. Craig's.

"Were these men known to you?"

"They were not."

"Had you ever seen them before?"

"I had seen one of them once before without knowing his name."

"State where on the road between here and the camp you met with this impediment."

"It was not on the direct road between here and the camp."

"Where was it?"

"It was on the trail which joins that road on the other side of the pass."

"You were then on your way to the pass?"

"No." Bodewin could not resist a pause, during which he enjoyed Mr. Craig's ill-concealed discomfiture, and then added calmly: "I had nearly reached the foot of the pass when I was overtaken by one of these men, who induced me to return with him to a spot in the timber where, he said, a man lay wounded by the falling of his horse, who had an important message for me which he would only deliver in person. I went back with the supposed messenger's messenger, by the way of this trail, found a man lying on the ground apparently helpless and in pain; I dismounted to receive his message and was then easily made prisoner."

Bodewin was answering with reckless promptness, so far as the condition of his promise would permit. If Mr. Craig, in the insanity of his zeal, insisted upon putting questions his witness could not or would not answer, he must take the consequences.

"What was the nature of that message they trapped you with, Mr. Bodewin?"

"It was of a personal nature."

Mr. Craig did not press the question, though inwardly raging at Bodewin's impertinence, and longing for an opportunity to punish it.

"Were you forcibly prevented from returning to your home and occupation during all the time you were absent?"

"That may be a matter of opinion."

"How do you mean?"

"I was constantly kept in sight by one or both of my keepers, they carrying weapons, while I was unarmed. They informed me that if I kept quiet I would not get hurt, the inference being that if I did not keep quiet, I would."

"Under these circumstances you naturally kept pretty quiet."

Bodewin did not smile at or reply to this pleasantry.

"Was Colonel Harkins's name mentioned at any time between you and your captors during the time of your confinement?"

"It was."

"Give the conversation or conversations as nearly as you can recall them relating to Colonel Harkins."

"I remember but one conversation in which his name was mentioned. I cannot repeat it word for word."

"What impression did it leave on your

mind as to Harkins's connection with your capture and imprisonment?"

"I have not said that I was imprisoned —"

"Your restraint, then."

"It left the impression that Colonel Harkins was solely responsible for both."

"Where did they run you off to?" one of the jurymen asked.

Mr. Craig interposed, saying that his witness did not wish to criminate those persons who had carried into execution the plan of his abduction, regarding them, with characteristic magnanimity, as tools merely, in the hands of a power much more dangerous than themselves.

"There is a humane breadth of view," Mr. Craig continued, permitting himself an attempt at sarcasm, which he fancied would escape everybody but the object of it, "a humane breadth of view which but few of us can boast of, which enables us to sympathize even with those who have tried to injure us, when we understand and pity their circumstances. We look upon them as injured themselves, in proportion as they are injuring us, by their enslavement to an evil influence —"

"Oh, that's all nonsense!" said the lively jurymen. "Tell us where they hid you!"

The court protected Bodewin in refusing to answer the question, perhaps because it interfered with the court's dignity for jurors to assist at the examination of witnesses; but an unfavorable opinion was inevitably formed of the witness, as a person of high moral pretensions and unaccountable reserves, whose own actions would require close watching.

This opinion prevailed thenceforward among the men who were present, but the women generally respected Bodewin for keeping his own secrets and protecting his enemies. They were predisposed towards him for other reasons that would not sound so well in statement. They liked his youthful slenderness of person, the easy way in which he wore his well-cut clothes. They observed, those who were nearest to him, that his hands, although nearly as brown as an Indian's, were long, smooth, and refined-looking. They liked his Eastern accent, his quiet answers, and the slumbering intensity of expression, impossible to define, in his heavy-lidded, grayish eyes. They hoped he would come off well on the cross-examination.

The court now took a recess.

RECENT ARCHITECTURE IN AMERICA. VI.

CITY DWELLINGS. II.

HOUSES OF F. L. HIGGINSON AND C. A. WHITTIER, BEACON STREET, BOSTON.

IN my last chapter, after referring to a few of the most conspicuous among the new homes of New York, I had but brief space left in which to say that even our average homes are also beginning to show marked improvement.

In nothing is this improvement more apparent than in the effort that is being made to use good and varied materials, and to treat each of them so as to reveal and to accentuate its best possibilities. We are at last trying to shake ourselves free from the monotonous tyranny of mechanically "pointed" red brick and mechanically smoothed and devitalized brown-stone. We handle our surfaces more vivaciously, and we proportion our units more artistically. It is not wonderful

that in the first reaction against lifeless nullity we should have run a little to the opposite extreme of over-ruggedness and over-emphasis, not only, as I have already said, in our monumental work, but also in our domestic. Spirit and vigor exist, for instance, in the basement of the house on Fifth Avenue near Thirty-fifth street; * but they have been achieved in a rather too impetuous fashion. The stones are perhaps too large to be "in scale" with the general proportions; and they are certainly too rudely wrought to be in keeping with the quiet refinement secured in other parts, or with the delicate nature of the decoration. Compare this basement with that of the Columbia Bank, already once cited as a model, and we see a distinct progress in

* Here, as elsewhere further on, I am obliged to refer to illustrations that were given with the preceding paper.

MR. J. J. HIGGINSON'S HALL, 16 EAST FORTY-FIRST STREET.

work that has come at short intervals from the same office.

Our newest houses prove, no less, that we are beginning to do something better with our beloved high stoop than send it up straight and steep and narrow to the door. Some of the entrances on Fifty-seventh street are interesting examples; there is a good one on Madison Avenue not far below the railway station; and there are others in certain recently remodeled façades in the lower portion of Fifth Avenue.

Again, we find cheering promise in our decoration. Look at the ornament of No. 724 Fifth Avenue, and see how artistic it is. If anything, it is too delicate, too quiet, too refined. But these are the best of faults; and they would be even if their opposites had not so long been our crying sins.

Boston too has grown ambitious of late years, and now shows many varieties of conspicuous good and bad. The bad need not detain us, yet even thus we shall have but

little space to note the good. The New York high stoop is becoming almost as frequent as the local type, and is often combined, more or less successfully, with the bowed front. Boston architects are fortunate in their beautiful red Longmeadow stone, and diligent in their efforts to make the most of it, both by itself and in combination with brick. Here as well as in New York the first revolt against mechanical smoothness led to the use of units too large in size and too unrefined in finish. There is a certain brutality of effect about many houses in the new "Back Bay" streets that springs from no defect but this. But here too there has been great improvement very lately—as, for example, in some houses on Commonwealth Avenue built by Messrs. Rotch & Tilden, where we see units which are suitable in size, and which in their finish hold the proper middle-ground between insignificance and rudeness.

Messrs. Sturgis & Brigham and Messrs. Peabody & Stearns should be cited for their

PLAN OF MR. CHARLES KNEELAND'S HOUSE,
EAST FIFTY-FIFTH STREET.

numerous attractive façades in which successful efforts after a sensible novelty in design reveal themselves. A type, for example, which we already see quite often has a bowed front running up through two or threestories and surmounted then by a deeply recessed *loggia*, agreeable to use and most effective in its powerful shadow.

In other new dwellings we find a return to last century models — colonial or English — which savors almost too strongly of direct imitation. The colonial type is excellent as a point of departure rather than as a pattern to be copied literally. Our ideas, our tastes, our habits of living, *ourselves* — all have changed very greatly in the hundred years. And something of our wider views of life and art, of our more conscious desire for beauty and brightness, of our gayer, livelier — and more sophisticated — way of living, needs to be expressed in our domestic architecture.

PLAN OF DR. ROTCH'S HOUSE, COMMONWEALTH AVENUE,
BOSTON.

If we wish to see perhaps the very simplest good houses that have been built in Boston, we may look at a group in red brick erected by Mr. Emerson on Huntington Avenue, near Trinity Church and the Art Museum. And then, to take a very wide step and reach the other extreme, we may turn to the two great houses on Beacon street that are illustrated here — the one to our left being Mr. Richardson's, the other Messrs. McKim, Mead & White's. They differ greatly in style and treatment, but each has considered the other in its own growth, and consequently is helped, not hurt, by the presence of its neighbor. Mr. Richardson's is the more striking of the two, and there is always a fervor about his work that seduces the would-be critic. But it has been called a trifle too "mediæval" in its massiveness and in the element of grotesqueness introduced into its ornamentation. Perhaps it is true that the expression of the other is better suited to a modern home — to the voicing of that modern life whose ideal is elegance rather than physical force. So charming a house is it, indeed, that one longs to give it unstinted praise. And one might if only the porch

MR. JAMES HAVEMEYER'S EXTENSION ROOM, 50 WEST THIRTY-SEVENTH STREET.

worked in better with the general design — looked more as though it had taken its place and shape by virtue of an unmistakable impulse of artistic *growth*.

In Washington a very large amount of domestic building has been done during the last ten years. The land is cheap, and the streets are so laid out as to offer an unwonted variety of sites. But one can hardly say that the very best use has yet been made of these advantages. Many houses are generously and agreeably planned, but all their charm must be sought inside. Part of their exterior unat-

tractiveness is often attributed to the fact that Washington is a poor and economical town as compared with its rivals north and west. But such an excuse is quite invalid. Even though brick has been the main material, even though there has not often been much money to spend on decoration — even so, there is no reason why Washington houses should vary almost exclusively between barren nakedness and rather frantic essays in “Queen Anne.” Yet we may note a few exceptions, and note that they are increasing in numbers from year to year. Certain very simple brick structures are as-

STAIRCASE IN MR. C. T. BARNEY'S HOUSE, 10 EAST FIFTY-FIFTH STREET.

suming not unpleasing shapes, as, for instance, Mr. Hornblower's little apartment-house, the "Everett," on H street. And Mr. Richardson has built a great brick house which is impressive because very simple and very strong, but looks a trifle eccentric — perhaps because the latter good quality is somewhat over-emphasized. Mr. Richardson's manner is, in truth, almost too monumental to lend itself gracefully to domestic work. Yet he is always much more than well worthy of attention, and we

are interested to see what he will do with two other houses he is building now among the respectable old homes on Lafayette Square.

It would be an endless task did I try to go through our Western towns, noting all the variety of their efforts and all the tokens of progress they reveal. Many influences are striving in the West for mastery. English and German Gothic, French and German Renaissance, "Queen Anne," the Boston "swell front," the New York and also the

MR. C. T. BARNEY'S LIBRARY.

rural "vernacular,"—all these dwell side by side, if not in harmony, at least in mutual toleration. The speculator and contractor have not set the fashions here; the Western spirit is peculiarly prone to investigation, and Western towns offer a very wide field for experiment, since closely built blocks are hardly more common than spacious avenues lined by detached houses of great size and cost. In the general effect of these latter streets there is often much stateliness; and many individual houses are stately too, even when their details do not bear examination. As might be expected, we seldom find a slavish adherence to precedent, but very often a wildly eccentric "individuality" or an ignorantly audacious eclecticism. Yet I think the present tendency is toward the middle course of scholarly adaptation. I think each year shows more simplicity of conception, more reticence of manner, more artistic feeling in matters of detail. I may note especially that the great

roofs which have always been beloved "out West" are getting to assume quieter, more organic, and more reasonable shapes. I have no space to cite examples of success, but I cannot pass without a word Messrs. Cobb & Frost's new Union Club House in Chicago. It is not faultless as a composition, but it is massive, simple, quiet, dignified,—a structure we would gladly take in exchange, I am very sure, for any New York club-house, whether "vernacular" or "Queen Anne" in style.

And now to speak of our domestic interiors. If anything could be stupider than our old average exterior, it was certainly our old average interior. Yet it has been improving of late years with even swifter strides, and has now attained to a completer excellence. Here, again, we long excused our laziness with complaints as to the difficulty of a problem which certainly was not easy, yet was by no means so unmanageable as we said. Surely we ought sooner to have done something more than we

MR. CHARLES WHITTIER'S HALL, COMMONWEALTH AVENUE, BOSTON.

did even with a plan twenty-five feet by seventy — something more than to make the narrowest possible dark hall with the narrowest impossible staircase, and to put three equal-sized rooms one behind another. Nor need we so have forgotten all rules of proportion as to believe that a very high ceiling was intrinsically “elegant,” and must be secured no matter what our other dimensions. We might more properly have decided that if there is one thing a ceiling ought *not* to have, it is excessive height; better far that it should be too low, especially as with this decision would have come an amelioration of the chicken-ladders we were pleased to call our stairs. Nor would it have been difficult to improve these stairs still further, even though the rest of the plan had remained unaltered. Look at our illustration of a hall at No. 16 East Forty-first street, and we shall see how an ordinary house has been altered by Messrs. McKim, Mead & White. The stairs have simply been torn down, started again from the back, and turned on a landing half-way up. And the result is — an entrance space of decent width; a pretty effect of carved screen and balustrade and archway instead of the ugly old perspective; complete privacy for those who in using the stairs are no longer obliged to pass the entrance and the drawing-room door; and, consequent upon this last,

a possible omission of that servants’ stairway which was so often a most harassing necessity.

Our plans will show how very much more than this has been accomplished in building new from the beginning. No. 724 Fifth Avenue is only a twenty-five foot house, but it looks a great deal larger when one is in it, and offers infinitely more of comfort and of beauty than we might think possible. The entrance-hall is a mere passage the width of the doorway. The front room, which thus gains greatly in breadth, is reached by a door at the end of this passage, where we step from it into the true hall, which fills the center of the house and has a great fire-place on one side and on the other a broad stairway with comfortable landings. But I will not describe what a drawing of the plan alone could tell with clearness, noting only the novel treatment of the back stairway, which is entirely built in and concealed from all save those who use it. The whole interior is transformed, and the wonder is that it took us so very long to see how such a transformation might be wrought.

A house by the same architects at No. 10 East Fifty-fifth street shows a similar arrangement of central hall and staircase. But as the lot is wider, the entrance-passage is broader, is no longer merely decorated but furnished too, and gives immediate access to the drawing-room. Such halls are sufficiently lighted

MR. NICHOLAS ANDERSON'S FIRE-PLACE, WASHINGTON.

by day through a skylight over the well, and at night are the most charming rooms of all. Many other houses of average size have been built upon the same general idea both by these architects (Messrs. McKim, Mead & White) and by others, and for a good result even twenty-five feet of width are not essential.* For none of all their many innovations are we more grateful than for the honor they pay the staircase. It may be, it always should be, and now it *is*, the very backbone of the house, not only as to use but as to beauty too. Yet for years we suppressed and compressed it into a shabby hideous instrument of torture.

In a physician's home domestic life and professional life should be separately accommodated, and the apartments devoted to the one should be isolated from those devoted to the other. Is it possible to do this within ordinary city limits? Or, if possible, will not space be too largely sacrificed? We might

answer doubtfully did not Messrs. Rotch & Tilden show us, in a house on Commonwealth Avenue in Boston, a quite ideal resolution of the problem.

It is a twenty-five-foot English-basement house, with an entrance-passage in the middle that admits to a waiting-room on the one hand and to a consulting-room on the other. At the end of the passage is the true house-door beyond which no patient comes. This opens into a central hall with its fire-place and broad stairway well lighted from above. Beyond is the dining-room, the drawing-room being as usual upstairs. The back stairway is in an inclosed space reserved at one side of the hall—a doubly advantageous arrangement here, since by its means the physician can pass from his consulting-room to a library above, and above this once more to a bed-chamber. When he desires—at night, for instance, or with infected clothing—he is thus able to live and move and have his professional being not merely without

disturbing his family but without passing through those parts of the house that are used by them. When we realize all this, and that there is not a corner lacking ample light, can we say that *nothing* is to be made even of an average house in the middle of a block?

The planning of a larger house may seem a less vital and a less difficult matter. It is certainly true that unintelligence will not here produce results intrinsically so bad. But its results will be just as bad when compared with the possibilities which offered—will sacrifice just as large a relative proportion of possible comfort, light, and beauty. More ingenuity and variety were sadly lacking in the arrangement of even our largest houses, but are conspicuously displayed in most of them to-day. We shall see this more clearly when our country homes are considered.

There is another important subject upon which too I need not dwell just now—the

* See, for instance, the plan herewith given of the English-basement house built by Mr. Haight on East Fifty-fifth street.

DETAIL OF MR. ANDERSON'S MANTEL.

called in the carpenter to insert flimsy pine doors and meager machine-made moldings, the marble-cutter to set a clumsy stolid white mantel, and the plasterer to affix a ghastly cornice and to sweep a flourish of absurdity in the middle of the ceiling. We did not even remember the word decoration. We built our houses and we furnished them—that was all; and inside, *building* never meant anything accessory to the mere rude fabric. Even when we began to long a little after beauty, even when we first made our furniture more attractive, the same ignorance prevailed. We did not try to beautify our *house*, we only tried to fill it with beautiful things; and our subsequent attempts at real decoration were for a while superficial only—were demanded of the painter and the paper-hanger, not of the architect. It is only within years so few that we can almost count them on the fingers of one hand that we have tried to *build* interior beauty, to make it part and parcel of the house itself. But in our best work to-day it is the architect who has imagined the general effect and has planned for it in every detail—in the richly screened or

subject of interior decoration. Certain articles are ere long to follow these in which such decoration will be treated specially and fully, and in which, I may add, a particularly complete description will be given of Mr. Villard's house on Madison Avenue—undoubtedly the finest interior we have to show, and one that would do us infinite credit if shown beside the best of any land. There are, nevertheless, certain remarks which must here be made. It is in itself a fortunate sign that I can say they *must*; for it is a sign that our interior decoration is a part of our *architecture* strictly so considered. A necessary state of things, it may be thought, and one which in itself is not much to boast of. Yet it was not so necessary but that we entirely escaped from it during very many years. The architect was utterly banished from our interiors during all the time that divided our old houses from those of the very recent renaissance we are now reviewing. When he had built his walls he seems to have been quite satisfied. And we were quite satisfied when we had

CORNER CUPBOARD IN HOUSE OF MR. F. F. THOMPSON,
283 MADISON AVENUE, NEW YORK.

balustraded staircase, in the wood-work everywhere, in the mantels which are a portion of the wall and not a mere excrescence, in the colors and patterns and materials for wall and ceiling, often in the shapes and colors and materials of the furniture itself. The good impulse has already descended, indeed, even to our speculative building—though, of course, it is not apt to reveal itself here in the most delightful manner. We have space for but one or two illustrations, and for no commentary whatsoever. I will only explain that the “extension room” of the house No. 50 West Thirty-seventh street is shown, not because of any great excellence, still less because it is at all characteristic of the work that Messrs. McKim, Mead & White enchant us with to-day, but simply because of its interest as one of our very first tentative essays in the right direction. The hall of No. 10 East Fifty-fifth street is a better example of their work. The Boston hall is theirs also—rather inadequately pictured, I am sorry to say; and the mantel is from Mr. Richardson’s house

in Washington. Let me only add, lest I should be grievously misunderstood, that I do not in the least undervalue the work that has been done by our decorators who are *not* architects. Certainly it is only by the aid of such that the architect is likely to succeed in his higher decorative efforts. No architect—in these days when artists are not Michael Angelos for versatility—can himself supply what a painter like Mr. La Farge will give him, or a sculptor like Mr. St. Gaudens. But, on the other hand, neither Mr. La Farge with his beautiful color in paint and glass, nor Mr. St. Gaudens with his beautiful form in bronze and stone, can do his best if the architect has not prepared the way for him. Such art as theirs, moreover, is a luxury for the very few, while architectural decoration is within the reach of every man who builds himself a home. For to be sufficient it need not imply the introduction of any unavoidable feature or any unnecessary detail. It need only mean that

DRESSER IN MR. HORACE WHITE'S HOUSE, 51 EAST FIFTY-FIFTH STREET.

each obligatory detail and feature, no matter how small or simple, has been included by the architect in his conception of the structure.

Many sins of omission rise before me as I try to bring these long pages to a close. For example, I have not even mentioned our hotels and our huge apartment-houses. Perhaps, however, the less said of them the better. They vary, writes an epigrammatic critic, “between the Scylla of monotony and the Charybdis of miscellany.” Scylla is, without doubt, the better haven. The Astor House and the Fifth Avenue Hotel seem at least more peaceful than those enormous up-town structures that are enwrapped in miscellanies at once riotous and puerile and vulgar. I know that the problem offered by huge buildings of the kind—with their twelve stories sometimes, and their innumerable small rooms within—is supremely discouraging. I know, too, that a large expenditure of pains and skill has often produced very good results in

the interior. Nor do I presume to say that there may not be good exteriors among the multitude that have been built in these latter years. I would only testify that, so far as I have seen in New York and elsewhere, there is but *one* which merits praise. This is Mr. Hardenberg's "Dakota," on the west side of Central Park.

And now I will give a final word to a very simple, plebeian little house lately built in New York on Greene street, just before it ends at Clinton Place. For I want to enforce once more the virtue — nay, the charm — that lies in mere solidity. Why is it that even when our walls are really quite thick and strong enough, they so often look like flimsy screens? It is partly because they are not well composed, but largely, also, because their strength is not shown outside, because we put the sash-frames close up to their outer

surface, leaving no visible depth of wall and preventing all play of light and shadow. The deep "reveals" — excellent technical name, since they show so much we want to see — of our iron façades may be cited as a virtue to set against their many sins. But it is a virtue often wanting to work that should in every way be better. We find it, though, in this Greene street house, and all the more conspicuously since there is no decoration to assist it. The windows — square and round-headed — are nicely proportioned, the wall-spaces are broad and quiet, and the string-courses are structurally expressive. But the effect would be far less satisfactory were it not for the unusual depth of the reveals and the consequent bold marking of the shadows. If something better could take the place of the present sordid little steps, this would, in its own modest way, be a very satisfactory little house indeed.

M. G. van Rensselaer.

ONE TOUCH OF NATURE.

CRUEL and wild the battle :
Great horses plunged and reared,
And through dust-cloud and smoke-cloud,
Blood-red with sunset's angry flush,
You heard the gun-shots rattle,
And, 'mid hoof-tramp and rush,
The shrieks of women speared.

For it was Russ and Turkoman,—
No quarter asked or given;
A whirl of frenzied hate and death
Across the desert driven.
Look! the half-naked horde gives way,
Fleeing frantic without breath,
Or hope, or will; and on behind
The troopers storm, in blood-thirst blind,
While, like a dreadful fountain-play,
The swords flash up, and fall, and slay —
Wives, grandsires, baby brows and gray,
Groan after groan, yell upon yell —
Are men but fiends, and is earth hell?

Nay, for out of the flight and fear
Spurs a Russian cuirassier;

In his arms a child he bears.
Her little foot bleeds; stern she stares
Back at the ruin of her race.
The small hurt creature sheds no tear,
Nor utters cry; but clinging still
To this one arm that does not kill,
She stares back with her baby face.

Apart, fenced round with ruined gear,
The hurrying horseman finds a space,
Where, with face crouched upon her knee,
A woman cowers. You see him stoop
And reach the child down tenderly,
Then dash away to join his troop.

How came one pulse of pity there—
One heart that would not slay, but save—
In all that Christ-forgotten sight?
Was there, far north by Neva's wave,
Some Russian girl in sleep-robcs white,
Making her peaceful evening prayer,
That Heaven's great mercy 'neath its care
Would keep and cover him to-night?

Anthony Morehead.

ARIANA AND THE SEÑOR.

JOHN TONER'S EXPERIMENT.

IT was a chill November afternoon, and Cour de Paradis was almost deserted. It was one of the shabby, irregular streets of the French quarter of New Orleans. At one end it was entirely closed up by the side wall of a tall brick building; and at the other the church of Jean Baptiste blocked the way so completely that the only mode of egress was a narrow alley which led around the corner of the church, and out in front of it. Between these two limits it wound at its own crooked will, and in some parts was quite wide, while in others opposite neighbors could almost shake hands from the jutting galleries on the second story. The most pretentious of the humble houses stood slightly back from the street, in a tiny court-yard of its own, which was the one bright spot in the place. Once a latticed wall and high arched gateway shut in the little court from public gaze; but now the gate swings on one hinge, and the lattice is decayed and broken, and through its gaps one can see the dying flame of the last scarlet verbenas, and the flagged walk shadowed by broad-leaved Spanish plum-trees, and whitened with the drifting snow of orange blossoms.

The sun crept up the side of Jean Baptiste, bringing out its green mold-stains, and fell in a broad stream on the small inclosed space in front of it, where a parched and stunted plot of rosemary filled the air with faint odor, and the grass grew rank.

Just as the sun reached the arm of the cross above the church, the vesper-bell rang out with thin, clear strokes, and presently house-doors began to open, and people to pass along in answer to its voice. They were, for the most part, Creoles, or sometimes a negro nurse, with a gaudily turbaned head, driving before her a flock of children whom she alternately scolded and cajoled in the broadest of gumbo French.

Some one, midway in the row, began to play a scale on a flat-toned piano; and while the first notes were still echoing through the place, two people turned the corner of the church and entered the Cour de Paradis.

The elder was a short, spare man, an unquestionable "down-easter," with hair and beard streaked with gray, and keen, restless eyes; his clothes were fast verging upon rustiness. In one hand he carried a small black bag, and with the other led a girl who followed him with lagging steps.

"We're most there now," he said encour-

agingly; and presently they stopped before one of the smallest and shabbiest houses, where a plate informed the public, "Signor Guido Sporza, Teaches to sing and to play, at moderate prices."

This was the house from which the sound of the piano came. At first the man knocked in vain, for by this time the young musician was in all the agonies of a five-finger exercise, which she played at once so slowly and so violently that one might have believed that she must prostrate herself on each separate note, and that the interval was required for her to recover herself before she could proceed to the next.

With an impatient exclamation he pushed open the door, and walked uninvited into the parlor. A woman with a peevish, sallow face sat sewing as she counted time in a shrill and monotonous voice for the toiler at the piano.

"Is that you, John?" she said, without rising. "Why, we didn't think to see you back these two weeks."

"You didn't? Well, don't let the joyful surprise kill you," said he, dryly. "Is the young un at the pianner one er the scholars?"

The woman nodded assent.

"Send her home, an' go tell Sporza I want him."

"She pays extra to practice here, and her hour ain't up yet," Mrs. Sporza said. "Who's that girl with you, John?"

"Oh, I guess it ain't necessary to your happiness to know," he answered. "I know, an' that's about enough." And without further parley he walked up to the musician and bade her go home—an order at once obeyed with round-eyed and joyful haste.

"Land, John!" said Mrs. Sporza; but that was the sole protest she made. Her brother was the one person with whom she never wrangled.

"Where's Sporza?" he asked. "I've got to be at Grunewald's afore they close, an' it's gettin' late."

Mrs. Sporza opened the window and looked up the street.

"Here he comes now," she said. "Vespers are just over."

The Signor was a small man in trousers of the largest check, and a brilliantly flowered waistcoat. As he was a child of the sun (that is, of Italy), he reveled in gay colors, and his necktie was the brightest red.

"Aleece," he began, as he put his foot on

the first step, and continued his remarks as he trotted through the hall, "Aleece, you vill 'ave to geeve dat Sophie girl a noteece dat she leave. She 'ave now de twin in de coal-bin vile she talka love to de grocer young-a man —" By this time he was at the parlor door, and paused in surprise at the sight of his brother-in-law and his companion.

As they shook hands Toner said :

"I come on business, Sporza, so I guess you might as well tell Alice to clear out till we've settled it."

Mrs. Sporza cast a withering look at her brother, but prudently said nothing. The Signor looked dismayed at the task before him.

"My dear," he began timidly, "you 'ear vat your brother say —"

"I ain't deaf, but if I ain't a right —"

"Look a-here," said Toner, "I'm in a hurry."

Mrs. Sporza went slowly across the room, and the Signor added, with a view to propitiation :

"Eef you vud search up dat Sophie girl, de twin, you know —"

"I *don't* know!" and the door closed after her with emphasis.

"What a tongueshe's got! I tell you, Sporza, it's well you're one er the meek kind," said Toner.

The Signor heaved a long sigh and nodded his head.

"I'd be drove to drink in a week," Toner said meditatively, "if I was you. Have a cigar?"

The Signor eyed it wistfully and again shook his head and sighed.

"*She* like not de smoke," he said.

Toner chuckled with dry appreciation, and presently, perhaps encouraged by the sound, the Signor put out his hand absently and lit a cigar; but he smoked it furtively, and showed a tendency to hide it at the slightest sound.

"You 'ave with you a young-a lady," he said, suggestively.

"Ye-es. She's a kind er *ex*-periment."

"*Es*-speriment!" the Signor repeated vaguely.

What he saw was a girl of perhaps twelve, but small and slight for her age, with a thin, dark face, made darker by sunburn, and shadowed by a shock of jet-black hair. She sat on the edge of her chair and stared sullenly at the floor. She might have been deaf and dumb for all the interest she took in what was going on around her.

"An *ex*-periment," Toner repeated slowly. "A sort er 'Cast your bread on the water an' it'll turn up again.' You see, Sporza, pianner-tunin' ain't much for makin' a fortun', an' I never had a chance at nothin' else. It's been a sort er cheap John with me ever since

I was knee-high to a grasshopper. But now, I guess I've a-bout hit it, an' I'm a-goin' to cast my bread with the chance o' it comin' back — comin' back thick-buttered inter the bargain, Sporza!"

"Eet ees vary nice to 'ave de bread butter'," said the Signor vaguely. "But vat ees eet you vill do vith de young-a lady?"

"I'm a-comin' to her. You know this last trip I went out into the parishes among the little towns — an' God-forsaken places most er 'em are, with ev'rything datin' back afore the war! Tell 'em their pianners ain't no account, an' mostly you'll be told, 'It's a very fine instr'ment. It was bought befo' the wah!' — as if pianners was Methusellers, an' never wore out. Last week it was, I put up at one er them little towns — Plaquemine' its name — all cane-fields an' dead-level roads leadin' to nowheres in partic'lar. It wasn't much of a place for biz, the town wasn't; but there I was, an' there I had to stay three days afore a boat 'd land an' pick me up. Such a place! If I was a drinkin' man I'd 'a' drunk *sure*; but I ain't. So I jes' loafed 'round an' kep' my eyes open. The house I put up at was *The Friendship's Exchange* — though why she called it *that*," he said, pausing again in his narrative with a reflective air, "I can't make out."

"So?" said the Signor, with an air of polite interest, but still looking dazed.

Lighting a fresh cigar, Toner went on :

"Alice's got a tongue, but it's a mild one alongsiden that landlady's. Princip'ly she nagged that child yonder, an' once or twice I spoke up for her, feelin' sort er sorry, but precious little good it done. Well, the night before I left, I was finishin' up a job at the other end er town, an' it kep' me pretty late, an' as I come through the yard (mortal a-fraid er the dog) I heard some one a-singin', and when I heard it" (Toner shook his head impressively), "give you my word, Sporza, I clean forgot all about the dog an' just stood there a-listenin'! It was that child yonder, a-sittin' on the kitchen steps, singin' like a mocking-bird. Says I, 'John Toner, here's your chance!' The next day I found out she was an orphin. The woman'd took her out er charity, an' was precious glad to get rid er her."

"But vat you do vit'er?" the Signor asked again.

"Learn her to sing," Toner said. "Get you to take her in hand. She won't cost you nothin' — I'll do that part; an' I tell you there's money in her voice. Not operer, you know, — leastways not at first, for operer means Italy an' a lot o' money, — but *se*-lect concerts where she'll come out in a black dress an' a bunch o' flowers, an' Alice to play propriety."

"She 'ave not beauty," the Signor says, critically. "But you say she 'ave de voice?"

In answer, Toner took his seat at the open piano, and beckoned to the girl. After a moment of sullen hesitation she obeyed.

"Now, you sing out," he admonished her, as he ran over the air with a loud, incisive touch. The strain was odd and rambling, with now and then a minor note breaking in upon its monotonous flow.

The girl stood watching him with the furtive look of a creature forever upon the alert to escape a blow, until he struck the chord, and motioned to her to begin. At the first note the Signor started from his chair and drew nearer the piano.

It was that old and almost forgotten negro melody, "Nicodemus the slave was of African birth."

Through the brief summary of Nicodemus's life her voice rang out with the strength and clearness of a trumpet. There was no attempt at modulation, no shade of expression; it was one rich swell of sound. One note merged itself into another with that wailing rhythm which is a feature of negro singing, and her body swayed to and fro in time to its cadence. Then the wild refrain burst out, and floated down the quiet street:

"Oh, de good time's comin, 'tis almost here,
But 'tis long, long, lo-ng on de wa-y!"

Before the sound had fairly died away the girl was back in her seat, with the same impassive face. The Signor drew a long breath.

"*Gran Dio!*" he cried. "Vat a voice!"

Then the enthusiasm of the man gave place to the criticism of the artist. "But," he added, "she drag too much de voice!"

"Then you'll take her?" Toner asked. The Signor's enthusiasm suddenly departed.

"Aleece —" he began.

"Hang Alice!" Toner growled.

"Eet will be as she say. And den — eet take a long-a time to train de seeng-er, and much prac-teze. Besides dat, de young-a lady vill 'ave to be learn' to talk. I spick not your languish vell, for I am of Italy, but *she* — she spick it like de black!"

The Signor was right; her accent was atrocious. It was negro; nay, it was worse, — it was "po' white"; there was not a single *r* in her whole vocabulary. Not that such a lack matters much in the singing of negro songs; it was only when the Signor asked her name that the absence of that useful letter became glaringly apparent.

"Ayana Wawnah," she answered, not looking up from her study of the ingrain carpet.

"Arianer Warner," Toner said, coming to the Signor's aid. "Her class come it strong

on first names. She ain't an F. F. by no manner o' means. Father was an overseer an' died durin' the war. It was her gran'father raised her, but *he's* been dead goin' on three year, too."

At the mention of her grandfather the child moved uneasily, and for the first time raised her eyes. They were large and dark, and stared with sullen melancholy out of her thin face.

At this juncture Mrs. Sporza's voice was heard in the hall berating the delinquent Sophia, and the Signor looked around for a place to hide his second cigar. While he wavered between a vase and a card-basket, she entered with the lamp, and a demand to know how much longer she was to be kept out of *her own* parlor. The Signor dropped his cigar on the floor, fervently praying it might go out undiscovered, and looked out on the dim street with a preoccupied air.

It was Toner who unfolded the scheme, and after much bickering she yielded her consent, but as ungraciously as possible, making it distinctly understood that she had no faith whatever in the fortune the child's voice was to bring. The matter being settled, Toner rose to go. At this instant Mrs. Sporza detected the smoldering cigar.

"How eet come dere?" the Signor says feebly. "Eet ess vare strange —"

"It *is* strange," she cried angrily, "that you can smoke the bread out of your children's mouths. I won't say mine, as that —"

"Hold on a bit!" Toner interrupted. "I paid for that cigar. Precious little, too, — it was smuggled, — an' a prime article it is!"

The next day Ariana took her first lesson. Sporza began by playing and singing the first note of the scale. A shrill, derisive laugh burst from the child and silenced him.

"O-oh, Lordy! d'ye call thet air singin'?" I kin do twice's good's *thet!*"

Though somewhat confounded by his new pupil's audacity, the Signor very kindly and patiently tried to explain to her the process of cultivating a voice; and when he again struck the chord she droned after him listlessly.

"Vy you not seeng out?" he questioned, imploringly; and then, with a sullen twist of her shoulders, she fairly screamed the notes.

"Ah, now you seeng too *skrilly!*" said the patient Signor.

A moment later Mrs. Sporza's face looked in at the door.

"You've woke up the twins, and you'd better not sing like that again, or —"

A cowed look came over the impudence of the child's face, but a sullen fire flashed for an instant into her dark eyes.

That afternoon the Signor started off on his rounds, on his usual jog-trot. Shortly afterward Mrs. Sporza went out to spend the afternoon, and as soon as the coast was clear Sophie took the twins and strolled forth in search of admiration.

Finding herself alone, Ariana stole upstairs to the small, bare room where she had slept the night before, and gazed out of the window like some trapped creature. As she stood so a sound rose from the direction of the river, and quivered through the heavy air; it was the whistle of a boat. To her it was the greeting of an old friend. As far back as she could remember that sound had been part of her life. When it pierced shrill and clear through the morning air, she knew the sun would usher in the dawn; and in the dead of night, when it rose with long-drawn, muffled tones, which were hardly spent before another echoed it, she knew the white fog was dropping over the river. The familiar sound brought up before her the vision of a lonely grave in the shadow of a cypress grove, with no headstone to mark it, and not even the rudest fence to protect it from the cattle.

For an instant she wavered, and then, snatching up her hat, she crept downstairs and out of the house.

Several hours later John Toner, coming out of a music-room, stumbled over a child huddled up in the corner of the doorway; stooping to see if he had hurt the child, he discovered Ariana. She was fast asleep, with her black elf-locks falling over her pinched face; and as he shook her she opened her eyes, staring stupidly at him. Then a look of fear and distrust came over her face, and, jerking her shoulder out of his grasp, she cried:

"Jes' yo' lemme 'lone now! I'm a-goin' back ter home."

"You can't go anywheres at this time er night, an' if you *could*, you ain't the money. Now jus' you go back to the Seenyer with me, an' we'll talk it over to-morrer, an' if you still hold out you want ter go back, why then — I'll take you."

"D'yo' mean *that*?"

"Yes," he said.

"Honest?"

"Yes," he nodded; "honest!"

"Then," she said, relapsing into her drawl, "I'll go with yo', I reckon."

They found the Signor's household in a state of wild excitement over her disappearance, and its mistress received her with a torrent of questions and abuse, which she was too tired to notice.

The next day Toner called to fulfill his promise to Ariana.

"Now let's hear why you want ter go back,"

he said. "You ain't no one there, and Mrs. Collins treated you worse'n a nigger."

"I don't keer," she said, doggedly. "I hate this hyar place; it chokes me."

"Your gran'father's dead," Toner began, reflectively.

"I reckon I know that 'thout bein' tole." Then a sudden spasm contracted her passive face, and the words seemed to force their way through her lips against her will: "Th' ain't no fence nor nuthin' 'round where they buried him, an' ef th' ain't no 'ne ter tend ter it, th' cows an' pigs they jes' tromp it flat, an' I'm a-goin' back ter mind it. E'en Mrs. Collins *she* lemme do *that* o' Sunday evenin's."

"If that don't beat the Jews!" he said. "Look a-here — if you'll promise to stay here and let the Seenyer learn you, I'll put a fence round him. Jes' you stay here an' learn to sing real well, an' some day you'll be rich — so rich you can put a marble over him as high's this house, if you've a mind ter."

"An' a iron fence?" she asked gravely.

"Yes, as strong as all *cre*-ation."

"Honest?" she asked, solemnly; "cross-your-heart and hope to never?"

"Yes, cross-my-heart and hope to never."

That settled the matter, and in this way it happened that Ariana's life became inclosed within the narrow limits of Cour de Paradis. It was not a rose-tinted life, for Mrs. Sporza was a lady of strong will. Sophie was promoted to the place of cook, and the twins given into Ariana's charge, together with all the rougher work, and the thousand and one things which no one else cared to do. As Toner had stipulated that she was to attend the public school, Mrs. Sporza sometimes allowed her to go when there was nothing in particular to be done about the house.

At school it proved to be no pleasanter than at home. When she was first entered, she was so ignorant that the smallest children were placed above her, and the girls of her own age laughed at her odd dress and accent. Her feelings were too dull for this life to embitter her; it only increased her native timidity and reserve until the people about her called her sullen.

So she plodded upward to womanhood, until the time came when Mrs. Sporza decided that she need no longer go to school, and Toner began to talk half nervously, half jocosely of the day when his experiment should be put to public test; but she puzzled him.

"Queer she is. I ain't a judge o' wimmen!" soliloquized Toner; "but she's a tip-top voice, an' no mistake!"

Shortly after this Toner returned to Cour de Paradis, accompanied by a stranger whom

he brought to pronounce judgment on Ariana's voice.

He graciously intimated that the girl might begin, and then leaned back in his chair with a critical air. During the first few bars he beat time to the music, but presently surprise stayed his hand. As she ended, there was a silence, and they waited for the great man's verdict,—Toner nervous, the Signor confident, Ariana indifferent,—and at last it came.

"The Signorina have in her voice a fortune!" he said. "*But*"—he shook his head—"she lack expression. It is brilliant, but it do not touch."

"Dat ees vat I tell to 'er alway," the Signor said mournfully; "but eet ees of no use. She 'ave eet not."

"When you sing, Signorina," the impresario said oracularly, turning to Ariana, "you must have no self. What you do sing that it is, you must be."

"But I can't," she said.

Nor could she. To sing with expression—to sing dramatically—one must have imagination. That Ariana utterly lacked, and nothing yet within the narrow limit of her experience had supplied its place. So far she had trodden the path marked out for her unquestioningly. The music-lessons, the household drudgery, Mrs. Sporza's sharp words, were accepted with utter impassiveness. To cow a nature like Ariana's is to teach it to put on the semblance of stupidity, until the semblance becomes reality.

In this way another year went by, and once more summer had given unwilling place to autumn. The roses still lingered, and in the little courtyard chrysanthemums nodded to the wind, which stripped the late oleanders from their stems, and scattered them far and wide along the street.

A young man who had sauntered along, thus far, in sheer idleness, stopped at the angle of the church, and surveyed the shabby little *quartier* with interest. The cross above his head was growing ruddy in the afternoon light, and from the churchyard beneath it rose the faint yet pungent odor of the rosemary.

As he stood idly in the sunshine he was roused by the sound of feet behind him, and before he could move something came into violent contact with his legs. A little startled, he turned, and looking down, saw a small boy sitting on the pavement—a boy with the face of a Cupid. At that moment its archness was obscured by the injured expression with which he was regarding Stuart Tresmond. While they were still looking at each other, another boy and a young woman turned the church-corner hastily. She helped the child to rise, and then said timidly to Tresmond:

"I'm sure Guido's sorry he ran against you, sir. Ask the gentleman's pardon an' tell him you're sorry, Guido."

"Think he'd better ask *mine*. Wasn't *me* frowed *him* down!"

"Yes, Arian'," the other child said, upholding his brother's veracity, "you know when we came the gen'leman was standin' up—it was Guido sittin' down."

Tresmond laughed at this conclusive argument, and then noticed for the first time that the children were so alike they might use each other as mirrors. Up to this point all his attention had been concentrated upon their companion, and even now, as he accepted the situation and gravely apologized to Guido, he saw only her as she stood looking on him with an expression half distressed, half amazed.

Her dress was very shabby,—that his eye took in at once,—but what her dress lacked in vividness her face supplied. The coloring of lip and cheek mocked the scarlet of the pomegranate flower, and the veil twisted carelessly about her head only half concealed the jet-black hair, growing low upon her forehead, in startling contrast to the cream-tinted skin; from under the dark shadow of their long lashes her eyes half met, half evaded his own.

As he ended his little speech, and before the silent observation had ceased, she made an awkward bow and, with the children clinging to either hand, hurried into Cour de Paradis, while he stood looking after her until she entered one of the houses. After a moment's hesitation he sauntered slowly into the place and looked curiously at the house she had just entered.

The next day, partly through accident, partly through design, his rambles brought him again into the neighborhood.

He was a young gentleman of infinite leisure, who all his life long had been guided by impulse rather than principle;—handsome, idle, fond of pleasure, but kind-hearted, and possessed of a certain refinement of taste which so far had supplied moderately well the place of higher qualities.

It had taken strong hold upon his imagination, this dingy little *cul de sac*, with its air of antiquity, and the girl with eyes as melancholy as if the shadow of the place had fallen across her life and dimmed it. It came to him like the fragment of an idyl of which he must read the end.

He passed the Signor's house and looked eagerly at the window, but she was nowhere to be seen; walking to the end of the street, he turned and came slowly back. This time as he approached the house he caught the strains of a song which held him spellbound.

Note after note of each long roulade and trill rose with such liquid sweetness and strength that it seemed as if she breathed rather than sang the strain. At last it died into silence. As he was about to turn away, the Signor's sign caught his eye again, and a perverse imp of mischief suggested the happy expedient of taking lessons. Why not? He had a voice, time, money; like a flash he decided, and rang the bell.

Ariana ushered him in, and the Signor being out, she began at once eagerly and timidly to tell his terms. Tresmond had a quick ear, and as soon as she spoke he guessed her rank in life; for though a superficial education had somewhat straightened out Ariana's grammar and toned down her accent, it could not quite restore her long-lost r's.

While she was speaking the Signor trotted up the steps, and she went out to meet him. What she said was in a low tone, but Tresmond heard it.

"There's a young man in there who wants to take lessons, and I put on five dollars more. It ain't too much, and he looks rich."

"Bravo!" the Signor chuckled; "you are a smart young-a lady."

But what a pang went through Tresmond. It was only his idealism which had received a blow, for even with the addition the sum was small enough; yet he felt really annoyed that a girl with such a wonderful color and such heart-broken eyes should know the value of a dollar.

Making the best of the situation, Tresmond settled the hour of his lessons, securely comforting himself with the idea that if the first was too much for him he need never return to take a second.

"Yes!" the Signor answered with modest pride, "you will find dat I can teach. Oh, yes! dat I can teach."

"Was it one of your pupils who was singing as I came?" said Tresmond, grasping at the suggestion, but not in the least believing the Signor capable of teaching so well.

"Pupeel?" the Signor repeated "A-a-h! eet ees Arian' you mean. Yes, I teach Arian' all she know."

Tresmond was greatly startled by the discovery that the singer and the girl with the beautiful eyes were one and the same person.

When he returned to take his first lesson Ariana opened the door and vanished, to reappear no more, though he again lingered in the hope of seeing her, and with this end in view tried to make friends with the twins, who received his advances in strict but smiling silence.

"Tut!" the Signor said, reproving them, but with admiration in every feature. "Tut! de cat 'ave got your tongue."

At last, in despair of seeing her, Tresmond went away.

When he came next it was near sunset. The street was again echoing with the sound of Ariana's voice.

As he was about to ring, Mrs. Sporza came up the steps, and greeted him with a gracious air. Pleased that he lingered, as it gave the neighbors an opportunity of seeing her husband's well-dressed pupil, she said: "Walk right in, Mr. Tresmond. The Signor's ready for you — that's only Ariana."

"A member of your family?" he asked, curious to know the girl's position in the house.

"Law, no!" Mrs. Sporza said. "A sort of charity pupil trainin' to sing in public. None of *my* family," she added, with a patrician air, "*ever* sang in public."

As usual Ariana vanished as soon as he entered, and in spite of his vexation the failure of his scheme amused him a little. A fleeting glimpse of the girl, the occasional sound of her voice — that is all he had got for his pains. Added to this, the Signor, being a thorough musician, an enthusiast in his art, and charmed by his new pupil's capabilities, proved himself a very martinet.

This afternoon Tresmond beguiled him into conversation. He had hinted once or twice already that he would like to hear Ariana sing, but the Signor shook his head. "No," he said, "Tonair 'e like 'er not to seeng for young-a gentlemen. 'E 'ave a name 'e call 'er — vat you call — ah, yes! *es-speriment*. Dat mean 'e vant 'er not to know de young-a man."

Then Tresmond tried a little diplomacy.

"I am not at all good at part-singing," telling his fib with tolerable composure.

"Prac-teze, prac-teze!" the Signor said, modulating with his left hand.

"I do not have any one to sing with," Tresmond said, unblushingly.

The Signor reflected a little. Toner had warned him solemnly against exposing Ariana to the wiles of youth; but this seemed to the Signor to be an exceptional case. Tresmond did not desire to know her for the pleasure of hersociety, but simply as a means of improving his voice, and he liked the young gentleman who had the good taste to admire the twins and bring them bonbons.

"So?" he said; "den I send de twin to search up Arian', and she seeng vith you."

She came back with Guido, and stood in the doorway looking awkward and frightened, until the Signor explained why he had summoned her. Then she took her place by the piano and gave all her attention to the music before her. Tresmond, on the contrary, sang so out of tune that the Signor was filled with anguish and dismay.

"Vait, dis go not vell. I search an easier." And, trotting off, he left the young people alone together.

They stood in silence, until Tresmond said: "Do you never talk? I have been waiting for you to give me permission to talk to you."

"I haven't got anything to say," she answered, raising her eyes in her slow, frightened way.

"Do you think that excuses you from talking?" he asked, with a laugh. "Don't you know it has gone out of fashion to keep silent until one has something worth saying? If we waited for that, half of us would grow dumb!"

Ariana only raised her eyes in the same slow way, and then dropped them in silence.

At the end of a few weeks Tresmond was quite at home in Cour de Paradis. As for Mrs. Sporza, she had no praise too high for a young gentleman so affable that he would stay and spend the evening when his lesson was over; and the twins developed a vast and unbounded admiration for him.

A little of this new brightness had fallen even on Ariana, and lingered subtly in her face, until the Signor, dimly conscious of a change, remarked it to his wife.

"Arian' ees eemprove' in 'er a-pearanze," he said. "Yes, eemprove'."

"There was room for it!" said Mrs. Sporza contemptuously.

One evening, as usual, Tresmond found himself at Signor Sporza's door. Ariana was practicing, and he stood in the shadow of the entry until the last note had echoed itself into silence. When he came towards her she raised her face with a half-timid, half-deprecating look, and he stood for an instant in silence looking into her eyes, those beautiful eyes which said so much that found no echo on her lips.

While he looked at her or listened to her singing, he lost in a measure his power of reasoning; it was only when he was away from her that his cooler judgment resumed its sway.

"Good-evenin', sir," she said; and the drawled elision of her words roused him with a shock from his absorption. With a half-conscious irritation he turned to the music before her.

"*Convien partir*," he read. "I never should have guessed it was anything so doleful. You sang as if you were glad to get rid of them."

"I wasn't sorry," she said seriously. "What'd make me? I don't know 'em, an' I don't care about 'em."

"You have not the least bit of feeling," he said discontentedly.

"I reckon I haven't. I can't be sorry for people in songs."

In a desultory fashion he had tried to cul-

tivate her taste,—and, as he was a very young man, chiefly through the medium of poetry,—but with small success. With a sense of disappointment, he turned towards the table and, fluttering the leaves of a prettily bound book,—his latest offering upon the educational shrine,—asked, in a tone which was almost one of entreaty, if she did not like the poem.

"I s'pose I don't understand it," she said humbly. "It jingles so it bothers me. Nobody talks that way—an' I don't see any good in it."

"But the story," he persisted; "you must have liked that."

It was "Enoch Arden."

She answered with dogged honesty:

"No, I didn't. What made him ever tell? It wasn't any good."

"It made it dramatic," he said. "What would the end have been without that?"

"I s'pose you know," she answered slowly; "but if it'd been me, I'd have just died an' not told. It didn't unmarry *her*, an' it didn't do *him* any good for 'em to spend a heap of money buryin' him,—he was dead all the same."

And with these words on her lips she looked at him with eyes full of deep and pathetic melancholy! Something like a groan of dismay rose to Tresmond's lips; but, smothering it, he tried another point of attack.

"When you sing in public, do you suppose people will feel the pathos of your music if you don't feel it yourself?"

She glanced at him in silence, and then looked straight before her, with eyes a little dilated, and her sharp, clear-cut profile coming out vividly against the gray-papered wall. In motion there was a certain awkwardness about the girl, but as she sat now the picture was perfect in outline and coloring. Rising restlessly, Tresmond took the place she had vacated at the piano, and began to prelude idly with one hand. As he gazed at her his mind made a sudden leap towards a possibility he had hitherto ignored—did he love her? His blood coursed more rapidly through his veins, and he drew a deeper breath, almost a breath of relief, now that he had dared to face the question. He paused in his improvisation, and leaning on his elbow bent towards her with an eager look in his eyes, but the impassive gravity of her face struck his passion with a cold shock.

He was conscious of but one desire—to rouse her from her quiet, and make her responsive to the admiration which, despite his more critical judgment, she had won from him. To himself he had not yet answered the question her beauty had provoked.

"Ariana," he said, and she turned her face towards him, "listen. Do you know this?"

He struck the opening chord of the march in Raff's symphony of "Leonore," and while he spoke he carried on that strain in which one can almost hear the tread of the soldiers' feet,—now ringing it out in martial measure, now weaving it into a softly swaying melody.

"She was a peasant girl," he said, "and her lover was a soldier."

Very graphically he sketched the poem to her, pausing when he told how Leonore waits at home, hungry-hearted, for the tidings which never come, and in the pause the strain grew softer. Something like interest stirred the almost dull gravity of her look, and it added fresh impetus to his effort. He took up the story again, and, watching her intently as he spoke, he pictured the return of King Frederick's troops, and how old and young, with joyful acclamation, hastened out to welcome the victors home.

"And among the maidens was Leonore," he said, "eager to greet her lover."

"An' he came back?" Ariana asked, slowly. Now the march rings out in joyous expectation. "They were still far away, so far that only the sound of the fifes reached the villagers from beyond the vineyards where the grapes were purpling on the hill-sides." Then skillfully, and with lingering touches, he portrayed how Leonore waited with bated breath for the weal or woe which was to be her portion. "For she loved him——" The strain changed, and Ariana, like one in a dream, drew near the piano. Her lips were slightly parted, and she had the breathless air of one who had run far and swiftly. There was an answering fire in Tresmond's handsome face, and, with the music pulsing like the undercurrent of his words, he went on, in tones which gave them a subtler meaning:

"She loved him so that with him hell would be heaven, and without him heaven would be hell!"

The poem moved him; he willed that it should move her too; and into the scene where Leonore, alone of all the maidens, stands unclaimed by lover, he threw all his power of description and expression.

"And Leonore——" he said, striking a swift chord.

"He came back," said Ariana. "he came back."

"No," Tresmond said; "no."

Then he repeated softly:

"Without him heaven were hell, and with him—hell were heaven."

With swift modulation he passed from the air he was playing into *Convien partir*.

"Sing," he said; and, with the unwonted excitement still in her face, she obeyed.

As she sang she was no longer Ariana the

drudge of Cour de Paradis. For the moment the shackles with which her life had bound her dropped from her, and she rose like a soul casting from it the burden and toil of life. For the first time the perfect voice thrilled with a mighty passion, which moved Tresmond to his heart's core.

At the last sobbing note he lifted his eager eyes to hers, and what he saw in them brought him back to the realities of life with a shock.

He had roused the artist within her, but—alas!—he had awakened the woman too.

"Bray-vo, Arianer! That was A No. 1,—ex-pression an' all. I allus said you had it in you, *sure!*"

John Toner, bag in hand, came in. He looked a little grayer, but it was the same brisk voice which said:

"Well, Arianer! an' where's ev'ry one?"

Then his eyes fell upon Tresmond; his jaw dropped, and the jubilant expression faded out of his face.

"It's—it's Mr. Tresmond, Mr. Toner, an' he's a pupil." And she hurried off to tell Mrs. Sporza of the arrival.

"Glad to make your acquaintance, sir," Toner said, recovering a little. "Tresmond, she said, didn't she, sir? Last week I tuned a pianner for a lady o' that name in Plaquemines. Some er your people, sir?"

"My home is there," Tresmond replied, "so no doubt the lady was my mother."

"You was a-playin' the accomp'niment for Arianer?" Toner asked. Tresmond nodded assent, and tried to make the nod as careless as possible.

"Jus' so!" said Toner. "I stood outside lis'nin' a bit, an' I thought either 'twas Sporza, or else she'd im-proved in her playin'."

Presently Mrs. Sporza, having finished the toilet begun in Tresmond's honor, came in resplendent, followed by Ariana, who looked shabbier than ever by contrast. Without the money Toner supplied, in the belief that it was spent to clothe the girl, Mrs. Sporza would have had to curb her love of smart attire, and the number of her gowns would have been considerably lessened.

Soon the Signor came in from vespers.

As for Tresmond, he felt that he had crossed that boundary line beyond which there is no returning, but at present no regret was mingled with the thought, and while he talked his eyes wandered to Ariana with something of the ardor and pride of possession. He felt conscious that the old piano-tuner was watching him, and in sheer bravado he exerted himself more than ever to please. In spite of himself Toner yielded to the charm, and did not realize that he had done so until the evening was far spent. Once alive to the

fact, he pulled himself together with a feeling that he had been entrapped, and drawing the Signor out of the room said to him :

"I thought you said you kep' away beaux an' that sort er thing?"

"So I 'ave," the Signor said, with pride. "Dere come 'ere no young-a man."

"What d'you call that Tresmond? An old one?"

"Treesmon'," the Signor said, "ees a vary nice young-a man, but 'e 'ave no thought of Arian'—'e do but come to prateze de voice."

Toner, giving a groan of irritation and disgust, returned to the parlor, where Tresmond was making his adieux.

"I'm a-goin' too, sir," he said, "an' if you've no objection I'll walk a bit with you."

Tresmond assented with careless good humor, proffering his cigar-case as they walked along the moonlit street where Jean Baptiste looms dark against the starry sky.

"Thank you, sir," Toner said. "Esplanade is your street, ain't it? Very nice street, though I don't care much where I stay, so long's the place ain't one er your dead-alive ones. But people is cu-rious, very! There's Arianer, now—she hankered a long time after the country where she was raised, an', beggin' your pardon, sir, a mos' God-forsaken place it is!"

"What place?" Tresmond asked, absently.

"Plaquemine," Toner answered; and at the name Tresmond made a movement of surprise which did not escape his companion's watchful eyes.

"Yes," Toner went on, carelessly, "though 'tain't likely you know any er her people, for I guess you was off at college when the old man died an' I brought her here along er her voice. Your ma 'd know the name, though—Warner. Arianer's pa oversee for yours afore the war."

The daughter of his father's overseer! Tresmond said it over to himself as if to test the sound—as if he were announcing it to his proud, well-born mother, who was nurtured in all the tradition of race, and who so nurtured him.

"You've got an elegant place, sir," Toner said, changing the subject; "an' an elegant lady your ma is! You're sort er like her."

"We are considered alike."

"Pianner-tunin'," Toner said, apparently changing the subject again, "shows you—meanin' *me*, sir—a deal o' the world. Ladies, proud like your ma, an' po' white folks like Arianer—both from the same place!"

"From the same place," Tresmond echoed, desperately saying what first came into his head,—“and we met here! The world is a small place after all.”

"Yes," the old man said, grimly; "with all

its bigness it ain't room enough to keep young gentlemen out er mischief."

"What do you mean?" Tresmond asked, angrily.

"Don't get mad, sir," Toner said deprecatingly. "You see all wimmen is fools, an' Arianer ain't no better'n the rest."

By this time they had reached Tresmond's boarding-house, and, stopping, the young man said haughtily :

"Good-night, Mr. Toner."

"Stop!" Toner said, following him up the steps; "I've got to speak to you, sir."

In silence they entered Tresmond's room, and without noticing his companion the young man threw himself into a chair and stared moodily at the carpet.

"What I wanted to ask you, sir," the old man began, slowly, "was as you'd not come up our way no more. You see, Arianer's a kind er ex-periment o' mine. I've spent money on her, an'—she ain't nothin' to *you*!"

"She is!" the youth cried hotly. The glamour of her face and voice was still upon him, and for the moment he lost sight of everything else. "She is!"

"But your ma—think o' your ma!" Toner said eagerly. "You couldn't marry a girl like Arianer."

"I know," he said, dropping his head with a groan. The words leaped to his lips in the first shock of conviction, but when they were uttered it seemed to him that he had done a cowardly thing.

"That's the way to talk," Toner said encouragingly. "She ain't your ekal, sir."

"What harm does it do for me to see her sometimes?" he asked. "Why should I not?"

"You're too young to know much about 'em, sir," Toner said, in a tone intended to soothe, "but the older you grow, the better you'll know that there ain't no calcalatin' on wimmen. They're like mules—mortal uncertain!"

He paused and looked at the young man's face; it was half sulky, half defiant, and withal very miserable—the face of a man who dares not choose the wrong, but whose soul shrinks from the right. Toner came a few steps nearer, and continued, half apologetically: "Mind you, I don't say as she *does* like you, but I can't a-ford to risk it. I've kep' her since she was twelve years old, an' I've paid Sporza reg'lar for her. Sometimes it was mortal hard to do, but I done it. Look a-here, sir; you'd call this a shabby coat, wouldn't you? *That's* how I done it. I've walked when I could 'a' rode; I've slep' under a tree or a gin-shed in place o' goin' to a tavern; I've even stinted myself in my victuals."

While Toner spoke, Tresmond rose from his seat and walked restlessly up and down.

He was disturbed by the old man's appeal, but he was angered too; and now he stopped before him and said sullenly:

"But you knew she could sing. You knew she was a good speculation." Yet even while he spoke he felt ashamed of what he said.

"Yes," Toner admitted, "you're right there. It wasn't out of charity I took her, that I'll own; but for all that I sort er like the girl. You can't marry her,—you agreed to that yourself, sir,—an' I ain't a-goin' to have you a-muse yourself with her. That's the long an' short of it, sir."

Tresmond felt an inclination to take Toner by the shoulders and assist him forcibly downstairs, and at the same time blushed at the inclination.

"You understand, sir," Toner went on, "I ain't a-askin' you to marry her—not a bit of it! I'm just a-sayin' hands off. Marriage ain't in Arianer's line. She's my experiment, an' she's a ca-reer before her."

Still without speaking, Tresmond threw himself again into his chair and covered his eyes with his hand. Construing this into a favorable sign, Toner added:

"You've took a kind er fancy to her, but what er that? You'll soon get over it, an' Lor'!—girls is as thick as blackberries. Good-night, sir," he said, but at the door he paused. "I'll stop by early to-morrow, an' I'll take it kindly, sir, if you'd give me a note to carry to her, if you'd not mind writing it;—a frien'ly sort er note, but positive like,—telling her good-bye, so she'll not be expectin' you back, an' thinkin' it's me as is keepin' you away. The best of 'em like to do a little in the martyr line o-casionally, an' once you let a woman get that notion in her head you might as well throw up your hand. Good-night again, sir."

The next morning Tresmond had barely finished dressing when the piano-tuner presented himself; and with a muttered salutation he pointed to the sealed note on the table. He was pale and heavy-eyed, as if he had slept ill.

"Thank you, sir," Toner said, in a relieved tone. "It's tellin' her good-bye, I s'pose?"

"Yes," Tresmond replied. He turned a little aside and hesitated. "Yes," he said again.

"An' you're goin' to leave the city?" Toner asked curiously.

"Yes," Tresmond said; "to-morrow."

Later in the day Toner handed the note carelessly to Ariana.

"Here's somethin' from that young man," he said.

Ariana opened it, and turning with startled eyes upon Toner:

"He's—he's goin' away!" she cried.

"Well, Arianer, I guess we can stand it."

"An' he wants me to come to vespers," the poor simpleton said, looking from the note to the piano-tuner. "Why d'you reckon he wants me to?"

For a moment Toner was dazed by this addition to his "frien'ly note."

"Good for you!" he cried, clapping her on the shoulder. "You're the first woman, Arianer, ever I come across as was too stoopid to be tricky!"

Then slowly it dawned upon Ariana that in some way she had been indiscreet, and she stood in frightened silence, until Toner asked:

"Now look a-here, Arianer, has that young man been a-makin' love to you?"

Like a flash of light, a strange thought crossed her mind, a thought which sent a deeper crimson into her cheeks and vivified the beauty of her face. Since yesterday a dim, ill-defined idea had agitated her, and now Toner's words gave it shape. She knew now the meaning of the look which was in Tresmond's eyes while she sang, and she knew too why that look made her tremble as she had never trembled before. A slow smile parted her lips, and at the sight Toner's patience utterly gave out.

"What are you a-grinnin' at?" he asked roughly. "Can't you speak? Did he—yes or no?"

"No," she said, shrinking back frightened into her old self; "no, Mr. Toner." In words, he never had.

In the afternoon Ariana found time to steal off to her room to read the precious note over and over—"a friendly note," and nothing more, except for the last entreaty. It told her that he was going away, but her heart told her he would return. As she sat conning it, with a soft light in her eyes, a sudden desire to beautify herself for her lover awoke within her. After a moment's hesitation she opened her closet, and stood perplexed before her slender stock of dresses, and at length selected a cast-off garment of Mrs. Sporza's. There was an inexpressible air of vulgarity about both fabric and fashion, but of this Ariana was blissfully unconscious, and also of the fact that it was the last color that a woman of her complexion should wear. To her it seemed a masterpiece; and she dressed herself in it with due care. For a few minutes she lingered before the small greenish square of looking-glass, and then, going once more to the closet, took out the pasteboard box which contained the few treasures accumulated in all the years spent in Cour de Paradis. She opened the box and turned them over carefully and anxiously, taking out finally a large collar worked in coarse thread which Toner had won at a country raffle.

"The young woman as run the thing said it was a re-markably stylish *an'* fashionable collar," he said, presenting it with an air of pride to Ariana. "You can save it up till you make your *dee-bue*." And Ariana had received it with believing gratitude, and now felt that the fitting time had come.

Soon the sound of the vesper-bell for which she was listening startled her out of her restless inaction, and, slipping with guilty haste out of the house, she hurried with her pitiful tawdry finery along the street until she reached the shelter of Jean Baptiste. She took her seat in a dim corner, and did not notice that Toner was almost opposite her. Service began, and presently she saw Tresmond enter.

At last service was over. Père Mignot went into the sacristy, and the people straggled away—all but three. Tresmond waited at the church porch, and Toner, unnoticed, lingered in the dimness of the vestibule. From their positions they watched Ariana come down the aisle towards them, hesitating a little and with downcast eyes.

She came nearer, and the brilliant light of sunset, falling full upon her, threw out every detail of her grotesque toilet. Tresmond was advancing eagerly, when the travesty burst upon him, and he stood transfixed, staring at her in bewilderment. Recovering from the first shock, Tresmond took her hand, and Toner, too far away to hear the words, saw her raise her face as he spoke; and in the shy gladness and agitation of her look the pianotuner read a disagreeable truth.

"She likes him—Lor', she likes him!" he said to himself.

Still watching, he saw a change come over her face, and heard her cry out in a voice which sounded as if all the lacking emotion of her whole life were crowded into this one cry.

"Never comin' back—never! Why must you go?"

"Yes," Toner said, coming out, "why must you? Here you are, a fine young gentleman as has sung an' talked with a poor girl until—ain't it a joke, sir?—she's lost her head an' thinks she's as good as you! Why don't you marry her? She won't mind poverty nor crusts nor rags, an' if your ma cuts you off, she'll work her fingers to the bone for you. She's a fool like all of 'em, she is!"

"If you were not an old man," Tresmond cried, "I'd knock you down!"

"Oh, no, you wouldn't! Gentlemen don't knock a man down for tellin' the truth, an' I've told it. You ain't a-goin' to marry her?"

Dead silence. The warm air waked the bitter odor of the rosemary, and stirred the sear grass above the forgotten graves, where love and despair and remorse had long since re-

solved themselves into a handful of dust and some moldering bones.

"You see you ain't good enough, Arianer," Toner said. "He brought you here to tell you so!" She raised a pale, scared face for a second, then it drooped again.

"You are very hard on me," Tresmond began, tamely. "I wanted to see her for the last time—that was all. Wait, Ariana"—then the struggle within him silenced his voice. His passion for her was battling against the picture of the future which her jarring colors and faded and crumpled bits of finery had conjured up. This girl his wife! Her poor efforts to adorn herself, which had been made with such a loving heart, turned the wavering scale.

"God knows I do love you," he said at last, not trusting himself to look at her, "and if—if things were different—"

"If the moon was green cheese—which it ain't," Toner said, contemptuously.

"Good-bye, Ariana," the young man said, huskily. For an instant she raised her dark eyes to his, and in them was the look he remembered so well. Then she turned without a word and followed Toner, pale and pitiful in her tawdry finery, with the brightness all dead in her face.

At the door Mrs. Sporza met them with an angry face.

"You, Ariana!" she cried, "where have you been? And my best shawl, too!"

She made a dart at the girl, but Toner caught her arm.

"You let her be, will you," he said, roughly; and Ariana went upstairs.

Upstairs Ariana stood silent, with a face miserably white, but tearless. Then with a sudden movement she pulled off collar and ribbon and threw them from her; not because of the harm they had wrought her,—of that she was ignorant,—but for what they had failed to do. She plucked the flowers from her hat, and then the mood left her, and her arm dropped listlessly, and from her loosened fingers the flowers fell to the floor one by one. She went back to her household drudgery and practicing, and did it all in the old self-contained way.

"Af-teer all," the Signor said, astutely, "vas not I right? Arian' love not de young-a man, nor love 'e'er!"

SPRING came, bringing Easter with it; and this year Easter was an event to the Signor and Toner, for Ariana was to sing in high mass at the cathedral of St. Louis. It was to be her first appearance in public, and they were both a little nervous. Toner put his anxiety into words.

"Now you do your best, Arianer," he said, "an' whatever you do, don't you forget the expression. Think er somethin' onpleasant.

"That Alice's a-naggin' you, or — or somethin' o' that de-scription, so's your voice'll get a sort er doleful sound. Queer, with them eyes o' yours, it don't come nat'ral! But you can't go by looks, for I knew a lady onc't," he went on, dropping into a reflective vein, "as sung. She was in the variety business, an' expression was her strong point, though you'd not 'a' guessed it from looking at her face — or her figger, either!" he added, warming with the subject. "She weighed close on a hundred an' eighty, an' such an appetite as she had! But she could sing, Arianer, an' in that feelin' way that afore she was through half the gallery'd be pretendin' they'd colds in their head. Lor', Arianer, if *she* could, why can't *you*?"

Already the acolytes had lighted the altar, and one by one, under the tinted arch of the chancel, the candles glimmered out like flickering stars. Through the old windows, with their square panes of colored glass, the sunshine fell in blocks of blue and red on the heads of the people and the marble pavement; and on the left of the altar at the shrine of Our Lady of Lourdes twinkled countless little tapers — each one, like a bead on the rosary, representing a prayer.

Throughout the mass Ariana's voice soared triumphantly above the other voices, and when at last they died away and left hers to carry the strain alone, it held the multitude enrapt. The swell of the organ changed into an accompaniment so soft that it seemed a faintly breathing echo, and blending with it the beautiful voice uttered the plaintive appeal interwoven again and again with the melody —

"Ave Maria! ora pro nobis."

It was not sympathetic; it was simply beautiful. Its purity and strength and flexibility filled the listeners with wonder and delight; but it pierced no heart by its tenderness; it brought tears into no eyes.

The papers next day noticed the service, and spoke in flattering terms of Signor Sporza's pupil; but one, mingling criticism with high praise, called attention to its curious flaw — absence of all expression — and likened her to the well-drilled "Fotheringay" of Thackeray.

"There it is again, Arianer!" Toner said, tossing the paper aside in disgust. "Expression! Another fellow's got hold er that now! Well, you'll have to get it somehow — that's clear!"

It was April, and Ariana was not to make her grand *début* until the coming autumn.

"You let me polish 'er teel den," the Signor said, with enthusiasm, "and ven de warm veth-er ees over, and de peo-pell dey look

'roun' for dat to a-muse demselve', *den* you breeng 'er out, and my vord, I pro-mees you de grand suc-ceeds!"

June came, and with it came rumors of yellow fever.

"My ex-perience of this blamed country is that there always *is* some," Toner said, as he started northward on one of his trips.

His was but the echo of a general opinion; but by the end of a month the rumor was a dreadful certainty, not confined to the levees and slums, but raging in the best parts of the city. At last it was declared epidemic; the panic spread from city to country, and every train carried away refugees. Mrs. Sporza caught the general alarm, but, with beautiful consistency, her fear was chiefly for her own safety. The Signor's pupils dropped off until but one remained, and that one he taught in a spiritless way. Ariana was sitting in the hall, sewing, while he gave his last lesson, and listened half absently to his comments. The twins were playing beside Ariana, and they joined in the song with tiny flute-like voices.

"Young-a man," the Signor called, "young-a man! I come and lay my 'and on you."

At this dreadful threat they subsided, and contented themselves with dancing noiselessly, but as the strain was doleful the dance resolved itself into a solemn minuet. Ariana let her work fall, and looked wistfully at the pretty laughing children. When the pupil went the Signor said to Ariana:

"She vas de last, and now she come no more. She fly de ceety."

Mrs. Sporza joined them, and they stood in dejected silence watching this last pupil depart.

"Why don't you go too?" Ariana asked at last. "You can't make any money now, an' the twins ain't ever had the fever."

"What does *he* care!" Mrs. Sporza cried shrilly.

"Care vill not pay de beells," the Signor said, with a heavy sigh. "I 'ave but leetle mon-y, and dere ees five of us to fly."

"Only four," Ariana said. "I'll go and nurse, I reckon."

Mrs. Sporza grasped the idea eagerly.

"That's just what I was thinking of. The month's up day after to-morrow, and we might as well board somewhere along the gulf as rent this house; it'll be just as cheap."

"You forget dat Arian' 'ave not 'ad the fever," the Signor ventured.

"May be I have," Ariana said. "It don't matter, any way."

"Of course not," Mrs. Sporza agreed; then she hurried on to more personal matters. "We may get a few pupils, and with that and Ariana's pay, — it'll be as little as you can do

to send it to us, Ariana, after all we've done for you,—we can make out."

"No, *no!*" the Signor protested, but Ariana interrupted:

"Yes, I'll send it all. If it wasn't for *them*," and she pointed to the twins, "I'd nurse without pay. I'll not take it from the poor ones, just from the rich people."

"You'll be a precious fool then!" Mrs. Sporza said; "nurses get their own price this year, and are fed into the bargain. I guess," she concluded, "we better go to St. Tammany."

Within two hours they were at the *dépôt*, and Ariana hovered about the twins up to the last moment, but they were too much excited by the idea of traveling to care much for parting with her.

"Take care yourself, Arian'!" the Signor cried sorrowfully; and the twins laughed and nodded farewell from the window.

She had had but few loves in her life: her grandfather, Tresmond, the twins. The first was dead; the second did not think her worth the keeping; and the love of the twins was frail child-love, light to come and lighter still to go.

She went slowly back to Cour de Paradis and closed the house,—lingering over the task, and pausing at the church to cast one backward look at the quiet sunlit place,—then turned her face away from her old life, and sought the Howard office, where she offered her services as nurse.

After that all days became alike to her,—sometimes at a handsome house, sometimes at a hovel. Sometimes her charges got well, sometimes it was death that bade her move on to another stricken home. And still the fever swept on, sparing neither rich nor poor, youth nor age. It crept out into the country and to the smaller towns, and when it once gained a foothold it baffled all skill and science until it had run its course.

From time to time she heard from Mrs. Sporza. The letters related to money matters, with now and then a casual mention of the twins; and sustained by the thought that they were breathing pure air, Ariana labored on with a brave heart.

Towards the end of August she received a sudden order to be ready to leave the city within an hour; and it was not until they had left the office of the Howards that she had time to ask her companion where they were going.

"To a little river town," the woman said, indifferently. "Brulée or some such name."

It was high noon in Brulée, and the hot sun fell in a broad, unbroken glare upon the dusty, irregular streets. No loungers were before the line of shops, none in the court-house square; and, but for the occasional ring of

hurried footsteps along the plank sidewalk, the silence of a plague-smitten land rested over it all.

John Toner stood at a curtainless window in the upper story of "L'Etoile d'Or" and looked out upon the dreary scene with mechanical intentness. Presently the physician turned to leave the room, and Toner, starting forward, detained him.

"Ain't there no hope, sir?" he asked. "Mightn't she take a turn the other way? Couldn't you try somethin' more, sir? I—I wouldn't care nothing about the ex-pense of it. You see, I'm sort er fond o' the girl, though she ain't no relation—jus' a—a sort er experiment." As his eyes fell on the face of the insensible girl, he used unconsciously the familiar phrase which had been his life's core for nearly seven years.

"She has done her part bravely," the physician said, "but her work is over now."

Toner thought she was already dying, but the old negro woman who waited in the house reassured him.

"Dis is only four days," she said, "an' dey nebbber dies on *eben* days, always on de *odd* uns. She'll go to-morrow, or she'll last till seven days, master."

It had all come so suddenly upon him that it seemed like an evil dream: his hurried return from Arkansas to find the Signor's house deserted and Ariana gone—no one could tell him whither; his days of restless wandering about the city until the thought came to him that perhaps Tresmond was answerable for her disappearance; how he had sought Tresmond in his house, and the stormy scene between them which followed—a scene full of bitter reproach on his part, and on Tresmond's of anger at his suspicions, until the old feeling for Ariana, reawakened by anxiety, swept every other consideration before it; then how, sorely against his will, he had consented to resume his search for her in Tresmond's company, and how at last, owing to the quicker wit of the young man, they had traced her, through Père Mignot, to Brulée.

Full of hope, they had arrived that morning to find her dying. Through all the bitter intentness of his thoughts, Toner was conscious of the restless tread of feet on the gallery below, and he knew it was Tresmond pacing up and down, too wretched to sit still. Once as he crossed the hall Tresmond stopped him with an eager entreaty.

"I don't see as you've no call to see her," Toner answered sullenly. "Can't you let the girl die in peace? It ain't much to ask of you."

Later in the day the stupor left the girl, and she turned her hollow eyes upon Toner, but she showed no surprise at seeing him.

"I reckon — I'm — dyin'," she said.

"Don't, Arianer!" he said, with a twitching face. "Don't you talk that a-way. I'm sorter rough, I know, an' I've called you a fool time an' ag'in, but 'twas only my way. Why, I couldn't set no more store by you, Arianer, if you was my own!" and the old man broke down completely. She did not answer; perhaps she did not understand.

There was an elm without the window, and the sun cast its shadow on the bare, white wall. With every breath of air the lace-like tracery swayed and pulsed, and Ariana lay watching it in wide-eyed silence for a time, then began afresh:

"It's bad about the money you spent — I'll never sing again — an' it's gone — gone."

"I ain't a-thinkin' about *that*, Arianer," Toner said, huskily. "It's *you* I'm thinkin' of."

He did not tell her that Tresmond was in the house. He had argued it out with himself that it would do no good; that it would only bring back the bitterness of what was past.

"May be I'd 'a' broke down after all," she said slowly, "an' it don't matter *now*."

"Don't, Arianer!" he repeated; "don't you trouble about that. I don't care nuthin' about my ex-periment jus' so's you get well."

"It seems sort of queer," she muttered, and a spasm crossed her face, and her eyes wandered restlessly back to the dancing shadow, as if she would fain have had a little time to understand the strangeness of it all.

"I reckon God knows best," she said more faintly, as if she answered some inward cry of lamentation.

"Tell Guido — an' Angelo," she said at last; but her wandering thoughts could not form themselves into words, and she did not speak coherently again until the night was far spent.

"You'll put me a-side of gran'father?" she asked, and Toner nodded.

Near dawn he spoke to her and touched her gently on the shoulder, but she did not heed him. Tossing and muttering to herself, Toner caught Tresmond's name again and again, and his face grew dark.

"Don't you think about him, Arianer," he said; "he ain't worth it."

As he spoke it seemed as if his voice had recalled her wandering senses, for her eyes rested on his face for a moment, just a moment, and then she rambled on again:

"It won't do him — any hurt — *now*."

Toner turned from her and stood for a moment irresolute, then passed into the hall. At the far end the glare of a lamp mingled with the gray of dawn, and in its circle of

sickly light Tresmond sat, with arms crossed on the table and head bowed down upon them.

Memory, that surest of all avengers, was leading him back step by step over the past, until he was once more in the little church-yard, where the rosemary lifted its sharp, dimly colored spires to the calm blue sky, and filled the air with faint odor — just as it was upon the day they parted.

"Come," the piano-tuner said, and they entered the room together.

He stood aside and allowed Tresmond to take his place beside her.

"Ariana," he said, steadying his voice as well as he could, "I've come — to ask you — to forgive me."

She turned her eyes towards him, but it was too late. There was no recognition in them; yet his voice must have struck some chord within her, for she moved restlessly on her pillow, moaning:

"It wa'n't his fault; I wa'n't a lady."

No reproach could have stabbed him as did her unconscious loyalty, and stooping over her he caught her hands in his, and entreated her hoarsely:

"Look at me, Ariana — it is I. Look at me, dear —"

"It ain't no use," Toner said, roughly. "Can't you see it ain't?"

With a groan Tresmond sank upon his knees beside the bed, and covered his face.

Like a refrain she muttered now and then: "Most over — it seems — sort of queer —"

As the light crept upward, flushing the east rosily, she stirred, and her one idea came back with pitiful persistence:

"It seems — sort — of — queer —"

The light grew stronger, and the muddy stretch of water caught a glimmering reflection of the dawn, and the whistle of the boat sounded shrilly through the morning air. Ariana's glazed eyes turned in the direction of the sound, which seemed to call to her like a voice from the past of her lonely and neglected childhood; and, as the sound died away across the water, a thrush in the elm began to sing, and the world awoke.

"Arianer!" Toner called, bending over her; "Arianer!"

Not the faintest movement answered his voice.

THERE are some lives like the weeds which spring between the city stones to be parched by the sun and stunted by the flinty soil, and at last, before their little day is over, to be crushed by the careless foot of some passer-by. Only God in his infinite wisdom can know why they exist.

Margaretta Wetherill Kernan.

MOUNTAINEERING IN PERSIA.

IT was pleasant enough at Serassiâb. The porch or open veranda where the busy days were so delightfully passed was musical with the sound of falling water which poured into a tank encircled by a row of graceful pillars. At the end of a dense avenue of plane-trees an open pavilion could be seen, supported by columns and walls faced with glazed bricks, colored turquoise-blue, orange-yellow, and black. The Persians have few of the appliances that aid the artisan of America. They do not even use a square in masonry or joinery. But they bring to their aid industry and an exquisite taste which three thousand years of vicissitudes have not eradicated from the national character. Putting up a rough, crooked post, they build around it a shapely and elegant pillar. If carefully measured, it will doubtless show numerous departures from straight or symmetrical lines; but the general effect is so just and agreeable as to indicate invention and a remarkable turn for constructive decoration. The arrangement of glazed bricks of various colors in elegant designs is also a trait of Persian art in which great beauty and taste are often displayed.

But this is widely digressive from the object in view when I began this paper, which was to give an account of a little trip among the Elburz mountains after health and trout. A branch of this range, called the Shimrân, or Light of Persia, arose behind our house at Serassiâb to an altitude of thirteen thousand feet. In our evening rides we could also see the snowy cone of Demavënd soaring above the nearer range to a far greater height, still rosy in the glow of departing day, when all the nearer landscape had put on the sober mantle of twilight.

The Lar is perhaps forty-five miles from Serassiâb. And this is the way we were obliged to prepare for the trip in order to reach our destination. It was essential that we should take with us tents, bedding, crockery, and sufficient animals to carry ourselves, the servants, and the outfit. This required the employment of much talking and of an occasional thrashing when the insolence of the *charvadârs*, or muleteers, interfered with the clinching of a bargain. After several days of preparation all seemed ready for the start. One curious circumstance about the journey, however, was the fact that we were obliged to journey by night. The great heat makes it impossible to travel in Persia in the middle of the day during the greater part of the year. Our

departure was therefore so timed that we could have the benefit of the full moon. Once on the road, and winding through narrow lanes at a moderate walk, we were able to observe what an imposing procession we made. At the head rode the *giliôdâr*, or equerry, mounted on a white Shirâzee Arab stallion. Two gentlemen followed, and next to them came several ladies on donkeys. The *tachtravân* was next in order, carrying the invalid of the party. This is a curious vehicle peculiar to Persia and Turkey. It is a covered litter borne between two mules, and contains sliding doors and windows. It is rendered reasonably comfortable by mattresses on which a person can lie at full length. The *tachtravân* of the wealthy is sometimes handsomely decorated, and mention is made of kings of Persia using it many centuries ago. But generally this conveyance is more heavily constructed than is necessary, owing to the difficulty of finding wood which is at once light and strong in Persia. The march of a *tachtravân* is necessarily tediously slow, but it is announced for a long distance by the strings of jangling bells carried by the gayly decorated mules, which do not, however, seem to appreciate the wealth and weight of ornament lavished upon them. On level roads the *tachtravân* is a real luxury; but when there is a steep ascent or descent combined with bad roads, this form of locomotion is not only very trying to the mules, but is also a severe strain on the rider, both on account of the exertion requisite in preserving his position and the nervous strain caused by watching the frequent peril of being hurled over a precipice. At the head of the leading mule marched a stately Arab, Abdullah Ibn Hassân. His gait was that of a prince; he was six feet in height, sparely built and perfectly erect. A camel's-hair tunic reached to the ankles. His head was muffled with a striped mantle bound around the forehead with a white cord. His swarthy features were haggard but yet handsome, and the dark orbs which flashed from under cavernous brows were marked by a proud and romantic melancholy, deepening into a glow of injured pride tinged with sadness when he was refused a back-sheesh, as if he would reproach you for having disappointed the confidence he had reposed in your elevated generosity. What a standard is to an army was this son of the desert to our humbler train. He gave to it such a bearing that he seemed to be the chief

person in it, instead of a poor mule-driver earning twenty cents a day traversing the wastes of an ancient land,—a mule-driver by descent and the father of mule-drivers of the future. In looking at Abdullah Ibn Hossân I was led by a very whimsical turn of the mind to think of La Fotheringay, in Thackeray's "Pendennis." Did that great reader of human nature realize when he delineated her character what a type she is of a numerous class who are so richly endowed with lofty mien and aspect that until they open their mouths and betray themselves they pass for something far higher than they are.

Our sumpter mules, thirty in number, had already been sent on several hours in advance, in order that the tents and supper might be ready for our arrival at the proposed camping-ground. Our path led us at first through narrow lanes of Tejrish and the adjoining village of Dezeshoob, and gave occasion to a considerable disturbance among the curs of those villages. Our passing also brought on our heads numerous remarks, not always complimentary, as we were foreigners and Christians, from the idlers smoking under the trees at the wayside places of refreshment. We were also saluted by the clamor of mingled blessings and curses from the professional beggars seated by the roadside, among whom must be included the filthy and half-idiotic santons, who, in a disgusting condition of nudity and dirt, depend upon the benevolence of the faithful for alms. They build a low hovel of mud under a wide-spreading tree, and pass their unprofitable lives in what they are pleased to consider service to God. Owing to their alleged sanctity one cannot always treat these lazy fellows as they deserve,—viz., with a sound thrashing for their impudence.

Emerging from Dezeshoob, we soon came to the superb country residence of the Naib Sultanêh, third son of the Shah, and Minister of War. The grounds are arranged in terraces with pools and spouting fountains on each terrace, surrounded by shrubbery and lofty trees laid out with a pleasingly artistic air of negligence. After leaving the shaded avenues surrounding these elegant grounds, our train moved slowly over a treeless plain, which gradually ascended until the road entered the mountains. At nightfall we found ourselves in a pass noted for brigandage, and although the road has for some time been comparatively free from danger, and we had a military escort with us, it was deemed prudent for the party to close up its ranks, as stragglers might be attacked in the dark. The moon came to our assistance early, and was bright and welcome indeed when we reached the summit at nine.

We found the ridge so abrupt that we passed at once from the ascent to the descent; and here the greatest care was required to reach the plain without accident. The road for some distance followed the edge of an excessively steep mountain, which divided the gorge in twain like a curtain. To make room for the road the sharp edge of this elevation had been cut down. In many places we could look on either hand into a black ravine far below, shrouded in deep and seemingly fathomless gloom, untouched by the moon, which fortunately lighted up the hazardous path we were following. The lower half of the descent was very bad, as the road was there composed of loose shingle, and, besides being uncomfortably steep, often branched off in various directions. A party which had preceded us on a previous night lost their way in this place, and did not find it again until daylight. It was also with great difficulty that the mules were able to turn the abrupt corners of a precipitous, zigzag road without accident to the tachtavân.

Having at last accomplished the descent without mishap, we entered on a narrow plain, and soon reached a wayside resting-place with the usual *chenâr*, or plane-tree, which marks such spots in Persia. Under the enormous spreading shade were two or three booths offering bread, fruits, and tea to travelers; a fountain adjoining furnished us a grateful draught. On leaving this place we came to a deep, rushing torrent called the Jarje Rood, the latter word meaning river. Here were some remarkable cliffs springing directly from the stream. They were shaped like a stupendous fortress with bomb-proof casements. Several caves in the sides suggested embrasures for cannon.

We crossed the river on a massive stone bridge supported by arches. In the rainy season the river is often much wider than we found it, and overflows its banks. It was to this circumstance that the late Emin-e-Sultân, one of the most prominent men in Persia, owed his title and the origin of his good fortune. The Shah often comes to this spot to hunt, being a skillful and enthusiastic follower of the chase. In a garden near the river he has built a pretty pavilion, and usually takes a number of his wives with him. When the retinue is large the ladies live in tents. On one of these occasions the river, evidently desirous to show its independence of the royal authority, took a whim to overflow the banks and give the king and his attendants a good wetting. They were aroused from their sleep by the sound of rushing water, and found the river rapidly rising around their couches. In wild terror the royal wives fled

NOVGARÂN, COUNTRY SEAT OF THE NAÏB SULTANÉH.

to a safer spot, leaving everything behind them, including jewelry to a large amount. One of the lower officers of the court, aware of the loss and with an eye to his own profit, ordered his servants after the subsidence of the waters to search high and low for the lost treasure. Their efforts were crowned with success, and the officer caused them to be restored to the royal owners. The Shah was so gratified with the enterprise and zeal shown on this occasion by his subject, that he named him Emin-e-Sultân, and eventually promoted him to the charge of the mint and many other offices of great importance.

A short steep ascent from the bridge along the wall-like face of the lofty banks brought us to a noble plain, so white in the light of the full moon that it looked like a snow-land in the isle of dreams. Across the plain we now discovered two men approaching us at a tearing gallop. They reined up suddenly on reaching our train, and proved to be two of our servants who were on the lookout for us.

After giving us directions as to where to find our tents, they returned to the camp at full speed, to order hot tea prepared on the *samovâr* ready for our arrival. Another weary half-hour followed ere our slow-moving train reached the massive shade of the gigantic plane-tree under which the tents had been spread, by the side of a pool and a brook which emptied into it. It was a most picturesque scene as we alighted, the white tents looming mysteriously in the gloom, lanterns moving hither and thither and flashing in the water, dusky figures grouped around the fire where our supper was cooking, and the broad moon above in the cloudless heaven, braiding silver spangles with the shadows.

The following morning being the Sabbath, we abandoned ourselves without reserve to the attractions of our camp, happy in the consciousness that we should not have to leave it until the subsequent day. To enjoy one's self by indulging in the luxury of absolute indolence, entirely free from *arrière pensée*, is

actually a task rather than a pleasure for most Americans. But one soon learns in the Orient that the only way to obtain the full benefit of rest, or entirely to appreciate the opulence of the attractions of Nature, is to lay aside for

of one of these gorges, which in this case was a narrow winding ravine scooped out of a ridge whose castellated peaks towered several thousand feet higher. At sunset this mountain was arrayed in a superb robe of purple.

A BIG PLANE-TREE AT GELANDEVÊK. (DRAWN BY HARRY FENN FROM A SKETCH BY S. G. W. BENJAMIN.)

the time the business and the burdens of life without reserve. Then and then only can one understand that there is enormous gratification in the simple consciousness of existence.

Our camp made quite an imposing appearance, consisting as it did of several large sleeping tents and a number of smaller ones for the soldiers and servants. We took our meals off a camp-table spread under the great chenâr. The tree was probably one thousand years old, and measured thirty feet in circumference several feet from the ground. A few feet higher up the gnarled trunk divided into several large branches which towered like the columns of a temple. This idea was intensified by the smooth gray bark that incased and gave them the appearance of hewn stone. Besides this patriarch of the plain, a beautiful grove of willows shaded our encampment. This spot is a favorite resort for the Shah, who comes here to hunt the panthers and ibexes that are found in the neighborhood. I should mention here that we were on the edge of the village of Gelandevêk, at the head of a plain inclosed by mountains. This plain is called Hassardaré, or plain of a thousand valleys, because it is so undulating as to produce the effect of numerous separate plains, which again in turn wind into the gorges of the mountains. The camp was at the entrance

In a clearing between the wood and the village extended an open field yielding melons and vegetables. In the evening the lads of the village sported there in a manner very like that of boys in Christian lands. The tall gardener, whose beard was curiously dyed an orange-red with henna, also came down at that hour with his wife and daughter to gather melons. The women seemed to have hard work of it to keep their faces concealed with a loose mantle, and at the same time pluck the fruit. They were far less anxious about revealing their persons than their faces.

On the following day the gardener appeared at my tent door with a most attractive dish of honey in the comb. He offered it as a present, but we knew perfectly well what he meant by this. It is a custom and privilege of the lower classes in Persia to bring what they call presents to those above them; but they expect a corresponding pecuniary present in return. When this privilege is not abused by being exercised too often, it is usual to accept the present. But the custom is sometimes annoying, and I always reserved to myself the privilege of declining the offering. In this case the honey was too tempting and the demeanor of the man too respectful to admit of refusal, and he went away happy with a sum twice the value of the honey and equal to the profits of several days labor in Persia.

A while after this episode a troop of veiled women, stately in the long mantle which muffled them from head to foot, visited the camp. They had learned that a physician was one of our party, and desired to consult him. Improvising a medical office at once under a tree, the doctor sat on one of the roots, and proceeded to feel pulses and examine tongues. Their faces he could not see. It was a novel sight to observe this group of ignorant peasant women, in parti-colored garb, seated in a circle before him on the grass, giving him an account of their ailments. The traveler in the East is often requested to prescribe to the sick, be he actually a physician or no. I have been repeatedly requested to serve in this capacity, and sincerely hope that the list of mortality in non-Christian lands has not been thereby increased. Luckily neither coroner nor municipal records exist in the happy Orient. The physician, however, labors under a peculiar disadvantage in Persian practice even if his qualifications are not too carefully examined; for he is not permitted to see the face of his female patient, and is thus deprived of one of the most important points in forming a diagnosis. The native doctors require no other diploma to enter on the profession of medicine than a supply of infinite assurance sometimes called cheek. They are generally itinerants who go from village to village and announce their profession on arriving. Extraordinary remedies are given. Having prescribed, the physician decamps before the results become perceptible, aware that a common sequence is death. Fortunately for them, this result is generally quietly accepted as the fiat of Kismét, or Destiny.

Another question also came up for our consideration on Monday; this was the selection of the best route for us to take over the tremendous ridge that rose between us and the Lar. Having an invalid in a tachtravân to take with us, the question was much more serious than that of deciding which of various comfortable routes one should select to go from Boston to New York; for there are many roads in Persia over which it is impossible to take a tachtravân. We had intended to go by the route of Lavassân, in two stages. But hearing that the road over the Aftcha Pass was practicable, and could be made in one stage, we found ourselves in a dilemma. Nothing is more difficult than to obtain precise and correct information about routes and distances in Oriental countries. In order to settle the question, we sent for the head men or elders of the village, who came to the camp and gave respectful attention to our inquiries, seated

under the great plane-tree and smoking with great dignity. They assured us that the route over the Aftcha Pass was every way the most desirable. They pronounced the road to be good, and the distance, they affirmed, could be accomplished in eight hours. The former statement proved measurably true, while the latter we unfortunately found on trial to be correct only for horsemen excellently mounted and going at a gallop over many parts of the route, which was manifestly out of the question with such a train as ours.

After the departure of these worthies, we ordered the tents to be struck and the sumpter-mules to be loaded, and proceed in advance to prepare our next camp for us. The loading of so many implements on some forty mules, my own share of the number amounting to sixteen, was a task of several hours; but by one P. M. the loads were all started. After a comfortable siesta under the trees and a right jolly meal, we also got the passenger-train under way at half-past four P. M., the very earliest hour we dared to start, owing to the intensity of the heat before sunset. But we had many hours of the hardest mountain travel in Persia before us, and were anxious to reach our cots before one A. M. When one considers that in our party were included an invalid and two infants, with their nurses, two small boys under five, and a half dozen spinsters ranging from six to sixteen years, and some twenty-five animals loaded with passengers of various ages, the arduousness of the undertaking is better appreciated, especially if to this be added the fact that we were to wind along the edge of tremendous precipices over a pass thirteen thousand feet above the sea. I should add that the nurses and babies were carried in *kajevêhs*, which are basket-like

OLD BRIDGE AT GELANDEVÊK.

frames, slung on either side of a mule, and sheltered by a curtain. The peculiar advantage of the *kajevêh* on a narrow cliff road lies in the probability that, if one of the *kajevêhs* hits the side of a rock, the mule will be thrown off his balance and land with his load at the bottom of a ravine.

Our road lay for a couple of miles over the plain of Hassarderé, crossing several streams that were nearly dry. One of them was

spanned by a picturesque but dilapidated bridge with a single arch. I subjoin a sketch of it, as it is a characteristic example of the Persian mode of bridge-building. Some of the timbers employed for a staging during its construction are still to be seen there. It is a curious habit of the Persians to leave parts of the scaffold timbers obtruding, even in elaborate structures; for what reason it is difficult to tell.

Gradually ascending, we entered and passed through the village of Kardan, and came to a large waterfall at the left of two bridges. The old one was a fearfully narrow and ticklish structure, without a parapet and wide enough for only one horse. Happily our train was not obliged to risk this perilous passage, for a handsome new bridge of hewn stone, broad and parapeted, had recently been constructed by the side of the old one.

From this place the road rapidly ascended, passing along the edge of a ridge and looking on either hand over a landscape of the most magnificent description. On the lovely slopes and glens below, half veiled in the creeping shadows of the late afternoon or smitten by the long shafts of the setting sun, tilled fields, gardens, and picturesque villages were clustered in agreeable variety. Ever and anon, too, between the foliage one caught the magical gleam of a mountain stream dashing down over crags and precipices. Above, and on either hand, sublime peaks lifted their pinnacles golden in the radiance of a cloudless sunset. Those travelers who speak in light terms of the scenery of Persia are either unobservant of what they might see, or wedded to a special type of landscape; what is more likely, they have never been over the Aftcha Pass.

The road here was excellent and showed real engineering skill. Two hours' ride brought us to the village of Aftcha, which, like many villages of Persia, is an appanage of one of the men in power. His country residence may be seen prominently situated on one side of the ravine, at the bottom of which rests the village in a picturesque confusion of peasants' houses grouped amid the foliage in a most irregular but attractive manner. The steep, narrow entrance to the village was blocked by a drove of loaded donkeys as we approached. It was a characteristic incident of Persian travel when our *giliodâr* dashed headlong into this clumsy throng, thrashing heartily from side to side, hitting both men and animals with no trifling blows of his whip, and driving them back into a side lane to make room for our train. As we clattered noisily through the rough, tortuous streets of the village, every one came forth to gaze on such an unwonted scene. It

was no small matter to force the *tachtravân* through the narrow, tortuous lanes round abrupt corners. The difficulty experienced here was a foretaste of the obstacles that we were to encounter higher up the mountain.

The village of Aftcha may be considered typical. Persian villages are divisible into two classes: those of the plains, treeless and surrounded by a high, quadrangular wall of sundried bricks to protect them against the inroads of *Turkomâns* and *Kurds*; and those distinguished for their watercourses and trees, in ravines or lofty mountains, where springs and torrents encourage the growth of plane, mulberry, and poplar trees and orchards, and allow irrigating channels for the nourishment of vegetable plantations. Water is the most precious commodity in Persia. Except in the humid provinces north of the mountains adjoining the Caspian, there is neither rain nor dew for many months, and none too much the rest of the year. The cities are entirely dependent for water on subterranean aqueducts. Nothing can exceed the aridity of the vast plains of this ancient land; while on the other hand nothing can surpass the rank luxuriance of the verdure of its mountain villages, through which the roaring torrents dash all the year round.

Aftcha is one of these. As we emerged from its lanes and opened the upper side of the hamlet, we heard the roaring of a cataract, tumbling over a precipice and endowing the village to which it gave a name with rural comfort and beauty. In a small field on the right reapers were cutting the wheat with sickles, or gathering fruits in baskets and mantles. After crossing the torrent over an arched, parapeted bridge of colored bricks, we began to climb the mountain in earnest. We could see the road above us very distinctly, a serpentine line following the zigzag crest of an ascending spur, which led to the entrance of the pass. The sun was now below the mountains, but the twilight lingered for some time, and we made good headway before it was actually too dark to proceed with safety. On returning over the same road in broad daylight, I confess there were parts where the precipices on either hand were a little giddy, especially with a skittish horse or a *tachtravân*.

Fortunately, when the darkness fairly set in, rendered doubly intense by the lofty mountain walls on either hand, we came to a small level nook where it was deemed best to cry a halt and wait for the rising of the moon. Every one dismounted, and the animals were detailed in groups to several of the attendants. Several large boulders were scattered over this mimic plateau, and in a few moments our party had found a shelter from the night wind

A RELIGIOUS MENDICANT.

under these rocks. Lanterns and the fitful gleam of a fire soon shed a flickering radiance over the moving figures, but added extraordinary mystery to the opaque background of mountains that seemed to spring up abruptly only a few yards from us. In the mean time the ever-present samovâr or Persian tea-urn was busy heating water, and we found a capital cup of Russian tea refreshing indeed. To this we added cold boiled eggs and some sandjiâk or unleavened bread baked on the stones in a

thin cake. Two of the horses now took it into their heads to kick up their heels and make a bold strike for liberty; they dashed away towards Aftcha. This might have proved a serious incident, for they were both spirited animals, and it is no easy matter, the catching of runaway horses in such a place and at such an hour. Specter-like they flew down the road, one white as snow, the other black as night, but both a shadowy gray in the gloom. A dozen men at once started

THE TACHTRAVÂN.

in pursuit, while my hostler, springing on a quick horse, spurred after the fugitives. The flying bridles probably impeded their steps, for in a few minutes they were caught and brought back. But, on remounting my black Afghan, I found his ambition for a night adventure was not quite over.

After resting an hour, we began to see the light of the moon touching the peaks on the left side of the gorge and gradually creeping down the mountain-side, which changed from a black form to the appearance of a white mist. Then, with lanterns carried by the outriders both in front and rear of the procession, in order to indicate the road and prevent straggling, we recommenced our journey. The giliodâr received strict orders to keep a careful lookout; on the appearance of a sign that any one was falling behind, the head of the column was to be stopped and a messenger sent to ascertain the difficulty and dress up the line again. Of course we traveled single file, and this made it important that we should keep together; for the climb before us was full of danger, and if any accident should happen to some one in the rear of the column it might be some time before he was missed unless we exercised unusual vigilance.

Next to the giliodâr followed the tachtra-

vân, with a footman on each side to steady it in rough places. Immediately behind rode two gentlemen ready to spring off the horses any instant the tachtravân should be in danger of slipping over a precipice. After them followed a miscellaneous train of horses and donkeys, with kajevêhs and ladies and children; lastly, came several attendants and the escort of soldiers.

The moon long delayed bestowing the advantage of her rays on our devious path. The farther we entered into the heart of the mountains, the darker it became; for the mountain between us and the moon, although the sky above it was glowing as with a white fire, yet arose as we approached it and tantalized us with the constant hope of seeing the moon, while it persistently screened it from our view, and thereby increased the gloom which enveloped the hazardous

cliff-road up which we were slowly climbing. Every one was carefully watching his own animal, lest a false step in the dark should hurl him into the gorge below, when a sharp, long cry rang from the rear of the train, which was still on the zigzag below. At once a halt was called and a messenger was sent to find out the cause of the outcry. It was discovered that a loaded mule with a servant on his back had fallen over the edge of the road and rolled down. The man fortunately saved himself as the animal went over, but the mule was recovered somewhat the worse for wear, although able to continue the climb. Mules, like cats, are hard to kill.

Again the long procession began to wend its slow way upwards, over a terrific piece of road which often consisted of smooth rocks confusedly thrown together. On looking at that part of the road afterwards by daylight, I was astonished that we escaped without serious accident. Many of the party now found it convenient to dismount and climb on foot until the moon finally burst over the ridge with a light scarcely dimmer than that of day. But once again came the cry of distress from the hollow below. This time another mule had fallen over with damage to its load; but it had caught on a ledge and escaped with only some severe bruises.

But if the moonlight enabled us to see our way better, it also revealed to us more clearly the depths of the yawning gulf on our right, enveloped in mysterious gloom. The road, although a very good one in the main for a Persian mountain road, was in places of the most desperate character, while the short zigzags and sharp angles of a path along one side of a steep gorge made it excessively difficult to carry the tachtravân and kajevêhs without accident. Many a time those riding near to the former leaped off their horses and rushed to the rescue, when those who were steadying the tachtravân found their strength insufficient to prevent the mules from slipping over the cliff or capsizing the heavy and cumbersome fabric. For the mules the labor was terrible, and I expected momentarily to see one of them give out. At one point of imminent peril there were eight men tugging at the mules and the tachtravân to force them safely around a sharp angle in the road.

In the mean time the hours were slipping by, and the time set for arriving at our camp had passed; but it was, notwithstanding, painfully evident that scarce half our arduous task was yet accomplished.

Finally, at two in the morning, we scaled the Aftcha Pass and stood on the summit of the ridge, thirteen thousand feet above the level of the sea. We had safely accomplished a feat never before undertaken on that road. For the first time a tachtravân had scaled the Aftcha Pass, and an American lady was the first woman who had ventured on the undertaking. From the sharp ridge on which we halted a few moments we looked down into the great volcanic valley of the Lar, twenty-five hundred feet below, and discerned at the farther side the shadowy form of the stupendous cone of Demavênd. Although yet thirty miles from us, it soared far above our position, and its snows gleamed in the light of the moon like a mighty phantom hovering in the heavens.

As it was two hours yet before dawn, and all were weary and hungry, it seemed proper that we should now dismount and find the rest we so much needed. But this was a joy to be deferred for several weary hours, for we had still to pick our way down the other side of the ridge and travel miles and miles across the plain to the spot where our servants had been directed to pitch the tents. The descending road, although following a zigzag course, was on the whole less difficult than the one we had just ascended; and by four in the morning the entire party were fairly on the plain and passing the camps of nomads, whose fierce watchdogs gave us a boisterous greeting. I may say here that one of the greatest ob-

stacles encountered in climbing the Aftcha Pass were the large trains of mules and donkeys carrying rice and coal to Teherân and the south of Persia. These stubborn animals are no respecters of persons, nor can more be said of their uncouth drivers. Whenever one of these trains hove in sight, our giliodâr and attendants had their hands full forcing these unruly trains to keep on the outside of the road.

At last dawn began to break on the heights

AN ILIYÂT WOMAN.

of Demavênd, which now soared above us mightier than ever. "Where can the tents be?" "I wonder if we shall ever get there!" were the exclamations constantly uttered by the ladies and children, who were half dead from exhaustion. Around us on every side were the rock-turreted walls of the great mountains inclosing the winding plain. But as dawn deepened into daylight we looked in vain for a glimpse of the longed-for camp. We were fording a rapid stream when a horseman appeared over a knoll galloping towards us at full speed. It proved to be one of my servants, coming to guide us. Here at last was a ray of hope; every heart brightened, and all were cheered by the good news that the camp was only half a *farsâkh*, or two miles, distant. The Persians, as described by Xenophon in the "Anabasis," still

MOUNT DEMAVÉND, FROM VALLEY OF THE LAR. (DRAWN BY HARRY FENN FROM A SKETCH BY S. G. W. BENJAMIN.)

measure distances by farsâkhs or parasangs. The snow on the top of Demavénd blushed into a warm roseate hue as the sunlight burst into the broad effulgence of day. But on and on we journeyed without rest, stared at here and there by the flocks of mares and their foals pasturing in the meadows, or by the tawny, unkempt nomad children, who romped quite naked before the black tents. The two miles had been more than accomplished over the devious road which led us across one of the most desolate and extraordinary landscapes on the globe, before it dawned on us that the half farsâkh was a mere vague statement of the distance to the camp. No tents were in sight, although we now entered on a portion of the valley enlarging into a plain three or four miles wide. The horses and mules began to show signs of exhaustion; one of the mules carrying kajevêhs came down on his knees on level ground and threw a child out on the turf, face foremost. But now another messenger, who had been sent ahead to reconnoiter, returned to assure us that he had found the camp just around the foot of a high mountain directly before us, which concealed Demavénd. Fording the rapid current of the Lar River, and skirting this mountain, we at last came to a turn where the camp appeared, yet a mile away, and the tremendous dome of Demavénd springing ten thousand feet abruptly above the plain, apparently close at hand, but actually fifteen miles distant.

It was well past eight o'clock when we at last reached our tents in the valley of the Lar, and dismounted, sixteen hours after we had started from Galendevêk.

The first word that ran unanimously through the camp was *tea*. Fortified by several draughts of the best refreshment for the weary yet discovered since the time of Adam, we resolved ourselves into a committee of the whole, to visit the land of Nod. "God bless the man who invented sleep!" ejaculated Sancho Panza, and the sentiment found hearty response in every bosom that memorable morning when we reached the valley of the Lar.

On returning to ourselves again, after a nap of long duration, we all once more with one accord cried breakfast. The universal longing found expression by a vigorous clapping of hands. This is a novel way, you may imagine, to express a sentiment of hunger. I should explain that this is a method of summoning servants in the East. When the servants raised the door of the tent they knew what we wanted, and said, "*Bally, bally, hazûr dur*," which is to say, "Yes, it is ready." Having satisfied the wants of our lower nature, as pietists and philosophers would say (rather hastily as it would seem, considering how dependent the brain is on the stomach), we were in a proper condition to take a survey of the situation. The camp, we found, was planted about the center of a rolling plain several miles long and about two miles wide,

THE BLACKSMITH.

completely hemmed in by rocky mountains, absolutely bare, but lovely in their very savageness, painted as they were by the various gray or ruddy hues peculiar to volcanic formations. About a thousand feet above the plain was a large patch of snow. At the south-western end the mountains separated, making a passage for the river. At the opposite end, also, the plain widened and gave into it a larger valley meeting it at right angles. But across the entrance stood a mighty eminence crowned by nature with rocks resembling a feudal castle; and beyond and far above soared the great mountain of Persia, Demavênd, the majestic and sublime, the peer of the noblest kings of the mountain world. The plain we were on was ten thousand nine hundred feet above the sea, and Demavênd rose ten thousand feet higher. No vegetation was visible on the deeply seamed slopes of the cone, but its summit was crowned with eternal snow, which extended down several thousand feet, mostly in the clefts of the deep ravines and precipices. I found by measurement that the slope of the cone has an average inclination of thirty-eight degrees, which is remarkable when one considers the extent of

the slope or compares it with some of the steepest of the world's volcanic peaks.

The valley of the Lar, although destitute of any sign of shrub or tree, is yet full of interest to the lover of nature. The river Lar winds along the center of the valley. This is a stream fifty to one hundred yards wide; the current is somewhat turbid, and rushes with great rapidity. The low banks rise gradually on either hand towards the mountains. These undulating slopes were dotted with black goat's-hair tents of the nomads, or blackened with moving patches, which as they approached were resolved into large flocks of goats. Herds of mares were also frequently seen accompanied by their colts, browsing on the short herbage, and wandering at will over this fenceless valley of desolation. These mares belonged to the king, and I was told fully two thousand are annually kept at the Lar, rearing horses for the artillery of Persia.

The Lar valley is in reality the bed of an enormous crater. At some remote period volcanic peaks have been upheaved above its crust, which have divided the surface into the chain of narrow and winding valleys that form the present great valley of the Lar.

Demavënd, the monarch of this elevated solitude, is, of course, a volcano, although quiet for many ages. The presence of this great scene of volcanic action on the borders of the Caspian Sea appears to be consistent with the now well-known law that volcanoes are usually found near the sea.

Our camp was pitched on the brow of a low plateau overlooking the river Lar. The party divided itself into three sections. My own camp included seven tents, with those for the servants. Our sleeping-tent was pitched on the edge of one of the numerous musical brooks which aided to feed the deep flood of the Lar. A curious feature attending the supply of water in the valley are numerous boiling springs. The bubbling action to which they are subject is intermittent, occurring every few minutes. Where our camp lay, forty of these springs were clustered within the space of a third of a mile, whence the spot is called Shehel Chesmê, or Forty Springs. Besides this group of forty springs, I may mention, among other interesting objects in the Lar Valley, the Whitewater River, which enters the Lar a milk-white stream tinged with a faint suggestion of green; near its source is found the Devil's Mill. It is externally represented by a large ferruginous rock with two apertures a few feet apart. On standing near the rock one hears a deep, perpetual, and mysterious roar far down in the bowels of the earth, as if demons were engaged in forging weapons for another war against the race of man. Naturally no one has ever ventured down to see the mighty works going on below, nor ever will in all probability; for a mephitic gas of deadly potency exhales from the openings in the rock which causes instant death to every living thing that breathes it. Around the rock there is ever a score or two of birds which have fallen dead on inhaling the air, and when I was there a bear was lying at the entrance stark and stiff.

For the members of the Alpine clubs Demavënd offers attractions well worth considering. Here is a peak a mile higher than Mont Blanc, which can be ascended with comparative ease by any one of strong legs and sound lungs and heart. The sulphur constantly forming at the top, together with the vapor and the extreme heat just below the surface, indicates that, although there is no record of any eruption of Demavënd, it is still by no means dormant.

I followed the course of the Lar River to where it rushes roaring out of a Tartarean gorge at Peloure, and is joined by several other streams. After the junction the Lar is called the Harhaz, and becomes one of the most important streams in Persia. I have

seen no river scenery elsewhere much grander than the gorge of the Harhaz. The river rushes deep and strong at the bottom of a narrow abyss which it has cloven for itself in the long course of ages. Hundreds, and in some places thousands, of feet above soar the wall-like precipices. Here and there on the green shelves far above are clumps of dense verdure and picturesque hamlets reached by winding and dizzy paths.

An interesting feature of the Lar Valley is also found in the Iliots who resort thither in summer with their flocks. Iliot, or Iliyât, is the name applied to the numerous nomadic tribes of Persia, who, to the number of nearly a million, under different names and in different clans, roam over the wilds with numerous flocks and herds. The Iliyâts of the Lar informed me that, wandering as they may appear, they are yet guided by invariable laws and habits. When the Lar Valley is covered to the depth of many feet with a dense mass of snow, these shepherds resort to the fertile district of Veramin, south-east of Teherân. When summer comes once more they scale the wild passes which surround Demavënd, and deploy their flocks over the volcanic valley to nibble the scanty herbage. But there is nothing random in this movement. By a sort of unwritten law each family and sect recognizes the rights of the others, and thus from year to year each without interference pitches its black goat's-hair tent in the same place. Each night the flocks are counted, and each month the tax-collector comes round and gathers in the monthly levy of four shahis, or three cents, on every sheep.

It may seem strange that in such a lonely spot, where, notwithstanding the presence of herdsmen and herds, one was almost oppressed by the savage sublimity of the landscape which inclosed us from the world and forced us to study the stars, and in a spot so elevated and so difficult of access, one should come to fish for trout, and, what is more, find them in abundance. But such indeed is the case. The river Lar is famed for its speckled trout, and we encamped on its banks well provided with the best rods and flies the English market could afford. We found the trout fickle enough, as elsewhere, and could never tell when or where to find them,—some days "coy and hard to please," and other days so abundant that magnificent strings of fish, averaging upwards of half a pound each, adorned the tent-poles, or graced the board around which we were gathered, with appetites whetted by the keen mountain air. We soon discovered that a trait peculiar to these Persian trout was an indifference amounting to contempt for the daintiest flies we coaxingly

threw in their way. I concluded the cause of this phenomenon lay partly in the scarcity of flying insects at that altitude. But when we baited our hooks with young grasshoppers or frogs we discovered the favorite weakness of these epicures of the Lar.

But, after all, troutng at the Lar seemed secondary to the magnificent aspects of nature which constantly arrested the attention wherever one might be. The form of the great mountain pyramid was ever present, varying in appearance with every change of the atmosphere, and yet dominating over all other objects and haunting the imagination like the presence of a spirit. Sometimes, flooded with the glory of morning and dimmed by the haze of golden light, it retired to a vast distance. Then it would advance until it appeared to be but three or four miles away, disclosing a clear, sharp outline, and the various ruddy tints of the manifold rocks and abysses which seamed its tremendous slopes. Or anon the storm-clouds tossed across its bosom like ocean surges, and the crest alone was visible as if suspended from the zenith.

But the hour above all others to realize the impressive grandeur of this awful peak was towards evening, seated in the tent-door when the flocks were wending homeward to their fold among the rocks, where the black-eyed daughter of a race of nomads was waiting for their return. When the valley of the Lar and the mountains which inclosed it were gray in the creeping gloom of twilight, the summit of Demavënd was yet lit by the rosy fire of the vanished sun, and glowed like a star in the firmament. But at night, when all was dark and no sound broke the silence of the sleeping world except the low sound of the brook, no effect of nature ever impressed me more deeply than the presence of the great mountain, like a vast shadow thrown up against the stars.

One at the Lar reminded us vividly of America. This was the weather. One may well say that in the greater part of Persia there is very little weather. For nine months of the year the skies are serene, a cloudless azure by day, and at night a purple veil spangled with the countless gems. Towards noon a breeze from the plains sways the tree-tops, and at night the cool zephyrs from snow-capped mountains flutter the tops of the slumbering groves. When at last the leaves fall in November, and a spasmodic attempt at winter comes, the bright gleams of sunshine often intervening seem like a protest against such an intrusion upon a settled order of things, and the early spring restores the equilibrium of an atmosphere which has been only temporarily disturbed.

It was, therefore, with surprise that, after enjoying for some months an almost entire absence of weather, we found in the valley of the Lar an abundance of this material. The altitude of the valley, its peculiar form, and the near presence of a lofty peak were sufficient conditions for a state of things which went even beyond the preparations we had made to meet it. After we had been there several days the sky began to be obscured with clouds. At once the air became chilly; then the rain commenced falling, and every afternoon thereafter a heavy thunder-storm came up, grandly rolling through the gorges, but seriously interfering with trout-fishing, and, what was worse, soaking the tents and making them too damp to occupy with safety. On Demavënd the rain changed to snow, and the slopes of the peak were each evening whiter, although the heat of midday carried away much of the snow of the previous days. Several times the mercury fell from eighty-six degrees at noon to forty-five degrees at night. One after another of our party was attacked with chills, and the horses, accustomed to life on the warmer plains, showed indications of exhaustion.

We decided without delay to return. The tents were struck after breakfast, and the sumpter-mules sent in advance. At that time the heat was intense, and some of our number suffered with only the shelter of an umbrella to protect us from the sun-rays pouring into the valley, untempered by a breeze. But when at noon the rest of us mounted, we had to do so hurriedly, for a storm was thundering in the gorges, which overtook us before we were fairly out of the valley. Our camp that night was pitched on a green shelf hidden in the heart of the mountain that we had to climb to reach the Aftcha Pass. We arrived there at twilight. The horses were tethered by the side of a brook at the bottom of the gorge. It was an idyllic scene. The new moon hung over the dark edge of the mountain, and the fires before the tents added a superb effect to one of those hours which live long in the memory. But after dispatching a warm meal we were obliged to seek our cots, for word had been given for the tents to be struck at three.

Defiling slowly up the zigzag road, we reached the summit of the range an hour after sunrise. Then we rested, and turned back to take a farewell look at Demavënd from that magnificent point of vantage. A universal acclaim of enthusiasm burst apparently from the lips of all. Vertically below us lay the winding valley of the Lar like the bed of a mighty river. Beyond it the ridges rose and fell in endless succession like waves of the sea. A

SOME OF THE INHABITANTS OF AFTCHA.

bank of cloud closed in the receding horizon, and lo! far above it, and far above where we stood, soared the summit of Demavënd, majestic and alone. We were satisfied; that view compensated for all the toils and fatigues we had endured. "Let us go!" said one with a sigh; the exquisite sense of pleasure is sometimes allied to pain.

The descent from the Aftcha Pass was much more rapid than the night ascent had been; but, although we now had daylight in our favor, the difficulties scarcely seemed less, for the weary animals often slipped or stumbled,

and to be hurled over the precipices was not a pleasing prospect. Indeed, in some rugged places we were fain to dismount and trust to our feet. For the tachtravân the descent was attended with enormous difficulty, as the weight constantly tended to impel the poor patient mules over the edge of the road, and several narrow escapes did not add to our sense of security. But finally, after several hours of this sort of work, we came to a more level spot. The tall Arab charvadâr here began to pick up small stones and toss them back towards the other muleteers. "Why do you do that?" I in-

quired. "Because, praise be to God, the Preserver, we have at last got over the worst of the road, and now it will be easy going."

Happily his statement proved true, and ere long we were again meandering through the winding, leafy lanes of Aftcha. A halt was cried at the shops of the village. These shops were open to the road, and facing the orchards along the stream that dashed musically through the place. What attracted us was the fruit, which, for the first time in the season, we found both good and abundant. In a few moments every one of our party was busily occupied discussing the delicious grapes and melons which were liberally handed around. It was a curious spectacle, this little group of Americans on horseback, or in litters and *kajevêhs*, huddled together in a narrow lane of a hamlet in the heart of this distant land, eating fruit with keen zest, while the neighboring roofs, walls, and doorways were thronged with a picturesque assemblage of peasants, men, women, and children, gazing with eager eyes at so unexpected a sight. But although the curiosity of these simple people was so great that many a pretty young girl occasionally lowered her veil an instant to get a better view of the strangers, and the bare-legged urchins crept fearlessly among the horses to obtain more certain information concerning these queer foreigners, and the blacksmith forgot to raise his hammer, and the baker, lost in mute surprise, neglected the dough ready to be thrust in the heated oven, yet politeness reigned over the scene and not a word was said to disturb our content. On the contrary, several individuals offered to bring us water or volunteered information about the attractions of this lovely hamlet nestling in a hollow of the mountains and garmented in almost perennial verdure. It is on such occasions that one realizes how very handsome is the race which inhabits Persia. Nowhere are children to be found whose cheeks are more rich in bloom, or whose eyes are kindled with a brighter glow. Large-eyed they are, well formed, in their type of beauty akin to the Greeks and the Spaniards. Nor does squalor or poverty utterly rob the Persians of their native grace.

It was with a considerable sense of relief that we at last arrived at Gelandevêk and found the tents ready for us, by the side of the old plane-tree. There we remained for several days enjoying the grateful shelter afforded by this venerable tree, under which it is quite possible Marco Polo encamped when passing through Persia eight hundred years ago. Among other facts which he re-

cords of this country is the statement that Persia was in his time celebrated as the land of plane-trees. It was in fact the country called by Polo the Arbor Sec, referring to the plane-tree, which was considered to be the tree that became dry at the bidding of our Lord. But Orientals maintain that it grew in Paradise and regard it with great veneration. This noble tree, which for purposes of shade can hardly be equaled, still prevails in many parts of Persia.

The tent we occupied was worthy of notice. It formerly belonged to a Persian general, who used it when accompanying the king or the army in the field. It was of a pattern peculiar to Persia, where it has been the custom for the court to spend the summer in tents. Consequently, the making of tents has been carried to great perfection in Persia, and has given good scope to the decorative talents of the native artists. My tent was of the sort called *kalemkâr*, the designs of the interior being done by hand, and the colors being also applied or stamped by hand. Nothing could exceed the extraordinary beauty of the intricate designs which completely covered the interior of this tent. Each panel had in the center an agreeable representation of the conventional figure of a cypress or tree of life, which we are in the habit of calling the palm-leaf pattern when we see it on Cashmere shawls. But this is an error; it is the cypress that is intended in this design. Around this figure were wreaths of flowers, interwoven with birds of paradise, and at the base of the picture were grotesque elephants pursued by hunters brandishing scimitars. Over the junction of the panels was a pair of exquisitely comical lions of the most ferocious aspect, bearing naked swords in their right paws. This is but a feeble description of the graceful and fertile fancy displayed in this intricate and lovely system of decoration. As in all Oriental decoration, the individuality of the artist was apparent in a score of repetitions; for while repeating the same general plan in each panel, the artist allowed himself to vary the arrangement of color in several places.

Another charm of our life at Gelandevêk was the arrival of our mails twice a week, brought by courier from Teherân. The capital seemed far away, and yet a swift rider could reach our camp in six or seven hours. Letters from our distant home in America had a peculiar charm when read in the quiet scene of rural seclusion, thirty-five to forty days after they had received the stamp of the United States at New York.

S. G. W. Benjamin.

THE MINISTER'S CHARGE;*

OR, THE APPRENTICESHIP OF LEMUEL BARKER.

BY W. D. HOWELLS,

Author of "Venetian Life," "A Modern Instance," "The Rise of Silas Lapham," etc.

v.

LEMUEL stretched the note between his hands, and pored so long upon it that the clerk began to tap impatiently with his finger-tips on the register. "It won't go?" faltered the boy, looking up at the clerk's sharp face.

"It won't go here," replied the clerk. "Got anything else?"

Lemuel's head whirled; the air seemed to darken around him, as he pored again upon the note, and turned it over and over. Two tears scalded their way down his cheeks, and his lips twitched, when the clerk added, "Some beats been workin' you?" but he made no answer. His heart was hot with shame and rage, and heavy with despair. He put the note in his pocket, and took his bag and walked out of the hotel. He had not money enough to get home with now, and besides he could not bear to go back in the disgrace of such calamity. It would be all over the neighborhood, as soon as his mother could tell it; she might wish to keep it to herself for his sake, but she could not help telling it to the first person and every person she saw; she would have to go over to the neighbors to tell it. In a dreary, homesick longing he saw her crossing the familiar meadows that lay between the houses, bare-headed, in her apron, her face set and rigid with wonder at what had happened to her Lem. He could not bear the thought. He would rather die; he would rather go to sea. This idea flashed into his mind as he lifted his eyes aimlessly and caught sight of the tall masts of the coal-ships lying at the railroad wharfs, and he walked quickly in the direction of them, so as not to give himself time to think about it, so as to do it now, quick, right off. But he found his way impeded by all sorts of obstacles; a gate closed across the street to let some trains draw in and out of a station; then a lot of string teams and slow heavy-laden trucks got before him, with a turmoil of express wagons, herdicks, and hacks, in which he was near being run over, and was yelled at, sworn at, and laughed at as he stood bewildered, with his lank bag in his

hand. He turned and walked back past the hotel again. He felt it an escape, after all, not to have gone to sea; and now a hopeful thought struck him. He would go back to the Common and watch for those fellows who fooled him, and set the police on them, and get his money from them; they might come prowling round again to fool somebody else. He looked out for a car marked like the one he had followed down from the Common, and began to follow it on its return. He got ahead of the car whenever it stopped, so as to be spared the shame of being seen to chase it; and he managed to keep it in sight till he reached the Common. There he walked about looking for those scamps, and getting pushed and hustled by the people who now thronged the paths. At last he was tired out, and on the Beacon street mall, where he had first seen those fellows, he found the very seat where they had all sat together, and sank into it. The seats were mostly vacant now; a few persons sat there reading their evening papers. As the light began to wane, they folded up their papers and walked away, and their places were filled by young men, who at once put their arms round the young women with them, and seemed to be courting. They did not say much, if anything; they just sat there. It made Lemuel ashamed to look at them; he thought they ought to have more sense. He looked away, but he could not look away from them all, there were so many of them. He was all the time very hungry, but he thought he ought not to break into his half-dollar as long as he could help it, or till there was no chance left of catching those fellows. The night came on, the gas-lamps were lighted, and some lights higher up, like moonlight off on the other paths, projected long glares into the night and made the gas look sickly and yellow. Sitting still there while it grew later, he did not feel quite so hungry, but he felt more tired than ever. There were not so many people around now, and he did not see why he should not lie down on that seat and rest himself a little. He made feints of reclining on his arm at first, to see if he were noticed; then he stretched himself out, with his bag under his head, and his hands in his pockets clutching

the money which he meant to make those fellows take back. He got a gas-lamp in range, to keep him awake, and lay squinting his eyes to meet the path of rays running down from it to him. Then he shivered, and rose up with a sudden start. The dull, rich dawn was hanging under the trees around him, while the electric lamps, like paler moons now, still burned among their tops. The sparrows bickered on the grass and the gravel of the path around him.

He could not tell where he was at first; but presently he remembered, and looked for his bag. It was gone; and the money was gone out of both his pockets. He dropped back upon the seat, and leaning his head against the back, he began to cry for utter despair. He had hardly ever cried since he was a baby; and he would not have done it now, but there was no one there to see him.

When he had his cry out he felt a little better, and he got up and went to the pond in the hollow, and washed his hands and face, and wiped them on the handkerchief his mother had ironed for him to use at the minister's; it was still in the folds she had given it. As he shook it out, rising up, he saw that people were asleep on all the benches round the pond; he looked hopelessly at them to see if any of them were those fellows, but he could not find them. He seemed to be the only person awake on the Common, and wandered out of it and down through the empty streets, filled at times with the moony light of the waning electrics, and at times merely with the gray dawn. A man came along putting out the gas, and some milk-carts rattled over the pavement. By and by a market-wagon, with the leaves and roots of cabbages sticking out from the edges of the canvas that covered it, came by, and Lemuel followed it; he did not know what else to do, and it went so slow that he could keep up, though the famine that gnawed within him was so sharp sometimes that he felt as if he must fall down. He was going to drop into a doorway and rest, but when he came to it he found on an upper step a man folded forward like a limp bundle, snoring in a fetid, sodden sleep, and, shocked into new strength, he hurried on. At last the wagon came to a place that he saw was a market. There were no buyers yet, but men were flitting round under the long arcades of the market-houses, with lanterns under their arms, among boxes and barrels of melons, apples, potatoes, onions, beans, carrots, and other vegetables, which the country carts as they arrived continually unloaded. The smell of peaches and cantaloupes filled the air, and made Lemuel giddy as he stood and looked at the abundance. The men were not saying much; now

and then one of them priced something, the owner pretended to figure on it, and then they fell into a playful scuffle, but all silently. A black cat lay luxuriously asleep on the canvas top of a barrel of melons, and the man who priced the melons asked if the owner would throw the cat in. There was a butcher's cart laden with carcasses of sheep, and one of the men asked the butcher if he called that stuff mutton. "No; imitation," said the butcher. They all seemed to be very good-natured. Lemuel thought he would ask for an apple; but he could not.

The neighboring restaurants began to send forth the smell of breakfast, and he dragged up and down till he could bear it no longer, and then went into one of them, meaning to ask for some job by which he could pay for a meal. But his shame again would not let him. He looked at the fat, white-aproned boy drawing coffee hot from a huge urn, and serving a countryman with a beefsteak. It was close and sultry in there; the open sugar-bowl was black with flies, and a scent of decaying meat came from the next cellar. "Like some nice fresh doughnuts?" said the boy to Lemuel. He did not answer; he looked around as if he had come in search of some one. Then he went out, and straying away from the market, he found himself after a while in a street that opened upon the Common.

He was glad to sit down, and he said to himself that now he would stay there, and keep a good lookout for the chaps that had robbed him. But again he fell asleep, and he did not wake now till the sun was high, and the paths of the Common were filled with hurrying people. He sat where he had slept, for he did not know what else to do or where to go. Sometimes he thought he would go to Mr. Sewell, and ask him for money enough to get home; but he could not do it; he could more easily starve.

After an hour or two he went to get a drink at a fountain he saw a little way off, and when he came back some people had got his seat. He started to look for another, and on his way he found a cent in the path, and he bought an apple with it—a small one that the dealer especially picked out for cheapness. It seemed pretty queer to Lemuel that a person should want anything for one apple. The apple when he ate it made him sick. His head began to ache, and it ached all day. Late in the afternoon he caught sight of one of those fellows at a distance; but there was no policeman near. Lemuel called out, "Stop there, you!" but the fellow began to run when he recognized Lemuel, and the boy was too weak and faint to run after him.

The day wore away and the evening came again, and he had been twenty-four hours houseless and without food. He must do something; he could not stand it any longer; there was no sense in it. He had read in the newspapers how they gave soup at the police-stations in Boston in the winter; perhaps they gave something in summer. He mustered up courage to ask a gentleman who passed where the nearest station was, and then started in search of it. If the city gave it, then there was no disgrace in it, and Lemuel had as much right to anything that was going as other people; that was the way he silenced his pride.

But he missed the place; he must have gone down the wrong street from Tremont to Washington; the gentleman had said the street that ran along the Common was Tremont, and the next was Washington. The cross-street that Lemuel got into was filled with people, going and coming, and lounging about. There were girls going along two or three together with books under their arms, and other girls talking with young fellows who hung about the doors of brightly lighted shops, and flirting with them. One of the girls, whom he had seen the day before in the Common, turned upon Lemuel as he passed, and said, "There goes my young man *now*! Good-evening, Johnny!" It made Lemuel's cheek burn; he would have liked to box her ears for her. The fellows all set up a laugh.

Towards the end of the street the crowd thickened, and there the mixture of gas and the white moony lights that glared higher up, and winked and hissed, shone upon the faces of a throng that had gathered about the doors and windows of a store a little way down the other street. Lemuel joined them, and for pure listlessness waited round to see what they were looking at. By and by he was worked inward by the shifting and changing of the crowd, and found himself looking in at the door of a room, splendidly fitted up with mirrors and marble everywhere, and colored glass and carved mahogany. There was a long counter with three men behind it, and over their heads was a large painting of a woman, worse than that image in the garden. The men were serving out liquor to the people that stood around drinking and smoking, and battenning on this picture. Lemuel could not help looking, either. "What place is this?" he asked of the boy next him.

"Why, don't you know?" said the boy. "It's Jimmy Baker's. Just opened."

"Oh," said Lemuel. He was not going to let the boy see that he did not know who Jimmy Baker was. Just then something caught his eye that had a more powerful charm for him than that painting. It was a large bowl at

the end of the counter which had broken crackers in it, and near it were two plates, one with cheese, and one with bits of dried fish and smoked meat. The sight made the water come into his mouth; he watched like a hungry dog, with a sympathetic working of the jaws, the men who took a bit of fish, or meat, or cheese, and a cracker, or all four of them, before or after they drank. Presently one of the crowd near him walked in and took some fish and cracker without drinking at all; he merely winked at one of the bartenders, who winked at him in return.

A tremendous tide of daring rose in Lemuel's breast. He was just going to go in and risk the same thing himself, when a voice in the crowd behind him said, "Hain't you had 'most enough, young feller? Some the rest of us would like a chance to see now."

Lemuel knew the voice, and turning quickly, he knew the impudent face it belonged to. He did not mind the laugh raised at his expense, but launched himself across the intervening spectators, and tried to seize the scamp who had got his money from him. The scamp had recognized Lemuel too, and he fell back beyond his grasp, and then lunged through the crowd, and tore round the corner and up the street. Lemuel followed as fast as he could. In spite of the weakness he had felt before, wrath and the sense of wrong lent him speed, and he was gaining in the chase when he heard a girl's voice, "There goes one of them now!" and then a man seemed to be calling after him, "Stop, there!" He turned round, and a policeman, looking gigantic in his belted blue flannel blouse and his straw helmet, bore down upon the country boy with his club drawn, and seized him by the collar.

"You come along," he said.

"I haven't done anything," said Lemuel, submitting as he must, and in his surprise and terror losing the strength his wrath had given him. He could scarcely drag his feet over the pavement, and the policeman had almost to carry him at arm's length.

A crowd had gathered about them, and was following Lemuel and his captor, but they fell back when they reached the steps of the police station, and Lemuel was pulled up alone, and pushed in at the door. He was pushed through another door, and found himself in a kind of office. A stout man in his shirt-sleeves was sitting behind a desk within a railing, and a large book lay open on the desk. This man, whose blue waistcoat with brass buttons marked him for some sort of officer, looked impersonally at Lemuel and then at the officer, while he chewed a quill toothpick, rolling it in his lips. "What have you got there?" he asked.

"Assaulting a girl down here, and grabbing her satchel," said the officer who had arrested Lemuel, releasing his collar and going to the door, whence he called, "You come in here, lady," and a young girl, her face red with weeping and her hair disordered, came back with him. She held a crumpled straw hat with the brim torn loose, and in spite of her disordered looks she was very pretty, with blue eyes flung very wide open, and rough brown hair, wavy and cut short, almost like a boy's. This Lemuel saw in the frightened glance they exchanged.

"This the fellow that assaulted you?" asked the man at the desk, nodding his head toward Lemuel, who tried to speak; but it was like a nightmare; he could not make any sound.

"There were three of them," said the girl with hysterical volubility. "One of them pulled my hat down over my eyes and tore it, and one of them held me by the elbows behind, and they grabbed my satchel away that had a book in it that I had just got out of the library. I hadn't got it more than ——"

"What name?" asked the man at the desk.

"A Young Man's Darling," said the girl, after a bashful hesitation. Lemuel had read that book just before he left home; he had not thought it was much of a book.

"The captain wants to know your name," said the officer in charge of Lemuel.

"Oh," said the girl with mortification. "Statira Dudley."

"What age?" asked the captain.

"Nineteen last June," replied the girl with eager promptness, that must have come from shame from the blunder she had made. Lemuel was twenty, the 4th of July.

"Weight?" pursued the captain.

"Well, I hain't been weighed very *late*ly," answered the girl, with increasing interest. "I don't know as I been weighed since I left home."

The captain looked at her judicially.

"That so? Well, you look pretty solid. Guess I'll put you down at a hundred and twenty."

"Well, I guess it's full as *much* as that," said the girl, with a flattered laugh.

"Dunno how high you are?" suggested the captain, glancing at her again.

"Well, yes, I *do*. I am just five feet two inches and a half."

"You don't look it," said the captain critically.

"Well, I *am*," insisted the girl, with a returning gayety.

The captain apparently checked himself and put on a professional severity.

"What business — occupation?"

"Saleslady," said the girl.

"Residence?"

"No. 2334 Pleasant Avenue."

The captain leaned back in his arm-chair, and turned his toothpick between his lips, as he stared hard at the girl.

"Well, now," he said, after a moment, "you know you've got to come into court and testify to-morrow morning."

"Yes," said the girl, rather falteringly, with a sidelong glance at Lemuel.

"You've got to promise to do it, or else it will be my duty to have you locked up over-night."

"Have me locked up?" gasped the girl, her wide blue eyes filling with astonishment.

"Detain you as a witness," the captain explained. "Of course, we shouldn't put you in a cell; we should give you a good room, and if you ain't sure you'll appear in the morning ——"

The girl was not of the sort whose tongues are paralyzed by terror. "Oh, I'll be *sure* to appear, captain! Indeed I will, captain! You needn't lock me up, captain! Lock me *up*!" she broke off indignantly. "It would be a *pretty* idea if I was first to be robbed of my satchel and then put in prison for it overnight! A great kind of law *that* would be! Why, I never heard of such a thing! I think it's a perfect shame! I want to know if that's the way you do with poor things that you don't know about?"

"That's about the size of it," said the captain, permitting himself a smile, in which the officer joined.

"Well, it's a shame!" cried the girl, now carried far beyond her personal interest in the matter.

The captain laughed outright. "It *is* pretty rough. But what you going to do?"

"Do? Why, I'd ——" But here she stopped for want of science, and added from emotion, "I'd do *anything* before I'd do that."

"Well," said the captain, "then I understand you'll come round to the police court and give your testimony in the morning?"

"Yes," said the girl, with a vague, compassionate glance at Lemuel, who had stood there dumb throughout the colloquy.

"If you don't, I shall have to send for you," said the captain.

"Oh, I'll *come*," replied the girl, in a sort of disgust, and her eyes still dwelt upon Lemuel.

"That's all," returned the captain, and the girl, accepting her dismissal, went out.

Now that it was too late, Lemuel could break from his nightmare. "Oh, don't let her go! I ain't the one! I was running after

a fellow that passed off a counterfeit ten-dollar bill on me in the Common yesterday. I never touched her satchel. I never saw her before ——”

“What’s that?” demanded the captain sharply.

“You’ve got the wrong one!” cried Lemuel. “I never did anything to the girl.”

“Why, you fool!” retorted the captain angrily; “why didn’t you say that when she was here, instead of standing there like a dumb animal? Heigh?”

Lemuel’s sudden flow of speech was stopped at its source again. His lips were locked; he could not answer a word.

The captain went on angrily. “If you’d spoke up in time, maybe I might ’a’ let you go. I don’t want to do a man any harm if I can’t do him some good. Next time, if you’ve got a tongue in your head, use it. I can’t do anything for you now. I got to commit you.”

He paused between his sentences, as if to let Lemuel speak, but the boy said nothing. The captain pulled his book impatiently toward him, and took up his pen.

“What’s your name?”

“Lemuel Barker.”

“I thought maybe there was a mistake all the while,” said the captain to the officer, while he wrote down Lemuel’s name. “But if a man hain’t got sense enough to speak for himself, I can’t put the words in his mouth. Age?” he demanded savagely of Lemuel.

“Twenty.”

“Weight?”

“A hundred and thirty.”

“I could see with half an eye that the girl wa’n’t very sanguine about it. But what’s the use? I couldn’t tell her she was mistaken. Heigh?”

“Five feet six.”

“Occupation?”

“I help mother carry on the farm.”

“Just as I expected!” cried the captain. “Slow as a yoke of oxen. Residence?”

“Willoughby Pastures.”

The captain could not contain himself. “Well, Willoughby Pastures,—or whatever your name is,—you’ll get yourself into the papers *this time, sure*. And I must say it serves you right. If you can’t speak for yourself, who’s going to speak for you, do you suppose? Might send round to the girl’s house —— No, she wouldn’t be there, ten to one. You’ve got to go through now. Next time don’t be such an infernal fool.”

The captain blotted his book and shut it.

“We’ll have to lock him up here to-night,” he said to the policeman. “Last batch has gone round. Better go through him.” But

Lemuel had been gone through before, and the officer’s search of his pockets only revealed their emptiness. The captain struck a bell on his desk. “If it ain’t all right, you can make it right with the judge in the morning,” he added to Lemuel.

Lemuel looked up at the policeman who had arrested him. He was an elderly man, with a kindly face, squarely fringed with a chin-beard. The boy tried to speak, but he could only repeat, “I never saw her before. I never touched her.”

The policeman looked at him and then at the captain.

“Too late now,” said the latter. “Got to go through the mill this time. But if it ain’t right, you can make it right.”

Another officer had answered the bell, and the captain indicated with a comprehensive roll of his head that he was to take Lemuel away and lock him up.

“Oh, my!” moaned the boy. As they passed the door of a small room opening on an inner corridor, a smell of coffee gushed out of it; the officer stopped, and Lemuel caught sight of two gentlemen in the room with a policeman, who was saying:

“Get a cup of coffee here when we want it. Try one?” he suggested hospitably.

“No, thank you,” said one of the gentlemen, with the bland respectfulness of people being shown about an institution. “How many of you are attached to this station?”

“Eighty-one,” said the officer. “Largest station in town. Gang goes on at one in the morning, and another at eight and another at six p. m.” He looked inquiringly at the officer in charge of Lemuel.

“Any matches?” asked this officer.

“Everything but money,” said the other, taking some matches out of his waistcoat pocket.

Lemuel’s officer went ahead, lighting the gas along the corridor, and the boy followed, while the other officer brought up the rear with the visitor whom he was lecturing. They passed some neat rooms, each with two beds in it, and he answered some question: “Tramps? Not much! Give *them* a board when they’re drunk; send ’em round to the Wayfarers’ Lodge when they’re sober. These officers’ rooms.”

Lemuel followed his officer downstairs into a basement, where on either side of a white-walled, brilliantly lighted, specklessly clean corridor, there were numbers of cells, very clean and smelling of fresh whitewash. Each had a broad low shelf in it, and a bench opposite, a little wider than a man’s body. Lemuel suddenly felt himself pushed into one of them, and then a railed door of iron was

locked upon him. He stood motionless in the breadth of light and lines of shade which the gas-light cast upon him through the door, and knew the gentlemen were looking at him as their guide talked.

"Well, fill up pretty well, Sunday nights. Most the arrests for drunkenness. But all the arrests before seven o'clock sent to the City Prison. Only keep them that come in afterwards."

One of the gentlemen looked into the cell opposite Lemuel's. "There seems to be only one bunk. Do you ever put more into a cell?"

"Well, hardly ever, if they're men. Lot o' women brought in 'most always ask to be locked up together for company."

"I don't see where they sleep," said the visitor. "Do they lie on the floor?"

The officer laughed. "Sleep? *They* don't want to sleep. What *they* want to do is to set up all night, and talk it over."

Both of the visitors laughed.

"Some of the cells," resumed the officer, "have two bunks, but we hardly ever put more than one in a cell."

The visitors noticed that a section of the rail was removed in each door near the floor.

"That's to put a dipper of water through, or anything," explained the officer. "There!" he continued, showing them Lemuel's door; "see how the rails are bent there? You wouldn't think a man could squeeze through there, but we found a fellow half out o' that one night — backwards. Captain came down with a rattan and made it hot for him."

The visitors laughed, and Lemuel, in his cell, shuddered.

"I never saw anything so astonishingly clean," said one of the gentlemen. "And do you keep the gas burning here all night?"

"Yes; calculate to give 'em plenty of light," said the officer, with comfortable satisfaction in the visitor's complimentary tone.

"And the sanitary arrangements seem to be perfect, doctor," said the other visitor.

"Oh, perfect."

"Yes," said the officer, "we do the best we can for 'em."

The visitors made a murmur of approbation. Their steps moved away; Lemuel heard the guide saying, "Dunno *what* that fellow's in for. Find out in the captain's room."

"He didn't look like a very abandoned ruffian," said one of the visitors, with both pity and amusement in his voice.

VI.

LEMUEL stood and leaned his head against the wall of his cell. The tears that had come to his relief in the morning when he found

that he was robbed would not come now. He was trembling with famine and weakness, but he could not lie down; it would be like accepting his fate, and every fiber of his body joined his soul in rebellion against that. The hunger gnawed him incessantly, mixed with an awful sickness.

After a long time a policeman passed his door with another prisoner, a drunken woman, whom he locked into a cell at the end of the corridor. When he came back, Lemuel could endure it no longer. "Say!" he called huskily through his door. "Won't you give me a cup of that coffee upstairs? I haven't had anything but an apple to eat for nearly two days. I don't want you to *give* me the coffee. You can take my clasp button —"

The officer went by a few steps, then he came back, and peered in through the door at Lemuel's face. "Oh! that's you?" he said; he was the officer who had arrested Lemuel.

"Yes. Please get me the coffee. I'm afraid I shall have a fit of sickness if I go much longer."

"Well," said the officer, "I guess I can get you something." He went away, and came back, after Lemuel had given up the hope of his return, with a saucerless cup of coffee, and a slice of buttered bread laid on top of it. He passed it in through the opening at the bottom of the door.

"Oh, my!" gasped the starving boy. He thought he should drop the cup, his hand shook so when he took it. He gulped the coffee and swallowed the bread in a frenzy.

"Here — here's the button," he said as he passed the empty cup out to the officer.

"I don't want your button," answered the policeman. He hesitated a moment. "I shall be round at the court in the morning, and I guess if it ain't right we can make it so."

"Thank you, sir," said Lemuel, humbly grateful.

"You lay down now," said the officer. "We sha'n't put anybody in on you to-night."

"I guess I better," said Lemuel. He crept in upon the lower shelf and stretched himself out in his clothes, with his arm under his head for a pillow. The drunken woman at the end of the corridor was clamoring to get out. She wished to get out just half a minute, she said, and settle with that hussy; then she would come back willingly. Sometimes she sang, sometimes she swore; but with the coffee still sensibly hot in his stomach, and the comfort of it in every vein, her uproar turned into an agreeable, fantastic medley for Lemuel, and he thought it was the folks singing in church at Willoughby Pastures, and they were all asking him who the new girl in the choir was, and he was saying Statira Dud-

ley; and then it all slipped off into a smooth, yellow nothingness, and he heard some one calling him to get up.

When he woke in the morning he started up so suddenly that he struck his head against the shelf above him, and lay staring stupidly at the iron-work of his door.

He heard the order to turn out repeated at other cells along the corridor, and he crept out of his shelf, and then sat down upon it, waiting for his door to be unlocked. He was very hungry again, and he trembled with faintness. He wondered how he should get his breakfast, and he dreaded the trial in court less than the thought of going through another day with nothing to eat. He heard the stir of the other prisoners in the cells along the corridors, the low groans and sighs with which people pull themselves together after a bad night; and he heard the voice of the drunken woman, now sober, poured out in voluble remorse, and in voluble promise of amendment for the future, to every one who passed, if they would let her off easy. She said aisy, of course, and it was in her native accent that she bewailed the fate of the little ones whom her arrest had left motherless at home. No one seemed to answer her, but presently she broke into a cry of joy and blessing, and from her cell at the other end of the corridor came the clink of crockery. Steps approached with several pauses, and at last they paused at Lemuel's door, and a man outside stooped and pushed in, through the opening at the bottom, a big bowl of baked beans, a quarter of a loaf of bread, and a tin cup full of coffee. "Coffee's extra," he said, jocosely. "Comes from the officers. You're in luck, young feller."

"I ha'n't got anything to pay for it with," faltered Lemuel.

"Guess they'll trust you," said the man. "Anyrate, I got orders to leave it." He passed on, and Lemuel gathered up his breakfast, and arranged it on the shelf where he had slept; then he knelt down before it, and ate.

An hour later an officer came and unbolted his door from the outside. "Hurry up," he said; "Maria's waiting."

"Maria?" repeated Lemuel, innocently.

"Yes," returned the officer. "Other name's Black. She don't like to wait. Come out of here."

Lemuel found himself in the corridor with four or five other prisoners, whom some officers took in charge and conducted upstairs to the door of the station. He saw no woman, but a sort of omnibus without windows was drawn up at the curbstone.

"I thought," he said to an officer, "that there was a lady waiting to see me. Maria

Black," he added, seeing that the officer did not understand.

The policeman roared, and could not help putting his head in at the office door to tell the joke.

"Well, you must introduce him," called a voice from within.

"Guess you ha'n't got the name exactly straight, young man," said the policeman to Lemuel, as he guarded him down the steps. "It's Black Maria you're looking for. There she is," he continued, pointing to the omnibus, "and don't you forget it. She's particular to have folks recognize her. She's blacker'n she's painted."

The omnibus was, in fact, a sort of æsthetic drab, relieved with salmon, as Lemuel had time to notice before he was hustled into it with the other prisoners, and locked in.

There were already several there, and as Lemuel's eyes accustomed themselves to the light that came in through the little panes at the sides of the roof, he could see that they were women; and by and by he saw that two of them were the saucy girls who had driven him from his seat in the Common that day, and laughed so at him. They knew him too, and one of them set up a shrill laugh. "Hello, Johnny! That you? You don't say so? What you up for *this* time? Going down to the Island? Well, give us a call there! Do be sociable! Ward 11's the address." The other one laughed, and then swore at the first for trying to push her off the seat.

Lemuel broke out involuntarily in all the severity that was native to him. "You ought to be ashamed of yourselves."

This convulsed the bold things with laughter. When they could get their breath, one of them said, "Pshaw! I know what he's up for: preaching on the Common. Say, young feller! don't you want to hold a prayer-meetin' here?"

They burst into another shriek of laughter, so wild and shrill that the driver rapped on the roof, and called down, "Dry up in there!"

"Oh, you mind your horses, and we'll look after the passengers. Go and set on his knee, Jen, and cheer him up a little."

Lemuel sat in a quiver of abhorrence. The girl appealed to remained giggling beside her companion.

"I — I pity ye!" said Lemuel.

The Irishwoman had not stopped bewailing herself and imploring right and left an easy doom. She now addressed herself wholly to Lemuel, whose personal dignity seemed to clothe him with authority in her eyes. She told him about her children, left alone with no one to look after them; the two little girls, the boy only three years old. When the van

stopped at a station to take in more passengers, she tried to get out — to tell the gentlemen at the office about it, she said.

After several of these halts they stopped at the basement of a large stone building, that had a wide flight of steps in front, and columns, like the church at Willoughby Pastures, only the church steps were wood, and the columns painted pine. Here more officers took charge of them, and put them in a room where there were already twenty-five or thirty other prisoners, the harvest of the night before; and presently another van-load was brought in. There were many women among them, but here there was no laughing or joking as there had been in the van. Scarcely any one spoke, except the Irishwoman, who crept up to an officer at the door from time to time, and begged him to tell the judge to let her have it easy this time. Lemuel could not help seeing that she and most of the others were familiar with the place. Those two saucy jades who had mocked him were silent, and had lost their bold looks.

After waiting what seemed a long time, the door was opened, and they were driven up a flight of stairs into a railed inclosure at the corner of a large room, where they remained huddled together, while a man at a long desk rattled over something that ended with "God bless the commonwealth of Massachusetts." On a platform behind the speaker sat a gray-haired man in spectacles, and Lemuel knew that he was in the court-room, and that this must be the judge. He could not see much of the room over the top of the railing, but there was a buzz of voices and a stir of feet beyond, that made him think the place was full. But full or empty, it was the same to him; his shame could not be greater or less. He waited apathetically while the clerk read off the charges against the vastly greater number of his fellow-prisoners arrested for drunkenness. When these were disposed of, he read from the back of a paper, which he took from a fresh pile, "Bridget Gallagher, complained of for habitual drunkenness. Guilty or not guilty?"

"Not guilty, your hanor," answered the Irishwoman who had come from Lemuel's station. "But make it aisy for me this time, judge, and ye'll never catch me in it again. I've three helpless childer at home, your hanor, starvin' and cryin' for their mother. Holy Mary, make it aisy, judge!"

A laugh went round the room, which a stern voice checked with "Silence, there!" but which renewed itself when the old woman took the stand at the end of the clerk's long desk, while a policeman mounted a similar platform outside the rail, and gave his testimony

against her. It was very conclusive, and it was not affected by the denials with which the poor woman gave herself away more and more. She had nothing to say when invited to do so except to beg for mercy; the judge made a few inquiries, apparently casual, of the policeman; then after a moment's silence, in which he sat rubbing his chin, he leaned forward and said quietly to the clerk, "Give her three months."

The woman gave a wild Irish cry, "Oh, my poor childer!" and amidst the amusement of the spectators, which the constables could not check at once, was led wailing below.

Before Lemuel could get his breath those bold girls, one after the other, were put upon the stand. The charge against them was not made the subject of public investigation; the judge and some other elderly gentleman talked it over together; and the girls, who had each wept in pleading guilty, were put on probation, as Lemuel understood it, and, weeping still and bridling a little, were left in charge of this elderly gentleman, and Lemuel saw them no more.

One case followed another, and Lemuel listened with the fascination of terror; the sentences seemed terribly severe, and out of all proportion to the offenses. Suddenly his own name was called. His name had been called in public places before: at the school exhibitions, where he had taken prizes in elocution and composition; in church, once, when the minister had mentioned him for peculiar efficiency and zeal among other Sabbath-school teachers. It was sacred to him for his father's sake, who fell in the war, and who was recorded in it on the ugly, pathetic monument on the village green; and hitherto he had made it respected and even honored, and had tried all the harder to keep it so because his family was poor, and his mother had such queer ways and dressed so. He dragged himself to the stand which he knew he must mount, and stole from under his eyelashes a glance at the court-room, which took it all in. There were some people, whom he did not know for reporters, busy with their pencils next the railing; and there was a semicircular table in the middle of the room at which a large number of policemen sat, and they had their straw helmets piled upon it, with the hats of the lawyers who sat among them. Beyond, the seats which covered the floor were filled with the sodden loafers whom the law offers every morning, the best dramatic amusement in the city. Presently, among the stupid eyes fixed upon him, Lemuel was aware of the eyes of that fellow who had passed the counterfeit money on him; and when this scamp got up and coolly sauntered out of the room, Lemuel was held

in such a spell that he did not hear the charge read against him, or the clerk's repeated demand, "Guilty or not guilty?"

He was recalled to himself by the voice of the judge. "Young man, do you understand? Are you guilty of assaulting this lady and taking her satchel, or not?"

"Not guilty," said Lemuel, huskily; and he looked, not at the judge, but at the pretty girl, who confronted him from a stand at the other end of the clerk's desk, blushing to find herself there up to her wide-flung blue eyes. Lemuel blushed too, and dropped his eyes; and it seemed to him in a crazy kind of way that it was impolite to have pleaded not guilty against her accusation. He stood waiting for the testimony which the judge had to prompt her to offer.

"State the facts in regard to the assault," he said gravely.

"I don't know as I can do it, very well," began the girl.

"We shall be satisfied if you do your best," said the judge, with the glimmer of a smile, which spread to a laugh among the spectators, unrebuked by the constables, since the judge had invited it.

In this atmosphere of sympathy the girl found her tongue, and with a confiding twist of her pretty head began again: "Well, now, I'll tell you just how it was. I'd just got my book out of the Public Library, and I was going down Neponset street on my way home, hurrying along, because I see it was beginning to be pretty late, and the first thing I know somebody pulled my hat down over my eyes, and tore the brim half off, so I don't suppose I can ever wear it again, it's such a lookin' thing; anyrate it ain't the one I've got on, though it's some like it; and then the next thing, somebody grabbed away the satchel I'd got on my arm; and as soon as I could get my eyes clear again, I see two fellows chasin' up the street, and I told the officer somebody'd got my book; and I knew it was one of those fellows runnin' away, and I said, 'There they go now,' and the officer caught the hind one, and I guess the other one got away; and the officer told me to follow along to the station-house, and when we got there they took my name, and where I roomed, and my age——"

"Do you recognize this young man as one of the persons who robbed you?" interrupted the judge, nodding his head toward Lemuel, who now lifted his head and looked his accuser fearlessly in her pretty eyes.

"Why, no!" she promptly replied. "The first thing I knew, he'd pulled my hat over my eyes."

"But you recognize him as one of those you saw running away?"

"Oh, yes, he's one of *them*," said the girl.

"What made you think he had robbed you?"

"Why, because my satchel was gone!" returned the girl, with logic that apparently amused the gentlemen of the bar.

"But why did you think *he* had taken it?"

"Because I see him running away."

"You couldn't swear that he was the one who took your satchel?"

"Why, of course not! I didn't *see* him till I saw him running. And I don't know as he was the one, now," added the girl, in a sudden burst of generosity. "And if it was to do over again, I should say as much to the officers at the station. But I got confused when they commenced askin' me who I was, and how much I weighed, and what my height was; and *he* didn't say anything; and I got to thinkin' maybe it *was*; and when they told me that if I didn't promise to appear at court in the morning they'd have to lock me up, I was only too glad to get away alive."

By this time all the blackguard audience were sharing, unchecked, the amusement of the bar. The judge put up his hand to hide a laugh. Then he said to Lemuel, "Do you wish to question the plaintiff?"

The two young things looked at each other, and both blushed. "No," said Lemuel.

The girl looked at the judge for permission, and at a nod from him left the stand and sat down.

The officer who had arrested Lemuel took the stand on the otherside of the rail from him, and corroborated the girl's story; but he had not seen the assault or robbery, and could not swear to either. Then Lemuel was invited to speak, and told his story with the sort of nervous courage that came to him in extremity. He told it from the beginning, and his adventure with the two beats in the Common made the audience laugh again. Even then, Lemuel could not see the fun of it; he stopped, and the stout ushers in blue flannel sacks commanded silence. Then Lemuel related how he had twice seen one of the beats since that time, but he was ashamed to say how he had let him escape out of that very room half an hour before. He told how he had found the beat in the crowd before the saloon, and how he was chasing him up the street when he heard the young lady hollo out, "There they go now!" and then the officer arrested him.

The judge sat a moment in thought; then said quietly, "The charge is dismissed"; and before Lemuel well knew what it meant, a gate was opened at the stand, and he was invited to pass out. He was free. The officer who had arrested him shook his hand in congratulation and excuse, and the lawyers

and the other policemen gave him a friendly glance. The loafers and beats of the audience did not seem to notice him. They were already intent upon a case of colored assault and battery which had been called, and which opened with the promise of uncommon richness, both of the parties being women.

Lemuel saw that girl who had accused him passing down the aisle on the other side of the room. She was with another girl, who looked older. Lemuel walked fast, to get out of their way; he did not know why, but he did not want to speak to the girl. They walked fast too, and when he got down the stairs on to the ground floor of the court-house they overtook him.

"Say!" said the older girl, "I want to speak to *you*. I think it's a down shame, the way that you've been treated; and Statira, she feels jus's I do about it; and I tell her she's got to say so. It's the least she can do, I tell her, after what she got you *in* for. My name's 'Manda Grier; I room 'th S'tira; 'n' I come 'th her this mornin' t' help keep her up; b't I *didn't* know 't was goin' to be s'ch a *perfect* flat-out!"

As the young woman rattled on she grew more and more glib; she was what they call whopper-jawed, and spoke a language almost purely consonantal, cutting and clipping her words with a rapid play of her whopper-jaw till there was nothing but the bare bones left of them. Statira was crying, and Lemuel could not bear to see her cry. He tried to say something to comfort her, but all he could think of was, "I hope you'll get your book back," and 'Manda Grier answered for her:

"Oh, I guess 't ain't the book 't she cares for. S' far forth's the book goes, I guess she can afford to buy another book, well enough. B't I tell her she's done 'n awful thing, and a thing 't she'll carry to her grave 'th her, 'n't she'll remember to her dyin' day. That's what I tell her."

"She ha'n't got any call to feel bad about it," said Lemuel, clumsily. "It was just a mistake." Then, not knowing what more to say, he said, being come to the outer door by this time, "Well, I wish you good-morning."

"Well, good-morning," said 'Manda Grier, and she thrust her elbow sharply into Statira Dudley's side, so that she also said faintly:

"Well, good-morning!" She was fluent enough on the witness-stand and in the police station, but now she could not find a word to say.

The three stood together on the threshold of the court-house, not knowing how to get away from one another.

'Manda Grier put out her hand to Lemuel. He took it, and, "Well, good-morning," he said again.

"Well, good-morning," repeated 'Manda Grier.

Then Statira put out her hand, and she and Lemuel shook hands, and said together, "Well, good-morning," and on these terms of high civility they parted. He went one way and they another. He did not look back, but the two girls, marching off with locked arms and flying tongues, when they came to the corner, turned to look back. They both turned inward and so bumped their heads together.

"Why, you — coot!" cried 'Manda Grier, and they broke out laughing.

Lemuel heard their laugh, and he knew they were laughing at him; but he did not care. He wandered on, he did not know whither, and presently he came to the only place he could remember.

VII.

THE place was the Common, where his trouble had begun. He looked back to the beginning, and could see that it was his own fault. To be sure, you might say that if a fellow came along and offered to pay you fifty cents for changing a ten-dollar bill, you had a right to take it; but there was a voice in Lemuel's heart which warned him that greed to another's hurt was sin, and that if you took too much for a thing from a necessitous person, you oppressed and robbed him. You could make it appear otherwise, but you could not really change the nature of the act. He owned this with a sigh, and he owned himself justly punished. He was still on those terms of personal understanding with the eternal spirit of right which most of us lose later in life, when we have so often seemed to see the effect fail to follow the cause, both in the case of our own misdeeds and the misdeeds of others.

He sat down on a bench, and he sat there all day, except when he went to drink from the tin cup dangling by the chain from the nearest fountain. His good breakfast kept him from being hungry for a while, but he was as aimless and as hopeless as ever, and as destitute. He would have gone home now if he had had the money; he was afraid they would be getting anxious about him there, though he had not made any particular promises about the time of returning. He had dropped a postal card into a box as soon as he reached Boston, to tell of his safe arrival, and they would not expect him to write again.

There were only two ways for him to get home: to turn tramp and walk back, or to go to that Mr. Sewell and borrow the money to pay his passage. To walk home would add intolerably to the public shame he must suffer, and the thought of going to Mr.

Sewell was, even in the secret which it would remain between him and the minister, a pang so cruel to his pride that he recoiled from it instantly. He said to himself he would stand it one day more; something might happen, and if nothing happened, he should think of it again. In the mean time he thought of other things: of that girl, among the rest, and how she looked at the different times. As nearly as he could make out, she seemed to be a very fashionable girl; at any rate, she was dressed fashionably, and she was nice-looking. He did not know whether she had behaved very sensibly, but he presumed she was some excited.

Toward dark, when Lemuel was reconciling himself to another night's sleep in the open air, a policeman sauntered along the mall, and as he drew nearer the boy recognized his friendly captor. He dropped his head, but it was too late. The officer knew him, and stopped before him.

"Well," he said, "hard at it, I see."

Lemuel made no answer, but he was aware of a friendly look in the officer's face, mixed with fatherly severity.

"I was in hopes you had started back to Willoughby Pastur's before this. You don't want to get into the habit of settin' round on the Common, much. First thing you know you can't quit it. Where you goin' to put up to-night?"

"I don't know," murmured Lemuel.

"Got no friends in town you can go to?"

"No."

"Well, now, look here! Do you think you could find your way back to the station?"

"I guess so," said Lemuel, looking up at the officer questioningly.

"Well, when you get tired of this, you come round, and we'll provide a bed for you. And you get back home to-morrow, quick as you can."

"Thank you," said Lemuel. He was helpless against the advice and its unjust implication, but he could not say anything.

"Get out o' Boston, anyway, wherever you go or don't go," continued the officer. "It's a bad place."

He walked on, and left Lemuel to himself again. He thought bitterly that no one knew better than himself how luridly wicked Boston was, and that there was probably not a soul in it more helplessly anxious to get out of it. He thought it hard to be talked to as if it were his fault; as if he wished to become a vagrant and a beggar. He sat there an hour or two longer, and then he took the officer's advice, so far as concerned his going to the station for a bed, swallowing his pride as he must. He must do that, or he must go to Mr. Sewell. It was easier

to accept humiliation at the hands of strangers. He found his way there with some difficulty, and slinking in at the front door, he waited at the threshold of the captain's room while he and two or three officers disposed of a respectably dressed man, whom a policeman was holding up by the collar of his coat. They were searching his pockets and taking away his money, his keys, and his pencil and pen-knife, which the captain sealed up in a large envelope, and put into his desk.

"There! take him and lock him up. He's pretty well loaded," said the captain.

Then he looked up and saw Lemuel. "Hello! Can't keep away, eh?" he demanded jocosely. "Well, we've heard about you. I told you the judge would make it all right. What's wanted? Bed? Well, here!" The captain filled up a blank which he took from a pigeon-hole, and gave it to Lemuel. "I guess that'll fix you out for the night. And to-morrow you put back to Willoughby Pastures tight as you can get there. You're on the wrong track now. First thing you know you'll be a professional tramp, and then you won't be worth the powder to blow you. I use plain talk with you because you're a beginner. I wouldn't waste my breath on that fellow behind you."

Lemuel looked round, and almost touched with his a face that shone fiery red through the rusty growth of a week's beard, and recoiled from a figure that was fouler as to shirt and coat and trousers than anything the boy had seen; though the tramps used to swarm through Willoughby Pastures before the Selectmen began to lock them up in the town poor-house and set them to breaking stone. There was no ferocity in the loathsome face; it was a vagrant swine that looked from it, no worse in its present mood than greedy and sleepy.

"Bed?" demanded the captain, writing another blank. "Never been here before, I suppose?" he continued with good-natured irony. "I don't seem to remember you."

The captain laughed, and the tramp returned a husky "Thank you, sir," and took himself off into the street.

Then the captain came to Lemuel's help. "You follow him," he said, "and you'll come to a bed by and by."

He went out, and, since he could do no better, did as he was bid. He had hardly ever seen a drunken man at Willoughby Pastures, where the prohibition law was strictly enforced; there was no such person as a thief in the whole community, and the tramps were gone long ago. Yet here was he, famed at home for the rectitude of his life and the loftiness of his aims, consorting with drunkards and thieves and tramps, and warned against

what he was doing by policemen, as if he was doing it of his own will. It was very strange business. If it was *all* a punishment for taking that fellow's half-dollar, it was pretty heavy punishment. He was not going to say that it was unjust, but he would say it was hard. His spirit was now so bruised and broken that he hardly knew what to think.

He followed the tramp as far off as he could and still keep him in sight, and he sometimes thought he had lost him, in the streets that climbed and crooked beyond the Common towards the quarter whither they were going; but he reappeared, slouching and shambling rapidly on, in the glare of some electric lights that stamped the ground with shadows thick and black as if cut in velvet or burnt into the surface. Here and there some girl brushed against the boy, and gave him a joking or jeering word; her face flashed into light for a moment, and then vanished in the darkness she passed into. It was that hot October, and the night was close and still; on the steps of some of the houses groups of fat,

weary women were sitting, and children were playing on the sidewalks, using the lamp-posts for goal or tag. The tramp ahead of Lemuel issued upon a brilliantly lighted little square, with a great many horse-cars coming and going in it; a church with stores on the ground floor, and fronting it on one side a row of handsome old stone houses with iron fences, and on another a great hotel, with a high-pillared portico, where men sat talking and smoking. People were waiting on the sidewalk to take the cars; a druggist's window threw its mellow lights into the street; from open cellar-ways came the sound of banjos and violins. At one of these cellar-doors his guide lingered so long that Lemuel thought he should have to find the way beyond for himself. But the tramp suddenly commanded himself from the music, the light, and the smell of strong drink, which Lemuel caught a whiff of as he followed, and turning a corner led the way to the side of a lofty building in a dark street, where they met other like shapes tending toward it from different directions.

(To be continued.)

W. D. Howells.

PREMONITION.

IN a still chamber, a white bed of sleep
 With soothing pillow, and a dream so deep,
 That it alone reality did seem,
 And all reality was but a dream—
 I woke as children waken, in surprise,
 With soft bewilderment of lips and eyes
 For I had felt upon my eyelids pressed
 One darling baby kiss; upon my breast
 A passing breath as of an angel-wing
 Poising above me, fragrant, fluttering.

And then I breathed the subtle, sweet perfume
 Of lilacs, purple lilacs in full bloom:
 Lilacs so cool and fresh, the flowers I knew
 Just plucked, pale purple lilacs damp with dew.

In ecstasy I to the window flew,
 Charmed with the garden of my dreams; but no!
 There coldly fell the moonlight on the snow,
 The snow that lay like moonlight far below.

Was it a memory that chose to bring
 From my dream-garden a forgotten flower?
 Was it a spirit that forestalled the hour
 And woke me with the first faint breath of spring?

Charles Warren Stoddard.

A BORROWED MONTH. II.

BY FRANK R. STOCKTON,

Author of "Rudder Grange," "The Lady, or the Tiger?" etc.

WEST.

I WILL now relate the events which took place in America, among the people in whom I was most interested, while I, a few thousand miles to the east, was enjoying my month of excursion and art work in the mountains of Switzerland.

On my return to my old associates I had intended to state to all of them, in turn, that I owed my delightful holiday to the fact that I had been able to transfer to them the physical disability which had prevented me from making use of the opportunities offered me by the Alps and the vales of Helvetia. But by conversation with one and another I gradually became acquainted with certain interesting facts which determined me to be very cautious in making disclosures regarding the outreaching power of my will.

No one of my friends was so much affected by my departure for Europe as that dear girl Kate Balthis, although I had no idea at the time that this was so. It was not that she was opposed to my going; on the contrary, it was she who had most encouraged me to persevere in my intention to visit Europe, and to conquer or disregard the many obstacles to the plan which rose up before me. She had taken a great interest in my artistic career, and much more personal interest in me than I had dared to suppose. She had imagined, and I feel that she had a perfect right to do so, that I felt an equal interest in her; and when I went away without a word more than any friend might say to another, the girl was hurt. It was not a deep wound; it was more in the nature of a rebuff. She felt a slight sense of humiliation, and wondered if she had infused more warmth into her intercourse with me than was warranted by the actual quality of our friendship. But she cherished no resentment, and merely put away an almost finished interior, in which I had painted a fair but very distant landscape seen through a partly opened window, and set herself to work on a fresh canvas.

Chester Parkman, the artist-athlete whom I have mentioned, was always fond of Kate's society; but after my departure he came a great deal more frequently to her studio than before; and he took it into his head that he

would like to have his portrait painted by her. I had never supposed that Parkman's mind was capable of such serviceable subtlety as this, and I take the opportunity here to give him credit for it. Kate's forte was clearly portraiture, although she did not confine herself at that time to this class of work; and she was well pleased to have such an admirable subject as Chester Parkman, who, if he had not been an artist himself, might have made a very comfortable livelihood by acting as a model for other artists. This portrait-painting business, of which I should have totally disapproved had I known of it, brought them together for an hour every day; and, although Kate had two or three pupils, they worked in an adjoining room, separated by drapery from her own studio; and this gave Parkman every opportunity of making himself as agreeable as he could be. His method of accomplishing this, I have reason to believe, was by looking as well as he could rather than by conversational efforts. But he made Kate agreeable to him in a way of which at the time she knew nothing. He so arranged his position that a Venetian mirror in a corner gave him an admirable view of Kate's face as she sat at hereasel. Thus, as she studied his features, his eyes dwelt more and more fondly upon hers, though she noticed it not. This sort of thing went on till Parkman found himself in a very bad way. The image of Kate rose up before him when he was not in her studio, and it had such an influence upon him that, if I may so put it, he gradually sunk his lungs, and let his heart rise to the surface. He imagined, though with what reason I am not prepared to say, that he could perceive in Kate's countenance indications of much admiration of her subject, and he flattered himself this was not confined to her consideration of him as a model. In fact, he found that he was very much in love with the girl. If he had been a wise man, he would have postponed proposing to her until his portrait was finished, for if she refused him he would lose both picture and painter. But he was not a wise man, and one day he made up his mind that as soon as she had finished the corner of his mouth, at which she was then at work, he would abandon his pose, and tell her how things stood with him. But a visitor came in, and prevented this plan from

being carried out. This interruption, however, was merely a postponement. Parkman determined that on the next day he would settle the matter with Kate the moment he arrived at the studio, or as soon, at least, as he was alone with her.

If he had known the state of Kate's mind at this time, he would have been very much encouraged. I do not mean to say that any tenderness of sentiment towards him was growing up within her, but she had begun to admire very much this fine, handsome fellow. She took more pleasure in working at his portrait than in any other she had yet done. A man, she had come to think, to be true to art and to his manhood, should look like this one.

Thus it was that although Kate Balthis had not yet thought of her model with feelings that had become fond, it could not be denied that her affections, having lately been obliged to admit that they had no right to consider themselves occupied, were not in a condition to repel a new comer. And Parkman was a man who, when he had made up his mind to offer his valued self, would do it with a vigor and earnestness that could not easily be withstood.

It was a long time before Chester Parkman went to sleep that night, so engaged was he in thinking upon what he was going to do on the morrow. But, shortly after he arose the next morning, he was attacked by a very queer feeling in his left leg, which made it decidedly unpleasant for him when he attempted to walk. Indisposition of any kind was exceedingly unusual with the young athlete, but he knew that under the circumstances the first thing necessary for his accurately developed muscles was absolute rest, and this he gave them. He sent a note to Kate, telling her what had happened to him, and expressing his great regret at not being able to keep his appointment for the day. He would see her, however, at the very earliest possible moment that this most unanticipated disorder would allow him. He sent for a trainer, and had himself rubbed and lotioned, and then betook himself to a pipe, a novel, and a big easy-chair, having first quieted his much perturbed soul by assuring it that if he did not get over this thing in a few days, he would write to Kate, and tell her in the letter all he had intended to say.

The next day, much to his surprise, he arose perfectly well. He walked, he strode, he sprang into the air; there was absolutely nothing the matter with him. He rejoiced beyond his power of expression, and determined to visit Kate's studio even earlier than the usual hour; but before he was ready to start he received a note from her, which stated that she had been obliged to stay at home that day

on account of a sudden attack of something like rheumatism, and therefore, even if he thought himself well enough, he need not make the exertion necessary to go all the way up to her studio. This note was very prettily expressed, and on the first reading of it Parkman could see nothing in it but a kind desire on the part of the writer that he should know there would be no occasion for him to do himself a possible injury by mounting to her lofty studio before he was entirely recovered. Of course she could not know, he thought, that he would be able to come that day, but it was very good of her to consider the possible contingency.

But, after sitting down and reflecting on the matter for ten or fifteen minutes, Parkman took a different view of the note. He now perceived that the girl was making fun of him. What imaginable reason was there for believing that she, a perfectly healthy person, should be suddenly afflicted by a rheumatism which apparently was as much like that of which he had told her the day before as one pain could be like another. Yes, she was making game of the muscles and sinews on which he prided himself. She did not believe the excuse he had given, and trumped up this ridiculous ailment to pay him back in his own coin. Chester Parkman was not easily angered, but he allowed this note to touch him on a tender point. It seemed to intimate that he would asperse his own physical organization in order to get an excuse for not keeping an appointment. To accuse him of such disloyalty was unpardonable. He was very indignant, and said to himself that he would give Miss Balthis some time to come to her senses; and that if she were that kind of a girl, it would be very well for him to reflect. He wrote a coldly expressed note to Kate, in which he said that, as far as he was concerned, he would not inconvenience her by giving her even the slightest reason for coming to her studio during the continuance of her most inexplicable malady.

Mr. Chester Parkman's mind might have been much more legitimately disturbed had he known that during the night before Kate had been lying awake, and had been thinking of me. She had heard that day from a friend, to whom I had written, of the great misfortune which had happened to me in Switzerland; and she had been thinking, dear girl, that if it were possible how gladly would she bear my trouble for a time, and give me a chance to enjoy that lovely land which I had tried so hard to reach. And if he had been told that at that very time, as I lay awake in the early morning, the idea had come into my head, although most instantly

dismissed, that I would like to be beholden to Kate for a day of Alpine pleasure, he would reasonably have wondered what that had to do with it.

After I had become acquainted with these facts, I asked young Tom Latham, the oarsman, to whom I supposed I had transferred my physical condition on the day after I walked with Parkman's legs to see the sunrise, if he had been at all troubled with rheumatism during the past few months. He replied with some asperity that he had been as right as a trivet straight along; and why in the world did I imagine he was subject to rheumatism!

Of course Kate was annoyed when she received Parkman's note. She saw that he had taken offense at something, although she had no idea what it was. But she did not allow this to trouble her long, and said to herself that if Mr. Parkman was angry with her she was very sorry, but she would be content to postpone work on the portrait until he should recover his good humor.

When she had retired that night she had determined that, if she should not be well enough to go to her studio in a few days, she would send for some of her working materials and try to paint in her room. But the next morning she arose perfectly well.

If, however, she had known what was going to happen, she would have preferred spending another day in her pleasant chamber with her books and sewing. For, about eleven o'clock in the morning, there walked into her studio Professor Dynard, a gentleman who for some time had taken a great deal of interest in her and her work.

She had usually been very well pleased to talk to him, for he was a man of wide information and good judgment. But this morning there seemed to be something about him which was not altogether pleasant. In the first place, he stood before the unfinished portrait of Chester Parkman, regarding it with evident displeasure. For some minutes he said nothing, but hemmed and grunted. Presently he turned and remarked, "I don't like it."

"What is the matter with it?" asked Kate from the easel at which she was at work. "Have I not caught the likeness?"

"Oh, that is good enough as far as it goes," said the Professor. "Very good indeed! too good! You are going to make an admirable picture. But I wish you had another subject."

"Why, I thought myself extraordinarily fortunate in getting so good a one!" exclaimed Kate. "Is he not an admirable model?"

"Of course he is," said the Professor, "but I don't like to see you painting a young fellow like Parkman. Now don't be angry," he

continued, taking a seat near her and looking around to see if the portière of the pupils' room was properly drawn. "I take a great interest in your welfare, Miss Balthis, and my primary object in coming here this morning is to tell you so; and, therefore, you must not be surprised that I was somewhat annoyed when I found that you were painting young Parkman's portrait. I don't like you to be painting the portraits of young men, Miss Balthis, and I will tell you why." And then he drew his chair a little nearer to her, and offered himself in marriage.

It must be rather awkward for a young lady artist to be proposed to at eleven o'clock in the morning, when she is sitting at her easel, one hand holding her palette and maul-stick, and the other her brush, and with three girl pupils on the other side of some moderately heavy drapery, probably listening with all their six ears. But in Kate's case the peculiarity of the situation was emphasized by the fact that this was the first time that any one had ever proposed to her. She had expected me to do something of the kind; and two days before, although she did not know it, she had just missed a declaration from Parkman; but now it was all really happening, and a man was asking her to marry him. And this man was Professor Dynard! Had Kate been in the habit of regarding him with the thousand eyes of a fly, never, with a single one of those eyes, would she have looked upon him as a lover. But she turned towards him, and sat up very straight, and listened to all he had to say.

The Professor told a very fair story. He had long admired Miss Balthis, and had ended by loving her. He knew very well that he was no longer a young man; but he thought that if she would carefully consider the matter, she would agree with him that he was likely to make her a much better husband than the usual young man could be expected to make. In the first place, the object of his life, as far as fortune was concerned, had been accomplished, and he was ready to devote the rest of his days to her, her fortune, and her happiness. He would not ask her to give up her art, but, on the contrary, would afford her every facility for work and study under the most favorable circumstances. He would take her to Europe, to the isles of the sea,—wherever she might like to go. She could live in the artistic heart of the world, or in any land where she might be happy. He was a man both able and free to devote himself to her. He had money enough, and he was not bound by circumstances to special work or particular place. Through him the world would be open to her, and his greatest happiness would be to see her enjoy her oppor-

tunities. "More than that," he continued, "I want you to remember that, although I am no longer in my first youth, I am very strong, and enjoy excellent health. This is something you should consider very carefully in making an alliance for life; for it would be most unfortunate for you if you should marry a man who, early in life, should become incapacitated from pursuing his career, and you should find yourself obliged to provide, not only for yourself, but for him."

This, Kate knew very well, was intended as a reference to me. Professor Dynard had reason to believe I was much attached to Kate, and he had heard exaggerated accounts of my being laid up with rheumatism in Switzerland. It was very good in him to warn her against a man who might become a chronic invalid on her hands; but Kate said nothing to him, and let him go on.

"And even these devotees of muscularity," said the Professor, "these amateur athletes, are liable to be stricken down at any moment by some unforeseen disease. I do not wish to elevate the body above the mind, Miss Balthis, but these things should be carefully considered. You should marry a man who is not only in vigorous health, but is likely to continue so. And now, my dear Miss Balthis, I do not wish you to utter one word in answer to what I have been saying to you. I want you to consider, carefully and earnestly, the proposition I have made. Do not speak now, I beg of you, for I know I could not expect at this moment a favorable answer. I want you to give your calm judgment an opportunity to come to my aid. On the day after to-morrow I will come to receive your answer. Good-bye."

During that afternoon and the next day Kate thought of little but the offer of marriage which had been made to her. Sometimes she regretted that she had not been bold enough to interrupt him with a refusal, and so end the matter. And then, again, she fell to thinking upon the subject of love, thinking and thinking. Naturally her first thoughts fell upon me. But I had not spoken, nor had I written. This could not be accidental. It had a meaning which she ought not to allow herself to overlook. She found, too, while thus turning over the contents of her mind, that she had thought a little, a very little she assured herself, about Chester Parkman. She admitted that there was something insensibly attractive about him, and he had been extremely attentive and kind to her. But even if her thoughts had been inclined to dwell upon him, it would have been ridiculous to allow them to do so now, for in some way she had offended him, and might never see him again. He must be of a very irritable disposition.

And then there came up before her visions of Europe and of the isles of the sea; of a life amid the art wonders of the world,—a life with every wish gratified, every desire made possible. Professor Dynard had worked much better than she had supposed at the time he was working. He had not offered her the kind of love she had expected, should love ever be offered, but he had placed before her, immediately and without reserve, everything to which she had expected to attain by the labors of a life. All this was very dangerous thinking for Kate; the fortifications of her heart were being approached at a very vulnerable point. When she started independently in life, she did not set out with the determination to fall in love, or to have love made to her, or to be married, or anything of the kind. Her purpose was to live an art life; and to do that as she wished to do it, she would have to work very hard and wait very long. But now, all she had to do was to give a little nod, and the hope of the future would be the fact of the present. Even her own self would be exalted. "What a different woman would I be," she thought, "in Italy or in Egypt." This was a terribly perilous time for Kate. The temptation came directly into the line of her hopes and aspirations. It tinged her mind with a delicately spreading rosiness.

The next morning when she went to her studio she found there a note from Professor Dynard, stating that he could not keep his appointment with her that day on account of a sudden attack of something like rheumatism, which made it impossible to leave his room. This indisposition was not a matter of much importance, he wrote, and would probably disappear in a few days, when he would hasten to call upon her. He begged that in the mean time she would continue the consideration of the subject on which he had spoken to her; and hoped very earnestly that she would arrive at a conclusion which would be favorable to him, and which, in that case, he most sincerely believed would also be favorable to herself.

When she read this, Kate leaned back in her chair and laughed. "After all he said the other day about the danger of my getting a husband who would have to be taken care of, this is certainly very funny!" She forgot the rosy hues which had been insensibly tinting her dreams of the future on the day before, and only thought of a middle-aged gentleman, with a little bald place on the top of his head, who was subject to rheumatism, and probably very cross when he was obliged to stay in the house. "It is a shame," she said to herself, "to allow the poor old gentleman to worry his mind about me any

longer. It will be no more than a deception to let him lie at home and imagine that as soon as he is well he can come up here and get a favorable answer from me. I'll write him a note immediately and settle the matter." And this she did, and thereby escaped the greatest danger to herself to which she had ever been exposed.

Nearly all Kate's art friends had been very much interested in her portrait of Chester Parkman, which, in its nearly completed state, was the best piece of work she had done. Among these friends was Bufford, whose pupil Kate had been, and to whom she had long looked up, not only as to a master, but as to a dear and kind friend. Mrs. Bufford, too, was extremely fond of Kate, and was ever ready to give her counsel and advice, but not in regard to art, which subject she resigned entirely to her husband. It was under Mrs. Bufford's guidance that Kate, when she first came to the city from her home in the interior of the State, selected her boarding-house, her studio, and her church. More than half of her Sundays were spent with these good friends, and they had always considered it their duty to watch over her as if her parents had appointed them her guardians. Bufford was greatly disappointed when he found that the work on Parkman's portrait had been abruptly broken off. He had wished Kate to finish it in time for an approaching exhibition, where he knew it would attract great attention, both from the fact that the subject was so well known in art circles and in society, and because it was going to be, he believed, a most admirable piece of work. Kate had explained to him, as far as she knew, how matters stood. Mr. Parkman had suddenly become offended with her, why she knew not. He was perfectly well and able to come, she said, for some of her friends had seen him going about as usual; but he did not come to her, and she certainly did not intend to ask him to do so. Bufford shook his head a good deal at this, and when he went home and told his wife about it, he expressed his opinion that Kate was not to blame in the matter.

"That young Parkman," he said, "is extremely touchy, and has an entirely too good opinion of himself; and by indulging in some of his cranky notions he is seriously interfering with Kate's career, for she has nothing on hand except his portrait which I would care to have her exhibit."

"Now don't you be too sure," said Mrs. Bufford, "about Kate not being to blame. Young girls, without the slightest intention, sometimes do and say things which are very irritating, and Kate is just as high-spirited as Parkman is touchy. I have no doubt that the

whole quarrel is about some ridiculous trifle, and could be smoothed over with a few words, if we could only get the few words said. I was delighted when I heard she was painting Chester's portrait, for I hoped the work would result in something much more desirable even than a good picture."

"I know you always wanted her to marry him," said Bufford.

"Yes, and I still want her to do so. And a little piece of nonsense like this should not be allowed to break off the best match I have ever known."

"Since our own," suggested her husband.

"That is understood," she replied. "And now, do you know what I think is our duty in the premises? We should make it our business to heal this quarrel, and bring these young people together again. I am extremely anxious that no time should be lost in doing this, for it will not be long before young Clinton will be coming home. He was to stay away only three months altogether."

"And you are afraid he will interfere with your plans?" said Bufford.

"Indeed I am," answered his wife. "For a long time Kate and he have been very intimate,—entirely too much so,—and I was very glad when he went away, and gave poor Chester a chance. Of course there is nothing settled between them so far, because if there had been Clinton would never have allowed that portrait to be thought of."

"Jealous wretch!" remarked Bufford.

"You need not joke about it," said his wife. "It would be a most deplorable thing for Kate to marry Clinton. He has, so far, made no name for himself in art, and no one can say that he ever will. He is poor, and has nothing on earth but what he makes, and it is not probable that he will ever make anything. And, worse than all that, he has become a chronic invalid. I have heard about his condition in Switzerland."

"And having originally very little," said her husband, "and having lost the only valuable thing he possessed, you would take away from him even what he expected to have."

"He has no right to expect it," said Mrs. Bufford, "and it would be a wicked and cruel thing for him to endeavor to take Kate away from a man like Chester Parkman. Chester is rich, he is handsome, he is in perfect health, and to a girl with an artistic mind like Kate he should be a constant joy to look upon."

"But," said Bufford, "why don't you leave Kate to find out these superiorities for herself?"

"It would never do at all. Don't you see how she has let the right man go on account

of some trifling misunderstanding? And Clinton will come home, and find that he has the field all to himself. Now I'll tell you what I want you to do. You must go to Kate to-morrow, find out what this trouble is about, and represent to her that she ought not to allow a little misunderstanding to interfere with her career in art."

"Why don't you go yourself?" said Bufford.

"That is out of the question. I could not put the matter on an art basis, and anything else would rouse Kate's suspicions. And, besides, I want you afterwards to go to Parkman, and talk to him; and, of course, I could not do that."

"Very well," said Bufford, "I am going to see them both to-morrow, and will endeavor to make things straight between them; but I don't wish to be considered as having anything to do with the matrimonial part of the affair. What I want is to have Kate finish that picture in time for the exhibition."

"You attend to that," said his wife, "and the matrimonial part will take care of itself."

But Bufford did not see either Kate or Parkman the next day, being prevented from leaving his room by a sudden attack of something like rheumatism. He was a man of strong good sense and persuasive speech, and I think he would have had no difficulty in bringing Parkman and Kate together again; and if this had happened, I am very certain that Parkman would have lost no time in declaring his passion. What would have resulted from this, of course, I cannot say; but it must be remembered that Kate at that time supposed that she had made a great mistake in regard to my sentiments towards her. In fact, if Bufford had seen the two young people that day, I am afraid, I am very much afraid that everything would have gone wrong.

The next day Bufford did see Kate, and easily obtained her permission to call on Parkman, and endeavor to find out what it was that had given him umbrage; but as the young athlete had started that very morning for a trip to the West, Bufford was obliged to admit to himself, very reluctantly, that it was probably useless to consider any further the question of Kate's finishing his portrait in time for the exhibition.

When I returned to America, and at the very earliest possible moment presented myself before Kate, I had not been ten seconds in her company before I perceived that I was an accepted lover. How I perceived this I will not say, for every one who has been accepted can imagine it for himself; but I will say that, although raised to the wildest pitch of joy by the discovery, I was very much surprised at it. I had never told the girl I loved

her. I had never asked her to love me. But here it was, all settled, and Kate was my own dear love. Of course, feeling as I did towards her, it was easy for me to avoid any backwardness of demeanor, which might indicate to her that I was surprised, and I know that not for a moment did she suspect it. Before the end of our interview, however, I found out how I had been accepted without knowing it. It had been on account of the letter I had written Kate from Switzerland. In this very carefully constructed epistle I had hinted at a great many things which I had been careful not to explain, not wishing to put upon paper the story of my series of wonderful deliverances, which I intended with my own mouth to tell to Kate. It was a subtly quiet letter, with a substratum of hilariousness, of enthusiasm, surging beneath it, which sometimes showed through the thin places in the surface. Of course, writing to Kate, my mind was full of her, as well as of my deliverances, and in my hypersubtlety I so expressed my feelings in regard to the latter of these subjects that it might easily have been supposed to pertain to the first. In fact, when I afterwards read this letter I did not wonder at all that the dear girl thought it was a declaration of love. That she made the mistake I shall never cease to rejoice; for, after leaving Switzerland, I should not have been able, involuntarily and unconsciously, to ward off until my return the attacks of possible lovers.

From day to day I met nearly all the persons who, without having the slightest idea that they were doing anything of the kind, had been of such wonderful service to me while I was abroad; and I never failed to make particular inquiries in regard to their health the past summer. Most of them replied that they had been very well as a general thing, although now and then they might have been under the weather for a day or two. Few of my friends were people who were given to remembering ailments past and gone, and if I had needed any specific information from them in regard to any particular day on which they had been confined to the house by this or that slight disorder, I should not have obtained it.

But when I called upon Henry Brinton, the editor of "Our Mother Earth," I received some very definite and interesting information.

"Everything has gone on pretty much as usual since you left," he said, "except that about a month ago we had a visitation of a curious sort of epidemic rheumatism, which actually ran through the office. It attacked me first, but as I understand such things and know very well that outward applications are

of no possible use, I took the proper medicine, and in one day, sir, I was entirely cured. The next day, however, Barclay, our book-keeper, was down with it, or, rather, he was obliged to stay at home on account of it. I immediately sent him my bottle of medicine, and the next day he came down to the office perfectly well. After him Brown, Simmons, Cummings, and White, one after another, were all attacked in the same way, but each was cured by my medicine in a day. The malady, however, seemed gradually to lose its force, and Cummings and White were only slightly inconvenienced, and were able to come to the office."

All this was very plain to me. Brinton's medicine was indeed the proper remedy for my ailment, and had gradually cured it, so that when I resumed it after my month's exemption, there was very little left of it, and this soon died out of itself. If I could only have known this, I would have sent it over to Brinton in the first instance.

In the course of time I related to Kate the strange series of incidents which had finally brought us together. I am sorry to say she

did not place entire belief in the outreaching powers of my mind. She thought that the relief from my disability was due very much to imagination.

"How," I said, "do you account for those remarkable involuntary holidays of Parkman, yourself, and the others, which were so opportune for me?"

"Things did happen very well for you," she said, "although I suppose a great many other people have had a series of lucky events come into their lives. But even if this were all true, I do not think it turned out exactly as it should have done in a moral point of view. Of course I am delighted, you poor boy, that you should have had that charming month in Switzerland, after all the trouble you had gone through; but wasn't it a little selfish to pass off your disability upon your friends without asking them anything about it?"

"Well," said I, "it may be that if this affair were viewed from a purely moral stand-point, there was a certain degree of selfishness about it, and it ought to have turned out all wrong for me. But we live in a real world, my dear, and it turned out all right."

THE END.

Frank R. Stockton.

THE MAID OF THRACE.

A MAIDEN dwelt in fabled Thrace,
So light of form, so fair of face,
So like the spirit of the dew,
The sunbeams would not let her pass,
Nor yield her shadow to the grass;
They kissed her, clasped her, shone her
through.

And all wild things for her were tame;
The eagle to her beck'ning came,
The stag forgot that he was fleet,
The cruel little pebbles rolled
Their flinty edges in the mold,
And turned their smoothness to her feet.

Whene'er she slept, the birds were hushed;
And when she woke, the lilies blushed,
The roses paled, for very joy.
'Twas whispered that a star each night
Forsook its heaven, and took delight
To be her jewel or her toy.

Whene'er she wept—Oh! could she weep?
Could any shade of sorrow creep
O'er one so born to Pleasure's throne?
Ah me! she drowned the brook with tears,
Her sighs come floating down the years,
She taught the wind its minor tone.

Away from marvels, worship, state,
Her yearning gaze turned, desolate,
To where, beyond a chasm's breach,
Upon a pathless crag, there waved
A far-off blossom that she craved,—
The one, sole flower—quite out of reach.

Since just that prize she could not gain,
Her whole bright world was bright in vain,
And might in vain her love beseech.
With royal bloom on every side,
She broke her heart, she pined and died;—
For oh! that one flower out of reach!

Fanny Foster Clark.

THE STRENGTH AND WEAKNESS OF SOCIALISM.

THE time has passed when socialism can be dismissed with curses, or threats, or sneers, or interjections of amazement. We may be greatly astonished to hear that men entertain theories so chimerical; we may think it a sufficient answer to call them cranks or lunatics; we may denounce them as free-booters and look about for forcible measures to suppress them; but none of these methods will avail. They are here; they are the natural progeny of existing industrial conditions; and they will not be exterminated by all the hard words we may fling at them, nor silenced by any amount of indifference or contempt.

There is, indeed, a class among these socialists to whom it is difficult to make any reply. The more violent wing of them, whose mouths are full of cursing and bitterness; who constantly threaten us with revolution and with rapine; who march about the streets of our cities with bands and banners, shouting that our homes are soon to be pillaged and our churches destroyed,—these crazy nihilists are not entitled to any consideration at our hands. On their rage discussion is wasted. It is idle to ask them what they mean; they tell us plainly: they mean murder and arson; they mean the destruction of the present social order, that anarchy may take its place. To such a frenzy no answer is possible. The kingdom that is based on unreason cannot be overthrown by reason. When these men begin to carry out their threats we shall know exactly what to do with them; and the business will be speedily and thoroughly done. Meantime the best thing to do is to give the utmost publicity to their movements and their outgivings. Few of their speeches and manifestoes are uttered in the English language, but they ought to be reported and translated and disseminated as widely as possible. Let the workingmen of this country hear what are the plans and the threats of these destructionists. They are able to judge for themselves whether the nihilistic programme is practicable and desirable.

It must not, however, be supposed that these miscreants are the exclusive representatives of socialism in this country. Mr. Rae, in the introductory chapter of "Contemporary Socialism," justly says that "American socialism is a mere episode of German socialism; that it is confined almost exclusively to the German population of the United States." A writ-

ter in the "North American Review," quoted by Mr. Rae, mentions the fact that the socialist vote has been increasing of late more rapidly in New York and Chicago than in Berlin, and attributes the fact to German immigration. Beyond a doubt a considerable portion of this increase consists of the more extreme and violent elements of the Social Democracy of Germany. The severe measures resorted to by the German Government, after the attempt to assassinate the Emperor, had the effect to hasten the departure of many of these rash spirits from their native land. Probably, therefore, the proportion of nihilists among the German socialists of this country at the present time is greater than among the same class in Germany. Nevertheless, in this country, as in Germany and even in Russia, the violent elements are but a small minority. What Mr. Rae says about Russian nihilism will bear pondering by Americans: "A party of violence and extreme principles can only thrive in the warmth of the countenance lent it by the less demonstrative disaffection of the more moderate members of society; and it always withers away when the latter classes are satisfied by timely concessions. Procrastination only swells instead of mitigating the revolutionary spirit, for it but prolongs the political unrest from which that spirit is thrown off. The nihilists of Russia are merely the extremers and more volatile minds who have been touched by the impact of the present upheaval. They are the spray and the foam which curls and roars on the ridge of the general political movement which has for years been rolling over Russia, and their whole real importance is borrowed from the volume and momentum of the wave that bears them up. Folly, it is said, is always weak and ridiculous till wisdom joins it; and the excesses of nihilism, if they stood alone, could not be the source of any formidable danger. But they do not stand alone; they flame out of an atmosphere overcharged with social discontent and political disaffection."*

It is not, then, the spray and the foam of these nihilistic assemblies that should engage our thought, so much as the wave that bears them on. That "less demonstrative disaffection of the more moderate members of society," which furnishes the Russian destroyers with their excuse for being, is present in Germany and in America. Among the German

* "Contemporary Socialism," pages 316, 317.

immigrants are many socialists of the more rational as well as of the more violent type ; and the theories of Rodbertus, and Winkelblech, and Karl Marx, and Ferdinand Lassalle have been transplanted to our soil. About the roots of these exotics not a few Americans have been digging somewhat cautiously ; the feeling that something is fundamentally wrong with the present organization of society is entertained by many thoughtful and humane persons ; and the books that expound the socialistic philosophy have been widely read, by some for the sake of controversy and by some for the sake of information.

There is, therefore, in this country at the present time a considerable number of persons who have some knowledge of the various schemes for the reorganization of the social and industrial order, and not a few who expect these schemes to be realized. These persons are by no means all lunatics. Their hopes for the future of society may seem vague, but there are those among them who are ready to give you a reason for their hopes. They have studied history. They are familiar with the theories of political economy. They rest their demands on a reasoned system of philosophy. They can only be answered by a completer induction of historical facts, a broader political economy, and a sounder philosophy.

On what grounds do these people base their demand for a reorganization of society ? Not solely, as some suppose, on their envy of those who are better off than themselves, but on certain economical evils, acknowledged and deplored by all intelligent political economists.

They observe that the wealth of the world is rapidly growing, and that the share of it which falls to those who work for wages is increasing much less rapidly. This is a fact that they have learned of the most orthodox political economists. "It is only too manifest," says Mr. Rae, in the work from which I have already quoted, "that the immense increase of wealth which has marked the present century has been attended with surprisingly little amelioration in the general lot of the people, and it is in no way remarkable that this fact should tend to dishearten the laboring classes, and fill reflective minds with serious concern." Mr. J. E. Cairnes, one of the most careful and thorough thinkers among recent economists, says :

"The fund available for those who live by labor tends, in the progress of society, while actually growing larger, to become a constantly smaller fraction of the entire national wealth. If, then, the means of any one class of society are to be permanently limited to

this fund, it is evident, assuming that the progress of its numbers keeps pace with that of other classes, that its material condition *in relation to theirs* cannot but decline. Now, as it would be futile to expect, on the part of the poorest and most ignorant of the population, self-denial and prudence greater than that actually practiced by the classes above them, the circumstances of whose life are much more favorable than theirs for the cultivation of these virtues, the conclusion to which I am brought is this, that, unequal as is the distribution of wealth already in this country, the tendency of industrial progress, on the supposition that the present separation between industrial classes is maintained, is toward an inequality greater still. The rich will be growing richer, and the poor, at least relatively, poorer. It seems to me, apart altogether from the question of the laborer's interest, that these are not conditions which furnish a solid basis for a progressive social state." *

It may be imagined that the reasonings of Mr. Cairnes apply only to the state of things in his own country ; but this is not the case. His conclusions are drawn from the operation of the laws of free contract and competition in the labor market, and they are just as applicable to America as to England. Indeed, some of the most thoughtful of our own teachers of economy have joined with Mr. Cairnes and Mr. Mill and Mr. Fawcett in teaching the same doctrine.

This, then, is the foundation fact on which the theories of the socialists rest. Their philosophers, men like Karl Marx and Lassalle, are profound students and independent investigators in all this field of political economy, and they have disciples in every nation. A book lately published in this country, "The Coöperative Commonwealth," by Laurence Gronlund, exhibits these economical laws lying at the basis of their system. To bring the fact now under consideration before the eyes of his readers Mr. Gronlund has prepared a series of diagrams, representing the increase of the net product of the industries of the United States through the last four decades, and the manner in which this product has been divided between "wages" and "surplus." The diagrams with the accompanying figures, drawn from the census, show that while the net product of our manufactures increased from \$437,000,000 in 1850 to \$1,834,000,000 in 1880, or more than four hundred per cent., the average annual wages of labor increased from \$248 in 1850 to \$346 in 1880, or about forty per cent. The increase of the "net product" is due, of course, in great part to the increased use of machinery and the improvement in methods of production. That the laborer has been benefited to some extent by this enormous increase of the productive energies of the nation is thus apparent ; the fact is one that well-informed socialists do not deny ; they only point out that the increase is

* "Some Leading Principles of Political Economy," page 340.

disproportionately small; that the laborer is getting some share of the growing wealth, but by no means his fair share.

Attempts have recently been made by Mr. Giffen in a paper read before the Statistical Society of England, by Mr. Mallock in his "Property and Progress," by Mr. Rae in "Contemporary Socialism," and by others, to break the force of this assertion. Figures have been marshaled from many quarters, tending to show that wages have risen as rapidly as wealth has increased, and that the laboring class are receiving their full share of the gains of modern society. These figures cannot be examined here in detail. Suffice it to say that the conclusions based upon them are far from being settled. Mr. Giffen's reasonings, for example, are confined to the improvement which has taken place in the condition of the English working classes during the last half century; but the point of comparison from which he starts was notoriously one of the very lowest in English history. The laboring classes had reached a point below which they could not have sunk without becoming extinct. From that point they have rapidly risen during the past fifty years. This improvement is mainly due to three causes: the abolition of the corn laws, the factory legislation protecting women and children, and the effective combinations of the trades-unions. But, as Mr. Thorold Rogers has clearly pointed out, the recent rise in British wages cannot be rightly estimated without taking account of the previous depression. If from any causes the laborer is thrust below the level at which he can subsist and rear his family, his return to that level can hardly be reckoned as "progress." And, as a matter of history, Mr. Rogers declares that the English workman was better off four hundred years ago than he is to-day,—not only relatively, but positively better off; that the real wages of labor were higher then than now. There have been great fluctuations in the remuneration of labor in England, as Mr. Rogers so clearly shows in his monumental book on "Work and Wages." By taking one of the extreme points of depression in the past, and comparing the condition of the laborer then with his present condition, it is easy to show that he is far better off than formerly; but a complete and exhaustive study of wages and prices, running through six centuries, like that of Mr. Rogers, leaves the student in a much less optimistic frame of mind. The real question is, however, what has been the effect upon the laboring class of the large system of productive industry now in vogue,—the system which comprises the massing of capital, the division of

labor, and the use of machinery, with free contract and competition as the regulative forces. And the answer to this question given by the socialists is, I am persuaded, substantially correct. Doubtless they exaggerate the facts, but, making all due allowance for exaggeration, the facts support their assertions. Indeed, although Mr. Rae, in the chapter to which I have referred, tries to dispute the conclusions of Mr. Cairnes, I do not see why he does not himself fully admit, in the sentences I have already quoted from him, all that Mr. Cairnes asserts and all that the socialists claim. If "it is only too manifest that the immense increase of wealth which has marked the present century has been attended with surprisingly little amelioration in the general lot of the people," Mr. Cairnes's law is exactly fulfilled; and I confess myself quite unable to reconcile Mr. Rae's statement just quoted on page 319, with his contention on page 324 that "it is a mistake to suppose" that the wage-laborer "has a less share in the wealth of the country than he had when the wealth of the country was less."

The socialists lay much stress upon what they call the "iron law of wages" enunciated by Ricardo, who taught that the natural rate of wages is "that price which is necessary to enable the laborers one with another to subsist, and to perpetuate their race without increase or diminution." It is true that Ricardo qualified this law by teaching that the consent of the laborer is an element in the determination of the price of labor, and that this consent is influenced by custom. The "natural" price is the lowest on which the workman will *consent* to marry and rear a family. But the introduction of this element into the problem takes away all its scientific value. To say that the natural rate of wages is what the laborer is willing to accept is to utter an extremely indeterminate proposition. And, although Ricardo did endeavor to qualify his law by adding custom and choice to physical necessity, there is not much doubt but that the actual working of unrestricted competition strongly tends to fulfill the law in its narrowest statement, and to confine the remuneration of laborers to the stipend actually required for the maintenance of life and the perpetuation of their race "without increase or diminution." A bare support is all that the economical forces, working unhindered, will guarantee to the laborer. So long as competition is the sole arbiter of his destiny, that is about all he will get. If in England during the last fifty years he has been getting more than this, his prosperity is due to the restriction of competition by the factory acts and the trades-unions. If in America he has had more than

this "natural" rate of wages, it has been because free land has constantly tempered the iron rule of competition.

The socialists point out the fact that the multiplication of commercial crises and the frequent recurrence of periods of stagnation and depression, causing great insecurity and distress among laborers, are natural consequences of the present industrial system. It is all due, they say, to over-production, and is a natural and inevitable result of the system of competition. "Private enterprise," says Mr. Gronlund, "compels every producer to produce for himself, to sell for himself, to keep all his transactions secret, without any regard whatever for anybody else in the wide world. But the producer and merchant—the small ones especially—find out daily that their success or failure depends, in the first place, *precisely on how much others produce and sell*; and, in the second place, on a multitude of causes—often on things that may happen thousands of miles away—which determine the power of purchase of their customers. They have got no measure at hand at all by which they can, even approximately, estimate the actual effective demand of consumers or ascertain the producing capacity of their rivals. In other words, 'private enterprise' is a defiance of Nature's law which decrees that the interests of society are *interdependent*; and Nature punishes that defiance in her own crude way by playing ball with these individualists, and, what is worse, by rendering all production, all commerce, chaotic."*

The existence of this evil is not disputed, nor the suffering that it causes to multitudes of laborers. Karl Marx, as paraphrased by Dr. Ely, shows how the latter class is affected by it. "During prosperous times manufacturers employ all the men, women, and children who will work. The laboring classes prosper, marriage is encouraged, and population increases. Suddenly there comes a commercial crisis. The greater part of the laborers are thrown out of employment, and are maintained by society at large; that is, the general public has to bear the burden of keeping the laborers—the manufacturers' tools—for their employer until he may need them again. These laborers without work constitute an army of reserve forces for the manufacturer. When times begin to improve he again gradually resumes business and becomes more prosperous. The laborer's wages have previously been reduced on account of hard times, and the manufacturer is not obliged to raise them, as there is a whole army in waiting, glad to take work at any price."†

The verification of this statement was easy when this was written. In many of our cities from one-twentieth to one-tenth of the population were receiving during the winter of 1884-5 partial support, either from the city authorities or from voluntary charities. But this is only a fraction of the burden thrown upon the general public by laborers out of employment. Count in all the rent bills, board bills, butchers' and grocers' bills, store bills of all sorts, which remain unpaid in times like these, and are finally charged up to profit and loss, and it will be evident that the wage-receivers become in these times of depression heavy pensioners upon society at large. This evil, according to the socialists, is inseparable from the present industrial system, and can only be cured by reforming that system out of existence.

They call attention also to the fact that the tendency of trade and manufactures at present is toward the creation of great enterprises and the destruction of the lesser ones. The class of small tradesmen and capitalists is rapidly becoming extinct. "The same causes," says Mr. Rae, "have of course exercised very important effects upon the economic condition of the working class. They have reduced them more and more to the permanent condition of wage-laborers, and have left them fewer openings than they once possessed for investing their savings in their own line, and fewer opportunities for the abler and more intelligent of them to rise to a competency."‡ That this will be increasingly true under a system of unmitigated competition is a simple deduction from the recognized laws of political economy. The wage-laborer has now "less chance than before of becoming anything else," and his chances will lessen as time goes on. The concentration of industrial direction in fewer and fewer hands is part of the logic of events.

As a consequence of this we have the growth of the plutocracy, into whose hands is gradually falling the power of the state, as well as the direction of commerce. Against the vast combinations that are made by the great corporations and the great capitalists the people seem to have little power. During the past ten years the number of rich men in the Senate of the United States has greatly increased. Doubtless these gentlemen have not resorted to Washington as a mere pastime. That some of them have used money freely in obtaining their seats is notorious; and these are "business" men, and not likely to expend so much time and money without a definite, "practical" purpose. We may expect to see

* "Coöperative Commonwealth," page 42.

† "French and German Socialism in Modern Times," page 181.

‡ Page 324.

this class of men increase in the Congress of the United States. If this is becoming, indeed, a plutocracy,—if, in other words, our economical system is contrived in such a manner as to throw a steadily increasing proportion of the wealth of the country into the hands of a few rich men,—we must expect that those whom we thus exalt will possess themselves, in one way or another, of a steadily increasing share of the political power of the country. Until human nature is greatly changed the political power will rest in the hands of those who possess the physical power.

Such is the indictment of the present order which socialism has drawn. Is it a true bill? It must be said, at any rate, that a *prima facie* case is made out, and that the complainants are entitled to a hearing. Indeed, these tendencies to which they point,—the tendency of wages to sink to starvation point, the tendency of the workman's share of the national wealth to grow constantly smaller, the tendency of commercial crises and depression to become more frequent and disastrous, the tendency of all business operations and enterprises to become concentrated in fewer hands, and the consequent tendency to confine the wage-laborers more and more rigidly to their present condition, with the steady growth of a plutocracy on the one side and a proletariat on the other,—all these are, as I believe, the natural issues of an industrial system whose sole motive power is self-interest, and whose sole regulative principle is competition.

To show that this prediction of the socialists is not a mere scarecrow, let me quote a few sentences from a master in political science who will not be accused of rashness. "If, however," says Dr. Woolsey, "that to which we have referred more than once already should be found to be a law of social progress,—that the free use of private property must end in making a few capitalists of enormous wealth, and a vast population of laborers dependent on them; and if there could be no choice between this disease of free society and the swallowing up of all property by the state,—then, we admit, it would be hard to choose between the two evils. Nothing would lead the mass of men to embrace socialism sooner than the conviction that this enormous accumulation of capital in a few hands was to be not only an *evil in fact*, if not prevented, but a *necessary evil*, beyond prevention. . . . If such a tendency should manifest itself, it would run through all the forms of property. A Stewart or a Claflin would root out smaller tradespeople. Holders of small farms would sink into tenants. The buildings of a city would belong to a few owners. Small manu-

facturers would have to take pay from mammoths of their own kind or be ruined. Then would the words of the prophet be fulfilled: 'Woe unto them that join house to house, that lay field to field, till there be no place that they may be placed alone in the earth.' For if this went to an extreme in a free country the 'expropriated' could not endure it; they would go to some other country, and leave these proprietors alone in the land, or would drive them away. A revolution, slow or rapid, would certainly bring about a new order of things." *

It is evident that this cautious thinker recognizes the *possibility* of the result which the socialists prophesy. In another place he says, still more significantly: "If any such law, fatal and inevitable, is at work, its progress must be measured, not by years, but by centuries. The socialists have done existing order a favor by calling to it the attention of men."† This must imply that the danger, though remote, is real. The socialists would be entitled to no thanks for discoursing of purely imaginary perils.

These words, and, indeed, the respectful treatment which all the more intelligent students of political science give to the discussions of the philosophical socialists, make it quite plain that they have something to say; and it is precisely here, in its criticisms of the present order, that the strength of socialism is found. Its arraignment of the methods of industry and commerce now existing is trenchant and timely. The warnings that it utters every wise man will heed.

But criticism is always easy; construction is another matter. When the socialists begin to outline the new order which is to supplant the old one, they reveal their weakness. The first problem, of course, is to dispose of the stock of political and social goods now on hand. What shall be done with the present order?

The nihilists and anarchists, as we have seen, have their answer ready. In one word, it is dynamite. They propose to wipe out the present civilization, to raze it, even to its foundations. They want to blow the whole social fabric into fragments. Out of the chaos thus produced they expect to evolve some sort of socialistic cosmos—a new heaven and a new earth, wherein every man shall do that which is right in his own eyes. Those brutal outbursts of reasonless and reckless hate to which they treat us now and then are the signs of a fatal weakness. The spasms of an epileptic exhibit the same sort of energy.

But it would be unfair to hold the philosophical socialists responsible for the freaks of these

madmen. Their programme is, for the most part, much more rational. They denounce the present system, but they hold the men guiltless who have been nourished by it. Nay, they hold that the present order is a natural and necessary outgrowth of the past; a stage that was inevitable in the process of evolution, and, until it had fulfilled its purpose, beneficent. "The social state of each epoch," says Mr. Gronlund, "was just as perfect as the corresponding development of our race permitted. The evils, therefore, of the 'let-alone' policy are to be considered the legitimate workings of a principle to which humanity in times to come will find itself greatly indebted. This conception ought to guard us against any ill-feeling towards the individual members of our plutocracy. Passions directed against the system are most proper, for it is only passion that can nerve us sufficiently to overthrow the system; but our capitalists are as much the creatures of circumstances as our paupers are. Neither should we forget that there have here and there been employers and capitalists who would willingly have sacrificed them all to right society. Robert Owen was the more noble a man for being rich."* This is the tone which the more moderate socialists adopt, though even these are sometimes found emitting the sulphurous breath of the anarchist. Thus the generally reasonable writer whose words I have just quoted refers in the last chapter of his book to the natural force called *vril*, described in Bulwer's romance, "The Coming Race." "It can be stored in a small wand which rests in the hollow of the palm, and, when skillfully wielded, can rend rocks, remove any natural obstacle, scatter the strongest fortress, and make the weak a perfect match for any combination of number, strength, and discipline. No wonder that these people attribute their equality, their freedom, felicity, and advancement to this discovery. What if this *vril*!"—so Mr. Gronlund muses—"is but a poetic anticipation of the civilizing power of that real, energetic substance, which we call—*dynamite*!"† Coming, as this does, in the course of a conjectural discussion of the ways in which socialism may be realized, it is little better than fiendish. Dynamite is, and will always be, the weapon of dastards. When the ideas of socialism shall have gained possession of the minds of the majority of the people, its reign can be ushered in without resorting to assassination. Until that time shall come, the men who undertake to force it upon a disbelieving and hostile community by the methods of the dynamiters are savages.

It is not, however, by these diabolical

methods that intelligent socialists expect to see the new order replace the old one. They regard it as the next step in the evolution of society,—sure to follow the capitalistic régime, as that was to follow feudalism and slavery. And they regard these very tendencies which we have been considering as movements in the direction of socialism. The large system of industry, by which laborers are drawn together in masses, the trades-unions, the Knights of Labor, and other organizations of similar character, are all preparing the way for the new order. The separation of society into two distinct classes, of the very rich and the very poor,—a plutocracy on one side and a proletariat on the other,—is, to them, a cheering sign. They are quite willing that the wage-laborer should remain a wage-laborer, and they look with no favor upon any attempts to introduce coöperative industries or industrial partnerships. The faster the work of concentration and division goes on, the better they are pleased. When that time shall come of which Roscher speaks, in which there shall be "a well-defined confrontation of rich and poor," the middle class having practically become extinct, the hour of the new order will strike.

Another sign of the good time coming, to which the socialists point, is the increasing amount of governmental interference. When Sir Arthur Helps wrote his "Thoughts on Government," twelve years ago, his plea for paternalism was thought to be extremely heretical; but the current is now setting strongly in this direction. As an acute writer has recently said: "*Laissez faire* is at the present time losing ground because of evolutionary tendencies, which neither political power nor social philosophy can resist; the Government must assume a larger share of duties, and *laissez faire* must so far stand aside."‡ Mr. Herbert Spencer's late essays on "The Man and the State" are one prolonged complaint of this tendency. "Evidently, then," he writes, "the changes made, the changes in progress, and the changes urged will carry us not only toward state ownership of land and dwellings, and means of communication, all to be administered and worked by state agents, but toward state usurpation of all industries; the private forms of which, disadvantaged more and more in competition with the state, which can arrange everything for its own convenience, will more and more die away, just as many voluntary schools have, in presence of board schools; and so will be brought about the desired ideal of the socialists."§ So universal is this tendency that

* "The Coöperative Commonwealth," page 59. † Page 275.

‡ "Reforms: Their Difficulties and Possibilities," p. 212. § "The Man and the State," p. 39.

Adolf Wagner, the great German economist, has enunciated it as a law—the law of the increasing function of government. From the operation of this law, which causes Mr. Spencer so much anxiety, the socialists expect the introduction of the new régime.

What is to be the new régime? It is, briefly, the nationalization of capital. The state is to own all the land, all the mines and factories, all the machinery, all the raw material of production; it is to assume the direction of all the productive and distributive industries; it is to own and manage all the railroads, the telegraphs, the telephones,—all the means of transportation and communication; it is to keep in its storehouses the fruits of the earth and the products of labor; it is to distribute them where they are needed, and to facilitate exchanges between different groups of workers. Gold and silver and their representatives will be abolished; the only currency will be labor-checks, given in exchange for certain amounts of labor, and exchangeable at the government stores for commodities. All callings are to be classified, and the government is to be administered through these classes of laborers, the principle being that of appointments from below and removal from above. Let Mr. Gronlund tell us how the thing may be done:

“Suppose, then, every distinct branch of industry, of agriculture, and, also, teachers, physicians, etc., to form, each trade and profession by itself, a distinct body, a trades-union (we simply use the term because it is convenient), a guild, a corporation managing its internal affairs itself, but subject to collective control. Suppose, further, that, *e. g.*, the ‘heelers’ among the operatives in a shoe-factory at Lynn come together and elect their foreman; and that the ‘tappers,’ the ‘solers,’ the ‘finishers,’ and whatever else the various operators may be called, do likewise. Suppose that these foremen assemble and elect a superintendent of the factory, and that the superintendents of all the factories in Lynn, in their turn, elect a—let us call him—district superintendent. Again, we shall suppose these district superintendents of the whole boot and shoe industry to assemble themselves somewhere from all parts of the country, and elect a bureau chief; and he, with other bureau chiefs of related industries, say the tanning industry, to elect a chief of department. However, we do not want too many of these chiefs, for we mean to make a working body, not a talking body, out of them. We mean that these chiefs of department shall form the *national board of administrators*, whose function it shall be to

supervise the whole social activity of the country. Each chief will supervise the internal affairs of his own department, and the whole board control all those matters in which the general public is interested.”*

This national board is, however, in Mr. Gronlund’s scheme, less a legislative than an executive body; for all general laws framed by it are to be referred to the people, and will only become laws when ratified by them. He also proposes that every directing officer have the right of dismissing any of his subordinates, and that the highest in every department, the chief, be made liable to removal by the whole body of his subordinates. “The subordinates elect, the superiors dismiss,” except in the case of the highest in rank, who, since he can be responsible to nobody above him, is to be responsible to everybody below him. The question what the foreman of the primary group is to do with refractory or negligent workers is not an easy one to this philosopher. “Whereto could a worker be removed?” he inquires. “He must be employed somewhere. Of course, there must be some kind of remedy by which society could protect itself against any rebellious or negligent worker. For such cases, a trial by his comrades might be provided, the issue of which might be removal to a lower *grade*, or some sort of compulsion.” The question, however, concerns the *lowest* grade. What could be done with people who would not work even there? This part of the programme must be carefully thought out, for unless human nature changes mightily before the dawn of the new order, there will be a great multitude of these people; and their persistent attempts to get a living without work are likely to make trouble in the best-regulated phalanstery.

The state will have three chief functions: it will be Superintendent, Statistician, and Arbitrator. It will direct and control all the farming, mining, manufacturing, carrying, teaching, healing, buying, and selling. It will also collect information from all parts of the country, upon which it will base its decrees concerning the amount of each product necessary for the year. “In the socialistic state,” says Schaeffle, “the functionaries who would have to do with sales would ascertain the amounts needed, would distribute the national work accordingly among the different classes of people doing business and the persons concerned in production, transportation, and storage, and would assign to the products a value according to the mass of socially necessary work spent upon them.”

Nothing like trade or commerce would

* “Coöperative Commonwealth,” page 79.

therefore exist in this state; the shops and stores by which our products are now distributed would give place to vast government bazaars, where your labor-check would be good for a given amount of any product that might happen to be in stock. No leasing would be possible, for all the lands and tenements would belong to the state. Householders would pay taxes to the state for the premises occupied. The state would help itself, out of the storehouses, to any additional amount needed to defray its own expenses. These expenses would not be small, for a pretty large army of officials would be required to supervise all the multifarious details of production, and distribution, and transportation, and instruction. Physicians, teachers, judges (arbitrators, Mr. Gronlund calls them), and all such "non-productive" laborers would be remunerated out of the government stores. The pay of all workers would be assimilated to that of the common laborer, making due allowance for the amount of time required by the skilled worker to fit himself for his calling. The compensation would be graded on this principle. The difference in the various kinds of work, Mr. Gronlund says, "consists simply in being more or less complicated. It takes, simply, more time to learn the one than the other. The most complicated kind of work can always be reduced to ordinary unskilled labor, may always be considered as multiplied common labor." Thus, for example, the actuaries of the new order may determine that the average number of working years in a man's life is thirty. A coal-heaver, who needs to take no time to learn his trade, would have thirty years to work. A teacher must spend five additional years in study; he would have, therefore, but twenty-five years for work. He should receive, therefore, for his twenty-five years' labor as much as the coal-heaver for his thirty years' labor. The teacher's daily stipend should be one-fifth larger than that of the coal-heaver.

It will be observed that, under socialism, every citizen would be directly and consciously in the employ of the government. The government would be the only employer. The civil service would include the whole population. The shoe-maker or the hod-carrier would be a government officer as much as the postmaster or the department clerk.

Under this régime private property would not be abolished, but it would be greatly restricted. A man might live, doubtless, on less than the amount of his daily earnings, and thus an accumulation of labor-checks might be made upon which he could subsist while devoting his leisure to study or travel; but the savings of day-wages must needs be small.

Loans with interest would be prohibited; for it is the very foundation-stone of socialism that capital—that is, property of any kind from which income is derived—shall all belong to the state. Every man's income would be strictly confined to his actual earnings; and the state would be his employer and would fix his stipend. Inheritance would also be restricted or forbidden. Private property would not be allowed to accumulate in this way, in families, by transmission. On this question, however, there is not entire agreement among socialists; some of them holding that the right of bequeathing one's personal savings should not be denied. The limitation of private property would, however, be pretty strict, if Mr. Gronlund is a prophet. This is his judgment:

"Every millionaire is a criminal.

"Every one who amasses a hundred thousand dollars is a criminal.

"Every president of a company with nominal duties, if his salary is but a thousand dollars, is a criminal.

"Every one who loans his neighbor one hundred dollars and exacts one hundred and six in return is a criminal."

It is evident that the reign of the plutocrat will cease when socialism comes to its own.

One interesting feature of the new order is conveyed in the assurance that the question of domestic service will be forever settled. "Domestics will be incorporated in the family, as members of it. No one, then, surely will be so slavish as to accept the position on less honorable terms." After making this fact known, Mr. Gronlund imagines some objector crying out, "Is the man crazy? No one to black our boots, sweep our rooms, attend us at meals, nurse our children! No one to look after our comfort!" To which he makes this answer: "We really think you will have to 'look after your comfort' yourself. Most of your fellow-men, many of them far more worthy than you, now have to do that. At the public places, of course, you can have all your wants supplied and yourself attended to, but mark! by persons as much public functionaries as you yourself will be, and conscious of being so, and whom you cannot familiarly call 'Ben' or 'John' except on an equal footing. But at home you will have to be 'served' by members of your family, and such people whom (*sic*) your personal qualities will attach to your person."

Socialism aims, fundamentally, at the reconstruction of the industrial order; and it need not concern itself with questions of morality or religion. Whatever may be said by its expositors about these questions should be taken as mere *obiter dicta*, and should not be suffered

to bind or to ban the system. Nevertheless it is noteworthy that those socialists who touch upon domestic and ethical matters indicate their preference for a somewhat radical reconstruction of society along these lines. Their prediction is that marriage will be purely voluntary; that society will interpose no obstacles to the separation of discontented partners; that the control of children by their parents will be much less absolute than at present; that in many of the most important interests of life society will stand *in loco parentis*. "Children do not belong to their parents," says Mr. Gronlund; "they belong to society." "In the very nature of things family supremacy will be absolutely incompatible with an *interdependent*, solidaric commonwealth, for in such a state the first object of education must be to establish in the minds of the children an indissoluble association between their individual happiness and the good of all. To that end family exclusiveness must be broken down first of all."*

As to morals, the socialists are inclined to charge all evil-doing upon the present order of society, and to excuse, if not to justify, the existing race of criminals. The new order will make men good by furnishing them with a better environment; it will successfully tempt them to do right.

As to religion, something of that nature will still remain, no doubt. There is no reason in the nature of things, as Dr. Woolsey says, why socialists should not be Christians. They might even make Christianity the state religion. There is in Germany at the present time a considerable body of Christian Socialists whose programme is, indeed, much less radical than that of the Social Democrats, but who are fairly entitled to the name. As a matter of fact, however, the great majority of socialists are violently opposed to all that is known by the name of religion at the present day.

"Socialists," says Schaeffle, "pronounce the church to be a police institution in the hands of capital, and that it cheats the proletarian 'by bills of exchange on heaven.' It deserves to perish."

THIS exposition of the philosophy and the aims of socialism is necessarily rough and incomplete; I have endeavored to set forth, as fairly as I could, the main features of the system. In doing so I have exhibited its weakness. As a positive programme for the reconstruction of society its ineptitude must be apparent. It can never survive a thorough popular discussion. So long as it is content with criticising the present order it can gain a hearing; and, as a matter of fact, it does, for

the most part, confine itself to this rôle. Its advocates are chary of definite information about their plans. They are able clearly to point out the evils of competition and capitalism; but when they are asked to tell what they would put in the place of the existing system, they at once begin to deal in generalities. An attempt such as Mr. Gronlund has made to furnish an outline of the new order is the most convincing argument against it. The reflections that must force themselves on all who take the trouble to think out this scheme are briefly these:

1. The attempt to regulate the social and industrial life of a great nation like ours by a centralized bureaucracy would break down under its own weight. The work would be so vast and complicated, the details so multifarious, the adjustments so difficult, the administration so herculean, that its collapse would be speedy. To do all this work an army of "non-productive" government officials would be required, whose draft upon the products of industry would be enormous; it is a question whether the "productive" workers would obtain any larger portion of the net product of their industry than they are now receiving. Under any system labor must be supervised and directed, and exchanges of products must be effected, and this work of direction and exchange must be remunerated. Socialists must carefully count the cost of all this before they enter upon the warfare in which they are now enlisting. The cumbersome nature rather than the cost of the method is, however, the feature upon which attention should be fixed. That a "National Board of Administrators" at Washington should set out to ascertain and measure the desires of fifty millions of people for the necessities, the comforts, the luxuries of life, and should undertake to produce all these "satisfactions" and distribute them to those who crave them, seems, on the face of it, preposterous.

2. Closely connected with this objection another fundamental weakness of the scheme appears. This is the attempt to base all values upon cost of production, without any consistent reference to the principle of supply and demand. Things are to be worth just what it costs to produce them; the strength or the weakness of the desire of the consumer is not to have any measurable influence in determining the price that shall be paid for them. Mr. Gronlund admits that supply and demand is a natural law, and that it has at present a great deal to do in fixing the prices of commodities, and he thinks that a little room may perhaps be found for the play of this force under the socialistic régime; but it is evident

* "Coöperative Commonwealth," page 224.

that he likes it not, and would willingly be rid of it altogether. The practical difficulties which would arise on account of it are easily conceived. Suppose, for example, a group of manufacturing tailors produce one hundred thousand coats, which are sent to the government warehouses, to be sold. The price of each is fixed by the time expended by the workman in making it. Suppose another group manufactures the same number of coats out of material costing exactly the same, and with the same amount of labor, and these go into the warehouses in the same way, to be sold, of course, at the same price. Owing to the differences in the color and style of the material, and in the pattern and finish of the work, the one lot of coats is quickly disposed of, while the other lot proves unsalable. What is the government to do with this product for which it has paid, and which nobody wants? Will it dispose of the stock for less than its actual cost in labor? Will it not continually find its storehouses filling up with goods that nobody will buy? Mr. Gronlund allows that sacrifices would sometimes have to be made in this way, which the government, "as the universal insurer," would be obliged to meet. He thinks, however, that the government would find ways of controlling this troublesome factor—that is, of causing the people to demand those commodities, and those only, of which it has the supply. It is easy to see how this might be done, in part, by establishing uniformity in a great many of the features of life where now diversity exists; by compelling the people all to dress exactly alike; to dwell in houses of uniform size and cost; to lay aside their individual tastes and preferences and live a life prescribed by governmental regulation. The socialistic scheme can never be worked without the enforcement of such a uniformity in most of the details of life.

3. It is evident that the freedom of the individual would be greatly limited under such a régime. No despotism could be more absolute or more intolerable than that which this fierce democracy would be sure to exercise. Many of the questions which men are now left to determine for themselves would be determined for them by the state; the range of their choices and responsibilities would be greatly narrowed; the forces by which high character is developed would be correspondingly weakened. It is by no means clear that the right of movement from place to place would be left to the individual. Mr. Gronlund insists that it would be, but he has not shown us how this great governmental machine will be able to carry on its work

successfully, unless it has the power to compel its workmen to stay where they are put and do the work assigned to them. As Baron J. Eötvös* has strongly said, "The unconditional subjection of the individual under the state" is the first principle of socialism. "What the form of the state would be in its socialistic era," says Dr. Woolsey, "would be of little importance. The essential characteristic is that it must become all but unlimited; and our readers are well aware that all unlimited governments are more like one another, whether they be called monarchies or oligarchies or democracies, than they are each like to a limited government of their own name."† That this unlimited government, though democratic at first, would easily pass under the control of a single despot, is a truth which reason announces and history confirms. It was revolutionary and communistic France that flung herself so suddenly and so eagerly into the arms of Napoleon. Mr. Gronlund's "National Board of Administrators" would soon find some single will ruling in its councils, and the question of the responsibility of this body, with which its inventor labors, would be promptly solved.

4. But socialism is fundamentally an economical method, and is, therefore, fundamentally wrong; because it is based on a doctrine of economy which is false; namely, the doctrine that all value is the product of labor. This doctrine of value, formulated by Karl Marx, is the corner-stone of socialism. "Nothing," says Mr. Gronlund, "can so effectually kill our cause as the successful impeachment of the answer we shall give to the question, 'What is value?'"‡ This is undoubtedly true, and therefore socialism can never survive a thorough discussion of its economical basis; for no matter whether Ricardo or Marx be the author of this doctrine, it is unsound. Other elements besides the "quantity of common human labor measured by time" help to make up value. Here are two groups of a thousand men, equally industrious and capable. The workmen of the one group find such occupation as they can; but many of them have poor tools, and many others are lacking in constructive or artistic skill and do not know how to direct their own powers; and many others make mistakes of judgment in determining what they will produce, and continually find that they have expended their energies upon products for which there is no demand; and many, still more helpless, though willing to work, are idle a good part of the time because they can find nothing profitable to do. The other group are employed by a man of intelligence and experience. He possesses an ample supply of the

* Quoted by Woolsey, "Communism and Socialism," page 269.

† Page 232.

‡ Page 16.

best tools and machines; he knows, by wide observation and careful study of the market, for what articles there will be an efficient demand; he has the constructive skill and the taste that enable him to produce the goods that will please the people; he knows when to get them to the market and how to put himself in communication with purchasers. Under his direction the second group of men work for a year. Will any man say that the product of their labor, thus directed, will possess no more value than the product of the first group, who wrought blindly during the same time, without direction? Will any man say that the knowledge, the skill, the taste, the judgment, the enterprise, the organizing ability of this employer are not elements in the production of this enhanced value? The majority of the men who work lack the power of directing their own labor so as to secure from it the most valuable product. A very large share of the value produced by their labor is given to it by the intelligence and the organizing power of their employers. To say that this intelligence and this organizing power have nothing to do, or but little to do, with the creation of value is to talk arrant nonsense.

The power to organize and direct labor is highly useful to society. We owe to it the great multiplication of wealth and the rapid progress of the industrial arts. The workmen themselves have derived from it incalculable benefits. And this power has been developed in great degree by the operation of that same "private enterprise" whose doings the socialists so constantly execrate. Even Mr. Gronlund is forced to acknowledge this: "We heartily admit that it has performed wonders. It has built monuments greater than the pyramids. Its Universal Expositions have moved greater masses of men than the crusades ever did. It has done mankind an immense service in proving by hard facts that wholesale manufacture is the most sensible form of labor." (Page 53.)

This is a grudging admission. It has done far more than this. With all its mischiefs and its curses,—and they are multitudinous,—private enterprise has filled the world with blessings. It has been the motive power of material civilization.

But socialism proposes to dispense with it. It will suffer private property, in a restricted sense, but it will not suffer private *enterprise*. The State is to monopolize the enterprise. The organizing genius, the constructive skill, the executive energy which have built up modern civilization have been developed by giving an open field to private enterprise, and permitting individuals to reap for themselves the rewards of their own vigilance and sagacity.

The closing of this door would paralyze industry and put a stop to development. The prospect of profit from industrial investment is the mainspring of industrial progress. In the words of Mr. Cairnes: "The inducement thus offered to the acquisitive propensity in man constitutes under the actual system of things the ultimate security for all the results which go to form our industrial civilization. The feeling appealed to may, if you like, be a coarse one, but it is at any rate efficacious; it does lead to habitual and systematic saving, and furnishes society with the necessary basis for civilized progress." The proposition of the socialists to exterminate or repress this central principle of human nature is clearly unscientific; the reform for which they call is "a reform against nature."

The just demand of the working class is that they shall share in the growing wealth of the world. "Now this," says Mr. Rae, "involves two things: first, progress; and second, diffusion of progress; and socialism is so intent on the second that it fails to see how completely it would cut off the springs of the first."

The two coördinate forces of the ideal society are self-interest and benevolence. In the perfect society they will exactly balance each other. The present industrial order makes self-interest the sole motive power. Under this one-sided régime the mischiefs have arisen of which socialism complains. The remedy which socialism proposes is the entire reconstruction of society upon the other principle of benevolence, allowing no opportunity for the free play of the self-regarding motives. From the one extreme it flies to the other. Because civilization has gone on one leg till it is lame, socialism insists that it shall go on the other, exclusively, till that too breaks down. Its health and its progress will be promoted by permitting it to go on both legs. Private property and private enterprise must be maintained, and some means must be found of infusing into them a larger measure of good-will. The manual laborer is not entitled to the whole of the net product of his labor; but a wise philanthropy, studying his conditions, freely allows that a larger share of it than he now receives equitably belongs to him, and insists that some adjustment shall be made by which he shall obtain a larger share. The wage-laborer ought to have not only the market rate of wages, under competition, but a stipulated share in the profits of business. He ought to be identified in interest with his employer; and he must be, before there can ever be peace between them. The system of profit-sharing, or industrial partnership, saves and enlarges the gains of private enterprise, and permits the work-

man to participate in them. By some application of this principle the efficiency of the present wage system will be preserved, and its worst mischiefs averted. If any one wishes to know whether this method is practicable or not, let him read that eloquent little book by Sedley Taylor on "Profit-Sharing," in which the results of a large number of experiments along this line are clearly set forth. More than a hundred establishments upon the continent of Europe are now working happily and prosperously upon this basis.

The socialists, indeed, as I have said, are altogether unfriendly to this method. They prefer that the gulf between the laborers and their employers should go on widening and deepening. The faster this proceeds the sooner will come the social revolution for which they pray. Therefore they denounce all workmen who enter into such partnerships with their employers, as a class "with one foot in the camp of the *bourgeoisie* and the other in the camp of the proletariat." Exactly so. In this lies the wisdom and the glory of the method. It is not divisive, it is unitary. "It is only," says Mr. Rae, "by linking a lower class to a higher that you can raise the level of the whole."

This simple readjustment of the economical relations of employer and laborer would put a new face upon industrial society. Peace would take the place of strife, confidence of distrust, hope of despair. The efficiency of labor would be promoted, and the gains of civilization, for all classes, indefinitely increased.

Instead, therefore, of pulling down the existing order, as the socialists propose, the thing to be done is to enlarge its foundations. They are right in saying that an industrial system whose sole motive power is self-interest and whose sole regulative principle is competition will end in pandemonium; but they are foolish in thinking that humanity will thrive under a system which discards or cripples these self-regarding forces. What is needed is the calling into action of the goodwill which is equally a part of human nature. This also must be made an integral part of the industrial system; it must be the business of the employer to promote the welfare of his workmen, and the business of the workmen to promote the interest of their employer. The organization of labor must be such that the one class cannot prosper without directly and perceptibly increasing the prosperity of the other. This is the true remedy for the evils of which the socialists complain. The reform needed is not the destruction but the Christianization of the present order.

Yet, in the language of Sedley Taylor, these

methods of profit-sharing and industrial partnership, "valuable as they are in themselves, constitute no self-acting panacea; . . . their best fruits can be reaped only by men who feel that life does not consist in abundance of material possessions, who regard stewardship as nobler than ownership, who see in the ultimate outcome of all true work issues reaching beyond the limits of the present dispensation, and who act faithfully and strenuously on these beliefs." Those who are under the sway of such motives must take the initiative in this great enterprise of making peace between the workmen and their employers. Edme-Jean Leclaire, founder of the *Maison Leclaire* in Paris, and a man whose life was devoted to the building up of a noble and beneficent industry upon this foundation, wrote, upon his death-bed, this confession of his faith: "I am the humble disciple of Him who has told us to do to others what we would have others do to us, and to love our neighbor as ourselves; it is in this sense that I desire to remain a Christian until my last breath." Out of such a faith ought to grow such fruit. If our Christianity has any life in it, it can solve this problem of the relation between labor and capital. And every employer over whom Christian motives have any power ought to feel the weight of the obligation resting on him to establish between himself and his workmen a relation in which it will be natural for them as well as for him to obey the Christian law.

As a consequence of this economical readjustment better relations would be established between all classes in society, and sympathy and kindness would take the place of suspicion and alienation. The iron law of wages would be broken, and the yawning chasm between rich and poor would be bridged by goodwill.

The principal remedy for the evils of which socialists complain is to be found, therefore, in the application by individuals of Christian principles and methods to the solution of the social problem. The notion that the state can cure all these mischiefs is not to be entertained. Nevertheless, though the state cannot do everything, there are some things that it can do, and must do. The limits of governmental interference are likely to be greatly enlarged in the immediate future. New occasions bring new duties; the function of the state must be broadened to meet the exigencies of our expanding civilization. We may go far beyond Mr. Spencer's limits and yet stop a great way this side of socialism. Out of unrestricted competition arise many wrongs that the state must redress, and many abuses that it must check. It may become the duty

of the state to reform its taxation, so that its burdens shall rest less heavily upon the lower classes; to repress monopolies of all sorts; to prevent and punish gambling; to regulate or control the railroads and the telegraphs; to limit the ownership of land; to modify the laws of inheritance; and possibly to levy a progressive income tax, so that the enormous fortunes should bear more, instead of less, than their share of the public burdens. The keeping up of such fortunes is against public policy, and the state has the same right to discourage them that it has to inspect factories

or ships, to tax saloons, or to prohibit the erection of a slaughter-house upon the public square. By some such measures the state may clearly indicate its purpose, while carefully guarding the essential liberty of its citizens, to restrain those oppressive evils which grow out of the abuses of liberty; and, while protecting property and honoring industry, to check, by every means in its power, those tendencies by which society is divided into the two contrasted and contending classes of plutocrats and proletarians.

Washington Gladden.

SHILOH REVIEWED.

BATTERY, FORWARD!

Twenty-three years ago the banks of the Tennessee witnessed a remarkable occurrence. There was a wage of battle. Heavy blows were given and received,

and the challenger failed to make his cause good. But there were peculiar circumstances which distinguished the combat from other trials of strength in the rebellion: An army comprising seventy regiments of infantry, twenty batteries of artillery, and a sufficiency of cavalry, lay for two weeks and more in isolated camps, with a river in its rear and a hostile army claimed to be superior in numbers twenty miles distant in its front, while the commander made his headquarters and passed his nights nine miles away on the opposite side of the river. It had no line or order of battle, no defensive works of any sort, no outposts, properly speaking, to give warning, or check the advance of an enemy, and no recognized head during the absence of the regular commander. On a Saturday the hostile force arrived and formed in order of battle, with-

out detection or hindrance, within a mile and a half of the unguarded army, advanced upon it the next morning, penetrated its disconnected lines, assaulted its camps in front and flank, drove its disjointed members successively from position to position, capturing some and routing others, in spite of much heroic individual resistance, and steadily drew near the landing and depot of its supplies in the pocket between the river and an impassable creek. At the moment near the close of the day when the remnant of the retrograding army was driven to refuge in the midst of its magazines, with the triumphant enemy at half-gunshot distance, the advance division of a reënforcing army arrived on the opposite bank of the river, crossed, and took position under fire at the point of attack; the attacking force was checked, and the battle ceased for the day. The next morning at dawn the reënforcing army and a fresh division belonging to the defeated force advanced against the assailants, followed or accompanied by such of the broken columns of the previous day as had not lost all cohesion, and after ten hours of conflict drove the enemy from the captured camps and the field of battle.

GENERAL THOMAS L. CRITTENDEN.
(FROM A PHOTOGRAPH BY BRADY.)

Such are the salient points in the popular conception and historical record of the battle of Shiloh. Scarcely less remarkable than the facts themselves are the means by which the responsible actors in the critical drama have endeavored to counteract them. At society reunions and festive entertainments, in newspaper interviews and dispatches, in letters and contributions to periodicals, afterthought official reports, biographies, memoirs, and other popular sketches, the subject of Shiloh from the first hour of the battle to the present time has been invaded by pretensions and exculpatory statements, which revive the discussion only to confirm the memory of the grave faults that brought an army into imminent peril. These defenses and assumptions, starting first, apparently half suggested, in the zeal of official attendants and other partisans, were soon taken up more or less directly by the persons in whose behalf they were put forward; and now it is virtually declared by the principals themselves, that the Army of the Ohio was an unnecessary intruder in the battle, and that the blood of more than two thousand of its members shed on that field was a gratuitous sacrifice.

With the origin of the animadversions that were current at the time upon the conduct of the battle, the Army of the Ohio had little to do, and it has not generally taken a willing

part in the subsequent discussion. They commenced in the ranks of the victims, and during all the years that have given unwonted influence to the names which they affected, the witnesses of the first reports have without show of prejudice or much reiteration firmly adhered to their earlier testimony. It does not impair the value of that testimony if extreme examples were cited to illustrate the general fact; nor constitute a defense that such examples were not the general rule. I have myself, though many years ago, made answer to the more formal pleas that concerned the army which I commanded, and I am now called upon in the same cause to review the circumstances of my connection with the battle, and investigate its condition when it was taken up by the Army of the Ohio.

WHEN by the separate or concurrent operations of the forces of the Department of the Missouri, commanded by General Halleck, and the Department of the Ohio, commanded by myself, the Confederate line had been broken, first at Mill Springs by General Thomas, and afterward at Fort Henry and at Fort Donelson by General Grant and the navy, and Nashville and Middle Tennessee were occupied by the Army of the Ohio, the shattered forces of the enemy fell back for the formation of a new line, and the Union armies prepared to follow for a fresh attack. It was apparent in advance that the Memphis and Charleston railroad between Memphis and Chattanooga would constitute the new line, and Corinth, the point of intersection of the Memphis and Charleston road running east

GENERAL THOMAS J. WOOD. (COPIED FROM AN ENGRAVING,
BY PERMISSION OF D. VAN NOSTRAND.)

and west, and the Mobile and Ohio road running north and south, soon developed as the main point of concentration.

While this new defense of the enemy and the means of assailing it by the Union forces were maturing, General Halleck's troops, for the moment under the immediate command of General C. F. Smith, were transported up the Tennessee by water to operate on the enemy's railroad communications. It was purely an expeditionary service not intended for the selection of a rendezvous or depot for future operations. After some attempts to debark at other points farther up the river, Pittsburg Landing was finally chosen as the most eligible for the temporary object; but when the concentration of the enemy at Corinth made that the objective point of a deliberate campaign, and the coöperation of General Halleck's troops and mine was arranged, Savannah, on the east bank of the river, was designated by Halleck as the point of rendezvous. This, though not as advisable a point as Florence, or some point between Florence and Eastport, was in a general sense proper. It placed the concentration under the shelter of the river and the gun-boats, and left the combined force at liberty to choose its point of crossing and line of attack.

On the restoration of General Grant to the immediate command of the troops, and his arrival at Savannah on the 17th of March, he converted the expeditionary encampment at Pittsburg Landing into the point of rendezvous of the two armies, by placing his whole force on the west side of the river, apparently on the advice of General Sherman, who, with his division, was already there. Nothing can be said upon any rule of military art or common expediency to justify that arrangement. An invading army may, indeed, as a preliminary step, throw an inferior force in advance upon the enemy's coast or across an intervening river to secure a harbor or other necessary foothold; but in such a case the first duty of the advanced force is to make itself secure by suitable works. Pittsburg Landing was in no sense a point of such necessity or desirability as to require any risk, or any great expenditure of means for its occupation. If the force established there was not safe alone, it had no business there; but having been placed there, still less can any justification be found for the neglect of all proper means to make it secure against a superior adversary. General Grant continued his headquarters at Savannah, leaving General Sherman with a sort of control at Pittsburg Landing. Sherman's rank did not allow him the command, but he was authorized to assign the arriving regiments to brigades and divisions

as he might think best, and designate the camping-grounds. In these and other ways he exercised an important influence upon the fate of the army.

The movement of the Army of the Ohio from Nashville for the appointed junction, was commenced on the night of the 15th of March by a rapid march of cavalry to secure the bridges in advance, which were then still guarded by the enemy. It was followed on the 16th and successive days by the infan-

GENERAL ALEXANDER MCD. MCCOOK.
(FROM A PHOTOGRAPH BY BRADY.)

try divisions, McCook being in advance with instructions to move steadily forward; to ford the streams where they were fordable, and when it was necessary to make repairs in the roads, such as building bridges over streams which were liable to frequent interruption by high water, to leave only a sufficient working party and guard for that purpose; to use all possible industry and energy, so as to move forward steadily and as rapidly as possible without forcing the march or straggling; and to send forward at once to communicate with General Smith at Savannah, and learn his situation.

When the cavalry reached Columbia the bridge over Duck River was found in flames, and the river at flood stage. General McCook immediately commenced the construction of a frame bridge, but finding, after several days, that the work was progressing less rapidly than had been expected, I ordered the building of a boat bridge also, and both were completed on the 30th. On the same day the river became fordable. I arrived at Columbia on the 26th. General Nelson succeeded in getting a portion of his division across by fording on the 29th, and was given the ad-

GENERAL WILLIAM NELSON. (FROM A PHOTOGRAPH BY BRADY.)

General Nelson had an altercation with General Jefferson C. Davis in the Galt House, Louisville, Kentucky, on the morning of September 29, 1862. General Davis shot General Nelson, who died almost instantly.—EDITOR.

vance. Most of his troops crossed by fording on the 30th. The other divisions followed him on the march with intervals of six miles, so as not to incommode one another—in all five divisions, about thirty-seven thousand effective men. On the first day of April, General Halleck and General Grant were notified that I would concentrate at Savannah on

Sunday and Monday, the 6th and 7th, the distance being ninety miles. On the 4th General Nelson received notification from General Grant that he need not hasten his march, as he could not be put across the river before the following Tuesday, but the rate of march was not changed.

After seeing my divisions on the road, I

left Columbia on the evening of the 3d, and arrived at Savannah on the evening of the 5th with my chief of staff and an orderly, leaving the rest of my staff to follow rapidly with the headquarters train. Nelson had already arrived and gone into camp, and Crittenden was close in his rear. We were there to form a junction for the contemplated forward movement under the command of General Halleck in person, who was to leave St. Louis the first of the following week to join us. General Grant had been at Nelson's camp before my arrival, and said he would send boats for the division "Monday or Tuesday, or some time early in the week." "There will," he said, "be no fight at Pittsburg Landing; we will have to go to Corinth, where the rebels are fortified. If they come to attack us we can whip them, as I have more than twice as many troops as I had at Fort Donelson." I did not see General Grant that evening—probably because he was at Pittsburg Landing when I arrived, but he had made an appointment to meet me next day.

We were finishing breakfast at Nelson's camp Sunday morning, when the sound of artillery was heard up the river. We knew of no ground to apprehend a serious engagement, but the troops were promptly prepared to march, and I walked with my chief of staff, Colonel James B. Fry, to Grant's quarters at Savannah, but he had started up the river. I there saw General C. F. Smith, who was in his bed sick, but apparently not dangerously ill. He had no apprehension about a battle, thought it an affair of outposts, and said that Grant had sixty thousand men. This would agree approximately with the estimate which Grant himself made of his force, at Nelson's camp.

As the firing continued, and increased in volume, I determined to go to the scene of action. Nelson only waited for the services of a guide to march by land. The river bottom between Savannah and Pittsburg Landing was a labyrinth of roads from which the overflows had obliterated all recent signs of travel, and left them impassable except in certain places, and it was with great difficulty that a guide could be obtained. The artillery had to be left behind to be transported by water. After disposing of these matters and sending orders for the rear divisions to push forward without their trains, I took a small steamer at the Landing and proceeded up the river, accompanied only by my chief of staff. On the way we were met by a descending steamer which came alongside and delivered a letter from General Grant addressed to the "Commanding Officer, advanced forces, near Pittsburg, Tenn.," and couched in the following words:

"PITTSBURG, April 6, 1862.—GEN.: The attack on my forces has been very spirited since early this morning. The appearance of fresh troops on the field now would have a powerful effect, both by inspiring our men and disheartening the enemy. If you will get upon the field, leaving all your baggage on the east bank of the river, it will be a move to our advantage, and possibly save the day to us. The rebel forces are estimated at over one hundred thousand men. My headquarters will be in the log building on the top of the hill, where you will be furnished a staff-officer to guide you to your place on the field.

"Respectfully, &c. U. S. GRANT, Maj.-Gen."

About half-way up we met a stream of fugitives that poured in a constantly swelling current along the west bank of the river. The mouth of Snake Creek was full of them swimming across. We arrived at the Landing about one o'clock. I inquired for General Grant and was informed that he was on his headquarters boat, nearly against which we had landed. I went on board, and was met by him at the door of the ladies' cabin, in which there were besides himself two or three members of his staff. Other officers may have entered afterward. He appeared to realize that he was beset by a pressing danger, and manifested by manner more than in words that he was relieved by my arrival as indicating the near approach of succor; but there was nothing in his deportment that the circumstances would not have justified without disparagement to the character of a courageous soldier. Certainly there was none of that masterly confidence which has since been assumed with reference to the occasion. After the first salutation, and as I walked to a seat, he remarked that he had just come in from the front, and held up his sword to call my attention to an indentation, which he said the scabbard had received from a shot. I did not particularly notice it, and after inquiring about the progress of the battle and requesting him to send steamers to bring up Crittenden's division, which was coming into Savannah as I left, I proposed that we should go ashore. As we reached the gangway I noticed that the horses of himself and his staff were being taken ashore. He mounted and rode away, while I walked up the hill; so that I saw him no more until the attack occurred at the Landing late in the evening. I state these particulars of our meeting with so much detail because a totally incorrect version of the place, manner, and substance of the interview has been used to give a false impression of the state of the battle, and a false coloring to personal traits which are assumed to have had the issue in control.

On the shore I encountered a scene which has often been described. The face of the bluff was crowded with stragglers from the battle. The number there at different hours has been estimated at from five thousand in the morn-

ing to fifteen thousand in the evening. The number at nightfall would not have fallen short of fifteen thousand, including those who had passed down the river, and the less callous but still broken and demoralized fragments about the camps on the plateau near the landing. At the top of the bluff all was confusion. Men mounted and on foot, and wagons with their teams and excited drivers, all struggling to force their way closer to the river, were mixed up in apparently inextricable confusion with a battery of artillery which was standing in park without men or horses to man or move it. The increasing throng already presented a barrier which it was evidently necessary to remove, in order to make way for the passage of my troops when they should arrive. In looking about for assistance I fell upon one officer, the quartermaster of an Ohio regiment, who preserved his senses, and was anxious to do something to abate the disorder. I instructed him to take control of the teams, and move them down the hill by a side road which led to the narrow bottom below the landing, and there park them. He went to work with alacrity and the efficiency of a strong will, and succeeded in clearing the ground of the wagons. It proved before night to have been a more important service than I had expected, for it not only opened the way for Nelson's division, but extricated the artillery and made it possible to get it into action when the attack occurred at the Landing about sunset.

It is now time to glance at the circumstances which had brought about and were urging on the state of affairs here imperfectly portrayed.

UPON learning on the 2d of April of the advance of the Army of the Ohio toward Savannah, General Sidney Johnston determined to anticipate the junction of that army with General Grant's force, by attacking the latter, and at once gave orders for the movement of his troops on the following day. It was his expectation to reach the front of the army at Pittsburg Landing on Friday, the 4th, and make the attack at daylight on Saturday; but the condition of the roads, and some confusion in the execution of orders, prevented him from getting into position for the attack until three o'clock on Saturday. This delay and an indiscreet reconnoissance which brought on a sharp engagement with the Federal pickets, rendered it so improbable that the Union commander would not be prepared for the attack, that General Beauregard advised the abandonment of the enterprise, to the success of which a surprise was deemed to be essential. General Johnston overruled the proposition, however, and the attack was ordered for the following morning. The army was drawn up in three parallel lines, covering the front of the Federal position. Hardee commanded the first line, Bragg the second, and Polk and Breckinridge the third, the latter being intended as a reserve.

The locality on which the storm of battle was about to burst has often been described with more or less of inaccuracy or incompleteness. It is an undulating table-land, quite broken in places, elevated a hundred feet or thereabout above the river; an irregular triangle in outline, nearly equilateral, with the sides four miles long, bordered on the east by the river, which here runs nearly due north, on the north-west by Snake Creek and its tributary, Owl Creek, and on the south, or south-west, by a range of hills which immediately border Lick Creek on the north bank, two hundred feet or more in height, and sloping gradually toward the battle-field. In these hills rise the eastern tributaries of Owl Creek, one of them, called Oak Creek, extending half-way across the front or south side of the battle-field, and interlocking with a ravine called Locust Grove Creek, which runs in the opposite direction into Lick Creek a mile from its mouth. Other short, deep ravines start from the table-land and empty into the river, the principal among them being Dill's Branch, six hundred yards above the Landing. Midway in the front, at the foot of the Lick Creek hills, start a number of surface drains which soon unite in somewhat difficult ravines and form Tillman's Creek, or Brier Creek. It runs almost due north, a mile and a quarter from the river, in a deep hollow, which divides the table-land into two main ridges. Tillman's Creek empties into Owl Creek half a mile above the Snake Creek bridge by which the division of Lew. Wallace arrived. Short, abrupt ravines break from the main ridges into Tillman's Hollow, and the broad surface of the west ridge is further broken by larger branches which empty into Owl Creek. Tillman's Hollow, only about a mile long, is a marked feature in the topography, and is identified with some important incidents of the battle.

Pittsburg Landing is three-quarters of a mile above the mouth of Snake Creek, and two and a quarter miles below the mouth of Lick Creek. Shiloh Church is on Oak Creek two miles and a half south-west of Pittsburg Landing. The table-land comes up boldly to the river at the Landing and for a mile south. Beyond those limits the river bends away from the high land, and the bottom gradually widens.

The principal roads are the River road, as it will here be called, which crosses Snake Creek at the bridge before mentioned, and running a mile west of Pittsburg Landing, obliquely along the ridge east of Tillman's Creek, crosses Lick Creek three quarters of a mile from the river at the east end of the Lick Creek hills; the Hamburg and Purdy road, which branches from the River road a mile and two-thirds in a straight line south of

Pittsburg Landing, and extends north-west four hundred yards north of Shiloh Church; and two roads that start at the Landing, cross the River road two-thirds of a mile apart, and also cross or run into the Hamburg and Purdy road nearly opposite the church. In the official reports these various roads are called with some confusion, but not altogether inaccurately, Crump's Landing road, Hamburg road, Corinth road or Purdy road, even over the same space, according to the idea of the writer. The Corinth road from the Landing has two principal branches. The western branch passes by the church, and the eastern passes a mile east of the church into the Bark road, which extends along the crest of the Lick Creek hills. The military maps show many other roads, some of them farm-roads, and some only well-worn tracks made in hauling for the troops. In some places the old roads were quite obliterated, and are improperly represented on the maps, as in the case of the River road, which is not shown on the official map between McArthur's and Hurlbut's headquarters, immediately west of the Landing. It is shown on Sherman's camp map, and its existence is not doubtful. At the time of the battle, much the largest part of the ground was in forest, sometimes open, sometimes almost impenetrable for horsemen, with occasional cleared fields of from twenty to eighty acres; and these variations operated in a signal manner upon the fortune of the combatants. There was not a cleared field within the limits of the battle that has not its history.

We may now locate the troops in their encampments, for there is where the battle found them, and its currents and eddies will frequently be discovered by the reference to certain camps in the official reports. The camp map which I received from General Sherman will serve as a useful guide, subject to some necessary modifications, to make a field sketch agree with an actual survey. But the regimental camps did not always conform to the lines laid down for the brigades and divisions. Sometimes they were in front, sometimes in rear of the general line. I have not pretended generally to introduce these variations into the map which I have prepared to accompany this article.

Starting at the Landing, we find the Second Division, commanded by W. H. L. Wallace, in the space bounded by the river, Snake Creek, the River road, and the right-hand road leading west from the Landing. Along that road are, in this order, the camps of the Twelfth, Seventh, Fourteenth and Second Iowa, and the Fifty-second and Ninth Illinois. At the point where that road crosses the River road,

from the church, and the left is two hundred yards from Hildebrand's brigade, which is thus obliquely in its front. The other two brigades, on a general line starting from the right of the Third, form an obtuse angle with the Third, and are along the ridge nearly parallel with Tillman's Creek, the extreme right being not far from the bluff overlooking Owl Creek bottom. The First Brigade is on the east side of the adjacent field instead of the west side, as the Sherman map, according to the road, would seem to place it, though that map does not show the field. It remains to be added that three of the five divisions were for that period of the war old and experienced troops. Hurlbut's Third Brigade belonged to the Army of the Ohio, and had been sent to reinforce Grant before Donelson. Eight other regiments were furnished by me for the first movement up the Tennessee, and remained with Grant's army. Sherman's division, one of the newest, had been under his command more than a month, and ought to have been in a tolerably efficient state of discipline. Prentiss's division, composed largely of raw regiments, had only been organized a few days; yet it was posted in the most exposed and assailable point on the front. The effective force at the date of the battle, exclusive of Lew. Wallace's division, which was at or near Crump's Landing, six miles below, is stated by Gen-

eral Sherman at 32,000 men; by General Grant at 33,000. General Wallace left two regiments of his division and a piece of artillery at Crump's Landing, and joined the army Sunday evening, with, as he states, not more than 5000 men.

I proceed now, in the light of the official reports and other evidence, to explain briefly what happened: the object being not so much to criticise the manner of the battle, or give a detailed description of it, as to trace it to its actual condition at the close of the first day, and outline its progress during the second. With this object the question of a surprise has little to do. I stop, therefore, only to remark that each revival of that question has placed the fact in a more glaring light. The enemy was known to be at hand, but no adequate steps were taken to ascertain in what force or with what design. The call to arms blended with the crash of the assault, and when the whole forest on the rising ground in front flashed with the gleam of bayonets, then General Sherman, as he reports, "became satisfied for the first time that the enemy designed a determined attack." Yet among the more watchful officers in the front divisions, there was a nervous feeling that their superiors were not giving due heed to the presence of hostile reconnoitering parties, though they little imagined the magnitude of the danger that impended. On Saturday General Sherman was notified of these parties. He answered that the pickets must be strengthened, and instructed to be vigilant; that he was embarrassed for the want of cavalry; his cavalry had been ordered away, and the cavalry he was to have instead had not arrived; as soon as they reported he would send them to the front and find out what was there. In one of his brigades the regimental commanders held a consultation, at which it was determined to strengthen the pickets. These are curious revelations to a soldier's ear.

Prentiss's vigilance gave the first warning of the actual danger, and in fact commenced the contest. On Saturday, disquieted by the frequent appearance of the enemy's cavalry, he increased his pickets, though he had no evidence of the presence of a large force. Early Sunday morning one of these picket-guards, startled no doubt by the hum of forty thousand men half a mile distant, waking up for battle, went forward to ascertain the cause, and soon came upon the enemy's pickets, which it promptly attacked. It was then a quarter-past five o'clock, and all things being ready, the Confederate general, accepting the signal of the pickets, at once gave the order to advance. Previously, however, General Prentiss, still apprehensive, had sent forward

Colonel Moore of the Twenty-first Missouri, with five companies to strengthen the picket-guard. On the way out Colonel Moore met the guard returning to camp with a number of its men killed and wounded. Sending the latter on to camp and calling for the remaining companies of his regiment, he proceeded to the front in time to take a good position on the border of a cleared field and open fire upon the enemy's skirmishers, checking them for a while; but the main body forced him back upon the division with a considerable list of wounded, himself among the number. All this occurred in front of Sherman's camp, not in front of Prentiss's. This spirited beginning, unexpected on both sides, gave the first alarm to the divisions of Sherman and Prentiss. The latter promptly formed his division at the first news from the front, and moved a quarter of a mile in advance of his camp, where he was attacked before Sherman was under arms. He held his position until the enemy on his right passed him in attacking Sherman, whose left regiment immediately broke into rout. He then retired in some disorder, renewing the resistance in his camp but forced back in still greater disorder, until at nine o'clock he came upon the line which Hurlbut and W. H. L. Wallace were forming half a mile in rear.

Upon the first alarm in his camp, which was simultaneous with the attack upon Sherman, McClelland rapidly got under arms, and endeavored to support Sherman's left with his Third Brigade, only two hundred yards in rear, while he placed his First and Second Brigades in inverted order still farther to the rear and left, to oppose the enemy's columns pouring in upon his left flank through the opening on Sherman's left; but his Third Brigade was forced back with the fugitives from Sherman's broken line by the advancing enemy, and endeavored with only partial success to form on the right of McClelland's line, which at first was formed with the left a little south, and the center north of the Corinth road. Before the formation was completed the line was compelled to retire by the pressure on its front and left flank, with the loss of six pieces of artillery, but it re-formed three hundred yards in rear.

Hildebrand's brigade had now disappeared in complete disorder from the front, leaving three pieces of artillery in the hands of the enemy. Buckland formed promptly at the first alarm, and in order to keep the enemy back endeavored by Sherman's direction to throw a regiment beyond Oak Creek, which covered his front at a distance of two hundred yards, but on reaching the brow of the low hill bordering the stream the enemy was

encountered on the hither side. Nevertheless the brigade resisted effectively for about two hours the efforts of the assailants to cross the boggy stream in force. The enemy suffered great loss in these efforts, but succeeded at last. Before being quite forced back, Buckland received orders from Sherman to form line on the Purdy road four hundred yards in rear, to connect with McClernand's right. Orders were also given to McDowell, who had not yet been engaged, to close to the left on the same line. These orders were in effect defeated in both cases, and five pieces of artillery lost by faults in the execution and the rapid advance of the enemy. Sherman's division as an organized body disappeared from the field from this time until the close of the day. McDowell's brigade preserved a sort of identity for a while. Sherman reports that at "about 10:30 A. M. the enemy had made a furious attack on General McClernand's whole front. Finding him pressed, I moved McDowell's brigade against the left flank of the enemy, forced him back some distance, and then directed the men to avail themselves of every cover—trees, fallen timber, and a wooded valley to our right." It sounds like the signal to disperse, and a little after one o'clock the brigade and regiments are seen no more. Some fragments of the division and the commander himself attached themselves to McClernand's command, which now, owing to its composite and irregular organization, could hardly be denominated a division.

The contest which raged in McClernand's camp was of a fluctuating character. The ground was lost and won more than once, but each ebb and flow of the struggle left the Union side in a worse condition. In his fifth position McClernand was driven to the camp of his First Brigade, half of his command facing to the south and half to the west, to meet the converging attack of the enemy. His nominal connection with the left wing of the army across the head of Tillman's Hollow had been severed, by the dispersion or defeat of the detached commands that formed it. Another reverse to his thinned ranks would drive him over the bluff into Owl Creek bottom, and perhaps cut him off from the river. He determined, therefore, between two and three o'clock to retire across Tillman's Hollow in the direction of the Landing. That movement was effected with a good deal of irregularity, but with the repulse of a small body of pursuing cavalry, and a new line was formed on the opposite ridge along the River road, north of Hurlbut's headquarters. I shall have occasion farther along to remark upon the display of force on the right of this line in

the vicinity of McArthur's headquarters. The movement must have been completed about three o'clock. Leaving the right wing, as it may be called, in this position prior to the attack of four o'clock, which drove it still farther back, we will return to the current of events in the left wing.

With Stuart on the extreme left, as with the other commanders, the presence of the enemy was the first warning of danger. He was soon compelled to fall back from his camp to a new position, and presently again to a third, which located him on the prolongation and extreme left of the line formed by Hurlbut and W. H. L. Wallace, but without having any connection with it. As soon as the first advance of the enemy was known, these two commanders were called upon by those in front for support. In the absence of a common superior it was sent forward by regiments or brigades in such manner as seemed proper to the officer appealed to, and after that was left to its own devices. It seldom formed the connection desired, or came under the direction of a common superior. Indeed, the want of cohesion and concert in the Union ranks, is conspicuously indicated in the official reports. A regiment is rarely overcome in front, but falls back because the regiment on its right or left has done so, and exposed its flank. It continues its backward movement at least until it is well under shelter, thus exposing the flank of its neighbor, who then must also needs fall back. Once in operation, the process repeats itself indefinitely. In a broken and covered country which affords occasional rallying points and obstructs the pursuit, it proceeds step by step. On an open field in the presence of light artillery and cavalry, it would run rapidly into general rout.

This outflanking, so common in the Union reports at Shiloh, is not a mere excuse of the inferior commanders. It is the practical consequence of the absence of a common head, and the judicious use of reserves to counteract partial reverses and preserve the front of battle. The want of a general direction is seen also in the distribution of Hurlbut's and Wallace's divisions. Hurlbut sent a brigade under Colonel Veatch, to support Sherman's left; Wallace sent one under General McArthur to the opposite extreme to support Stuart; and the two remaining brigades of each were between the extremes—Wallace on Veatch's left but not in connection with it, and Hurlbut on McArthur's right, also without connection. Stuart himself with his brigade was two miles to the left of Sherman's division to which he belonged. When the three Confederate lines were brought together successively at the front, there was, of course, a great apparent

mingling of organizations; but it was not in their case attended with the confusion that might be supposed, because each division area was thereby supplied with a triple complement of brigade and division officers, and the whole front was under the close supervision of four remarkably efficient corps commanders. The evils of disjointed command are plainly to be seen in the arrangement of the Federal line, but the position of the left wing after the forced correction of the first faulty disposition of Hurlbut's brigades was exceedingly strong, and in the center was held without a break against oft-repeated assaults from nine o'clock until five o'clock. From twelve until two it was identical with the second position taken by Nelson and Crittenden on Monday, and it was equally formidable against attack from both directions. Its peculiar feature consisted in a wood in the center, with a thick undergrowth, flanked on either side by open fields, and with open but sheltering woods in front and rear. The Confederates gave the name of Hornets' Nest to the thicket part of it on Sunday, and it was in the open ground on the east flank that General Sidney Johnston was killed.

On this line, between and under the shelter of Hurlbut and W. H. L. Wallace, Prentiss rallied a considerable force, perhaps a thousand men, of his routed division at nine o'clock, and fought stubbornly until near the close of the day. By three o'clock the withdrawal of the right wing, accompanied by Veatch's brigade, exposed Wallace's right flank, which also partially crumbled away; and the retirement of Stuart about the same hour before the strong attack brought against him, and of Hurlbut at four o'clock under the same powerful pressure upon his left flank, left Prentiss, and Wallace with his remaining regiments isolated and unsupported. Still they held their ground while the enemy closed upon each flank. As they were about being completely enveloped, Wallace endeavored to extricate his command, and was mortally wounded in the attempt at five o'clock. Some of his regiments under Colonel Tuttle fought their way through the cross-fire of the contracting lines of the enemy, but six regiments of the two divisions held fast until the encirclement was complete, and one by one with Prentiss, between half-past five and six o'clock, they were forced to surrender. This gallant resistance, and the delay caused by the necessary disposition of the captives, weakened the force of the attack which McClernand sustained in his seventh position on the River road at four o'clock, and retarded the onward movement of the enemy for nearly three hours after the retirement of the right wing from the west side of Tillman's Creek.

Before the incumbrance of their success

was entirely put out of the way the Confederates pressed forward to complete a seemingly assured victory, but it was too late. Jackson's brigade, and the Ninth and Tenth Mississippi of Chalmers's brigade crossed Dill's ravine, and their artillery on the south side swept the bluff at the landing, the missiles falling into the river far beyond. Hurlbut had hurriedly got into line in rear of the reserve artillery five hundred yards from the river, but from there to the Landing there was not a soldier in ranks or any organized means of defense. Just as the danger was perceived Colonel Webster, Grant's chief of artillery, rapidly approached Colonel Fry and myself. The idea of getting the battery which was standing in park into action was expressed simultaneously by the three, and was promptly executed by Colonel Webster's immediate exertion. General Grant came up a few minutes later, and a member of his escort was killed in that position. Chalmers's skirmishers approached to within one hundred yards of the battery. The number in view was not large, but the gunners were already abandoning their pieces, when Ammen's brigade, accompanied by Nelson, came into action. The attack was repelled, and the engagement ended for the day.

In his report of April 9, to General Halleck, General Grant says of this incident:

"At a late hour in the afternoon a desperate effort was made by the enemy to turn our left and get possession of the landing, transports, &c. This point was guarded by the gun-boats *Tyler* and *Lexington*, Captains Gwin and Shirk, U. S. Navy, commanding, four twenty-pounder Parrott guns, and a battery of rifled guns. As there is a deep and impassable ravine for artillery or cavalry, and very difficult for infantry, at this point, no troops were stationed here, except the necessary artillerists and a small infantry force for their support. Just at this moment the advance of Maj.-Gen. Buell's column (a part of the division under General Nelson) arrived, the two generals named both being present. An advance was immediately made upon the point of attack and the enemy soon driven back. In this repulse, much is due to the presence of the gun-boats *Tyler* and *Lexington*, and their able commanders, Captains Gwin and Shirk."

My own official report is to the same effect. In a calm review of the battle, not unfriendly to General Grant, and written some years after the occurrence, General Hurlbut said:

"About six p. m. this movement (for a final attack at the Landing) was reported to General Hurlbut. He at once took measures to change the front of two regiments, or parts of regiments, of which the Fifty-fifth Illinois was one, and to turn six pieces of artillery to bear upon the point of danger. At that instant, he being near the head of the Landing road, General Grant came up from the river, closely followed by Ammen's brigade of Nelson's division. Information of the expected attack was promptly given, and two of Ammen's regiments deployed into line, moved rapidly forward, and after a few sharp exchanges of volleys from them, the enemy fell back, and the bloody series of engagements of Sunday at Pittsburg Landing closed with that last repulse."

PITTSBURG LANDING. (FROM A PHOTOGRAPH TAKEN A FEW DAYS AFTER THE BATTLE.)

Of the six transports, the one farthest up stream, on the right, is the *Tycoon*, which was dispatched by the Cincinnati Branch of the Sanitary Commission with stores for the wounded. The next steamer, lower down, is the *Tigress*, which was General Grant's headquarters boat. On the opposite side of the river is seen the gun-boat *Tyler*.—EDITOR.

The reports of all the officers who took part in the action at the Landing, Nelson, Ammen, and the regimental commanders, fully sustain the main point in these accounts, and are totally at variance with General Grant's statement in his *CENTURY* article. I have myself never described the attack at the Landing as "a desperate effort" of the enemy; but I have said that the condition of affairs at that point made the occasion critical. We know from the Confederate reports that the attack was undertaken by Jackson's and Chalmers's brigades as above stated; that the reserve artillery could effect nothing against the attacking force under the shelter of Dill's ravine; that the fire of the gun-boats was equally harmless on account of the elevation which it was necessary to give the guns in order to clear the top of the bluff; and that the final assault, owing to the show of resistance, was delayed. Jackson's brigade made its advance without cartridges. When they came to the crest of the hill and found the artillery supported by infantry, they shrank from the assault with bayonets alone, and Jackson went in search of coöperation and

support. In the meantime the attack was superseded by the order of the Confederate commander calling off his troops for the night. The attack was poorly organized, but it was not repelled until Ammen arrived, and it cannot be affirmed under the circumstances that the action of his brigade in delaying and repelling the enemy was not of the most vital importance. Had the attack been made before Nelson could arrive, with the means which the enemy had abundantly at hand, it would have succeeded beyond all question.

As fast as Nelson's division arrived it was formed in line of battle in front of Grant's troops, pickets were thrown across Dill's ravine, and the dawn of another day was awaited to begin the second stage in the battle; or speaking more correctly, to fight the second battle of Shiloh. Let us in the meantime examine more in detail the condition in which the first day had left General Grant's command, and its prospects unaided for the morrow.

THE evidence relied upon to refute the accepted belief in the critical condition of

PITTSBURG LANDING, VIEWED FROM THE FERRY LANDING ON THE OPPOSITE SHORE. (FROM A RECENT PHOTOGRAPH.)

General Grant's command on Sunday evening is of two sorts: first, the *official map*, as it is called, and second, the personal statements and assumptions of General Grant and General Sherman. I shall examine these data upon the evidence of the official reports and my own observation.

The official map was prepared after the arrival of General Halleck at Pittsburg Landing, by his topographical engineer, General Thom. The topographical part of it was made from an approximate survey, and though not strictly accurate, is sufficiently so for an intelligent study of the battle. For the errors in the location of the troops General Thom cannot be supposed to be responsible, since he could have no knowledge of the facts except what he derived from the statements of others; but in what is given and what is withheld they are of a very misleading nature. They consist, first, in the extension of Grant's line on the evening of the 6th a full half-mile to the west of its true limit—placing Hurlbut's division on the front actually occupied by McClelland, McClelland on and four hundred yards beyond Sherman's ground, and Sherman entirely on the west side of Tillman's Hollow on the right of the camping-ground of McClelland's division, and within the lines occupied by the Confederates. On the morning of the 7th they place, from left to right, McClelland, then Sherman, then Lew. Wallace, along the bluff bordering Owl Creek bottom, all west of Tillman's Creek, and on ground which we did

not possess until after four hours of fighting; followed on the left by Hurlbut's division; thus occupying a solid front of a mile and a third, in comparison with which the undeveloped front of my army presents a very subordinate appearance. They give no account of the positions during the battle, in which the right of that army was substantially in contact with Wallace's division on the extreme right. They give two of its positions,—one in the first formation before its front was developed, and the other at the close of the day, when Grant's troops had taken possession of their camps again, and mine had been withdrawn from the ground on which they fought. These two positions are taken from my official map, but not the intermediate positions shown on that map. On the copy of the Thom map published with General Grant's article in the February number of *THE CENTURY* (1885), it is stated that "the positions of the troops were indicated in accordance with information furnished at the time by Generals Grant, Buell, and Sherman." It would be presumed that Grant and Sherman, the latter especially, in consequence of his intimate relations with Halleck's headquarters, were consulted about the location of the troops; and it is not to be doubted that their information was the guide. If any information of mine was adopted, it was only through the map that accompanied my report, and with reference to the position of my own troops.

Nineteen years after the battle General

ABOVE THE LANDING—THE STORE, AND A PART OF THE NATIONAL CEMETERY. (FROM A RECENT PHOTOGRAPH.)

Sherman revised the official map, and deposited his version with the archives of the Society of the Army of the Tennessee for historical use. Ostensibly it accepts the topography of the Thom map, but modifies the positions of the troops in the most radical manner. On the Thom map the line of battle Sunday evening is represented as being along the right-hand road leading west from the Landing, with the reserve artillery and Nelson's and Crittenden's divisions on the left, and Hurlbut, McClernand, and Sherman in the order mentioned, toward the right. The modification of this position of the troops by the Sherman edition, may be described as follows: Looking west over the map, we see a line on the east bank of the river marked "Buell." No part of my army is represented on the west bank. On the west side of the river, four hundred yards back from the Landing and parallel with the river, is a line one hundred yards long marked "Grant." Extending back from the river along Dill's Branch, is a line half a mile long marked "Detachments." This might mean the Reserve Artillery. From the outer extremity of the "Detachments" is a line two-thirds of a mile long running west, but swelling in the center well to the south, with its right resting on Tillman's Creek, and marked "Hurlbut." On the right of Hurlbut extending in the same west course, and entirely on the west side of Tillman's Creek, is a double line one-eighth of a mile long marked "McClernand." Then commencing one hundred yards north-west of McClernand's right and extending due north,

along the edge of the field in front of the camp of McClernand's First Brigade, is a line two-thirds of a mile long marked "Sherman." On the right of this line are three houses covered in front by a sort of demi-lune and wing, between which and the main Sherman line is a bastion-like arrangement. The demi-lune figure General Sherman designates as a "strong flank," and says it was occupied by Birge's Sharpshooters. Off to the right is seen Lew. Wallace's division crossing Snake Creek bridge, and marching toward the demi-lune by a road which had no existence in fact or on the original Thom map. At the angle between Sherman and McClernand is a ravine which extends into the camp of McClernand's division, and along the sides of this ravine from the right and left respectively of McClernand and Sherman are two dotted lines terminating in a point at the head of the ravine. In his speech submitting his map to the society, General Sherman explains how that horn-like projection was formed, with other particulars, as follows:

"In the very crisis of the battle of April 6, about four o'clock p. m., when my division occupied the line from Snake Creek bridge to the forks of the Corinth and Purdy road, there occurred an incident I have never seen recorded. Birge's Sharpshooters, or 'Squirrel Tails,' occupied the stables, granaries and house near the bridge as a strong flank. My division occupied a double line from it along what had once been a lane with its fences thrown down, and the blackberry and sassafras bushes still marking the border of an open cotton-field in front, and the left was in a ravine near which Major Ezra Taylor had assembled some ten or twelve guns. This ravine was densely wooded and extended to the front near two hundred

MAP OF THE FIELD OF SHILOH.

Near Pittsburgh Landing, Tenn., showing the positions of the U. S. forces under the command of Maj.-Gen'l U. S. Grant, U. S. Vol., and Maj.-Gen'l D. C. Buell, U. S. Vol., on the 6th and 7th of April, 1862. Surveyed under the direction of Col. Geo. Thom, Chief of Top'l Eng'rs, Dept. of the Mississippi.

REVISED AND AMENDED BY GEN. D. C. BUELL.

Note.—The topography is substantially that of the original Thom, or "Official Map," with some proper corrections taken from a survey made under the direction of Capt. A. T. Andreas, an officer in the battle, and now President of the Western Art Association; and from the official map of the Army of the Ohio, made by Capt. Michler, Topographical Engineers.

The camps are located partly in accordance with a camp map made prior to the battle, and obtained from Gen. W. T. Sherman; partly from information, original or confirmatory, obligingly furnished by Capt. Andreas, and from other authority. All camps referred to in the official reports have been carefully identified.

The positions, A, B, and C, numbers, 3 and 9, agree with the positions of McCook, Nelson, and Crittenden for "the morning," and "evening of the 7th" on the Thom map, and also on the Michler map.

The positions of Terrill's, Mendenhall's and Bartlett's batteries also correspond with those maps.

The other positions of the Army of the Ohio are not on the Thom map, but are copied from the Michler map, excepting number 7, which, with the positions of the Army of the Tennessee, prior to number 4, and between numbers 4 and 9, have been determined from the official reports.

The position, number 4 (10 o'clock, A. M.), of McClelland, Wallace, and Sherman, after four hours of fighting, corresponds with their position on the Thom map for the "morning of the 7th."

The first position of the Army of the Tennessee on the morning of the 6th conformed to the camps of Stuart on the left, Prentiss in the center, and Sherman on the right.

At 4 P. M. of the 6th, McClelland, Sherman, and one brigade of Hurlbut were on the River road north of Hurlbut's headquarters. The remainder of the army that was in ranks—Hurlbut, W. H. L. Wallace, and Prentiss—was almost exactly in the position number 4, occupied on the 7th by Crittenden, and the right and center brigade of Nelson, extending from the western Corinth road across to and a little beyond the River road. The "Hornet's Nest" was in front of Crittenden's left brigade and Nelson's right.—D. C. B.

THE SIEGE BATTERY, ABOVE THE LANDING, THAT WAS A PART OF THE "LAST LINE" IN THE FIRST DAY'S BATTLE.
(FROM A PHOTOGRAPH TAKEN A FEW DAYS AFTER THE BATTLE.)

yards, and I feared it might be occupied by the enemy, who from behind the trees could drive the gunners from their posts. I ordered the colonel of one of my regiments to occupy that ravine to anticipate the enemy, but he did not quickly catch my meaning or comprehend the tactics by which he could fulfill my purpose. I remember well that Colonel Thomas W. Sweeny, a one-armed officer who had lost an arm in the Mexican War and did not belong to my command, stood near by and quickly spoke up: 'I understand perfectly what you want; let me do it.' 'Certainly,' said I, 'Sweeny, go at once and occupy that ravine, converting it into a regular bastion.' He did it, and I attach more importance to that event than to any of the hundred achievements which I have since heard 'saved the day,' for we held that line and ravine all night, and the next morning advanced from them to certain victory."

And yet it will be seen that this new line, prepared with such elaboration of detail and introduced with such richness of anecdotal embellishment, was a thorough delusion; that Birge's Sharpshooters were not there, and that General Sherman was in a different place! Setting aside historical accuracy, however, the advantage of the revised arrangement is obvious. It extended General Grant's territory a half mile to the south, fully as much to the west, taking in Tillman's Hollow, one-third of McClernand's captured camp, and a large part of the Confederate army, giving a battle front of two miles and a half instead of one mile, and requiring no greater power of imagination to man it than to devise it. In presenting his map to the society, General Sherman said: "The map as thus modified tells the story of the battle!"

There can be no doubt that General Sher-

man's position will carry unhesitating credence to his naked assertion in the minds of a considerable number of persons; while the more cautious but still unsearching readers will say, that until the accuracy of the official map is disproved, it must be accepted as the standard representation of the battle. It is proper, therefore, to cite the proof which rejects both, and establishes a materially different version. The investigation may be confined, for the present, to the location of the Federal line of battle on Sunday evening. The other errors in the maps will be developed incidentally as the general subject progresses. Moreover, the inquiry will be directed specifically to the Sherman map, as that includes the faults of the Thom map as well as its own peculiar errors.

It is unnecessary to remark upon the exclusion of Nelson's leading brigade from the west bank of the river on the Sherman map. Its presence there at the time in question is as notorious as the battle itself. The distance from the Landing to Dill's Branch is six hundred yards. Sherman places his "Detachments," *i. e.*, the "Reserve Artillery," exactly on the line of that branch, whereas, they were five hundred yards north of it. During the engagement the Confederates passed the ravine and reached the crest of the hill on the north side. After the engagement Nelson's division occupied the ravine, and his pickets held ground beyond it during the night. None of Grant's troops were ever in that position.

In adducing evidence from the official reports to determine the further position of the

Union line, the extracts will be somewhat extended when the context is pertinent, in order to show at the same time the number and condition of the troops occupying it. The reader will be spared the impression of some irrelevancy if he will keep these additional objects in mind.

Of the position of General Hurlbut's division, the next on the right of the "Detachments," that officer says in his official report:

"On reaching the twenty-four-pounder siege-guns in battery near the river, I again succeeded in forming line of battle *in rear of the guns.*"

That brought his division on the line of the right-hand road leading back from the river, but not entirely to the right of the artillery where the Thom map places it. He adds:

"I passed to the right and found myself in communication with General Sherman, and received his instructions. In a short time the enemy appeared on the crest of the ridge, led by the Eighteenth Louisiana," etc. . . . "General Sherman's artillery also was rapidly engaged, and after an artillery contest of some duration, the enemy fell back." . . . "About dark the firing ceased. I advanced my division one hundred yards to the front, threw out pickets, and officers and men bivouacked in a heavy storm of rain. About twelve p. m. General Nelson's leading columns passed through my line and went to the front, and I called in my advance guard."

The next division in the regular order is McClelland's, though the reader will not have failed to observe the presence of General Sherman, with at least a portion of his command, in communication with Hurlbut's right. General Sherman, it will be remembered, locates this division (McClelland's) on the west side of Tillman's Creek. We trace its retrogression step by step, from its permanent camp, across Tillman's Hollow, at the close of the day, by the following extracts from General McClelland's report:

"Continuing this sanguinary conflict until several regiments of my division had exhausted their ammunition, and its right flank had been borne back, and it was in danger of being turned, the remainder of my command . . . also fell back to the camp of the First Brigade. Here the portion that had first fallen back re-formed parallel with the camp, and fronting the approach of the enemy from the west, while the other portion formed at right angles with it, still fronting the approach of the enemy from the south. . . . It was two o'clock when my fifth line had been thus formed. . . . Deterred from direct advance, he (the enemy) moved a considerable force by the right flank, with the evident intention of turning my left. To defeat this purpose, I ordered my command to fall back in the direction of the Landing, across a deep hollow and to re-form on the east side of another field, in the skirts of a wood. This was my sixth line. Here we rested a half hour, continuing to supply our men with ammunition,

until the enemy's cavalry were seen rapidly crossing the field to the charge. Waiting until they approached within some thirty paces of our line, I ordered a fire, which was delivered with great coolness and destructive effect. First halting, then wavering, they turned and fled in confusion, leaving behind a number of riders and horses dead on the field. The Twenty-ninth Illinois Infantry, inspired by the courageous example of their commanding officer, Lt.-Colonel Ferrell, bore the chief part in this engagement. . . . In the meantime, under cover of this demonstration strengthened by large additions from other portions of the field yielded by our forces, the enemy continued his endeavors to turn the flanks of my line, and to cut me off from the landing. To prevent this I ordered my left wing to fall back a short distance and form an obtuse angle with the center, opposing a double front to the enemy's approach. Thus disposed, my left held the enemy in check, while my whole line slowly fell back to my seventh position. Here I re-formed the worn and famishing remnant of my division, on favorable ground along a north and south road, supported on my right by fragments of General Sherman's division, and on my left by the [Fourteenth Illinois and Twenty-fifth Indiana] under command of Colonel Veatch, acting brigadier-general."

The identity of this seventh position of General McClelland is determined by the following extracts. Colonel Marsh, commanding McClelland's Second Brigade, says:

"At this time, my command having been reduced to a merely nominal one, I received orders to fall a short distance to the rear and form a new line, detaining all

General Terrill, who, as Captain, was Chief of Artillery of McCook's Division at Shiloh, was killed at the battle of Perryville, October 8th, 1862.—EDITOR.

stragglers, portions of commands, and commands which should attempt to pass. In obedience to this, though with some difficulty as regarded portions of some commands, whose officers seemed little inclined to halt short of the river, . . . I had gathered quite a force, and formed a line near the camp of the Second Division, concealing my men in the timber facing an open field. I here requested Colonel Davis, of the Forty-sixth

VICINITY OF THE "HORNETS' NEST."
(FROM RECENT PHOTOGRAPHS.)

The stump in the field on the right is said to mark the spot where General Albert Sidney Johnston was killed. The point of woods beyond the field is supposed to be the place which the Confederates called the "Hornets' Nest." The "peach orchard" was a little to the left of the field in the middle ground, and behind the house which is across the road from the field in which General Johnston was killed. — EDITOR.

near General McArthur's headquarters. We here took up quarters for the night, bivouacking without fires within four hundred yards of our regimental camp."

Illinois, to take position on my right. He promptly and cheerfully responded . . . In a short time General McClernand, with portions of the First and Third Brigades of his own division, and two regiments of Ohio troops, came up and formed on the left of the line I had already established."

Colonel Davis, of the Forty-sixth Ill., says:

"It being now one o'clock, my ammunition exhausted, the men tired and hungry, and myself exhausted, having lost my horse in the first engagement, and compelled to go on foot the balance of the time, and finding myself within one-half mile of my regimental encampment, I marched my men to it and got dinner for them. Calling my men into line immediately after dinner, I formed them upon the right of the brigade commanded by Colonel C. C. Marsh, at his request, in front and to the left of my camp, where we again met the enemy on Sunday evening."

Colonel Engemann, of the Forty-third Illinois, whose report in many respects is a remarkably clear and interesting one, says:

"We now fell back by degrees (from McClernand's sixth position), and a new line being formed, we found ourselves posted between the Forty-sixth Illinois and the Thirteenth Missouri, our position being midway between the encampments of the Forty-sixth and Ninth Illinois."

Colonel Wright, Thirteenth Mo., of McArthur's brigade, Second Division, but attached during the battle to Sherman's division, says:

"After advancing and falling back several times, the regiment was forced to retire, with all the others there, to the road which crosses the Purdy road at right angles

The "Purdy road" here mentioned is the continuation of the right-hand road leading from the Landing. The camp of the Ninth Illinois was in the north-east angle of the intersection of that road with the River road, and General McArthur's headquarters were in the south-west angle of the same intersection. The camp of the Forty-sixth Illinois was located in the south-east angle of the intersection of the River road and a middle road leading west from the Landing, about five hundred yards from McArthur's headquarters. These reports plainly identify General McClernand's seventh position, of which General Sherman formed part, with the River road between McArthur's and Hurlbut's headquarters. It is a full half-mile in rear of the position given to Sherman's division on the Thom map, and of the position which General Sherman assigns to himself on his edition, with the deep hollow of Tillman's Creek intervening.

The struggle which drove General McClernand from his seventh position is described by that officer as follows:

"The enemy renewed the contest by trying to shell us from our position. . . . Advancing in heavy columns led by the Louisiana Zouaves to break our center, we awaited his approach within sure range, and opened a terrific fire upon him. The head of the

column was instantly mowed down; the remainder of it swayed to and fro for a few seconds, and turned and fled. This second success of the last two engagements terminated a conflict of ten and a half hours' duration, from 6 o'clock a. m. to 4:30 o'clock p. m. and probably saved our army, transports and all, from capture. Strange, however, at the very moment of the flight of the enemy, the right of our line gave way, and immediately after, notwithstanding the indignant and heroic resistance of Colonel Veatch, the left, comprising the [Fourteenth Illinois and Twenty-fifth Indiana] was irresistibly swept back by the tide of fugitive soldiers and trains seeking vain security at the Landing. . . . *Left unsupported and alone, the Twentieth and Seventeenth Illinois, together with other portions of my division not borne back by the retreating multitude, retired in good order under the immediate command of Colonel Marsh and Lieutenant-Colonel Wood, and re-formed under my direction, the right resting near the former line, and the left at an acute angle with it. A more extended line, comprising portions of regiments, brigades, and divisions, was soon formed on this nucleus by the efforts of General Sherman, myself, and other officers. Here, in the eighth position occupied by my division during the day, we rested in line of battle upon our arms, uncovered and exposed to a drenching rain during the night.*"

This last position would locate McClermand, excepting his First Brigade, perhaps three hundred yards south of, and obliquely with reference to the right-hand road leading from the Landing, facing a little to the west. His First Brigade is traced to within half a mile of the river, where it was rallied by its commander "in front of the camp-ground of the Fourteenth Iowa," on the road to the Landing. It did not join the division again until after the battle, but acted in connection with my troops. Colonel Veatch, who was on McClermand's left with the Fourteenth Illinois and Twenty-fifth Indiana in the seventh position, fell back in rear of the reserve artillery, and became reunited there with Hurlbut's division to which he belonged. The space along the road in rear of McClermand was filled in with various fragments which constituted Sherman's command, including at last Buckland's two regiments. General Sherman describes Colonel Sweeny as being with him. No doubt some of Sweeny's men also were there. It was the camp-ground of his brigade — the camp of his own regiment, the Fifty-second Illinois, being immediately on the road. Two of his regiments were captured with Prentiss, and the remainder had been driven back from W. H. L. Wallace's right and virtually broken up. One of his regiments, the Fiftieth Illinois, was sent in the morning to support Colonel Stuart on the extreme left, and shared the fate of the sufferers in that quarter. The space along the road between Sherman and Hurlbut was occupied by the remnant of Colonel Tuttle's brigade and a portion of McClermand's First Brigade which united itself to Tuttle. It was Tuttle's camp-ground. Two of his regiments had been captured with Prentiss.

From the reports of the Thirteenth Missouri

and Forty-third Illinois it is inferred that those two regiments did not move from their position on the River road in the last falling back. But that, if certain, is not important. They were at any rate substantially on the general line above indicated. The same, in a careless reading, might be presumed of the Forty-sixth Illinois, which was immediately on the left of the Forty-third. The report of that regiment says: "The regiments both *on my right and left fell back*, but my line did not *waver under the fire of the enemy.*" But it evidently fell back at last, for the report continues: "After breakfast on Monday morning, still retaining my position on the right of Colonel Marsh's brigade, I moved with him until *I reached and went beyond the ground of our last engagement of Sunday*, where our pickets were driven in," etc. It remains now to determine the question of the extreme right of the general line.

General Sherman says, and his statement on that point is sustained by the reports, that Birge's Sharpshooters were immediately on his right and constituted the extreme right of the line. The official report of that regiment shows that during the afternoon it occupied a "*position near Colonel McArthur's headquarters*" in an open field. Its camp was in its rear along the opposite or east side of the River road. This would fix General Sherman's right at the cross-roads near McArthur's headquarters. It is more than a mile from the Snake Creek bridge. Other evidence confirms these positions. The official reports of Lew. Wallace's division show that he marched along the River road from the bridge, and formed in line of battle, facing Tillman's Creek in front of the camp of Birge's Sharpshooters and the Eighty-first Ohio, the right of the division being in front of the latter, and the left in front of the former; and that it came in actual contact with the "Sharpshooters," who occupied their camp that night and received the new-comers with cheers. This is clearly and more circumstantially explained by General Force in his book entitled "From Fort Henry to Corinth," page 163. He was present and commanded the right regiment of Lew. Wallace's division on that occasion. The position thus assigned to Wallace must have taken his left well up to the cross-road at McArthur's headquarters, and covered the entire field toward the north; for the distance from the cross-road to the right of the camp of the Eighty-first Ohio was only half a mile.

It is particularly to be observed that in no report, either from Sherman's division or from Lew. Wallace's, is there any mention of actual contact or of any definite proximity of these two divisions on the evening of the sixth, or earlier than ten o'clock on the morning of the

seventh. The inference is, that at the time of Wallace's arrival and subsequently, no part of Sherman's division was on the River road, or anywhere along the heights of Tillman's Creek north of McArthur's headquarters. General Sherman, in his report, says: "General Wallace arrived from Crump's Landing shortly after dark, and formed his line to my right and rear." That relative position could only exist by assuming that Sherman's command was on the road leading to the landing east of McArthur's headquarters, and nearly at right angles with Wallace,—a supposition which is strengthened by the condition indicated in Sherman's revised map, that Birge's Sharpshooters were on his right—not entirely in his front, as they would have been if his front had been on the River road. It is also sustained by General Buckland's statement in the "Journal of the Society of the Army of the Tennessee" for 1881, p. 82: "About dark," he says, "General Wallace's division commenced arriving, and formed to the right of my brigade." Buckland states in his report and in the "Journal" that he lay "on the road." If he had been on the River road, Wallace would have come in contact with him, and when he formed in line would have been entirely in his front—not in rear or on his right. Buckland seems to know nothing about Birge's Sharpshooters. The probable explanation is that when he came along the road from the bridge they were on the west side of the road, in the field near McArthur's headquarters. After Lew. Wallace arrived and formed in front of them, they probably retired to their camp on the east side of the road. The explanation of Buckland's position is that, after the retreat across Tillman's Creek from the west side, he found himself, as he says, near Snake Creek bridge "late in the afternoon, after the repulse of the right of the line," entirely apart from the rest of the army, and that to reestablish his connection with it he started on the road to the Landing, where one of his regiments actually went and remained over night; and that he came upon the outer flank of the new line where General Sherman soon after found him, east of McArthur's headquarters, and thus placed himself where he is described by Sherman as being, between Birge's Sharpshooters and the rest of the line.

The Confederate reports mention a considerable appearance of force in a camp opposite their extreme left in the afternoon, evidently referring to McArthur's camp. The student of the reports will not be misled by this appearance. It was caused by the force that clustered with Sherman on McClelland's right near McArthur's headquarters; by the

Ninth Illinois, Eighty-first Ohio, and Birge's Sharpshooters, all belonging to McArthur's brigade; and by the movement of Buckland's regiments from the bridge as already explained. The Sharpshooters and the Eighty-first Ohio had been posted at the bridge, and returned to their camps probably at the time of the retreat from the west side of Tillman's Creek. The Ninth Illinois had during the morning been engaged on the extreme left under its brigade commander. It had lost two hundred and fifty men out of five hundred and fifty, and was ordered to its camp "to replenish cartridge-boxes, clean guns, and be ready for action." While there at three o'clock it was ordered "to support the right wing of General Sherman's division," as the report expresses it, and in the subsequent engagements retired to within half a mile of the Landing. Birge's Sharpshooters retained their position at or in front of their camp. The movements of the Eighty-first Ohio are not very clearly defined, but in the advance next morning, it is found on McClelland's left. The "ten or twelve guns" mentioned by General Sherman in his map-presentation speech as being near a ravine on his left, Sunday afternoon, were Taylor's battery, as it was called, though commanded by Captain Barrett, and Bouton's battery. The former had retired for ammunition from McClelland's camp, probably to near McArthur's headquarters, but afterwards evidently went near the river, where it received "one lieutenant and twenty-four men with three horses" from Fitch's battery. Bouton's battery was taken into action in the field in front of McClelland's right about four o'clock, and was forced to retire, its support helping to draw off its guns. Both the battery and the support went back toward the river, for in the advance next morning the support is found on McClelland's left, and the battery was brought into service with McCook in the afternoon. Sherman had no artillery with him on Monday until about ten o'clock. Major Taylor then brought up three pieces of an Illinois battery under Lieutenant Wood, not belonging to Sherman's command. The final retreat from McClelland's seventh position, Sunday evening, undoubtedly carried with it all of the fragments connected with Sherman near McArthur's headquarters, along the road toward the river, where I found him about dark, excepting Birge's Sharpshooters, the Thirteenth Missouri, and the Forty-third Illinois. The latter belonged to McClelland's Third Brigade, but remained with the Thirteenth Missouri Sunday night. After crossing Tillman's Creek next morning, both were brought into line on McClelland's left, and

did not form with Sherman, though the Thirtieth Missouri subsequently joined him.

My own observation as to the position and extent of General Grant's line accords substantially with the evidence of the reports. In the dusk of the evening after the close of the engagement on Sunday, I walked out with my chief-of-staff, following the road and the line of the troops. My object was to gain information by which to determine the formation of my divisions, and I not only observed all that I could see at such an hour, but I made inquiry as I passed along. I came to Hurlbut's left five hundred yards from the river; I passed to the front and came to troops that answered as McClernand's, and which I supposed at the time to constitute his division, but which were probably his First Brigade only; I passed to the front of these troops, and when I turned in toward the road again, I came upon Sherman's line, as it happened, not far from where he was, and I was conducted to him. It was then growing dark. I judge the distance to have been about three-quarters of a mile from the river—less than half a mile from Hurlbut's left, and I think now that it was near the camp of Colonel Sweeney's regiment, the Fifty-second Illinois, that I found General Sherman.

The impression made upon my mind by that interview has remained as vivid as the circumstances were peculiar. I had no thought of seeing General Sherman when I set out, but on every score I was glad to meet him, and I was there to gain information. By what precise words I sought and he gave it, I would not pretend at this day to repeat. It is sufficient for the present to say that I learned the nature of the ground in front; that his right flank was some three hundred yards from us; and that the bridge by which Lew. Wallace was to cross Snake Creek was to his right and rear at an angle, as he pointed, of about forty degrees. I do not know whether I asked the question, but I know now that it was a mile and a quarter from his flank, and that he did not cover it in any practical sense, though in advancing Wallace would approach by his right and rear. I also see now that I was mistaken in supposing that these several commands retained a regular organization and had distinct limits; whereas they were in fact much intermixed.

Of course we talked of other incidental matters. In all his career he has, I venture to say, never appeared to better advantage. There was the frank, brave soldier, rather subdued, realizing the critical situation in which causes of some sort, perchance his own fault chiefly, had placed him, but ready, without affectation or bravado, to do any-

thing that duty required of him. He asked me what the plans were for the morrow. I answered that I was going to attack the enemy at daylight, and he expressed gratification at my reply, though apparently not because of any unmixed confidence in the result. I had had no consultation with General Grant, and knew nothing of his purpose. I presumed that we would be in accord, but I had been only a few hours within the limits of his authority, and I did not look upon him as my commander, though I would zealously have obeyed his orders. General Sherman allowed me to take with me the map of which a fac-simile accompanies this article. I never imagined that in the future it would have the interest which now attaches to it, and after the battle it was laid aside and forgotten.

Within two years after that meeting, quite contrary opinions developed themselves between General Sherman and myself concerning the battle of Shiloh, and his *Memoirs* give a different account of the interview above described. He says that he handed the map to my engineer-officer, Captain Michler, who, in fact, was not present, and complains that it was never returned to him. He says that I grumbled about the stragglers, and that he feared I would not bring my army across the river. One would suppose that his fears would have been allayed by the fact that at that very moment my troops were arriving and covering his front as fast as legs and steamboats could carry them.

In the execution of the retreat described in the reports of McClernand and Sherman, from the west to the east side of Tillman's Creek, there was a quite thorough disintegration of divisions and brigades, lacking nothing but the pressure of a vigorous pursuit to convert it into a complete rout. In its seventh position, McClernand's division recovered some force, and preserved a recognized organization; but not so with Sherman's. Indeed, in that division the disorganization occurred, as has already been stated, at an earlier period. In Hildebrand's brigade it was almost coincident with the enemy's first assault. With McDowell's it commenced with the unsuccessful attempt to form line of battle along the Purdy road, and was complete very soon after one o'clock; and these two brigades never recovered their aggregation again until after the battle. With Buckland's brigade also it occurred at the miscarriage at the Purdy road about ten o'clock, but it was not so thorough as in the other brigades—at least it was afterwards partially repaired during the first day, as his report explains. He says, after the retreat from his camp about ten o'clock, "We formed line on

the Purdy road, but the fleeing mass from the left broke through our lines, and many of our men caught the infection and fled with the crowd. Colonel Cockerill became separated from Colonel Sullivan and myself, and was afterward engaged with part of his command at McClermand's camp. Colonel Sullivan and myself kept together, and made every effort to rally our men, but with very poor success. They had become scattered in all directions. We were borne considerably to the left, but finally succeeded in forming a line, and had a short engagement with the enemy, who made his appearance soon after our line was formed. The enemy fell back, and we proceeded to the road where you (General Sherman) found us. At this point I was joined by Colonel Cockerill, and we there formed line of battle and slept on our arms Sunday night. Colonel Sullivan being out of ammunition, marched to the landing for a supply, and while there was ordered to support a battery at that point."

It is only after a close examination of the records that we can understand the full significance of the following passage in General Sherman's report:

"In this position we rested for the night. My command had become decidedly of a mixed character. Buckland's brigade was the only one with me that retained its organization. Colonel Hildebrand was personally there, but his brigade was not. Colonel McDowell had been severely injured by a fall from his horse, and had gone to the river, and the three regiments of his brigade were not in line. The Thirteenth Missouri, Colonel Crafts J. Wright, had reported to me on the field, and fought well, retaining its regimental organization, and it formed part of my line during Sunday night and all of Monday; other fragments of regiments and companies had also fallen into my division, and acted with it during the remainder of the battle."

It thus appears that from about one o'clock until the time when General Sherman found Colonel Buckland with two regiments on the road from the bridge to the Landing, not a single regiment of his division excepting Cockerill's, and not one prominent individual representative of it excepting that officer and Colonel Hildebrand, was present with him. The only body of troops besides Cockerill's regiment having any recognized organization was the Thirteenth Missouri, which belonged to another division. All the rest were squads or individual stragglers. In all the official reports, not a regiment or part of a regiment is described as being with him at this juncture or for several hours before. Of the nine regiments that composed the three brigades under his immediate command at the church, only five rendered reports, and three of these were from Buckland's brigade. The division did not exist except in the person of its com-

mander. Such is the story of the official reports. The number of men present could not have been large. Less than one thousand, including Buckland's two regiments after they were found, would have told the number that lay on their arms in Sherman's ranks on Sunday night.

This explains the close relation of McClermand and Sherman during the last five hours of Sunday, and the identity of their experiences. General Sherman has nothing to report of his own command distinctively. Everything is conjunctive and general as between McClermand and himself. "*We* held this position, General McClermand and myself acting in perfect concert." "*General McClermand and I*, on consultation, selected a new line." "*We* fell back as well as we could." "The enemy's cavalry charged *us*, and was handsomely repulsed." General McClermand's account of this incident has been quoted on a preceding page. When Colonel Hildebrand lost his brigade, it is not with General Sherman that he is identified, but with McClermand, on whose staff he served part of the day. Hildebrand seems to have been active, but not under the direction of his division commander. "About three o'clock," he says, "I assumed command of a regiment already formed of fragmentary regiments. I marched in a northwestern direction, where I aided a regiment of sharpshooters in defeating the enemy in an attempt to flank our rear." This movement was evidently made from McClermand's and Sherman's seventh position, and the troops assisted were Birge's Sharpshooters. General Sherman makes no mention of this significant if not important occurrence. His right flank was threatened, and the regiment of Sharpshooters posted in the field near McArthur's headquarters met and, in conjunction with Hildebrand's temporary regiment, repelled the danger.

We have in the official reports a good clue to the condition of McClermand's division also. It was in a far better state. It was shattered and worn, but it was represented by at least some recognized following of regiments and brigades. One of the brigades had five hundred men, and another, the commander reports, was "merely nominal," not long before McClermand took up his seventh position. In the last collision, one of the brigades became entirely separated from the division, and did not return to it until after the battle. Fifteen hundred, exclusive of that brigade, would cover the number of men that rested that night under McClermand's colors.

Hurlbut's division was in a somewhat better condition than either of the others. Its loss in killed and wounded was greater than

McClernand's, but it had not like the latter been affected in its organization by oft repeated shocks sustained in a cramped and embarrassing position, and his command had received some accessions from the driftings of other divisions. The estimate which he makes of his force is wholly fallacious. It could not have stood on the space which he occupied. There may have been two thousand men in his line on the night of the 6th. These three divisions, if they may be so called, and Tuttle's command, with Birge's Sharpshooters on the extreme right, and the reserve artillery on the left, which, according to General Grant's report, consisted of "four twenty-pounder Parrott guns and a battery of rifled guns," constituted the line of battle, which extended a mile from the river. Five thousand men occupied it. Other partially organized fragments were crowded together about the river and the camps on the plateau, and with proper effort could have been fitted for good service; but no steps to that end were taken. The defect in the command that opened the way for the disaster, facilitated its progress at every step—the want of a strong executive hand guided by a clear organizing head. Some of these fragmentary commands sought places for themselves in the advance next day. The remnant of the Second Division under Colonel Tuttle was one of these. Indeed it deserves a higher name. It presented itself to me on the field without orders, and rendered efficient service with my divisions. There may have been fifteen hundred or two thousand men of these unrecognized commands that went to the front on Monday without instructions. Seven thousand men at the utmost besides Lew. Wallace's five thousand, were ready Sunday night to take part in the struggle which was to be renewed in the morning. Of the original force seven thousand were killed or wounded, three thousand were prisoners, at least fifteen thousand were absent from the ranks and hopelessly disorganized, and about thirty pieces of artillery were in the hands of the enemy.

The physical condition of the army was an exact type of its moral condition. The ties of discipline, not yet of long enough duration or rigidly enough enforced to be very strong, were in much the largest part of the army thoroughly severed. An unbroken tide of disaster had obliterated the distance between grades, and brought all men to the standard of personal qualities. The feeble groups that still clung together, were held by force of individual character more than by discipline, and a disbelief in the ability of the army unaided to extricate itself from the peril that environed it, was, I do not hesitate to affirm, universal. In my opinion that feeling was

shared by the commander himself. A week after the battle the army had not recovered from its shattered and prostrated condition. On the 14th, three days after Halleck's arrival, he instructed Grant: "Divisions and brigades should, where necessary, be reorganized and put in position, and all stragglers returned to their companies and regiments. Your army is not now in condition to resist an attack." We are told that the enemy had stragglers too. Yes, every cause which demands effort and sacrifice will have them; but there is a difference between the straggling which is not restrained by the smile of fortune, and that which tries to elude the pursuit of fate—it is the difference between victory and defeat. The Confederates in their official reports make no concealment of their skeletons, but when the time for action arrived they were vital bodies, and, on Sunday, always in sufficient force to do the work at last.

General McClernand, it will have been observed, ascribes the breaking up of his seventh position to a panic among the troops, but the other reports show a different reason. Colonel Veatch on McClernand's left says:

"Our men were much encouraged by the strength of our position, and our fire was telling with terrible effect. Our forces were eager to advance and charge him (the enemy), when we were surprised by his driving back the whole left wing of our army, and advancing close to our rear near General Hurlbut's headquarters. A dense mass of baggage wagons and artillery crowded upon our ranks, while we were exposed to a heavy fire of the enemy both in front and rear."

General Hurlbut thus describes the crisis at that stage of the battle:

"I had hoped to make a stand on the line of my camp, but masses of the enemy were pressing rapidly on each flank, while their light artillery was closing rapidly in the rear. On reaching the 24-pounder siege-guns in battery near the river, I again succeeded in forming line of battle in rear of the guns."

We see here that there was a stern cause for the falling back. It was the tide of defeat and pursuit from the left wing of the army, and was compulsory in the strictest sense. How fortunate that it did not set in an hour earlier, and strike in flank the disorganized material of the right wing as it struggled across the ravines of Tillman's Creek! How more than fortunate that the onward current of the victor was obstructed still an hour longer by the unyielding tenacity of the remaining regiments of W. H. L. Wallace and Prentiss! From the self-assuring interview in which, according to one of General Sherman's reminiscences, it was "agreed that the enemy had expended the furor of his attack" at four o'clock, and General Grant told the "anecdote of his Donelson battle," that officer was aroused by the renewal of the din of the strife, and made his way to the river through

the disorganized throng of his retreating army. While those mutual felicitations were in progress, the enemy, a mile to the left, was disarming and marching six captured regiments to the rear. Thus disembarassed, his *furor* revived, and manifested itself at last at the very Landing. What worse state of affairs than this could have existed when at noon General Grant wrote: "If you will get upon the field, leaving all your baggage on the east bank of the river, it will be a move to our advantage, and possibly save the day to us."

Under the circumstances here described, General Grant and General Sherman have said that reinforcements other than Lew Wallace's division were in no wise necessary at the close of the first day, and that, without reference to them, General Grant would have assumed the offensive and defeated the Confederate army next morning. Those who study the subject attentively will find no ground to accept that declaration as regards either the purpose or the result. The former indeed presents an intangible question which it would seem to be useless to discuss. At the time it is alleged to have been entertained, the reinforcements were actually at hand, and their presence gives to the announcement the semblance of a vain boast, which could never have been put to the test of reality. That with the reinforcements from my army, General Grant confidently expected that the enemy would be defeated the following day, it is impossible to doubt; but it was not known Sunday night that the enemy had withdrawn from our immediate front, and the evidence establishes that General Grant had not determined upon or had not promulgated a plan of action in the morning. Not an order was given or a note of preparation sounded for the struggle which, with or without his assistance, was to begin at daybreak. To my certain knowledge, if words and actions were not wholly misleading, General Sherman when I saw him on the night of the 6th, did not consider that any instructions had been given for battle, and if he had such instructions he did not obey them. His report sustains the impression which I derived from our interview. "At daylight on Monday," he says, "I received General Grant's orders to advance and recapture our original camps." Then only it was that he dispatched several members of his staff to bring up all the men they could find. Is that the way in which General Sherman would have acquitted himself of the obligation of orders received the day before to engage in battle? I answer unhesitatingly, no! The reports of the other division commanders are to the same effect. General McClernand says: "Your (General

Grant's) order of the morning of the 7th for a forward movement," etc. The hour of the delivery of this order is indicated approximately by the following passage in the report of Colonel Marsh:

"At daylight on Monday morning the men in line were supplied with some provisions. While this was being done firing opened on our right, afterwards ascertained to come from a portion of General Lew Wallace's command. Directly afterwards, firing commenced to our left and front, both artillery and musketry, supposed by me to be a portion of General Buell's command, who, I had been informed during the night, had taken position on our left and considerably in advance. I now received orders from General McClernand to throw out skirmishers and follow with my whole command."

We must presume that General McClernand proceeded to the execution of General Grant's order as soon as it was received, which must then have been after the commencement of the battle in front of Nelson.

General Hurlbut says: "On Monday, about eight a. m., my division was formed in line close to the river bank, and I obtained a few crackers for my men. About nine a. m., I was ordered by General Grant to move up to the support of General McClernand." Colonel Tuttle, commanding the Second Division, acted without any orders. He says: "On Monday morning I collected all of the division that could be found, and such other detached regiments as volunteered to join me, and formed them in column by battalion closed in mass as a reserve for General Buell." The action of General Lew Wallace was not the result of orders, but proceeded from his own motion on discovering the enemy in his front at daylight across Tillman's Hollow. While that action was in progress, General Grant came up and gave Wallace "the direction of his attack." Nelson had been in motion an hour, and was sharply engaged before any of these orders were given.

General Grant's official reports of the battle are in accord with the subordinate reports upon this question. In his first telegraphic announcement of the battle to General Halleck, he says:

"Yesterday the rebels attacked us here with an overwhelming force, driving our troops in from their advanced position to near the Landing. General Wallace was immediately ordered up from Crump's Landing, and in the evening, one division of General Buell's army and General Buell in person arrived. During the night one other division arrived, and still another to-day. *This morning, at the break of day, I ordered an attack, which resulted in a fight, which continued until late this afternoon, with severe loss on both sides, but a complete repulse of the enemy. I shall follow to-morrow far enough to see that no immediate renewal of an attack is contemplated.*"

In his more detailed report of April 9th he says:

"During the night (Sunday) all was quiet, and feeling that a great moral advantage would be gained by becoming the attacking party, an advance was ordered

as soon as day dawned. The result was a gradual repulse of the enemy at all parts of the line from morning until probably five o'clock in the afternoon, when it became evident that the enemy was retreating. Before the close of the action the advance of General T. J. Wood's division arrived in time to take part in the action. *My force was too much fatigued from two days' hard fighting and exposure in the open air to a drenching rain during the intervening night, to pursue immediately.* Night closed in cloudy and with heavy rain, making the roads impracticable for artillery by the next morning. General Sherman, however, followed the enemy, *finding that the main part of the army had retreated in good order."*

Several points worthy of note present themselves in these dispatches of General Grant. There is still, at the close of the second day, the impression of the enemy's overwhelming force, which the day before he "estimated at over one hundred thousand men." He felt on Monday, after the arrival of reinforcements to the number of twenty-five thousand fresh troops, that "a great moral advantage would be gained by becoming the attacking party." There was, then, a question in his mind, namely, to attack, or to await attack; it was necessary to consider all the advantages, moral and physical; he concluded to secure the former at least, and accordingly gave the order, not on Sunday but on Monday "at break of day," to attack. The severity of the contest on Monday is affirmed in both dispatches; it was of such a nature as to prevent an immediate pursuit, which at any rate he would only make the next morning after the battle, far enough to see that no immediate renewal of the attack was contemplated. The pursuit was made on that plan, and found "that the main part of the army had retreated in good order." If the fact were not duly authenticated, one would wonder whether these dispatches were actually written by an officer who, twenty-three years afterwards, said with boastful assurance over his own signature, "Victory was assured when Wallace arrived with his division of five thousand effective veterans, even if there had been no other support!"

With this tedious but necessary review of the results of the first day, I take up the story of the second.

THE engagement was brought on, Monday morning, not by General Grant's order, but by the advance of Nelson's division along the River road in line of battle, at the first dawn of day, followed by Crittenden's division in column. The enemy was encountered at 5:20 o'clock, and a little in advance of Hurlbut's camp Nelson was halted while Crittenden came into line on his right. By this time the head of McCook's division came up and was formed on the right of Crittenden. Before McCook's rear brigade was up the line moved forward, pushing back the enemy's light troops, until

Nelson and Crittenden reached the very position occupied by Hurlbut, Prentiss, and W. H. L. Wallace at four o'clock the previous day where the enemy was found in force. McCook was on the north side of the western Corinth road, and eventually swept across half of McClernand's camp and released his headquarters. "The Hornets' Nest" was in front of Crittenden's left brigade; and "the peach orchard" and the ground where Albert Sidney Johnston fell were in front of Nelson.

Without following the vicissitudes of the struggle in this part of the field, I enter with a little more detail, but still cursorily, upon the operations of Grant's troops, which have not been connectedly explained in any official report. The action here was commenced by Lew. Wallace, one of whose batteries at half-past five o'clock opened fire on the enemy, who was discovered on the high ground across Tillman's Hollow. There is some diversity of statement among the official reports as to the priority of artillery firing in front of Nelson and Wallace. Colonel Hovey, who was in immediate support of Wallace's battery, gives the priority to Nelson, while Colonel Marsh, who was half a mile farther to the left, gives it to Wallace. But this is unimportant. Nelson was in motion three-quarters of an hour before that time, and had been engaged with the enemy's light troops. The first artillery fire was from the enemy, Nelson at first having no artillery. Wallace's action was not yet aggressive, no orders having been given for his advance; but while the firing was in progress General Grant came up, and gave him his "direction of attack, which was formed at a right angle with the river, with which at the time his line ran almost parallel." The enemy's battery and its supports having been driven from the opposite height by the artillery of Wallace, the latter moved his line forward about seven o'clock, crossed the hollow, and gained the crest of the hill almost without opposition. "Here," he says, "as General Sherman's division, next on my left, had not made its appearance to support my advance, a halt was ordered for it to come up." Wallace was now on the edge of the large oblong field which was in front of the encampment of McClernand's right brigade.

The next of Grant's commands to advance was McClernand's. The orders to that effect have already been cited, and their execution is explained by Colonel Marsh, into whose brigade what was present of McClernand's division seems to have merged. He says:

"Moving steadily forward for half a mile, I discovered a movement of troops on the hill nearly a quarter of a mile in front. Dispatching scouts to ascertain who they were, they were met by a message from Colonel

Smith, commanding the left brigade of the Third Division (Wallace's), informing me that he would take position on the right and wait my coming up."

Sherman, it thus appears, was not yet in motion. Hurlbut moved out about nine o'clock, and formed one brigade on McClernand's left.

When Lew. Wallace advanced across Tillman's Hollow, followed next on the left by McClernand, the force opposed to him fell gradually back upon reinforcements beyond the field on the edge of which was the encampment of McClernand's First Brigade; the enemy's left then clinging a little to the bluffs of Owl Creek in that quarter, but yielding without a very stubborn resistance, chiefly because of McCook's vigorous pressure along the western Corinth road, until it fell into a general line running through the center of McClernand's camp, and nearly parallel with the Hamburg and Purdy road. This swinging back of the enemy's left, and the direction of the Owl Creek bluffs, naturally caused a change in the direction of Wallace's front, until about ten o'clock it faced south at right angles to its direction in the beginning. A sharp artillery contest and some infantry fighting had been going on all the time. It was at ten o'clock, according to Sherman's report, that McClernand formed line obliquely in rear of the camp of his First Brigade, to advance against the enemy's position. Here for the first time Sherman's division appears in the movement, from which its absence at an earlier period is mentioned by both McClernand and Wallace. The statement in General Sherman's report in regard to its movements, is as follows:

"At daylight I received General Grant's orders to advance and recapture our original camps. I dispatched several members of my staff to bring up all the men they could find, and especially the brigade of Colonel Stuart, which had been separated from the division all the day before; and at the appointed time the division, or, rather, what remained of it, with the Thirteenth Missouri and other fragments, marched forward and reoccupied the ground on the extreme right of General McClernand's camp, where we attracted the fire of a battery located near Colonel McDowell's former headquarters. Here I remained patiently waiting for the sound of General Buell's advance upon the main Corinth road. About ten a. m. the heavy firing in that direction and its steady approach satisfied me, and General Wallace being on our right flank with his well-conducted division, I led the head of my column to General McClernand's right, formed line of battle, facing south, with Buckland's brigade directly across the ridge, and Stuart's brigade on its right in the woods, and thus advanced slowly and steadily under a heavy fire of musketry and artillery."

The contest thus inaugurated in and around McClernand's camp involved the whole of Grant's available force and McCook's division of the Army of the Ohio, and continued with great violence from ten until four o'clock. The significant facts connected with it are, the narrowness of the space covered by the

interior divisions,—McClernand's, Hurlbut's, and Sherman's,—the lapping over them by McCook, so as to form, in fact, a connection with the division of Wallace on the extreme right, and the decisive part ascribed to McCook's division in that part of the field in the reports of McClernand, Wallace and Sherman. McClernand says:

"Here one of the severest conflicts ensued that occurred during the two days. We drove the enemy back . . . to the edge of a field . . . where reserves came to his support. Our position at this moment was most critical, and a repulse seemed inevitable; but fortunately the Louisville Legion, forming part of General Rousseau's brigade, came up at my request and succored me. Extending and strengthening my line, this gallant body poured into the enemy's ranks one of the most terrible fires I ever witnessed. Thus breaking his center, he fell back in disorder, and thenceforth he was beaten at all points."

General Wallace mentions particularly an important service rendered to the left of his division at a crisis in its operations, by one of McCook's regiments.

Colonel McGinnis, of the Eleventh Indiana, whose regiment was on Wallace's extreme left, describes this incident as follows:

"At 2:30 o'clock I discovered that the Federal forces on our left were falling back and the rebels advancing, and that they were nearly in rear of our left flank. I immediately notified you (the brigade commander) of their position, changed front with our left wing, opened our fire upon them, and sent to you for assistance. During this the most trying moment to us of the day, I received your order to fall back if it got too hot for us. . . . Fortunately and much to our relief, at this critical moment the Thirty-second Indiana, Colonel Willich, came up on our left, and with their assistance the advancing enemy was compelled to retire."

General Sherman says:

"We advanced until we reached the point where the Corinth road crosses the line of McClernand's camp, and here I saw for the first time the well-ordered and compact columns of General Buell's Kentucky forces, whose soldierly movements at once gave confidence to our newer and less-disciplined forces. Here I saw Willich's regiment advance upon a point of water-oaks and thicket behind which, I knew the enemy was in great strength, and enter it in beautiful style. Then arose the severest musketry fire I ever heard, which lasted some twenty minutes, when this splendid regiment had to fall back. This green point of timber is about five hundred yards east of Shiloh Meeting House, and it was evident that here was to be the struggle. The enemy could be seen forming his lines to the south. . . . This was about two o'clock p. m. . . . Willich's regiment had been repulsed, but a whole brigade of McCook's division advanced beautifully, deployed, and entered this dreaded woods. . . . Rousseau's brigade moved in splendid order steadily to the front, sweeping everything before it."

This occurred in front of Sherman, who was between McClernand and Wallace, for he says: "I ordered my Second Brigade . . . to form on its right, and my Fourth Brigade, Colonel Buckland, on its right, all to advance abreast with this Kentucky brigade." Of the action of McCook's division, General Sherman further says: "I concede that General McCook's

splendid division from Kentucky drove back the enemy along the Corinth road, which was the great central line of this battle."

The conclusion to be drawn from these several reports is that at this stage of the battle McCook's division reached across and practically connected the Army of the Ohio with Wallace's division, which formed the extreme right of Grant's force, and that its steady valor and effective service, not without the coöperation of McClelland's, Hurlbut's, and Sherman's commands, decided the issue of the conflict on that portion of the field. The result, however, was not brought about without the concurrence of decisive action, at other points.

While the battle was going on in McClelland's camp, it raged with great fury from an earlier hour in front of Nelson and Crittenden on the left, and vigorously but with less destructive effects in front of Wallace on the right. As soon as the enemy's right began to yield, the splendid batteries of Mendenhall and Terrill directed an enfilading fire upon the Confederate batteries playing fiercely upon McCook, and they were soon silenced. General Sherman ascribes that result to the action of two pieces of artillery to which he says he gave personal direction, but it is probable that he mistook the principal cause. A Confederate view of the contest in front of Nelson and Crittenden is seen in the report of Colonel Trabue, whose brigade at a certain stage of the battle (about one o'clock) was moved with Anderson's brigade to their right, in front of Crittenden. The report describes the conflict at this point as terrific, the ground being crossed and recrossed four times in the course of it. I refer to it, chiefly because in some accounts of the battle it has erroneously been identified with McCook's front, where Trabue's brigade was first engaged.

Without going further into details in which the official reports abound, it may be sufficient to add briefly, that at four o'clock the flag of the Union floated again upon the line from which it had been driven the previous day, and General Grant's troops at once resumed their camps.

What more need be said? Must I sketch the scenes with twenty thousand of the soldiers of the Army of the Ohio left out of their place in the combat, as it is described by General Grant and his own officers? Shall I not, indeed, already have wearied the reader with the citation of evidence to substantiate a view of the case which unbiased intelligence is forbidden to deny?

But if the Army of the Ohio had not arrived, and General Grant had remained on the defensive, what then? Some of those who

frankly acknowledge the reality of their discomfiture on Sunday, like now to believe with natural pride and the difficulties that beset them then far in the past, that they would have been more successful the second day; and it has been argued that the withdrawal of the Confederates from their advanced positions on the night of the 6th threw doubt upon the final result. A newspaper interviewer has even said for General Grant that they were then preparing to retreat. The inconsistency of that observation is evident. A general who stops to fight a fresh army is not likely to have had it in contemplation to flee before one that he had already defeated on the same ground. The published reports show that the withdrawal on Sunday night did not proceed from any faltering of the Confederate commander. On the contrary, he believed the victory to have been substantially won, and that the fruit would certainly be gathered the following day. His confidence in that respect was shared in the fullest manner by his entire army, backed by a particularly able body of high officers. All demanded to be led against the last position: not one doubted the result. We can imagine the effort such an army would have put forth when animated by such a spirit.

With the usual apologies for defeat on Monday, they rated their strength at 20,000 men, but with the fruits of victory in view, it will be safe to say they would have brought at least 25,000 into action; and it has been claimed that 25,000, according to the Confederate method of computation, would have been equal to about 28,000 according to the Federal method. Their relative strength would have been materially increased by the large accession of captured cannon. They had also improved their condition by exchanging their inferior arms for better captured ones. Comparatively, the enemy was in a more efficient state than before the battle.

The Union ranks might have been swelled to 15,000—not more. That force could not on such ground have ventured to cover a line of more than a mile—its left at the river and its right near the ravines of Tillman's Creek. The high ground beyond the creek would have enfiladed it, and the ravines would have afforded a lodgment and shelter for the enemy. Dill's ravine on the left might also have proved an element of weakness, and though that flank could not be turned, the peculiar advantage of position that aided the Union troops on the left so much on Sunday would not have existed on Monday.—The field of action in front was a uniform wooded surface.

Nowhere in history is the profane idea that

in a fair field fight, Providence is on the side of the strongest battalions, more uniformly sustained than in our Civil War. It presents no example of the triumph of 15,000 or even 20,000 men against 25,000. It affords some such instances where the stronger force was surprised by rapid and unexpected movements, and still others where it was directed with a want of skill against chosen positions strengthened by the art of defense; but nowhere else. The weaker force is uniformly defeated or compelled to retire. In this case the missiles of the assailant would have found a target in the battle-line of the defense and in the transportation and masses of stragglers crowded together about the Landing. The height of the bluff would have rendered the gun-boats powerless—the example of Belmont could only have been partially repeated, if at all—the bulk of the defeated force must have laid down its arms. There are those who have met the question with the argument that General Grant's personal qualities were a guarantee for his triumph. That is a poor sort of logic, and there are thousands of patriotic citizens, not unfriendly to General Grant, who would draw back in alarm from the contemplation of any contingency that would have deprived the Union cause of its superior numbers at more than one period of his career.

In the usual extravagant newspaper dispatches from the field of battle there was a statement of charges led by General Grant and his staff, which were assumed to have decided the fate of the day on Monday, or at least to have given a crowning touch to the victory. It would be a satire to reproduce that statement in its original form at this time. Its adoption, however, by various books and sketches, and especially the reference to such an incident by General Grant in his recent *CENTURY* article, makes it properly an object of inquiry. Such an act as leading a charge is a conspicuous incident rarely resorted to by the commander of an army. General Grant in some former newspaper interview is made to assume that General Sidney Johnston lost his life under such circumstances, from which he argues the failing fortune of the Confederate attack on Sunday. General Johnston's conduct in that affair is described in the Confederate reports. It was an outburst of impatient valor not caused by any crisis in the battle, though an attack at a certain point had been repulsed. He did not lose his life in the act, and the most substantial successes of the Confederates were achieved at a later hour. We likewise naturally look in the official reports for a circumstantial account of the charge said to have

been led by General Grant, for no colonel of a regiment is likely to overlook the honor of having been led in a charge by the commander of the army.

In the report of Colonel Veatch of Hurlbut's division there occurs the following passage: "Maj.-Gen. Grant now ordered me forward to charge the enemy. I formed my brigade in column of battalions, and moved forward in double-quick through our deserted camps and to the thick woods beyond our lines in pursuit of the retreating enemy, following until we were in advance of our other forces, and were ordered to fall back by General Buell." It is proper to remark that I witnessed this movement. I was in advance on the line toward which it was made, and understand its bearing. It does not answer the description of a charge led by General Grant, since he is not said to have been present in it.

In the report of General Rousseau occurs the following:

"When thus repulsed, the enemy fell back and his retreat began; soon after which I saw two regiments of government troops advancing in double-quick time across the open fields in our front, and saw that one of them was the First Ohio, which had been moved to our left to wait for ammunition. I galloped to the regiment and ordered it to halt, as I had not ordered the movement, but was informed that it was advancing by order of General Grant, whom I then saw in rear of the line with his staff. I ordered the regiment to advance with the other, which it did some two or three hundred yards farther, when it was halted, and a fire was opened upon it from one of our camps, then occupied by the enemy. The fire was instantly returned, and the enemy soon fled, after wounding eight men of the First Ohio."

There is in the official reports no other mention of such an occurrence. This must have been the charge referred to, though it does not satisfy the description, since it appears that General Grant was not taken into the enemy's fire; and there is nothing in it which fills the definition of a charge. The professional soldier at least understands that the term implies something more serious than a movement of troops upon the field of battle, even at a rapid pace, in the presence of an enemy. But putting out of the question all appropriate distinctions in the use of terms, there was nothing in the occasion or in these simple movements which promised any advantage, or entitled them to the slightest prominence. The enemy had retired from the last line, and was believed to be in retreat; but he had withdrawn in good order, and it is known that he halted a half-mile beyond, fully prepared to repel a careless pursuit. The topographical feature of larger fields and intervening woods made the left and left-center of the battle-field more difficult for attack than the ground about McClers-

nant's camp, as was illustrated by the battle of the previous day. The antagonists, except when in immediate contact, were kept at a greater distance apart, and were more screened from the observation of each other. The resistance, quelled for the moment, would be renewed unexpectedly by reinforcements or on a new line with increased vigor, and did not always allow the assailant to retain the advantage he had gained.

Nelson and Crittenden were working their way step by step over this difficult ground, when the cheers of victory commenced on the right where the enemy could be better observed. It was my misfortune to know nothing about the topography in front, and when at that moment the enemy on the left was found to be yielding readily to our advance, it was my mistake to suppose that the retirement was more precipitate and disordered than proved to be the case. On that supposition Nelson was ordered rapidly to the lower ford of Lick Creek, by which I supposed a part of the enemy had advanced and would retreat, and was thus out of position for the state of the case as it turned out. The last attack of Crittenden was made through thick woods, and his division had become a good deal scattered; but a brigade of Wood's division came up just then and was pushed forward on the eastern Corinth road. It soon came upon and engaged the enemy's skirmishers, and was attracting a flank fire from a battery a considerable distance off on the right. The orderly withdrawal of the enemy was now discovered, and indicated that a single brigade unsupported would be insufficient for a pursuit. Wood's brigade was therefore halted while its skirmishers occupied the enemy's cavalry, and orders were sent to McCook and Crittenden to form on the new line. Just at that moment a feeble column was seen to the right and rear of Wood's brigade, moving in a direction which would bring it into the flank fire of the enemy's artillery on the right. I therefore ordered it to be halted until other dispositions were made; but misapprehending the object of the order, or deeming perhaps that enough had been done for one day, it withdrew altogether, and like the rest of Grant's troops, retired to its camp. Following the same example, and most probably with General Grant's authority, McCook's division had started to the river. Before these misconceptions could be corrected, and my divisions got into position, night came on, and the time for a further forward movement passed for the day. Indeed, while my troops were being called up, I received from General Grant, who had retired to the Landing, the following letter:

"HEADQUARTERS DIST. OF W. TENN., PITTSBURG, April 7, 1862. Major-General D. C. Buell, Gen.: When I left the field this evening, my intention was to occupy the most advanced position possible for the night, with the infantry engaged through the day, and follow up our success with cavalry and fresh troops expected to arrive during my last absence on the field. The great fatigue of our men—they having been engaged in two days' fight, and subject to a march yesterday and a fight to-day—would preclude the idea of making any advance to-night without the arrival of the expected reinforcements. My plan, therefore, will be to feel out in the morning, with all the troops on the outer lines, until our cavalry force can be organized (one regiment of your army will finish crossing soon), and a sufficient artillery and infantry support to follow them are ready for a move. Under the instructions which I have previously received, and a dispatch also of to-day from Major-General Halleck, it will not then do to advance beyond Pea Ridge, or some point which we can reach and return in a day. General Halleck will probably be here himself to-morrow. Instructions have been sent to the division commanders, not included in your command, to be ready in the morning either to find if an enemy was in front, or to advance. Very respectfully, Your obedient Servant, U. S. Grant, Major-General Commanding."

This letter implies the hypothesis expressed also in General Grant's dispatch of the same evening to General Halleck, that the enemy might still be in our front with the intention of renewing the attack. I make no comment on that point further than to contrast it with the later pretensions with which the battle has been reviewed by General Grant and his friends. The idea is again indicated in his orders to his division commanders on the eighth:

"I have instructed Taylor's cavalry to push out the road toward Corinth to ascertain if the enemy have retreated. . . . Should they be retreating, I want all the cavalry to follow them."

Something in the same vein, which I would by no means be understood as dwelling upon censoriously, is seen in a dispatch of the next day to Halleck

"I do not" [he says] "like to suggest, but it appears to me that it would be demoralizing upon our troops here to be forced to retire upon the opposite bank of the river, and unsafe to remain on this many weeks without large reinforcements."

The passage is chiefly noteworthy as showing that the fault of Shiloh was not in an excess of rashness or contempt for the adversary, and that the lesson of the occasion had not yet pointed out a means of security other than in reinforcements or retreat. The introduction of the evidence is not to be ascribed to any motive of disparagement. It is entirely pertinent to the subject under consideration.

General Grant has recently admitted that a pursuit ought to have been made, and vaguely intimates that somebody else than himself was responsible that it was not done. The reason given in his letter to me is, of course, insufficient. General McCook may have told him that his men were hungry and tired; but if the order had been issued, both McCook

and his troops would cheerfully have shown how much tired and hungry soldiers can do when an emergency demands it. If General Grant meant to imply that I was responsible that the pursuit was not made, I might perhaps answer that it is always to be expected that the chief officer in command will determine the course to be pursued at such a juncture, when he is immediately upon the ground; but I inwardly imposed upon myself the obligation of employing the army under my command as though the whole duty of the occasion rested upon it. There was no doubt in my mind or hesitation in my conduct as to the propriety of continuing the action, at least as long as the enemy was in our presence, as I considered him still to be; and I make no attempt to excuse myself or blame others when I say that General Grant's troops, the lowest individual among them not more than the commander himself, appear to have thought that the object of the battle was sufficiently accomplished when they were reinstated in their camps; and that in some way that idea obstructed the reorganization of my line until a further advance that day became impracticable.

MUCH harsh criticism has been passed upon General Lew. Wallace for having failed to reach the field in time to participate in the battle on Sunday. The naked fact is apt to be judged severely, and the reports made a year afterward by General Grant's staff-officers—the report of Colonel Rawlins especially—are calculated to increase the unfavorable impression. But some qualification of that evidence must be made, on account of the anxiety produced in the minds of those officers by their peculiar connection with the exciting circumstances of the battle. The statement of Rawlins is particularly to be received with reservation. They found Wallace on a different road from the one by which they expected him, and assumed that he was wrongfully there. Rawlins pretends to give the words of a verbal order that would have taken him to a different place. Wallace denies that version of the order, and the circumstances do not sustain it. He was on the road to and not far from the upper ford of Owl Creek, which would have brought him on the right flank of the Federal line, as it was in the morning, and as he presumed it still to be. It would have been at least an honest if not a reasonable interpretation of the order that took him to a point where the responsibility and danger were liable to be greatly increased. The impression of Major Rowley, repeated more strongly by General Grant in his *CENTURY* article, that when found he was farther from the battle-field

than when he started, the map shows to have been incorrect. The statement of Rawlins that he did not make a mile and a half an hour, is also not correct of the whole day's march. He actually marched nearly fifteen miles in six hours and a half. That is not particularly rapid marching, but it does not indicate any loitering. At the same time it must be said that, under the circumstances, the manner in which the order was given to Wallace is liable to unqualified disapproval, both as it concerned the public interest and the good name of the officer.

To these qualifying facts it must be added that a presumption of honest endeavor is due to Wallace's character. He did good service at Donelson, and at Shiloh on the 7th, and on no other occasion have his zeal and courage been impugned. The verdict must perhaps remain that his action did not respond to the emergency as it turned out, but that might fall far short of a technical criminality, unless under a more austere standard of discipline than prevailed at that, or indeed at any other, period of the war. If he had moved energetically after McPherson and Rawlins arrived and informed him of the urgency of the occasion, no just censure could be cast upon his conduct. The reports of those officers imply that he did not do so, but McPherson, who was most likely to be correct, is least positive on that point. It would probably be easy in any of the armies to point to similar examples of a lack of ardent effort which led to grave disappointment without being challenged, and to many more that would have been attended with serious consequences if any emergency had arisen. It was a defect in the discipline which it was not possible at that time to remedy completely.

WHEN this article was urged upon me by the recent revival of the discussion, I was advised by friends in whose judgment I have great confidence, to write an *impersonal* account of the battle. The idea was perfectly in harmony with my disposition, but a moment's reflection showed me that it was impracticable. It would ignore the characteristics which have made the battle of Shiloh the most famous, and to both sides the most interesting of the war. The whole theme is full of personality. The battle might be called, almost properly, a personal one. It was ushered in by faults that were personal, and the resistance that prolonged it until succor came was personal. This does not pretend to be a history of it, but only a review of some of the prominent facts which determined its character and foreshadowed its result. Even

this fragmentary treatment of the subject would be incomplete without a revision of the roll of honor. The task is not difficult, for the evidence is not meager or doubtful. It says of McClernand, that, crippled at the start by the rudeness of the unexpected attack and the wreck of the division in his front, before he had time well to establish his line, he struggled gallantly and long with varying fortune to keep back the columns of the enemy; and though he failed in that, he was still able to present an organized nucleus which attracted the disrupted elements of other divisions: of Hurlbut, that he posted the two brigades under his immediate command, not in the strongest manner at first, but with judgment to afford prompt shelter to the defeated division of Prentiss, and maintained his front with some serious reverses to his left flank, for seven hours and until his left was turned, with a greater list of mortality than any other division sustained: of W. H. L. Wallace, that, never dislodged, he sacrificed his life in a heroic effort with Prentiss to maintain his front between the enemy and the Landing: of Prentiss, that with the rawest troops in the army his vigilance gave the earliest warning of the magnitude of the danger, and offered a resolute resistance to its approach; that, though overwhelmed and broken in advance, he rallied in effective force on the line of Hurlbut and Wallace, and firmly held his ground until completely surrounded and overpowered: and of Sherman, that he too strove bravely, but from an early hour with a feeble and ineffective force, to stay the tide of disaster for which his shortcoming in the position of an advanced guard was largely responsible; but it discloses no fact to justify the announcement of General Halleck that he "saved the fortune of the day on the 6th." On the contrary it shows, that of all the division com-

manders, not one was less entitled to that distinction. This will be a strange and may seem like a harsh utterance to many readers, but it is the verdict of the record. The similar indorsement of General Grant a year later that "he held the key-point to the Landing" is equally alien to the evidence, and still further without intelligent meaning. If the key-point was any other than the Landing itself, it was on the left where the attack was strongest and the resistance longest maintained.

Into the list of brave men in the inferior grades—captains and even lieutenants who for the moment led the wrecks of regiments and brigades, and field-officers who represented brigades and divisions, and who poured out their lives on the field or survived its carnage—I cannot here pretend to enter, though it is a most interesting chapter in the battle.

And of Grant himself—is nothing to be said? The record is silent and tradition adverse to any marked influence that he exerted upon the fortune of the day. The contemporaneous and subsequent newspaper accounts of personal adventure are alike destitute of authenticity and dignity. If he could have done anything in the beginning, he was not on the ground in time. The determining act in the drama was completed by ten o'clock. From Sherman's report and later reminiscences we learn that he was with that officer about that hour, and again, it would seem, at three and five o'clock, and he was with Prentiss between ten and eleven; but he is not seen anywhere else in front. We read of some indefinite or unimportant directions given without effect to straggling bodies of troops in rear. That is all. But he was one of the many there who would have resisted while resistance could avail. That is all that can be said, but it is an honorable record.

AIRDRIE, KY., June, 1885.

D. C. Buell.

MEMORANDA ON THE CIVIL WAR.

Controversies in regard to Shiloh.

A STAFF-OFFICER'S ACCOUNT OF THE ATTACK AND WITHDRAWAL.

AT the time of the battle of Shiloh I was on General Bragg's staff as his chief engineer, with the rank of captain. On the night of April 5th I accompanied him to General Johnston's headquarters, where the last council of war was held. I was not present at the meeting of the generals, but with a number of other staff-officers remained near by. We could hear the low, earnest discussion of our superiors, but could not distinguish the words spoken.

When the council closed, and General Bragg started to his own bivouac, I joined him, and received the following instructions: That as the attack would be

made at daylight, the next morning at four o'clock I should proceed to the front along the Bark road, with Lieutenant Steel of the engineers and a squad of cavalry, until I came to the enemy's camp; that I should very carefully and cautiously reconnoiter the camp from where I struck it towards the enemy's left flank; that I should by no means allow any firing by my little force, or do anything to attract attention; that my duty was to get all the information possible about the enemy's position and condition, and send it back by couriers from point to point, as my judgment should suggest. Those orders I carried out the next morning. Lieutenant Steel, now Major Steel, of Nashville, Tenn., had been a civil engineer and surveyor in that section of the country, had already made

several daring and valuable reconnaissances of the Federal camps, and knew the country thoroughly. He was a splendid scout, and as brave a man as ever lived. Under his skillful guidance I reached in safety a point which he said was not more than a few hundred yards from the Federal camps. Here our cavalry escort and our own horses were left, and we two, leaving the road, passed down a narrow valley or gorge, got beyond the Federal pickets, and came within a few rods of a sleepy camp sentinel leaning against a tree. In front of us was a large camp as still and silent as the grave; no signs of life except a few smoldering fires of the last night's supper. Noting these facts, and without disturbing the man at the tree, we returned to our cavalry squad, and I dispatched a courier to General Bragg with a note telling what I had seen. We then moved by our right flank through the woods, from a quarter to half a mile, and repeated our former manœuvre. This time we found the cooks of the camp astir preparing breakfast. While we were watching the process reveille was sounded, and I saw one or two regiments form by companies, answer to roll-call, and then disperse to their tents. Once more I returned to my cavalry and dispatched a courier.

A third time I made a descent from the hills, down a narrow hollow, still farther to our right, and saw Federal soldiers cleaning their guns and accouterments and getting ready for Sunday morning inspection. By this time firing had begun on our left, and I could see that it caused some commotion in the camps, but it was evident that it was not understood. Soon the firing became more rapid and clearer and closer, and I saw officers begin to stir out of their tents, evidently anxious to find out what it all meant. Then couriers began to arrive, and there was great bustle and confusion; the long roll was beaten; there was rapid falling in, and the whole party in front of me was so thoroughly awake and alarmed that I thought my safest course was to retreat while I could and send another courier to the rear.

How long all this took I cannot now recall, but perhaps not more than an hour and a half or two hours. When I reached my cavalry squad I knew that the battle had opened in earnest, but I determined to have one more look at the Federal position and moved once more to the right. Without getting as near as our former positions, I had a good view of another camp with a line of soldiers formed in front of it. Meantime the Confederate troops had moved on down the hills, and I could plainly see from the firing that there was hot and heavy work on my left and in advance of my present position. I then began to fear that the division in front of me would swing around and take our forces in flank, as it was manifest that the Federal line extended farther in that direction than ours. I therefore disposed my little cavalry force as skirmishers, and sent a courier with a sketch of the ground to General Bragg, and urged the importance of having our right flank protected. How long I waited and watched at this point it is hard to say. Finally, becoming very uneasy at the state of affairs, I left Lieutenant Steel with the cavalry and rode to the left myself to make a personal report. In this ride I passed right down the line of battle of the Confederate forces, and saw some splendid duels both of artillery and infantry. Finally, as I have always thought,

about eleven o'clock, I came to General A. S. Johnston and his staff standing on the brow of a hill watching the conflict in their front. I rode up to General Johnston, saluted him, and said I wished to make a report of the state of affairs on our extreme right. He said he had received that report and a sketch from Captain Lockett of the engineers. I told him I was Captain Lockett. He replied, "Well, sir, tell me as briefly and quickly as possible what you have to say." When my report was finished he said, "That is what I gathered from your note and sketch, and I have already ordered General Breckinridge to send forces to fill up the space on our right. Ride back, sir, towards the right, and you will probably meet General Breckinridge; lead him to the position you indicate, and tell him to drive the enemy he may find in his front into the river. He needs no further orders." The words are, as near as I can remember them, exactly the ones General Johnston used. I obeyed the order given, met General Breckinridge, conducted him to the place where I had left my cavalry, but found both them and the Federal division gone. I rode with General Breckinridge a few hundred yards forward, and we soon received a volley which let us know that the Federal forces had retired but a very short distance from their original position. General Breckinridge deployed Bowen's and Statham's brigades, moved them forward, and soon engaged the Federal forces. I bade the General good-day and good luck, and once more rode down the line of battle until I found General Bragg. With him I remained, excepting when carrying orders and making reconnaissances under his orders, until the close of the first day's fight.

I witnessed the various bloody and unsuccessful attacks on the "hornets' nest." During one of the dreadful repulses of our forces, General Bragg directed me to ride forward to the central regiment of a brigade of troops that was recoiling across an open field, to take its colors and carry them forward. "The flag must not go back again," he said. Obeying the order, I dashed through the line of battle, seized the colors from the color-bearer, and said to him, "General Bragg says these colors must not go to the rear." While talking to him the color-sergeant was shot down. A moment or two afterwards I was almost alone on horseback in the open field between the two lines of battle. An officer came up to me with a bullet-hole in each cheek, the blood streaming from his mouth, and asked, "What are you doing with my colors, sir?" "I am obeying General Bragg's orders, sir, to hold them where they are," was my reply. "Let me have them," he said. "If any man but my color-bearer carries these colors, I am the man. Tell General Bragg I will see that these colors are in the right place. But he must attack this position in flank; we can never carry it alone from the front." It was Colonel Allen, afterwards Governor Allen of Louisiana. I returned, miraculously preserved, to General Bragg, and reported Colonel Allen's words. I then carried an order to the same troops, giving the order I think to General Gibson, to fall back to the fence in the rear and reorganize. This was done, and then General Bragg dispatched me to the right, and Colonel Frank Gardner (afterwards Major-General) to the left, to inform the brigade and division commanders on either side that a combined movement would be made on the

front and flanks of that position. The movements were made, and Prentiss was captured.

As Colonel William Preston Johnston says, that capture was a dear triumph to us—dear for the many soldiers we had lost in the first fruitless attacks, but still dearer on account of the valuable time it cost us. The time consumed in gathering Prentiss's command together, in taking their arms, in marching them to the rear, was inestimably valuable. Not only that; the news of the capture spread, and grew as it spread; many soldiers and officers believed we had captured the bulk of the Federal army, and hundreds left their positions and came to see the "captured Yanks." But after a while the Confederates were gotten into ranks, and a perfect line of battle was formed, with our left wing resting on Owl Creek and our right on the Tennessee River. General Polk was on the left, then Bragg, then Hardee, then Breckinridge. In our front only one single point was showing fight, a hill crowned with artillery. I was with General Bragg, and rode with him along the front of his corps. I heard him say over and over again, "One more charge, my men, and we will capture them all." While this was going on a staff-officer (or rather, I think, it was one of the detailed clerks of General Beauregard's headquarters, for he wore no uniform) came up to General Bragg and said, "The General directs that the pursuit be stopped; the victory is sufficiently complete; it is needless to expose our men to the fire of the gun-boats." General Bragg said, "My God, was a victory ever sufficiently complete?" and added, "Have you given that order to any one else?" "Yes, sir," was the reply, "to General Polk, on your left; and if you will look to the left, you will see that the order is being obeyed." General Bragg looked, and said, "My God, my God, it is too late!" and turning to me he said, "Captain, carry that order to the troops on the right"; and to Captain Frank Parker, "You carry it to the left." In a short time the troops were all falling back—and the victory was lost. Captain Parker and myself were the only members of General Bragg's staff who were with him at that time. Captain Parker, I think, is still living in South Carolina, and will surely remember all that I have narrated.

In this hasty sketch I have intentionally omitted everything but the beginning and end of that day's operations, to throw what light I can upon the two grand points of dispute: Was the Federal army surprised by our attack? and whose fault was it that the victory was not sufficiently complete on the first day?

In regard to the second day's fight I will touch upon but one point. I, like a great many other staff-officers, was principally occupied in the early hours of the second day in gathering together our scattered men and getting them into some sort of manageable organization. In this duty I collected and organized a body of men about a thousand strong. They were composed of men of at least a half-dozen different regiments. The Seventh Kentucky, with a tattered flag, and the Ninth Arkansas were the most numerous represented. We had not one single field-officer in the command. When I reported to General Beauregard that I had the troops divided into companies, had assigned a captain to duty as lieutenant-colonel and a first lieutenant as major, he himself put me in command of them as colonel. In order that

my command might have a name, I dubbed it the "Beauregard Regiment,"—a name that was received with three rousing cheers. Not long after my regiment was thus officered and christened, a message came from General Breckinridge on our extreme right that he was hard pressed, and needed reinforcements. My regiment, which was at the time just behind General Beauregard, held in reserve by his orders, was sent by him to General Breckinridge's assistance. We marched down the line of battle to the extreme right, passed beyond General Breckinridge's right, wheeled by companies into line of battle, and went in with the "rebel yell." The men on our left took up the yell and the charge, and we gained several hundred yards of ground. From this point we fought back slowly and steadily for several hours, until word came that the army was ordered to retreat, that the commands would fall back in succession from the left, and that the right wing would be the rear-guard. This order was carried out, and when night came the right wing was slowly falling back with face to the foe. We halted on the same ground we had occupied on the morning of the 6th, just before the battle began. If there was any "breaking" and "starting," as General Grant expresses it, I did not witness it.

As a sequel I will state that in the retreat of our troops before General Sherman from Jackson to Meridian in 1864, I was lieutenant-colonel and chief engineer of the Confederate forces; and in one of our day's marches to the rear, while I was passing the army to select a defensive position for our next halt, I recognized the captain whom I had made lieutenant-colonel at the battle of Shiloh. He was then a real lieutenant-colonel, commanding the Ninth Arkansas Regiment. We had not met since the battle of Shiloh, and I could not but slacken my pace a little to recall old memories. I have forgotten his name, but I trust he is still alive. He was as brave as a lion, and led the Beauregard Regiment into that charge at Shiloh like a veteran of a thousand battles.

S. H. Lockett.

THE PLAN OF THE BATTLE, AND THE WITHDRAWAL OF THE FIRST DAY.

In his paper published in *THE CENTURY* for February, 1885, Colonel William Preston Johnston, assuming to give the Confederate version of the campaign and battle of Shiloh, at which he was not present, has adventured material statements regarding operations on that field, which must have been based on misinformation or misunderstanding in essential particulars, as I take occasion to assert from personal knowledge acquired as an eye-witness and aide-de-camp on the staff of General Beauregard. My personal knowledge runs counter to many of his statements and deductions, but I shall here confine myself to two points.

First, I must dispute that the battle order as promulgated was in any wise different from the one submitted by General Beauregard at his own quarters at Corinth, early in the morning of the 3d of April, to General A. S. Johnston, and which was accepted without modification or suggestion. This assertion I base on these facts: About one o'clock in the morning the adjutant-general of the Confederate forces, Colonel Jordan, aroused me from sleep in my tent, close by General Beauregard's chamber, and desired

me to inform the General at dawn that General Johnston had agreed to his recommendation to move offensively against Pittsburg Landing at meridian that day, and that the circular orders to the corps commanders had been already issued by Colonel Jordan to that effect. Acting upon this request, I found that General Beauregard had already during the night made full notes on loose scraps of paper of the order of march and battle, from which he read aloud for me to copy — my copy being given to Colonel Jordan as soon as completed, as the basis of the official order that he was to frame, and did frame and issue in the name of General Johnston. And that is the order which Colonel Johnston erroneously alleges upon the posthumous authority of General Bragg to differ essentially from the plan settled upon by General Johnston for the battle. This allegation I know to be unfounded, as the order as issued varies in no wise from the notes dictated to me by General Beauregard, excepting the mere verbiage and the details relating to transportation and ordnance service added by Colonel Jordan: that is to say, the plan explained by General Beauregard and accepted by General Johnston at the quarters of the former.

Being limited as to space, I shall pass over a throng of facts within my personal knowledge, which would establish that General Beauregard was as actively and directly handling the Confederate forces engaged in their general conduct of the battle before the death of General Johnston, as he was after that incident. I shall confine myself on this occasion to relating that after General Beauregard became cognizant of the death of General Johnston, he dispatched me to the front with orders that led to the concentration of the widely scattered and disarrayed Confederate forces, which resulted in the capture of General Prentiss and so many of his division after five o'clock on the 6th.

I also, later in the day, carried orders to Hardee, who was engaged on our extreme left or Federal right, where I remained with that officer until almost dark, up to which time no orders had reached him to cease fighting. On the contrary, he was doing his best to force back the enemy in his front. As he was without any of his staff about him for the nonce, I acted as his aide-de-camp. Meantime the gun-boats were shelling furiously, and their huge missiles crashed through the branches of the trees overhead with such a fearful din, frequency, and closeness, that, despite the excitement of our apparently complete victory, there was room left in our minds for some most unpleasant sensations, especially when the top of some lofty tree, cut off by a shell, would come toppling down among the men.

Possibly, had Colonel Johnston been present on the field at that last hour of the battle of the 6th, a witness of the actual fruitless efforts made to storm the last position held by the enemy upon the ridge covering the immediate landing-place, known as Pittsburg, he might be better informed why it was that that position was not carried, and be less disposed to adduce such testimony as that of General Bragg, to the effect that but for the order given by Beauregard to withdraw from action he would have carried all before him.

It so happened that I rejoined General Beauregard at a point near Shiloh Chapel (having escorted General Prentiss from the field to General Beaure-

gard), when General Bragg rode up from the front, and I heard him say in an excited manner: "General, we have carried everything before us to the Tennessee River. I have ridden from Owl to Lick Creek, and there is none of the enemy to be seen." Beauregard quietly replied: "Then, General, do not unnecessarily expose your command to the fire of the gun-boats."

Alexander Robert Chisolm.

The Fourth Regular Infantry at Gaines's Mill.

PROBABLY not much credit attaches to the particular organized force which was the last to cross the Chickahominy River after the battle of Gaines's Mill; but in order to settle the question I desire to state that the cavalry was not the last to cross the river — even if they did leave at the time General Merritt states in the September CENTURY. The Fourth U. S. Infantry was the last organization which crossed, and that regiment passed over about *two hours after daylight* on the morning of the 28th, and a bridge had to be partly relaid to enable it to do so. This regiment was posted on the extreme right flank of the army at the battle of Gaines's Mill, and was ordered to support Weed's battery. Weed was afterwards reinforced by Tidball's battery, and the Fourth Infantry held its position from the commencement of the engagement (about 11 A. M.) until twilight of the 27th, without receiving an order or stirring from its position until Weed reported that he had no more ammunition, and retired from the field by way of the Cold Harbor road, covered by the Fourth Infantry. Night came upon the regiment as it was retiring on this road. It went into bivouac, in line of battle, in the Chickahominy Valley on the road by which it retired from the field. When daylight came we expected orders to renew the engagement, and took up our march to return to the battle-field, about a mile and a half distant. It was then that some wounded were met, who informed that all the army had crossed during the night. We then marched from Grapevine Bridge to Alexander's Bridge, in sight of the enemy's pickets, and when we arrived on the south side we were astonished to find that it was thought we had been captured. We learned afterwards that orders had been sent to the Fourth Infantry during the action but the officer who started with them was killed; another who took them was wounded before they could be delivered, and an orderly who was subsequently dispatched with them did not arrive at his destination, and was never heard of afterwards.

FORT OMAHA, September 8, 1885. *William H. Powell,*
Captain Fourth Infantry, Brevet-Major U. S. A.

A Correction from General Longstreet.

My attention has just been called to a dispatch of General John Buford, written on August 29th, 1862, at 9:30 A. M., in which he gives information of my troops moving through Gainesville some three-quarters of an hour before his note was written. This would place the head of my column at Gainesville about 9 A. M., and the line deployed and ready for battle at 12 M., which agrees with my recollection, and with my evidence in the F. J. Porter case. It seems that the Washington Artillery was halted some distance in rear to await my selection of the position to which it was assigned, — hence the late hour (11:30) mentioned in the diary from which I quoted, in my article in the February CENTURY, in fixing the hour of our arrival at Gainesville.

James Longstreet.

GAINESVILLE, GA., 8th January, 1886.

IN A VOLUME OF ALDRICH'S POEMS.

WITH evening-star's blue tender radiance, caught
Through northern twilight in the winter-time,
These luminous cameos of beryl wrought
A master-workman in the gems of rhyme.

CASTELAR, THE ORATOR.

THE recent death of the King of Spain has drawn public attention once more to that country of volcanic politics, whose periodical eruptions are liable to settle at any moment into a new form of the administration of the Spanish state. Amid the strife of parties contending for supremacy following the death of the King, the figure of one Spaniard will be apt to rise to the vision of the outside world preëminent above all his fellows, the figure of Don Emilio Castelar. Throughout Christendom ten years ago the name of Castelar was a magic word. It was not that he had achieved the highest fame as an orator, but that as a democrat of the latest nineteenth-century type he had risen to the head of a republic in the most reactionary nation in Europe. Indeed, the fame of Castelar in 1873-4 was a star shining against the black night of Spanish political traditions. When the republic which was his creation fell almost with the suddenness of a star, the light of the man was too great to disappear. In the little more than a decade which has followed, Spain has repeated nearly all the vicissitudes of her fickle politics and parties. Castelar, self-pledged to accept office under nothing less than an absolutely popular government, has been content to remain in comparative political obscurity. But a genius like his is not dependent upon politics for its activity, and again and again, in literary addresses before the Academy of Madrid and in orations on themes of general polity, his eloquence has gone abroad.

In the nineteenth century no country but Spain could have produced Castelar. He is a product of her history, as he is a legitimate son of that fervent clime which has changed its children like its mountains to bronze. "Spain, it is that part of Africa commencing with the Pyrenees," said the wits of Paris a century ago. "It is that country sleeping on, untroubled, unheeding, impassive, receiving no impressions from the rest of the world, and making none upon it—a huge, torpid mass, the sole representative now remaining of the feelings and knowledge of the Middle Ages," wrote Buckle, in the present generation.

Such was or seemed Spain only a few years since, ruled over by a woman still living, Isabella II., who came to the Spanish throne three years earlier than Victoria to that of England. Under her reign one could succeed neither in dying nor in getting born in Spain unless he were a Catholic or had a special indulgence from the Pope,—the adherents of other faiths being refused both baptism and burial. Isabella's motto for ruling Spain was the simple traditional one of the Bourbons—"Pet the priests, rob the revenues, suppress the people." Her reign was a seething vat of anarchy till at last Isabella's government had grown well-nigh intolerable. With the ferment of French revolutions and Italian pronunciamientos for liberty in her blood, and prodded by this sore misrule, Spain was slowly heaving out of the lethargy of centuries, but knew not yet what she wanted. There were Royalists and Republicans, Carlists and Progressists, Primists and Esparteroists, Montpensierists and Isabellists,—thirty-four factions in all, with their infinite subdivisions.

Castelar's boyish entrance on this scene of the turbulent drama of Spanish politics thirty years since has been graphically described by a contemporary. It was literally a *coup de théâtre*. It was a September night in 1854, and ripe revolt was in the streets of the cities. A tempestuous electoral meeting was being held in the Teatro de Oriente in Madrid. Many orators had spoken, it was already late, and the audience was tired. An unknown youth, scarcely more than a boy of twenty, mounted the stage to address it. The assembly, annoyed at the appearance of a new speaker, began to disperse. But the young orator had not spoken many words before a few began to hesitate and call, "Hush!"

Then slowly, as there rang from the speaker's lips an accent and utterance such as never before had been heard in that ancient peninsula, the mass grew agitated to enthusiasm—till at last it burst into thunderous bravos of applause. In an hour the youth, who with his pale face and dark Andalusian eyes had entered as by accident into that assembly,

had become a celebrity. It was the boy Emilio Castelar, who, from his lodgings near the Normal School of Madrid, had wandered toward the theater, attracted thither by the sorrows of his agitated country.

In the morning hundreds of thousands of copies of his speech were winging over the provinces of southern Spain, and falling like autumn leaves in the streets of Madrid. And while the young radical was poring over his books in the Normal School, the journals were seeking his address, and inquiries were flying fast through the city as to his history and personality.

The details of his brief life when collected were soon told. Six years before the birth of his great Gallic compeer, Gambetta, Castelar had been ushered into life in southern Spain, at Cadiz, in the month of September, 1832. Like Gambetta, he was born of a family of trade, and had taken his first lessons at the knee of a mother of extraordinary capacity and courage. His father, Don Manuel Castelar, was an agent of exchange in the town of Alicante, in one of the most romantic of the Spanish south-eastern provinces facing the Mediterranean—Valencia. Being also a man of affairs, he had served at the time of his son's birth as commandant of the national militia, and afterwards as secretary to the revolutionary junta of Cadiz, at the period of the entrance of the Duke of Angoulême.

The families of both parents were passionately devoted to the liberal cause,—Castelar's mother having descended from ancestors traditionally hostile to the Bourbons. Don Manuel, dying in broken fortune, had left to his son, at the age of seven, only the heritage of a magnificent library, and to his noble and devoted wife the care of the son's training for a career of letters.

Placed in the schools of Alicante, young Castelar in his leisure hours at home turned himself loose in the paternal library, whose opulent accumulations of history, travels, science, and political economy he had conquered before the age of sixteen. In Alicante he had become already a prodigy of knowledge. Continuing four years longer in the local academy under the guidance of his mother and a brilliant and beautiful aunt, her sister, Francisca, he had been sent at the age of twenty to complete his education at Madrid.

From that inspired hour of the September night, in the theater of the Orient, Castelar was no longer a school-boy. His name was on hundreds of thousands of lips; the journals vied with each other for the service of his pen in their columns. The storm of the revolt of 1854

blew over, but this ardent boy of Valencia continued to make impassioned speeches at occasional assemblies, poured out eloquent radicalism in the newspapers, and completed, two years later, his literary novitiate. The University of Madrid hastened to secure the renown of his learning to adorn its chair of critical and philosophical history. "At the age of twenty-four he turned the chair of philosophical history of the University of Madrid forthwith into a public tribune from which to disseminate throughout Spain the most advanced sentiments with respect to every question of modern economy. Transforming history into a living philosophy of example, he advocated the emancipation of slaves in Cuba, the abolition of the tie between church and state, universal suffrage, and free education."*

No university, indeed, could have restrained within the limits of methodic routine a genius at once so ardent and so balanced as Castelar's. A little later he added to his professorial functions the editorship of a Madrid journal, as he had already been the contributor to a score of newspapers and reviews, and from that moment assailed the existing Government of Spain with the double might of the literary head of her foremost university and of the most brilliant journalist of the peninsula. Through that obscure providence by which history matches genius with occasion, the rule of Isabella was the foil of Castelar's talent as the reign of Napoleon became that of Gambetta. At the age of thirty he had become in Spain a dreaded force against the stability of the Bourbon throne.

An article in his journal denouncing the advisers of the Queen for claiming the crown lands of the state cost him at last, in 1864, his professorship in the university. In the month of June, 1866, there occurred a bloody and desperate rising of the artillery of Madrid. Castelar was implicated, with hundreds of others. He was arrested by the Government, imprisoned and sentenced by a royal council to death. Escaping from his prison by the aid of friends, he fled from Spain, traveling in France, Italy, and England, supporting himself by his pen, and pouring out on the world in books and essays those superb utterances in whose glow his name first rose over the verge of Christendom.

Two years more, and the Spanish Bourbon had reached her last crisis. Another day, another insurrection; a battle beyond the walls of Madrid in which the generals of the Government were overthrown,—the plethoric Queen looking on, out of breath, from distant

* See article on "Spain of To-day," by the present writer, in September number of the *International Review*, 1881.

San Sebastian—not daring to reënter the gates of her capital, not even for her band-boxes and her poodle dogs. Then Isabella took her ungainly flight over the frontier.

The Spanish Revolution was complete. At its first sound Castelar hastened from exile, like Victor Hugo after Sedan. He had gone out from Spain a convict—he came back in almost Roman triumph. From Barcelona to the gates of the capital, his way through the cities of Spain was an ovation. Twelve thousand republicans assembled in the grand plaza to receive him and hear him speak. He had been martyred into the darling of the democracy. That first hour of Spain's redemption had touched her skies to double brightness. All things seemed possible to Liberty. Madrid, that splendid web of cities, Cordova, Saragossa, Seville, Cadiz, with a host of other towns, vied with one another to secure the services of Castelar as their representative in the Constituent Cortes. He chose for Saragossa, the heroic. The partisans of democracy believed that under his leading they could at once found the Republic. It was not so determined. The Cortes of '69, which Castelar entered as the most powerful and brilliant member, decreed as the first article of the new Constitution that Spain should continue as a monarchy. Then came an extraordinary spectacle. The crown which had pressed the brows of Ferdinand and Isabella the Great went begging for a head to wear it! After being thrown successively at the feet of seven royal dynasties of Europe and successively spurned, it was offered to a scion of German royalty whose name, it was said, no Spaniard could either pronounce or spell,—the very sound of whose title ignited the fiercest conflagration of modern Europe,—the Teutonic Herr, Prince Leopold of Hohenzollern-Sigmaringen!

At last the much-rejected regal bauble was shuffled on the fatuous brow of Amadeo, the second son of Victor Emanuel of Italy. Amadeo was unfortunate from the first. He was designated by the Spanish nobles as the intruder King. The irreverent populace dubbed him Macaroni I. The republicans assailed him in the Cortes. Castelar, addressing the monarchists, said: "It is a duty I owe my country and my conscience to say that on your work, in spite of its having come from far lands, over so many miles of sea and railway transit, all the world can read these words, 'Glass with care—Glass with care—Glass with care.'" The boys in the streets cried, "Italians to the train!"

Amadeo grew sick of his Spanish estates, and at the end of two years decided to accept

the advice of the street gamins. One February morning in 1873 he accordingly took the train for his Italian possessions in the valley of Aosta. Then came at last the awaited hour of the Republic. Castelar held in his brain a ready-made scheme of government—that of the United States. He drew a Constitution in twenty-four hours. In his ardor he believed that it would be a panacea for all the ills of his country; that he could "suddenly engraft on the ancient trunk of Spanish nationality, gnarled and deadened by centuries of superstition and tyranny, the quick buds of liberty."*

He would have builded his republic like that ideal one of Plato, to the sound of music. He rose to its presidency and was to make his trial. The experiment, like the monarchy of Amadeo, was a failure. Jealousies among his own party, the Republicans themselves, crises in the ministry, the priests, and the reactionary factions all conspired against him. The difficulties were overwhelming. "The new government, while offering to Spain for the first time in history the opportunity for freedom, liberated by its very novelty all the lawless elements of the nation. The Spanish people themselves were as yet ludicrously unschooled in the methods of popular government. The Republic and universal suffrage were accepted, in some parts of the country, to mean decorations to be distributed by the Government and worn on Sunday at the bull-fights."*

No human genius could have saved that Republic. But Castelar's figure and bearing through it all, as its animating soul, were magnificent. Disaster was but the setting of his resplendent courage. Against gloom itself his greatness cast a shadow, and before the end the sympathy and admiration of the world were his. Doomed beyond hope to failure, he still upheld for a time by the sheer force of his eloquence the hopes of his Republican countrymen for this ideal shape of human freedom. But there came speedily one of those days familiar to modern Europe—a day of *coup d'état*. On the second of January, 1874, General Pavia, Captain-General of Madrid, invading the Cortes, Cromwell-like, dispersed the assembly at the musket's mouth, and the days of the Republic were over. But its ferment endured in her blood. Castelar's reign had been as the khalifate of Abou Hassan—the reign of a day. The provisional government which ensued offered him a portfolio of office. He refused as haughtily as Cato. "My conscience," he said, "will not allow me to associate with demagogues, and my conscience and my honor keep me aloof from a state of things created by bayonets."

* "Spain of To-day," *International Review*, Sept., 1881.

And then, seeing no further service which in that crisis he could render Spain, he strode with dignity out of it on a second tour through Europe.

Such, until ten years since, when the Spanish Democracy fell, was the career of this great Latin Republican. But Castelar has been something more than the inspired citizen of a political epoch. He is a permanent part of the pride and greatness of his native land. Henceforward the historian must write: "Spain in the sixteenth century produced a cavalier novelist, Cervantes, who, turning his lance into a pen, pierced the bubble of her mediæval society; in the nineteenth century she gave birth to an orator, who, converting eloquence into a sword, hewed down the despotism of her state—Castelar." But the varied talents of this gifted Spaniard have a significance even beyond the bounds of his country: they are cosmopolitan.

Nature would seem to have withheld from him all those defects and rained upon him the excellences with which she has endowed the sons of eloquence since Demosthenes. He is the beau idéal of orators. Bossuet added the force of impassioned utterance to the religious fervors of an epoch. Danton, Mirabeau, and Camille Desmoulins were the mouthpieces of revolutionary tempest. Chatham was the orator of political vehemence and the budget. Webster, the majestic "expounder," was the orator of lawyers. Gladstone, that Saxon Nestor whose winged words are wont to bleach the sordid politics of England in a night, is the most facile of parliamentary polemics. Free from the limitations of these, Castelar adds to their various gifts a cosmic range of conception, a brilliance of expression wholly his own. He is the orator of the universal. Edmund Burke, the Bacon of political generalizers, talked to sleeping senators and empty benches. Castelar, with a passion for general truth more varied, because it is the passion of the poet, holds his audiences bound as with a spell.

The resources of learning which feed the flame of his tongue appear inexhaustible. The data of science and history are at his instant command, employed not as by other orators for rhetorical adornment, but woven in the woof of his thought. So prolonged, so accurate, so minute has been his examination of the past that every age appears to have exhaled to him its secret. As one hears him speak, the winds of the centuries seem blowing across his fervid spirit as over an æolian harp, issuing in solemn music from his lips.

Describing his own consciousness in the presence of the Parliament, he has said: "I no longer see the walls of the chamber; I be-

hold only distant peoples and ages which I have never seen." From Rome, Egypt, Assyria, Palmyra, or Carthage he plucks his arguments and symbols, as if antique empires were but things of yesterday. His prodigious learning is no less at home with the present. The politics and policies, the histories and secret diplomacies, the arts, the literatures, the systems of economy of the European states,—his familiar studies of the closet,—fused in the glowing alembic of his brain, are poured out at will in the amazing flights of his oratory.

Many of the occasions of Castelar's eloquence have been as scenic as the effects of his oratory itself. It was on his visit to Italy in 1875, after having left Spain for the second time in the previous year, that he stood in a magnificent banquetting-hall in Rome. Italy had only recently achieved that scheme of unity and independence born in the dreams of her mediæval poets. An entombed nationality risen from the dust, a specter ripe-veined with life, aglow with color as the dawn over the Apennines, she stood erect, a miracle confronting history. In that Roman banquetting-hall the great chiefs of her resurrection and independence, headed by Mancini, Depretis, and Crispi, had assembled to do honor to the Spaniard. Over them swung the kissing banners of the Italian states mingled with the colors of Spain. To the enthusiastic address of welcome from the lips of the Roman chiefs, Castelar began his memorable response: "Gentlemen, the dream of fifteen centuries is realized. You have done what the Roman Cæsars could not do, nor the Ostrogoths nor the Lombard kings. What Frederic of Suabia and his illustrious descendants could not effect by their death-struggle with the Guelphs and the Angevins,—that which neither Dante nor Petrarch saw in spite of invoking the Emperor of Germany to make the sword of the Holy Empire the axis round which Italy revolved,—that which Julius II. could not effect with his cannon, nor Leo X. with his arts,—that which Savonarola could not make a reality by giving himself to God, nor Machiavelli by giving himself to the Devil, has been done by you. You have made Italy one; you have made Italy free; you have made Italy independent."

On a field night in the Cortes, in the discussion of a proposed constitutional clause establishing universal religious toleration, Castelar was charged by the clerical faction with atheism. The orator sprang to his feet, and advancing to the very front of the chamber startled the deputies by holding in his uplifted hand the fragment of a human skull gathered from the mouldering heaps of dust of those victims who had been burned on the grand

plaza of Toledo by the order of the Inquisition in the reign of Philip II., while he invoked the spirits of the countless martyrs to religious intolerance, and with volcanic flashes of eloquence drew the picture of Spain desolated under her centuries of superstition. The occasion was dramatic almost beyond oratorical precedent, and the effect indescribable. The session of the Cortes was abruptly suspended.

Castelar's greatest triumphs in eloquence have been mainly achieved like this one before the Spanish parliamentary assembly. He has long been the acknowledged first orator of that presence. Every deputy readily makes way for him. "Place to Castelar!" is a motto of the assembly. His eloquence has been familiar to Spain now for twenty years, but it is still considered an event in Madrid to hear him speak. His friend, the Italian Edmondo de Amicis, in his "Spain and the Spaniards," has thus graphically described him as he appears before the Cortes: "On the day he is to speak . . . the President arranges matters so that his turn comes when the tribunes are crowded and all the deputies are in their places; his newspapers announce his speech the evening before, so that the ladies may procure tickets. . . . Before speaking he is restless and cannot keep quiet one instant. He enters the chamber, leaves it, reënters, goes out again, wanders through the corridors, goes into the library and turns over the leaves of a book; rushes into the café to take a glass of water; seems to be seized with a fever; fancies he will not know how to put the words together, that he will be laughed at or hissed; not a single lucid idea of his speech remains in his head—he has confused and forgotten everything. 'How is your pulse?' his friends ask smilingly. When the solemn moment arrives, he takes his place with bowed head, trembling and pallid as a man condemned to death, who is resigned to losing in a single day the glory acquired with so many years of fatigue. He gives a glance around him and says, 'Señores.' He is saved! His courage returns. His mind grows clear and his speech comes back to him like a forgotten air. The President, the Cortes, the tribunes disappear. He sees nothing but his gestures, hears nothing but his own voice, and feels naught but the irresistible flame which burns within him, and the mysterious force which sustains and upholds him." His eloquence is music; he has harmony in his mind, and follows it. One must hear him in order to credit the fact that human speech without poetical measure can so closely approach to the harmony of song. His heart is that of an artist as well as his intellect. "He speaks by the hour, and not a single deputy leaves the room; not a person

moves in the tribunes, not a voice interrupts him; not even when he breaks the regulations has the President sufficient courage to interrupt him. He displays at his ease the picture of his republic clothed in white and crowned with roses, and the monarchists do not dare protest, because, so clothed, they too find it beautiful. Castelar is master of the assembly; he thunders, lightens, sings, rages, and gleams like fireworks, makes his auditors smile, calls forth shouts of enthusiasm, and goes away with his head in a whirl."

Like Cavour, Castelar has drawn his inspirations of liberty from the English Constitution. Solitary among continental statesmen, he understands the genius of the United States—that absolute spirit of liberty which is not Celtic but Saxon, which does not persecute and is without fear. Of this spirit he became, in the epoch after the flight of Isabella, the illumined expositor and apostle, filling Spain with the light of its teaching.

Such is Castelar's place in the history of his country. And not in Spain alone, but in all Europe he has implanted conceptions of democracy which will not die. To him the Continent has been at school. Castelar's dream is the Federal Republic of Europe.

In Spain they never tire of repeating passages from the splendid outbursts of his eloquence during that formative epoch succeeding the Revolution.

"I would wish," he said, "for my country the art of Italy, the thought and science of Germany, the genius and universal spirit of France, the liberty and labor of England, the democracy and the Republic of the United States."

It is against the Spanish priests, and the mighty influence of Rome in his native land, in their hostility to progress and free government, that Castelar has waged his most tremendous warfare. In framing measures of reform he has a hundred times beaten them back, terrifying them into silence in the Parliament, with scorching rebuke. Closing his address in the debate already alluded to, on religious toleration, he gave utterance to one of his most soaring periods: "God is great in Sinai. The thunders precede him, the lightnings attend him, the earth trembles, the mountains fall in fragments. But there is a greater God than this. On Calvary, nailed to a cross, wounded, thirsting, dying, he prays, 'Father, forgive my executioners, pardon my persecutors, for they know not what they do!' Great is the religion of power, but greater is the religion of love. Great is the religion of implacable justice, but greater is the religion of pardoning mercy. And I, in the name of that religion,—I, in the name of the Gospel,

appeal to you, legislators of Spain, to place in the front of your fundamental constitution liberty, equality, fraternity with all mankind!" Then, facing the clerical deputies, he exclaimed: "Gentlemen, you are at war with the Head of your church! Were I a priest, I would pray, 'God bless these legislators, who are enacting on earth thy justice and thy grace!'"

The utterances of Castelar, as strong and rhetorically surpassing as they must be acknowledged to be in any tongue, lose something of their proper cadence and effect in translation. His diction, converted into English, has frequently the appearance of redundancy, and even of hyperbole. He should be heard and read in Spanish. No language but the sonorous and poetic speech of Castile, majestic as Homer, musical as the plashings of the Mediterranean on the shores of his native land, could fitly voice his eloquence.*

In the temperature of his opinions Castelar belongs both to the older and newer time. As a mere artist of expression he bears traces of kinship to three literary men of modern Europe besides Victor Hugo. These are Lamartine, Henri Taine, and John Ruskin. His diction more than theirs, however, is instinctively that of the forum. But his utterances, like theirs and unlike the froth of reputed eloquence, will go into the history of literature.

Compared with Gambetta, his only contemporaneous rival as an orator, it may be

said that Castelar's genius is far less purely administrative and political than was Gambetta's.

If the effects aimed at by the oratory of Gambetta were more immediate, those produced by Castelar are farther reaching. If there was more terror in the Gaul, there is more grandeur in the Goth. Gambetta spoke always to France; Castelar to the world. The Frenchman was the embodied genius of political force achieving instant ends by the weight of a mighty and aggressive personality; the Spaniard a scholar, a poet, a philosopher who entrances his fellows with the spell of ideas.

As a statesman Castelar is marked not only by the catholicity but by the sanity of his intellect. With an imagination as radiating as light, a tolerance liberal as air, and a spirit of deathless insurgence against every form of unrighteous authority, he has not been led to the Utopias. He has said, "I have never believed that to dethrone the kings of the earth it was necessary to destroy the idea of God in the conscience nor the hope of immortality in the soul."

Defending his favorite idea of government — the government that shall "accord liberty to every manifestation of the human spirit" — he exclaims: "We must have an end of all persecution of ideas. I condemn the governments of France and Prussia when they oppress the Jesuits; I condemn the government of Russia when it oppresses the Jews; I af-

* The following description of Castelar's personal appearance is given by Colonel John Hay, in his "Castilian Days": "On the extreme left of the chamber is a young face that bears an unmistakable seal of distinction. It reminds you instantly of Chantrey's bust of the greatest of the sons of men. The same pure oval outline, the arched eyebrows, the piled-up dome of forehead stretching outward from the eyes until the glossy black hair, seeing the hopelessness of disputing the field, has retired discouraged to the back of the head. This is Emilio Castelar, the inspired tribune of Spain. This people is so given to exaggerated phases of compliment, that the highest-colored adjectives have lost their power. They have exhausted their lexicons in speaking of Castelar, but in this instance I would be inclined to say that exaggeration was well-nigh impossible. It is true that his speech does not move with the powerful, convincing momentum of the greatest English and American orators. It is possible that its very brilliancy detracts somewhat from its effect upon a legislative body. When you see a Toledo blade all damasked with frondage and flowers and stories of the gods, you are apt to think it less deadly than one glittering in naked blueness from hilt to point. Yet the splendid sword is apt to be of the finest temper. Whatever may be said of his enduring influence upon legislation, it seems to me there can be no difference of opinion in regard to his transcendent oratorical gifts. There is something almost superhuman in the delivery. He is the only man I have ever seen who produces, in very truth, those astounding effects which I have always thought the inventions of poets and the exaggerations of biography. Robertson, speaking of Pitt's oratory, said, 'It was not the tor-

rent of Demosthenes, nor the splendid conflagration of Tully.' This ceases to be an unmeaning metaphor when you have heard Castelar. His speech is like a torrent in its inconceivable fluency, like a raging fire in its brilliancy of color and terrible energy of passion. Never for an instant is the wonderful current of declamation checked by the pauses, the hesitations, the deliberations that mark all Anglo-Saxon debate. An entire oration will be delivered with precisely the fluent energy which a veteran actor exhibits in his most passionate scenes; and when you consider that this is not conned beforehand, but is struck off instantly in the very heat and spasm of utterance, it seems little short of inspiration. The most elaborate filing of a fastidious rhetorician could not produce phrases of more exquisite harmony, antitheses more sharp and shining, metaphors more neatly fitting, all uttered with a distinct rapidity that makes the despair of stenographers. His memory is prodigious and under proper discipline. He has the world's history at his tongue's end. No fact is too insignificant to be retained nor too stale to do service.

"His action is also most energetic and impassioned. It would be considered redundant in a Teutonic country. If you do not understand Spanish, there is something almost insane in his gesticulation. I remember a French diplomat who came to see him in one of his happiest days, and who, after looking intently at the orator for a half hour, trying to see what he was saying, said at last in an injured tone, 'Mais! c'est un polichinelle, celui-là.' It had not occurred to me that he had made a gesture. The whole man was talking from his head to his feet."

firm that to persecute ideas is like persecuting light, air, electricity, or the magnetic fluid,—because ideas escape all persecution; when repressed they explode like powder.” But he has ever repelled that delirium of liberty which is the dream of the communist, the socialist, and the intransigent.

Nothing has more marked the public career of Castelar than his friendship for America. He neglects no opportunity to express with glowing words his admiration of the institutions of the United States. There are single sentences in which he has analyzed to the core the history and character of our Anglo-Saxon democracy, and which contain the most masterful descriptions ever drawn of our national life.*

In addition to the numerous volumes of his speeches, the literary works of Señor Castelar, consisting of novels, dramas, reviews, and essays on government, composed in the hours seized from public duties, constitute a small library in the Spanish language. Those of his writings accessible in English are his essays contributed to English and American magazines, his papers on Byron and Dumas, and a portion of his notable *Recuerdos de Italia*, translated some years since by Mrs. Arthur Arnold, under the title of “Old Rome and New Italy.”

In these latter years the utterances of

* In a recent letter to an American residing in Madrid (as correspondent of the New York *Herald*), answering his request for Señor Castelar's views on the proposed commercial treaty with the United States, he says:

“It pleases me as regards the United States, the nation of my predilection being, as I am, republican, for its stipulations tend toward fuller politico-economic relations, thus inaugurating a new and progressive mercantile policy with the nation which discovered the New World, and which, by reason of that discovery, should justly exert great influence therein. . . .

Castelar are listened to by his partisans in Spain with almost that worshipful enthusiasm accorded to those of Victor Hugo in France. It is conceived of him by his countrymen what Cicero said of Ennius, “that with him will die an art of word-painting which no coming man can restore!” The more memorable of Castelar's recent public appearances are the occasions on which from time to time he has delivered addresses before the Royal Academy of Madrid, and those of his speeches on his tours through the provinces.

Like Cavour and Gambetta, whom in so many respects of person and career he resembles, Castelar is a bachelor. In a quiet street of Madrid he keeps his modest home, supporting himself, at the age of fifty-three as at thirty, with tireless literary labors. The service of his country has left him rich only in honor. Every worthy book issued from either the English or American press, as from that of the Continent, he acquires for his ample library.

Nine years ago, moved with a consciousness that he might again be of service to his countrymen, Castelar returned to Spain from a two years' absence on his second wanderings over Europe, and took his seat in the Cortes, deputy elect from the republican city of Barcelona. Making a vow to accept himself no office under any form of government save that

I believe that the United States will esteem Spain the more as their relations with us, here or in the New World, increase. . . . These are my hopes and my desires; for, as when slavery was abolished in Porto Rico during my administration and preparations made for doing away with slavery in Cuba which could not be realized for want of time, and as when initiating and concluding the negotiations in the celebrated *Virginus* case, it has ever been my purpose as a liberal, as a republican, as a democrat, to strengthen more and more the constant historical friendship between our people and the American people.”

Emilio Castelar.

of a republic, with the keen sagacity of a practical statesman he allied himself with Sagasta, chief of the dynastic Liberals, to regain such liberties for his country as were possible under the monarchy of the restored Bourbon. Once more the thunders of his eloquence, rising above the walls of the chamber of the Cortes, rang over Spain in appeal for the lost rights of the Revolution. By that

spiral law of history which he confidently invoked, the appeal has been measurably answered. Led by the Latin Gladstone, Sagasta, and cheered on by the Republican chiefs, the forces of Liberty in Spain have made undoubted progress,—though again and again this progress has been doomed to undergo temporary eclipses under such reactionary administrations as those of Cánovas.

William Jackson Armstrong.

REMINISCENCES OF CASTELAR.

MUCH as an enthusiastic collector of art-treasures possesses some inestimable gem, to be carefully guarded from profane touch and exhibited on occasions for the applause and, it may be, the envy of less fortunate collectors, Spain has its Castelar. Next to Cervantes, his name has become known abroad better than that of any other Spaniard. To the people of the United States, especially, it has become endeared; for Castelar is in our eyes the embodiment of the republican idea, in a land where traditional religious faith and ingrained obedience to the extremest tenets of absolutism offered an unpromising soil for the development of democracy. In this stony ground Castelar has long been a tireless worker, but the sowing of the seed has been done by other hands. Orense, Figueras, Pi y Margall were the creators, the prime movers of modern Castilian republicanism; but to the marvelous eloquence of Castelar is due most of the fructifying growth that culminated in the Republic of 1873, and, unfortunately, in the communistic excesses that undermined it to its fall.

Spaniards call him "the glory of the Castilian rostrum." In a land where fluency is a national trait, where the cafés with their nightly crowds are nurseries of debate, where the political clubs are the scene of maturer flight, and where the populace judge of the merits of candidates for municipal and national representation almost wholly by their merits as public speakers, it is no slight triumph to tower above all, and stand alone and unapproachable, as the one great orator. Athens, say the Spaniards, had its Demosthenes, Rome its Cicero, and we have our Castelar. As one of this godlike trinity, the world at large is invited to admire him. No stranger has seen Spain who has not seen Castelar.

Quien no ha visto Sevilla
No ha visto maravilla.

It was my good fortune to meet Castelar in the autumn of 1869, when he was flushed with the triumph of "the greatest effort of his life," his fervid speech on the Spanish Constitution. The first impression one has on seeing him is that nature has exhausted herself in building a perfect machine for human vocal utterance. Slightly above the middle height, and stoutly built without positive corpulence, his notably erect carriage gives to his splendidly rounded chest seemingly titanic proportions. The effect is enhanced, perhaps, by his habit of wearing a low-cut waistcoat and a slender necktie, leaving a snowy expanse of linen, on which a rare ink-spot at times attests the absorbing character of his studious pursuits. A low collar shows the prominent sinews of a neck of almost taurine contour. Square, powerful jaws enframe a large, straight-cut mouth. The lips, slightly sensuous in their fullness, are half-hidden by a heavy moustache of wiry, dark-brown hair, curved enough to relieve it from the suspicion of bristliness. He is always clean-shaven as to cheek and chin, which makes the clearness of his slightly florid complexion more noticeable, and brings into relief a rounded button of a mole just below the left corner of his mouth. I saw no trace of stubble on his face, even in the saddest days of the Republic, when he, the responsible head of its power, saw the inevitable end approaching, and, like poor Lincoln after Fredericksburg, might have said, "If there is a soul out of hell that suffers more than I, God pity him!" His head, thrown well back, tip-tilts his nose more than nature intended. It might be a better nose, but he seems to be satisfied with it. The eyes are limpid, neither strikingly large nor dark, but they have a way of looking one frankly through and through, as with self-consciousness of integrity of convictions. Well-rounded brows slope upwards into a somewhat receding forehead,

made more conspicuous by baldness. One looks, and sighs for the superhuman frontal bulk of Webster. Castelar's chin, too, is inadequate. It is delicately rounded, but there ought to be more of it. If he had possessed Serrano's forehead and chin, the Spanish Republic might have been a living thing to-day.

But his voice! Like Salvini's, once heard it is never to be forgotten. Whether in the softly modulated tones of conversation, when the peculiar Andalusian accentuation is now and then characteristic, or rising to the sober force of demonstrative declamation, or trembling with feeling, or sweeping all before it in a wild Niagara of invective, it is always resonant. His slightest whisper pierces to the farthest corner of the Hall of Deputies, his fiercest Boanerges-blast is never harsh. This orator found his chiefest implement ready fashioned to his use. *He* never had to fill his mouth with sea-shore pebbles.

I saw him make his famous speech on the bill for Cuban emancipation. Madrid was agog for weeks beforehand. It was announced that Castelar was to make the grandest effort of his life. Tickets for the galleries were eagerly sought. Every deputy was in his seat, every nook was filled. The initial proceedings interested no one. A Spaniard said to me, "All Madrid has come to a Castelar *matinée*."

His gestures, like those of most Castilian speakers, were ceaseless and somewhat exaggerated. Some seemed to be peculiar to himself. I remember one in particular, when, with fingers loosely interlaced and palms upturned, he seemed to winnow a double handful of nothing for a minute or two. It accompanied a passage of marvelous pathos, descriptive of the sad condition of the slave. Another, which is, I think, a national gesture, consists in taking an idea, as it were, between the forefinger and thumb of the right hand, holding it up, turning it around, showing it on this side and that, above and below, as if it were a gem with many facets, and at the last releasing it, high in air, like some living thing, to speed through space. This generally accompanies some didactic demonstration. At times the redundancy of gesture is almost pantomimic. One would, perhaps, then recall Salvini's description of his escape in "*La Morte Civile*." The grandest part of that emancipation speech was the apostrophe to Lincoln. Step by step he drew the picture of the great emancipator's life and life-work, "until, at the last, that nothing might be wanting to his glory, not even martyrdom, like Socrates, like Christ, like all redeemers, he fell at the foot of his finished work, *his* work,

upon which humanity will forever shower its tears and God his benedictions!" And the prolonged thunders of applause that followed did an American heart good.

The speech accomplished little. It passed as a splendid pageant. Castelar advocated immediate emancipation in Cuba and Puerto Rico; the measure for gradual enfranchisement prevailed. Oratory like Castelar's is mostly on the side of the minority, and not, as a rule, to be measured by results. Its faculty seems to be critical and subversive, rather than creative and conservative. If Castelar were not in opposition, he would not be Castelar.

Perhaps the most vivid association I have of Castelar belongs to the memorable night after King Amadeo's abdication, when the Spanish Republic was formed. The Senate and House met in the Hall of Deputies and coalesced, with doubtful constitutionality, to form a Constituent Assembly. The result was known to be a foregone conclusion, and as the hours wore on in routine and in needless debate, the impatience of the Assembly and auditors increased. Castelar spoke but little. As reporter of an appointed committee, he presented a finely turned address to Amadeo, accepting the renunciation of the crown. Later he spoke, urging moderation and the adoption of federal organization. It was late at night when the vote was reached, to choose between the Republic and the monarchy. It was overwhelmingly for the Republic, 259 yeas, 32 nays. Estanislao Figueras, the grand, consistent Federalist, to whom more than any man Spain owes what it has of true democratic teaching, was elected President of the Executive Power of the Spanish Republic. The cabinet was chosen too, Castelar being Minister of State. One by one, as their names were announced, they left their seats in the Assembly to range themselves on the Blue Bench where royal ministers had sat. There was silence in the auditory, save a brief applause as each name was called, but it was a silence of emotion, and strong men hugged each other and wept because the Republic had come at last. And the main figure in my recollection is that of Castelar, more erect than ever, his eyes brimming, his hands tightly closed, moving down the central passageway from the seat he modestly occupied on the left at the rear, and entering the Blue Bench next after Figueras. His dream had come true!

A few days later General Sickles was formally received by Figueras as envoy of the United States. The President was surrounded by his cabinet, after the traditional Spanish fashion, Castelar on his right. The speeches made and hands shaken, Castelar violated all

rules of ministerial decorum by hugging me, in the odd Castilian way, patting my back with one hand, and crying, "We have lived to see this day at last!"

We lived to see other and darker days for the Republic. Administration succeeded administration with the shifting indistinctness of a nightmare. The phantasm of Carlism loomed ominously on the northern horizon. The work of framing a Constitution aroused hopeless dissensions in the party. Castelar's idea was a true federation, each of the old kingdoms of Spain to be a sovereign state, and all banded in a common pact. Of the ultra states-rights doctrine was born the hydra of communistic secession. It was Castelar's fate to be chosen President in season to confront the Commune of Murcia. His rule was undeniably weak. Contrary to all the teachings of his life, he found himself reduced to the obnoxious resort of a centralized military autocracy, and compelled to lean for aid on generals of royalist proclivities. To add to his perplexity came the disastrous incident of the *Virginius*. He did his best to avert a rupture with the United States, but at the cost of prestige at home and in the Antilles. At length, outvoted in the Assembly, he retired to private life with unfeigned relief, and with him the Republic fell. It would have been better for him had he never felt the burden of responsible power.

Since then Castelar's position in the political world of Spain has been anomalous. Opposed by his own party in Barcelona, he has been returned to the Chamber through the toleration of the monarchy. Abstaining from all revolutionary plottings, he has proclaimed himself a "Possibilist," unprepared to actively combat any government which may bring constitutional peace to Spain. Formerly a bitter opponent of army power, and enthusiastic in his admiration of the absence of a great standing army in the United States, he came to advocate a military government like that of Germany as the highest human achievement, and contrasted the compulsory service of the Landwehr and Landsturm with that of England and the United States, whose soldiers he said were "mercenaries and hirelings." Once

steadfastly opposed to the death penalty in the army, he later urged it because, he said, "the soldier would not face death unless certain death were behind him if he recoiled."

Castelar does not appear to have been regarded by the royalist governments of later Spain as a dangerous opponent. On the contrary, there has been something akin to and perhaps overpassing toleration, in his conservation of a place in the passive minority. He speaks as of old, but rarely, and is ever "the glory of the Spanish rostrum."

Of the character of his oratory it is not easy to speak. His discourses do not bear close analysis. Cánovas, Alonso Martínez, Sagasta, Mártos, and many others are his masters in debate. In fact, Castelar is not a good debater. Set speeches are his peculiar province. I have heard it said that they are written and committed to memory. Taken unawares by a shrewd logician, whom florid generalities will not silence, he does not show to advantage.

His style is, to our more sober Saxon thinking, redundant, and laden with tropes and metaphors. His reasoning is essentially poetical; imagination outweighs logic, and similes and illustrations take the place of argument. His rhetorical manner may be evidenced by a sentence I find in an album,—and, by the way, I know of no man more ready than Castelar to give his autograph, with a sentiment attached :

"Faith," he writes, "may change its aim, but ever remains in the depths of human nature as the supremest virtue, impelling to supreme acts. Life is, and will ever be, a stormy ocean. To cross this ocean, in Faith, and in Faith alone, must we embark. In this bark the prophet Columbus set sail, and, at his journey's end, found a New World. If that World had not existed, God would have created it in the solitude of the waves, if only to reward the faith and constancy of that man. We shall yet behold throughout the world that liberty and equality whose dawns already shine upon the pure brow of America the virgin, because we are resolute in our search thereof and possess assured faith that we shall find it."

Alvey A. Adee.

TOPICS OF THE TIME.

The Outlook for our Cities.

WHAT De Tocqueville saw so clearly forty years ago is evident now to the wayfaring man, though not a philosopher — the fact, namely, that the crucial problem of American civilization is to be worked out in the cities. If in 1848 the size of our cities and the nature of our population constituted “a real danger,” what must be true of them to-day? The most populous of our cities has nearly trebled its population since then; the same is true of Philadelphia and Cincinnati; Brooklyn and St. Louis have increased sixfold; San Francisco has sprung from fifteen or twenty thousand to three hundred thousand, and Chicago from about the same numbers to six hundred thousand; while scores of cities, populous, noisy, full of the most intense and turbulent life, like Minneapolis and St. Paul and Kansas City and Omaha and Denver, had not even a name when De Tocqueville was our honored guest. Less than three millions of our people were then living in cities; now more than twelve millions find their homes in cities whose population exceeds eight thousand. Since 1848 the population of the whole country has trebled, and the fraction which describes the proportion of the urban population to the whole population has been doubled; for then the cities held only one eighth of our people, and now they contain nearly one fourth of a population threefold greater. The size and number of our cities would astonish the French publicist, if he could return to our shores to-day. As to the nature of the population, there is not much reason for believing that it has improved. It is less homogeneous and less orderly now than it was then; the extremes of wealth and poverty are farther apart; discontent is deeper and more threatening; vicious politics are more strongly entrenched; the domination of the rum-power is more arrogant and more absolute; the spirit of mercantilism has constantly encroached upon public spirit, and the men of intelligence and business standing who take active part in municipal politics are relatively fewer now than they were forty years ago. In 1848 our millionaires might have been counted on the fingers of one hand, and we had almost no paupers; now we have millionaires by the hundred and paupers by the hundred thousand, and both these classes are almost confined to the cities. The new rich, with all the vices of their class, with none of the cultivation and discipline which are traditional in a hereditary aristocracy, and with a boundless contempt for everything that money cannot buy, are making a figure in our city life to-day that would have amazed the grandees who were flourishing about the middle of this century. At the other end of the social scale vast multitudes of our city people are huddled together in districts, of which the population is more dense than that of any precinct of Pekin—in tenement houses where the physical conditions make health and comfort and morality and even common decency impossible. It is out of these compost heaps of humanity that the fungi of communism and nihilism spring;

and the extent to which these notions have spread among the poorer classes is not, probably, realized by our prosperous and fortunate people.

On the whole the outlook for our great cities is not reassuring; and it is not strange that a congress of churches was lately gathered at Cincinnati to study the problem, and to discover, if possible, some remedies for the increasing evils. The congress is itself a hopeful sign; the disposition to look the facts steadily in the face, to know the worst of the ills that afflict us, is the first condition of successful work for their removal.

Two or three facts may be assumed as fundamental in dealing with this great question. The first is that the unfortunate condition of our cities is aggravated by the absenteeism which is becoming so prevalent. Thousands of the men who are making their fortunes in the cities make their homes elsewhere. Their business enterprises draw together vast numbers of mechanics, operatives, shop-girls, clerks, messengers, who must live in the cities; and they themselves flee to the suburbs and leave the social life of the cities to be shaped by the keepers of the saloons and the proprietors of the theaters and the dance-houses. The class that escapes to the country is, very largely, the class that is most needed in the cities—the “upper middle class,” the men of sound sense and steady habits. Their reasons for removing their families to more healthful homes and more quiet neighborhoods are obvious and cogent. The absenteeism of capitalists and employers is affecting the social and political life of our cities and manufacturing towns in much the same way that the absenteeism of landlords has affected the social and political life of Ireland. If men make their gains through the massing of these populations, they are bound to see to it that the people thus gathered together for their profit take no detriment from their associations; and the saving influence can only be exerted by those who live in the midst of the multitudes to be saved, and who helpfully address themselves to the problem of improving the social life of the cities.

The urgent need of a more active and energetic participation in the social, philanthropic, and political life of the cities by the business men now living in them is also obvious. The charitable work of the cities has been left, for the most part, to ministers and women. Some parts of this work can best be done by those to whom it has been surrendered; but there are other departments of it in which the firm judgment and the trained faculty of men of affairs are indispensable. The rapid growth of a pauper class in all our great cities calls for clear thinking and resolute effort.

The same thing is true of the work of the churches. The men of business have been liberal in their gifts of money to the churches, but they have bestowed very little of their time and thought upon their work. The great majority of the male members of the churches take no part in their life beyond the payment of their pew-rent and the attendance upon one service every Sunday. What plans the church may have for extending its

influence, for reaching the outside multitudes, for shaping, through its vital forces, the life of the community, they scarcely know, save as they hear them alluded to now and then from the pulpit. Now, here is an agency that ought to be most efficient in restraining the evils of society and in improving its conditions. In its origin this agency claims to be divine; but, like every other social institution, its usefulness depends upon human coöperation. The church can never be the power that it ought to be while so large a part of the intelligence and the enterprise of the community is withheld from its active service. It is not only in the management of its finances that the church needs these men of affairs, but in the development of its spiritual life and its benevolent work. A more business-like religion—one that takes hold in a practical, common-sense way of the problems of city-evangelization—is a crying need of these times.

The responsibility of the citizens of intelligence and property for the right government of the city is a tiresome commonplace. Nevertheless, it must be constantly reiterated. The power of these citizens to control the government, when they cast off the fetters of party and unite in the interest of public morality, is not doubted. So long as party lines are rigidly maintained in municipal politics, the rascals will always rule; they know how to combine, and they are thus able to control the nominations of one of the political parties, if not of both. But when the honest citizens unite, they always put the rascals to flight. This has been done in all our largest cities—in Brooklyn, in Philadelphia, in New York. The trouble arises from the fact that these uprisings of the people are spasmodic and occasional; they soon go back again to their buying and selling, and leave the field to the bad politicians. The fact to be urged upon citizens of intelligence and property is that they cannot keep the benefits of free government unless they are willing to pay full price for them. The whole duty of the average citizen cannot be discharged in the half hour that is required for the depositing of his ballot once or twice a year, nor by the check wherewith he pays his taxes. Citizenship in our American cities means more than this. Its obligations cannot be honored without devoting a great many hours in every year to study, and consultation, and difficult and disagreeable work.

Cheap Books under International Copyright.

CHIEF among the objections urged against International Copyright has been the allegation that it will make books dear: the people want cheap books, is the cry. The people want cheap beef and cheap bread, but this is not used as an argument for the denial of the protection of the law to the butcher and the baker. At first sight there may seem to be a certain plausibility in the assertion that the granting of copyright to the foreigner will make books dearer. The foreigner whose books we most often reprint is the Englishman, and certain kinds of English books are published originally at high prices. An English novel, for example, is generally issued in two or three volumes at from five to eight dollars; and a few of the lighter books of travel and biography are also published at a prohibitive price. This is because Great Britain is a small, compact country, with a highly organized system of circu-

lating libraries. The English publisher does not expect to sell a novel at seven dollars to a single reader; his large and sure customers are the circulating libraries, who lend it to the reader. But these high prices, even for books of this class, are apparent only and temporary. A successful novel is republished within six months in one volume at from fifty cents to a dollar and a half. And whether republished or not, second-hand copies are generally sold off by the circulating libraries in less than a year at from a quarter to a half of the published price. The English system of high prices is applied only to certain classes of books, and even as to these it is temporary. Professor Lounsbury, after an experience of years in buying for the library of Yale, declares that in the long run English books are cheaper than American books.

There is no danger that English publishers will try to impose on American readers the traditional methods of British bookselling, wholly unsuited to our tastes, to our customs, and to the vast extent of our country. The English are a book-borrowing people; we are a book-buying people; and any attempt to establish in these broad United States the English system of circulating libraries would surely fail. We have no right to assume that any English publisher who should venture to enter the American market would be so foolish as not to adopt American methods and to conform to American conditions. It would be their loss if they did not, and the loss of the English authors whose books they might publish; and they would very soon return to reason. There are now two great English publishing houses having important branches in New York, and both of these carefully adjust prices to suit the American demand and the traditions of the American trade. One of these houses has published a novel of Mrs. Oliphant's in London in three volumes at seven dollars and a half, and at the same time in New York in one volume at a dollar.

The passing of an International Copyright Bill will not make American books any dearer, nor will it in any way affect the prices of books already published; therefore the Greek and Latin classics, the great literatures of Italy, Spain, France, and Germany, the whole of English literature to this year of grace, and all that part of American literature which was in existence in 1844, will be just as cheap as it has been. There will be no change of any kind as far as these things are concerned; and exactly how great a proportion of the books worth reading are included in these various classes it is impossible to say, but it is quite nine-tenths, not to say ninety-nine hundredths. The passing of an International Copyright Bill can raise the price only of the future writings of foreign authors, and these only when they are suitable for republication here in the cheap pamphlet libraries. Now, it is only the lesser part of the work of foreign authors which is reprinted here in the pamphlet libraries at from a dime to a quarter. In the main these pamphlet libraries contain novels, and novels only. In all probability new English novels will not be quite as cheap after international copyright as before. But it is only new English novels which may be any dearer, and these new English novels cannot be much dearer, because they must be published in competition with all the great novels of the past on which there is no copyright, and with the increasing novels of the brill-

iant American school, which have frequently been sold as cheaply as fifty cents.

Rising from details like these to a consideration of the general question, it is not difficult to show that the extension of copyright will not seriously increase the price of books. France, for example, is the country giving perhaps the fullest copyright protection to authors of all nations, without distinction. Literature prospers in France, and French authors are rewarded and honored; there are perhaps half-a-dozen French novelists who can be sure of a sale of fifty thousand copies for any new novel they may write. Yet nowhere

are books cheaper than in France; and books have been cheap in France since Michel-Lévy wrought his literary revolution, now nearly half a century ago. A French novel appears generally in one volume at seventy cents, and it is often reprinted later in cheaper form for twenty cents. All the tales of that most delightful of story-tellers, the elder Dumas, can be bought in Paris for twenty cents a volume. American publishing methods are more closely akin to French than to English; and in America as in France the reading public has formed the habit of cheap books, to which no publisher would now dare to run counter.

OPEN LETTERS.

Christian Union.

LETTERS FROM PRESBYTERIAN DIVINES.

From Rev. Dr. Crosby.

THE Rev. Dr. Shields has prescribed a very simple remedy for church separation among Protestants; namely, union on the basis of the Protestant Episcopal liturgy. Coming from a Presbyterian, this is very complimentary to our Episcopal brethren, and very magnanimous for a Princeton man. We have heard of other easy schemes to the same end, as, for example, union on the basis of the Solemn League and Covenant.

But the plan is too easy and simple; that is, it is so easy and simple for one denomination that it would be very hard for the rest. The one denomination that would have to do nothing would enjoy the operation, but those that had to do all the changing might find it a very severe process. We only know of two Presbyterian ministers who could be counted on as venturing on this one-sided consolidation—Dr. Shields himself and my excellent friend Dr. Hopkins. I know a little about Presbyterians, and of them only I speak. They are not in love with the Episcopal liturgy. They cannot extol it in the panegyric of Dr. Shields. They like parts of it very well, and count most of it excellent English, but they object to a great deal in it, and could never make use of it.

1. They object to the breaking up of prayer into little fragments, each beginning with an invocation and ending with a formal peroration. They consider this style of prayer too artificial and leading to a mechanical worship.

2. They object to the open-eyed reading of prayer, as tending to withdraw the mind from the unseen.

3. They object to the stereotyped prayer, however excellent.

4. They object to the Litany *in toto*, as putting the believer far off from God, calling on him to *spare* him as a miserable sinner, when, as an accepted child of God, he should reverently call upon God as a dear Father near at hand, ready to bestow his gifts abundantly. The Litany has no feature suited to the "heir of God or joint-heir with Christ." Many of the features of the Litany (like the prayer against sudden death) are but relics of Romanism, and its repetitions are unmeaning.

5. They object to the absolution *declaration*, which is only a toning-down of the Roman absolution *bestowal*. No minister is authorized to pronounce an absolution on the penitent, any more than one who is not a minister. That grand truth is for everybody to know and to proclaim. The minister has no prerogative here, as this section of the prayer-book would imply. It is a remnant of the priestly idea of a Christian minister, while Presbyterians hold that all believers are equally priests, and that a minister is only an ordained leader and ruler.

6. They object to the repetitions of the Lord's Prayer, as if it were a magical formula, which was effective by frequent repetition.

7. They object to the clear remnants of transubstantiation in the Communion Service and of baptismal regeneration in the Baptismal Service—two doctrines which Presbyterians abhor.

With such objections on the part of Presbyterians (in which, I doubt not, Baptists, Methodists, and Congregationalists would largely concur), how can Dr. Shields's plan of union on the Episcopal liturgy be of avail?

The truth is that Christians cannot be made to agree on the points referred to, nor on secondary matters of doctrine and church government, nor is it desirable that they should agree. Down deep in the fundamentals of Christ's divinity, incarnation, sacrifice for sin, the gift of the Spirit, faith, repentance, the new life, Christians of all evangelical creeds and customs agree, and *on these they can unite*, but on nothing else. A visible union can be brought about only with the liberty of each Christian or group of Christians holding his or their differences in creed and custom. The union would be by periodical congress for prayer and conference, and by coöperative work in Christian associations and alliances for general effort against falsehood and infidelity. This union is feasible, and is, indeed, beginning to be a fact through more enlightened Christendom.

I am an out-and-out Presbyterian, but I find it a delight to work with my Episcopal friends in their admirable Church Temperance Society; I have worked side by side with Baptists and Methodists in City Missions and in Young Men's Christian Associations, and it never occurred to any of us to think of denominational differences; I am a member of two ministerial organizations where ministers of all the Protestant

denominations meet every week or fortnight, and the ties of friendship and esteem are equally strong between all. Here is Christian union of the highest sort. In maintaining and fostering such brotherhood we shall arrive at the perfection of Christian union, without touching the individual differences of view regarding the non-essentials of religion; and, furthermore, such a course will inevitably operate in making us all slough off such differences as are inimical in their spirit to true Christian fellowship. It will promote a spirit of yielding as against the spirit of mere prejudice, and establish true liberty in conjunction with solid and effective union.

The liturgy scheme is very pretty, but there is no substance in it. It is too romantic for plain people who wish for reality. It is a holding together the beams of a house with Spalding's glue. It looks very fair while it sticks, but a breath of the zephyr will bring chaos. We must have something that works from the heart outwards if we would have strength and permanency. That which is plastered on from without is deceptive and transitory.

Howard Crosby.

From Professor Hodge.

THERE are only two generically distinct doctrines of the Christian Church. The first maintains that it is essentially an organized society, its outward form as well as its informing spirit determined by the constitution originally imposed upon it by Christ, and this outward form preserved, through the succession of its officers, in unbroken organic continuity from the days of the Apostles until now.

The second doctrine maintains that the Church is a general term for the whole body of regenerated men, whether of past, present, or future generations. These are constituted one spiritual body by the indwelling of the Holy Ghost, which unites them to Christ their head, as all the various elements and members of our natural bodies are constituted one by the indwelling of a common soul. The many members of this body being many are one body; and it is all the more one because of the infinitely various relations which the several members sustain to their Lord and to each other, determined by their various natural faculties, historical conditions, and gracious endowments.

A very slight knowledge of history proves that the doctrine of the Church first stated is impossible. It is simply absurd to pretend that any one of the various competing churches of the present or of any former age since the second century is identical in outward form with the societies founded by the Apostles, or that it has preserved its organic continuity intact by an unbroken succession of officers under an unchanged constitution from that age until now. It is, moreover, precisely in the case of those extant churches which most emphasize the absolute necessity of an identity of external form, and of an uninterrupted continuity of succession, that the absurdity of the claim is rendered the most conspicuous and certain, by the facts of their history and the wide contrast existing between their ecclesiastical order and forms of worship and the apostolic literature and monuments. The more thoroughly this theory of the Church, therefore, is put to the test, the more it is found to be inconsistent with all the providential facts of the case.

On the other hand, it is evident that the second doctrine of the Church as above stated is the one which alone justifies the application to it of the common predicates of apostolicity, catholicity, infallibility, perpetuity, and sanctity. The spiritual body is always faithful to the genuine apostolic doctrine in all its essentials; is infallibly preserved from all fatal errors of faith or practice; is set apart from the world as consecrated and morally pure; and endures through all conflicts and changes, as indestructible, and unchangeably one and catholic, embracing in one spiritual union all saints in all parts of the world, in all successive generations.

It is no less visible. When consummated, it is to be the most conspicuously glorious of all created objects, "fair as the moon, clear as the sun, and terrible as an army with banners." It is visible in its essential nature, because it exists in part of men and women living in the flesh, and because these possess a peculiar spiritual nature which is manifested in their lives, so that by the very force of their saintship they are set apart in contrast to the mass of mankind, as "the salt of the earth" and "the light of the world." Moreover, it belongs to the essential nature of this spiritual church, as composed of intrinsically social beings, who by reason of their saintship are loyal servants of their Master in a hostile world, that it everywhere and always tends to express itself in some external organized form, and so render itself the more definitely visible.

This tendency to self-organization is intrinsic, and therefore constant and universal, and acts always spontaneously, springing from the social nature of man, and from the common needs and aspirations of all its members. All the various forms which thence result have been comprehended in God's design, and are necessary for the spiritual development of the Church, and for the accomplishment of the great tasks it has been commissioned to perform. Yet the permanent results of biblical interpretation unite with the history of his providential and gracious guidance of the churches in proving that Christ never intended to impose upon the Church as a whole any particular form of organization. Neither he nor his apostles ever went beyond the suggestion of general principles, and the actual inauguration of a few rudimentary forms. The history of the churches during all subsequent ages shows that these rudimentary forms have been ever changing in correspondence with the changes in their historical conditions. And in exact proportion to the freedom and fruitfulness of the Church's activity in the service of its Master, the more rapidly and flexibly are these organic forms adapted to the conditions of the sphere in which their especial work is appointed. These various denominational forms of the living Church are all one in their essentials, and differ only in their accidents. These accidents have been determined in each case by conditions peculiar to itself, especially by those resulting from national character, and from political, social, educational, and geographical circumstances. Some have sprung from transient conditions, some from the idiosyncrasies of their founders, and some even from the follies and sins of selfish partisans. Other differences are rooted in far more permanent distinctions of nations and classes, and represent persistent rival tendencies in the thoughts and tastes and habits of man. All of

these, since they exist, and are used as instruments of the Holy Ghost, have in that fact a providential justification. And each one, even the least significant, emphasizes some otherwise too much neglected side of the truth, and is therefore, in its day, necessary to the completeness of the whole.

It is evident, therefore, that while the Church of Christ necessarily tends to self-organization under ordinary conditions, and to different forms of organization under different conditions, nevertheless organization itself is not of its essence. The Church exists antecedently to and independently of any organization, and its far larger part, embracing all mankind of all centuries dying in infancy, extends indefinitely beyond all organizations. All the more it is certain that no special form can be essential to the existence or even to the integrity of the Church.

As the outward form should express the true character of the informing spirit, of course, in an ideally perfect state the essential unity of the Church, as well as all other permanent characteristics, must find expression. All radical diversities, all irreconcilable oppositions, all bigotry, jealousy, alienation, and strife must be eliminated. But all unity implies relation, and all relations imply differences, and the sublime unity of the Catholic Church, of all peoples, and of all generations, implies the harmony of incalculable varieties. The principle of the union is spiritual and vital, and hence must be the result of an internal growth. The more perfect the inward life, the more perfect will be its outward expression in form. The final external form of the Holy Catholic Church will never be reached by adding denomination to denomination. It will come as all growth into organized form, alike in the physiological and in the social world, comes, by the spontaneous action of central vital forces from within.

All living unity implies diversity, and just in proportion to the elevated type and significance of the unity will be the variety of the elements it comprehends. In the barren desert each grain of sand is of precisely the same form with every other grain, and therefore there is no organic whole. The life of the world results from the correlation of earth and sky, of land and sea, of mountains and plains. All social unity springs out of the differences between man and woman, parent and child, men of thought and men of action, the men who possess and the men who need. No number of similar stones would constitute a great cathedral. No number of repetitions of the same musical sound would generate music. Always where the most profound and perfect unity is effected, it is the result of the greatest variety and complexity of parts. This law holds true through all varieties of vegetable, animal, and social organisms, and is revealed equally through all the pages of the geologic records.

Certainly God appears to be preparing to make the ultimate unity of the Church the richest and most comprehensive of created forms in the number and variety of its profound harmonies. It would have been a very simple thing at the first to form a homogeneous society out of the undifferentiated family of Adam, numerically multiplied. But for thousands of years God has been breaking up that family into a multitude of varieties, passing all enumeration. In arctic, torrid, and temperate zones; on mountains, valleys, coasts, continents, and islands; in endlessly drawn-out suc-

cessions of ages; under the influence of every possible variety of inherited institution; in every stage of civilization, and under every political, social, and religious constitution; through all possible complications of personal idiosyncrasy and of external environment, God has been drawing human nature through endless modifications. All these varieties enter into and contribute to the marvelous riches of the Christian Church, for her members are "redeemed out of every kindred, and tongue, and people, and nation." And all these are further combined into all the endless varieties of ecclesiastical organizations, monarchical, aristocratical, republican, and democratic, which the ingenuity of man, assisted by all complications of theological controversy and of social and political life, has been able to invent.

Who then shall guide all these multitudinous constituents in their recombination into the higher unity? Shall it be accomplished by a process of absorption into some ancient society claiming to be *the Church*? Shall it be helped forward by the volunteered offices of some self-authorized "Church Congress"? A time can never come when many of these differences so evidently designed will be obliterated. But undoubtedly a time is soon coming when the law of differentiation, so long dominant, shall be subordinated to the law of integration, when all these differences so arduously won shall be wrought into the harmony of the perfect whole. The comprehension of so vast a variety of interacting forces must be left to God.* His methods are always historical, and his instruments are all second causes. He alone has been coterminous with the Church under all dispensations, and omnipresent with the churches of every nation and tribe, and with Him "a thousand years are as one day."

The sin of schism is unquestionably very common and very heinous. In its essence it is a sin against the unity of the Church. If this unity were external and mechanical, then all organic division or variety would be schism. But since the principle of unity is the immanent Holy Ghost binding all the members in one life to Christ its source, schism must consist in some violation of the ties which bind us to the Holy Ghost, or to Christ, or to our fellow-members.

Hence all denial of the supreme Godhead and Lordship of Christ is schism. All denial of the body of catholic doctrine, common to the whole confessing Church, and embraced in the great ecumenical creeds, is schism. All sin against the Holy Ghost, every breach of the law of holiness and defect in spiritual-mindedness, tends to the marring and dividing of the body of Christ. All pride, bigotry, and exclusive churchism; all claim that the true Church is essentially identical with a certain external organization or form of organization, or with a definite external succession of officers; all denial of the validity of the ministry and sacraments of any bodies professing the true faith, and bearing evidence of the presence of the Holy Spirit, is schism. All party spirit, jealousy, and selfish rivalry; all unnecessary multiplication of denominational organizations; all want of the spirit of fraternal love and cooperation in the service of the common Master, tends to the marring and dividing of the body of Christ.

If this be true, it is evident that the real union of the churches can best be cultivated by promoting the

central spiritual unity of the Church which comprehends them all. For this end all who call themselves Christians must with one purpose seek to bring their whole mind and thought more and more into perfect conformity to the *Word of God* speaking through the sacred Scriptures, and their whole life and activity more and more into subjection to the control of the Holy Ghost dwelling in the whole body and in all its members alike. This process must, of course, proceed entirely from within outward, never in the reverse direction. Organic unity will be the result of the co-operation through long ages of an infinite variety of forces. It cannot be brought about by any system of means working towards it directly as an end in itself. All such unionistic enterprises are prompted by many mixed motives, some of them essentially partisan and therefore wholly divisive in their real effects. But hereafter in God's good time the result will come as an incidental effect of the ripening of all the churches in knowledge and love and in all the graces, and especially of a whole-souled self-forgetful consecration of all to the service and glory of their common Lord.

It appears to us that the very felicity of the title affixed by Dr. Shields to his graceful article renders it all the more illusive. The United States are all similarly organized republics, established in different though adjacent territories. The united churches of these United States, on the contrary, are incongruous ecclesiastical organizations, competing as rivals on the same territory. We differ also from the Doctor in our estimate of the comparative hindrances to union severally presented in the departments of dogmatic profession, of ecclesiastical order and government, and of liturgical culture; and we differ from him seriously in our reading of the tendencies of the age.

In the first place, we believe that doctrinal agreement could much more easily be effected than organic union or liturgical uniformity. Indeed, doctrinal agreement on the basis of a common creed confined to the essentials of the historic catholic Christian faith, relegating all other points of theological opinion to the schools, would be within the limits of English-speaking Protestantism a very hopeful undertaking, if only the great practical questions as to church government and worship were removed out of the way. The most dogmatically conservative and exacting among us freely recognize the common Christian brotherhood of all who cordially accept the essentials of the common faith. This has been practically exhibited on a wide scale, when the simple confession of the Evangelical Alliance received the spontaneous suffrages of all Protestant Christians, whether Lutherans, Arminians, or Calvinists. This dogmatic consensus, although general and confined to fundamentals, must necessarily be in the line of historic catholic orthodoxy. It must recognize a common source and standard of faith in the canon of inspired Scripture, the absolutely and only authoritative and infallible rule of faith and practice. It must embrace not the theories but the great essential facts of the supreme Godhead of Jesus, of his atonement, resurrection, government of the world, of his future and final judgment of all men. There can be no honest mutual toleration between those who hold and those who deny the supreme Godhead of our Lord. If they are right, we are the most gross of idolaters. If we are right, "they have made God a liar, because

they believe not the record that God gave of his Son." And the whole scheme of doctrine and life depends upon the conception we form of Jesus, and the consequent attitude we assume to him.

We believe that the difficulty will be found far greater in the department of ecclesiastical constitution and government; and that not because it is felt to be more vitally important than that of dogmatic faith, but because it is concrete and practical, and because it is the very thing involved in this *organic* union it is proposed to bring about. The several competing principles of church constitution involve antagonistic dogmatic principles, which in this sphere of organic union cannot be ignored, while the very situation demands their practical application. It is worth noticing that the most prominent and confident advocates of organic union are Congregationalists or Episcopalians, representatives respectively of the extremes of the utmost possible organic indeterminateness and independency, and of the utmost possible hierarchical authority and organic immutability. Each of these parties appear to believe that the union of the churches can be effected only by the assimilation of all other bodies to their own. On the same principles, the centers being changed, we would all advocate organic union. It is quite certain that neither extreme will prevail in the universal Church. It is safe to predict that the historic Church will never admit the principle of independency, and that the churches of the Reformation will never organize upon any principle that involves the repudiated dogmas that the Christian minister is a priest, that grace is mediated essentially by sacraments, and that the apostolic office is perpetual. In this I am sure that I speak for the forty million non-Episcopal Protestants of the English-speaking world. It appears to be as certainly true, on the other hand, that communities loyal to historic Catholic Christianity can never organize upon any principle involving the exclusion of the children of professing Christians from church membership. In this I am sure that I truly represent the seventy million Catholic and Pedobaptist Protestant Christians in the English-speaking world.

As to the prospects of union in the department of liturgical culture, we think that Dr. Shields has been misled by his tastes and wishes when he judges it to be the tendency of all denominations in the United States to adopt liturgical forms, and predicts that ultimately all will adopt in common the liturgy of the English Episcopal Church. It is not to be denied that such a tendency may be discerned among certain classes of the inhabitants of our large towns. But a wide induction of the changes which have taken place during the last two hundred years among the entire English-speaking population of the world leads to precisely the opposite conclusion. In the beginning of the eighteenth century, the Protestant inhabitants of the home of our race in Great Britain who adhered to the use of the national liturgy as compared to those who rejected it were in the ratio of five to one. Now, after nearly two hundred years, they stand in the same island in a ratio of rather less than one to one, in the colonies of the empire in the ratio of one to three, and among the "united churches of the United States" at a ratio of a little less than one to twenty-eight. This tendency prevailing among Protestants uniformly

wherever the English-speaking race extends, and for so long a time, seems to render it certain that the churches will not be united through the common use of the liturgy of the English Church.

It is undoubtedly true, as Dr. Shields asserts, that the specific varieties which have subdivided the great generic churches are gradually disappearing, being merged in their respective general masses. But it is also true that the great generic distinctions between the churches, as between Prelatic and Presbyterian, as between Baptist and Pedobaptist, as between Lutheran and Reformed, as between Independents and Churchmen, remain as sharply cut and as rigidly maintained as ever. At the same time new, distinct varieties are being generated among the Africans in our Southern States, and among all the nations of the earth with whom the labors of our missionaries are now beginning to meet with a world-transforming success.

A. A. Hodge.

Timber Famine and a Forest School.

SAVAGES live lavishly as long as their stock of food lasts, although they know they will have to starve afterwards. We say they can never climb out of savagery until they learn to save and to provide for coming want. Yet with respect to the forests—which are, no doubt, the most indispensable product of the soil—we have acted very much as the Comanche does with respect to his store of food.

The value of our forest products is not less than eight hundred millions of dollars a year. Our store of white pine is rapidly approaching exhaustion, and other valuable species will be as ruthlessly wasted when the pine is gone. When the resulting timber famine comes, it will for several reasons be a more serious calamity than would be the failure for ten consecutive years of any other of our crops.

First. No other product has so great a money value.

Second. Any other crop requires only a short time, usually a year, to reach maturity, while a forest needs from thirty to one hundred years.

Third. We know how to raise other crops, but to superintend financially profitable timber-growing requires a long and severe special training, such as is afforded in the state forests of continental Europe and in the professional schools connected with them.

Fourth. Failure, or even great scarcity, of working timber involves the derangement or total ruin of a vast number of important industries which wholly or in part depend upon the forest for their raw material. Some of these are metallurgy, building, wood-turning, tanning and the manufacture of articles made of leather, the making of wagons, carriages, furniture, musical instruments, sewing-machines, etc. In short, almost everything one uses needs wood directly or indirectly for its production.

Fifth. Destruction of the forest, especially upon steep hillsides, causes irregularity in rainfall and other climatic changes very harmful to agriculture, commerce, manufactures, and health, besides the loss from floods, of which during the last few years we have had such sad experience. It is estimated that the last

year's great flood in the Ohio cost sixty millions of dollars; and if the harm done by the much higher water of 1884 was less, it was only because that of 1883 did not leave so much property within reach of inundations.

But we shall never keep the hillsides wooded merely as a preventive measure. We must learn how to make timber-culture in such localities profitable; and that can never be done without skilled labor and such professional training for the superintendents of that labor as the forest schools of Europe afford.

The German Empire has nine such schools of a high grade; and France, Austria-Hungary, Switzerland, Italy, Spain, Portugal, Denmark, Russia, and Sweden have all made similar provision. In most of these countries there are also schools for training the forest officials of lower grades as well as the workmen.

In Germany graduation from a gymnasium, which is equivalent to the training given in most American colleges, is required before one can enter these higher forest schools. The course lasts from two and one-half to three years, and is so severe that only young men of more than common talent and industry can keep their place in the classes.

Then come ten years or more of hard study and practice in subordinate positions, after which, if one has acquitted himself well, he may hope for an appointment as district forester, but generally will have to wait longer before a vacancy occurs.

This long and arduous novitiate secures, of course, a high social rank for those who pass through it, and this creates so eager a desire for the position that there is never a lack of applicants, many of whom are from the best families. A few years since there were not less than thirty-three barons and knights employed in the crown forests of Prussia.

There are, too, many heirs of large landed estates who take this course so as to be fitted to take charge of their own forests, or at least to see that they are properly administered. Then there are many corporations organized for timber-culture, as it has been found that to be done to the best advantage it must be upon a large scale, since aside from other reasons it is only when so carried on that the services of properly qualified superintendents and workmen can be afforded. People of moderate means, therefore, must associate, if they would compete in the markets with rich proprietors and with the state.

A few words as to the nature and scope of the studies pursued in these schools.

First. Physical sciences. Here come in general and special chemistry, both inorganic and organic, physics, and meteorology, with thorough work in geology and mineralogy.

After this investigation of the "stuff" from which organisms are built comes botany in general and that of forests in particular, with microscopy. Next is zoölogy, vertebrate and invertebrate, with special attention to entomology, since insects are perhaps the worst enemies of trees. Withal, the art of making "preparations" of animal organisms must be mastered.

Second. Besides this work in natural science, which takes up about one-third of the school course, about half as much time is devoted to special mathematics, geodesy, interest and rent accounts, measuring wood, surveying, leveling, and plan-drawing.

Third. After these physics and mathematics, which

fill about half the course, come in such branches as public economy and finance, the culture and implements, the protection, usufruct, and technology of forests, appraising their value, making up statistics, construction of roads, etc.

Fourth. Then follows jurisprudence, civil and criminal, as applied to forests. And in connection with the entire course there are excursions to the woods, so that the knowledge gained shall not be too exclusively bookish.

When shall we treat nature's sylvan gifts with such appreciation as this? We are rapidly nearing a terrible reckoning for the breach of natural law involved in our wasteful treatment of the woods.

We have a great deal of second-growth woodland which, although it may be of value as a means of regulating climate and the flow of water in springs and streams, is producing very little of the timber which we are beginning so sorely to need. If we had a forest school, with a large tract of woodland under its care, it would be easy for farmers' sons to learn in a few weeks of observation, study, and practice how to do the pruning and thinning necessary to change these unsightly and nearly profitless wood-lots into rich and permanent sources of gain. If the proposed Adirondack Reservation is made, as it should be, to yield a large revenue instead of being a heavy and increasing burden and peril to the public, a thoroughly equipped forest school will be one of the first requisites.

S. W. Powell.

"Ex-Presidents."

THE Rev. H. L. Singleton, of Baltimore, writing to us on the suggested life-senatorships for ex-Presidents, holds that, as the Senate is a representative body containing in the official persons of the two senators from each State the States themselves, an ex-President has no more right or relevancy there than any other private citizen. He adds that if an ex-President represents anything—which he does not, however—it is the executive branch of the government; if while President he possessed no rights in the Senate, there are no possible grounds on which those rights could be conferred after he ceased to be President.

In the same communication Mr. Singleton protests against the growing disposition to call the Senate the Upper House, as if it were a House of Lords. The Senate and House, he writes, perfectly maintain the double representation which is essential to a popular government, and can maintain it only by preserving their equality. The integrity of the States is manifest in the Senate, the voice of the people in the House. That the most recent expression of the people's will may be obtained, the membership of the House changes more frequently, and for this reason the authors of the government gave to the House the right and duty of deciding Presidential elections and of electing Presidents, when the electoral votes are not decisive. This, he adds in conclusion, is certainly as high a prerogative as any the Senate holds.

BRIC-À-BRAC.

Uncle Esek's Wisdom.

MOST disputes can be settled by hearing both sides and believing neither.

TO LOVE applause is praiseworthy; to seek it is weakness.

IF "ignorance is bliss," I am more convinced every day there is a great deal of happiness in this world.

SUPERSTITION is the first thing to attach itself to, and the last thing to release its hold upon, man.

THE devil goes for the busy, but the idle meet him half-way.

WHOEVER heard of a miser who was anything else than a miser?

THE days of miracles and martyrdom are over; patent rights have taken the place of miracles, and live men the place of dead ones.

ANY man who can show me a better book can have my Bible.

* ABOUT half serpent and half dove is the right mixture for a man; for woman, I would suggest leaving the serpent out.

WE all expect to be remembered long after we are dead, but not one in a thousand of us can tell for what.

Uncle Esek.

Hog-Killin' Time.

You kin talk 'bout yer watermellion red as any rose,

Wid de rin' jes' as green as any grass;
An' de black seeds a-stickin' in de pulp lik' crows,—
But gimme de shoat an' apple-sass.

Fur yer mellion so scrump'shus I wouldn't gib a dime,

But how dis nigga's wishin' fur de hog-killin' time!

You kin argy 'bout yer buckwheat cakes, an' butter mighty hot,

An' 'bout de tas' ob chickens on de spit;
You kin preach 'bout yer possum when you lif' him f'm de pot,—

But yer talk doan' alterfy de ting a bit.
You kin put it in de reg'lar way, or put it in de rhyme,

Dat dis heah nigga's waitin' fur de hog-killin' time!

Jes' tink 'bout de puddin', an' de glo'rous tender chine,

De sassidge an de hominy, an' dat;
Reflec' upon de subjec' ob de spar'-ribs,—my! dese fine,—

An' talk 'bout de bacon lined wid fat.
Dere's udder tings dat's mighty good, dere's meat dat's mighty prime,
But golly! how I'se longin' fur de hog-killin' time!

Durva Morgan-Smith.

"SPERRITS."

"MY GREAT GABRIEL! LOOK AT DEM LEGS A-WAGGLIN'.—DOAN NEBER TELL ME TURKEYS AIN'T GOT NO SPERRITS."

A Rhyme for Priscilla.

DEAR Priscilla, quaint, and very
 Like a modern Puritan,
 Is a modest, literary,
 Merry young American:
 Horace she has read, and Bion
 Is her favorite in Greek;
 Shakspeare is a mighty lion
 In whose den she dares but peek;
 Him she leaves to some sage Daniel,
 Since of lions she's afraid,—
 She prefers a playful spaniel,
 Such as Herrick or as Præd;
 And it's not a bit satiric
 To confess her fancy goes
 From the epic to a lyric
 On a rose.

Wise Priscilla, dilettante,
 With a sentimental mind,
 Doesn't deign to dip in Dante,
 And to Milton isn't kind;
 L'Allegro, Il Penseroso
 Have some merits she will grant,
 All the rest is only so-so,—
 Enter Paradise she can't!
 She might make a charming angel
 (And she will if she is good,
 But it's doubtful if the change'll
 Make the Epic understood):
 Honey-suckling, like a bee she
 Goes and pillages his sweets,
 And it's plain enough to see she
 Worships Keats.

Gay Priscilla,—just the person
 For the Locker whom she loves;
 What a captivating verse on
 Her neat-fitting gowns or gloves
 He could write in catching measure,
 Setting all the heart astir!
 And to Aldrich what a pleasure
 It would be to sing of her,—
 He, whose perfect songs have won her
 Lips to quote them day by day.
 She repeats the rhymes of Bunner
 In a fascinating way,
 And you'll often find her lost in —
 She has reveries at times —
 Some delightful one of Austin
 Dobson's rhymes.

O Priscilla, sweet Priscilla,
 Writing of you makes me think,
 As I burn my brown Manila
 And immortalize my ink,
 How well satisfied these poets
 Ought to be with what they do
 When, especially, they know it's
 Read by such a girl as you:
 I who sing of you would marry
 Just the kind of girl you are,—
 One who doesn't care to carry
 Her poetic taste too far,—
 One whose fancy is a bright one,
 Who is fond of poems fine,
 And appreciates a light one
 Such as mine.

Frank Dempster Sherman.

The Music-Stool.

A WEARY old man with a puzzled face
 Went wandering up the market-place,
 And he muttered, "I won't be made a fool,"
 And tightly he grasped a music-stool.

He entered a stately furniture-store,
 And he set the music-stool down on the floor,
 And he said to the clerk, "You may think you're
 funny;
 But here's this cheat, and I want my money!"

"What's the matter, my friend?" asked the gracious clerk;

"Is anything wrong? Can't you make it work?"
 Said the ancient customer: "*What* did you say?
 I did not buy it to work, but to play.

"It was ticketed plain — why, any fool
 Could have read the ticket, 'A music-stool,'
 And I bought it yesterday afternoon,
 For we're all of us fond of a right good tune.

"I took it home careful, as you may see,
 And they all were pleased as they could be,
 And I thought there was nothing at all to learn,
 So I set it up and I gave it a turn.

"And I tell you, sir, that, upon my word,
 A squeak like a mouse's was all we heard!
 The missus, she looked a little vexed,
 But she says, quite pleasant, 'Let me try next.'

"Well, to cut it short, we all of us tried —
 There's six of the children — and some of 'em cried;
 We worked all the rest of the afternoon,
 But I'm blest if it gave us the ghost of a tune!

"And I tell you, it's no more a music-stool
 Than the old woman's wash-bench. I'm perfectly
 cool,
 But you needn't talk none of your butter and honey;
 Here it is, I say, and I want my money!"

Said the clerk with much gravity, "Let me explain."
 "No, sir! you'll please give me my money again!
 I haven't a doubt you can talk like a book,
 But I am not so verdant, my friend, as I look!"

Margaret Vandegrift.

Banished Love.

O SHEPHERDS! have ye wandering seen
 A winged boy with blinded eyes?
 I drove him from me yestere'en,
 Despite his tears and pleading sighs.

He bears a pretty bow, and keen
 Tipped arrows in his quiver lie.
 O shepherds, tell me, have you seen
 This banished Love come wandering by?

Why shines the sun, regret to mock,
 Why flaunt the flowers in hues so gay
 Why skip with joy the snowy flock,
 When poor lost Love is far away?

Unfeeling shepherds, wherefore smile
 And point toward my breaking heart?
 What! close behind me all this while?
 O sweet! we two no more shall part.

CREOLE SLAVE SONGS.

I.

THE QUADROONS.

THE patois in which these songs are found is common, with broad local variations, wherever the black man and the French language are met in the mainland or island regions that border the Gulf and the Caribbean Sea. It approaches probably nearer to good French in Louisiana than anywhere in the Antilles. Yet it is not merely bad or broken French; it is the natural result from the effort of a savage people to take up the language of an old and highly refined civilization, and is much more than a jargon. The humble condition and great numbers of the slave-caste promoted this evolution of an African-Creole dialect. The facile character of the French master-caste, made more so by the languorous climate of the Gulf, easily tolerated and often condescended to use the new tongue. It chimed well with the fierce notions of caste to have one language for the master and another for the slave, and at the same time it was convenient that the servile speech should belong to and draw its existence chiefly from the master's. Its growth entirely by ear where there were so many more African ears than French tongues, and when those tongues had so many Gallic archaisms which they were glad to give away and get rid of, resulted in a broad grotesqueness all its own.

We had better not go aside to study it here. Books have been written on the subject. They may be thin, but they stand for years of labor. A Creole lady writes me almost as I write this, "It takes a whole life to speak such a language in form." Mr. Thomas of Trinidad has given a complete grammar of it as spoken there. M. Marbot has versified some fifty of La Fontaine's fables in the tongue. Père

Gaux has made a catechism in, and M. Turiault a complete grammatical work on, the Martinique variety. Dr. Armand Mercier, a Louisiana Creole, and Professor James A. Harrison, an Anglo-Louisianian, have written valuable papers on the dialect as spoken in the Mississippi delta. Mr. John Bigelow has done the same for the tongue as heard in Hayti. It is an amusing study. Certain tribes of Africa had no knowledge of the *v* and *z* sounds. The sprightly Franc-Congos, for all their chatter, could hardly master even this African-Creole dialect so as to make their wants intelligible. The Louisiana negro's *r*'s were ever being lost or mislaid. He changed *dormir* to *dromi*'. His master's children called the little fiddler-crab *Tourlourou*; he simplified the articulations to *Troolooloo*. Wherever the *r* added to a syllable's quantity, he either shifted it or dropped it overboard. *Pòté ça ? Non !* not if he could avoid it. It was the same with many other sounds. For example, final *le*; a thing so needless — he couldn't be burdened with it; *li pas capab'!* He found himself profitably understood when he called his master *aimab' et nob'*, and thought it not well to be *trop sensib'* about a trifling *l* or two. The French *u* was vinegar to his teeth. He substituted *i* or *ei* before a consonant and *oo* before a vowel, or dropped it altogether; for *une*, he said *eine*; for *puis, p'is*; *absolument* he made *assoliment*; *tu* was nearly always *to*; a *mulâtresse* was a *milatraisee*. In the West Indies he changed *s* into *ch* or *tch*, making *songer chongé*, and *suite tchoôte*; while in Louisiana he reversed the process and turned *ch* into *ç* — *c'ercé* for *cherchez* or *chercher*.

He misconstrued the liaisons of correct French, and omitted limiting adjectives where he conveniently could, or retained only their final sound carried over and prefixed to the noun: *nhomme* — *zanimaux* — *zherbes* — *zaf-*

faïres. He made odd substitutions of one word for another. For the verb to go he oftener than otherwise used a word that better signified his slavish pretense of alacrity, the verb to run: *mo courri*,—*mo* always, never *je*,—*mo courri*, *to courri*, *li courri*; always seizing whatever form of a verb was handiest and holding to it without change; *no courri*, *vo courri*, *yé courri*. Sometimes the plural was *no zôtt*—we others—*courri*, *vo zôtt courri*, *yé zôtt courri*; *no zôtt courri dans bois*—we are going to the woods. His auxiliary verb in imperfect and pluperfect tenses was not to have, but to be in the past participial form *été*, but shortened to one syllable. I have gone, thou hadst gone: *mo 'té courri*, *to 'té courri*.

There is an affluence of bitter meaning

hidden under these apparently nonsensical lines.* It mocks the helpless lot of three types of human life in old Louisiana whose fate was truly deplorable. *Milatraïsse* was, in Creole song, the generic term for all that class, famous wherever New Orleans was famous in those days when all foot-passengers by night picked their way through the mud by the rays of a hand-lantern—the freed or free-born quadroon or mulatto woman. *Cocodrie* (Spanish, *cocodrilla*, the crocodile or alligator) was the nickname for the unmixed black man; while *trouloulou* was applied to the free male quadroon, who could find admittance to the quadroon balls only in the capacity, in those days distinctly menial, of musician—fiddler. Now sing it!

"Yellow girl goes to the ball;
Nigger lights her to the hall.
Fiddler man!
Now, what is that to you?
Say, what is that to you,
Fiddler man?"

THE FIDDLER.

It was much to him; but it might as well have been little. What could he do? As they say, "*Ravette zamein tini raison divant poule*" ("Cockroach can never justify himself to the hungry chicken"). He could only let his black half-brother celebrate on Congo Plains the mingled humor and outrage of it in satirical songs of double meaning. They readily passed unchallenged among the numerous nonsense rhymes—that often rhymed lamely or not at all—which beguiled the hours afiel or the moonlight gatherings in the "quarters," as well as served to fit the wild chants of some of their dances. Here is one whose characteristics tempt us to suppose it a calinda, and whose humor consists only in a childish play on words. (*Quand Mo 'Te*, page 824.)

There is another nonsense song that may or may not have been a dance. Its movement has the true wriggle. The dances were many; there were some popular in the West Indies that seem to have remained comparatively unknown in Louisiana: the *belair*, *bèlè*, or *bèla*; the *cosaque*; the *biguine*. The *guiouba* was probably the famed *juba* of Georgia and the Carolinas. (*Neg' pas Capa' Marché*, page 824.)

CALALOU.

II.

THE LOVE-SONG.

AMONG the songs which seem to have been sung for their own sake, and not for the dance, are certain sentimental ones of slow movement, tinged with that faint and gentle melancholy that every one of Southern experience has noticed in the glance of the African slave's eye; a sentiment ready to be turned, at any instant that may demand the change, into a droll, self-abasing humor. They have thus a special charm that has kept for them a place even in the regard of the Creole of to-day. How many ten thousands of black or tawny nurse "mammies," with heads wrapped in stiffly starched Madras kerchief turbans, and holding *'tit mait'e* or *'tit maitresse* to their

bosoms, have made the infants' lullabies these gently sad strains of disappointed love or regretted youth, will never be known. Now and then the song would find its way through some master's growing child of musical ear, into the drawing-room; and it is from a Creole drawing-room in the Rue Esplanade that we draw the following, so familiar to all Creole ears and rendered with many variations of text and measure. (Ah Suzette, page 824.)

One may very safely suppose this song to have sprung from the poetic invention of some free black far away in the Gulf. A Louisiana slave would hardly have thought it possible to earn money for himself in the sugar-cane fields. The mention of mountains points back to St. Domingo.

It is strange to note in all this African-Creole lyric product how rarely its producers seem

A NURSE MAMMIE.

to have recognized the myriad charms of nature. The landscape, the seasons, the sun, moon, stars, the clouds, the storm, the peace that follows, the forest's solemn depths, the vast prairie, birds, insects, the breeze, the flowers — they are passed in silence. Was it because of the soul-destroying weight of bondage? Did the slave feel so painfully that the beauties of the natural earth were not for him? Was it because the overseer's eye was on him that his was not lifted upon them? It may have been—in part. But another truth goes with these. His songs were not often contemplative. They voiced not outward nature, but the inner emotions and passions of a nearly naked serpent-worshiper, and these looked not to the surrounding scene for sympathy; the surrounding scene belonged to his master. But love was his, and toil, and anger, and superstition, and malady. Sleep was his balm, food his reënforcement, the dance his pleasure, rum his longed-for nepenthe, and

death the road back to Africa. These were his themes, and furnished the few scant figures of his verse.

The moment we meet the offspring of his contemplative thought, as we do in his apothegms and riddles, we find a change, and any or every object in sight, great or trivial, comely or homely, is wrought into the web of his traditional wit and wisdom. "Vo mié, savon, passé godron," he says, to teach a lesson of gentle forbearance ("Soap is worth more than tar"). And then, to point the opposite truth,— "Pas marré so chien avé saucisse" ("Don't chain your dog with links of sausage"). "Qui zamein'tendé souris fé so nid dan zoré ç'at?" ("Who ever heard of mouse making nest in cat's ear?") And so, too, when love was his theme, apart from the madness of the dance — when his note fell to soft cooings the verse became pastoral. So it was in the song last quoted. And so, too, in this very African bit, whose air I have not:

"Si to té tit zozo,
Et mo-mème, mo té fizi,
Mo sré tchoué toé — boum!
Ah! tchère bizou
D'acazou,
Mo laimein ou
Comme cochon laimein la bou!"

Shall we translate literally?

"If you were a little bird
And myself, I were a gun,
I would shoot you — boum!
Ah! dear jewel
Of mahogany,
I love you
As the hog loves mud."

One of the best of these Creole love-songs — one that the famed Gottschalk, himself a New Orleans Creole of pure blood, made use of — is the tender lament of one who sees the girl of his heart's choice the victim of chagrin in beholding a female rival wearing those vestments of extra quality that could only be the favors which both women had coveted from the hand of some one in the proud master-caste whence alone such favors could come. "Calalou," says the song, "has an embroidered petticoat, and Lolotte, or Zizi," as it is often sung, "has a — heartache." Calalou, here, I take to be a derisive nickname. Originally it is the term for a West Indian dish, a noted ragout. It must be intended to apply here to the quadroon women who swarmed into New Orleans in 1809 as refugees from Cuba, Guadeloupe, and other islands where the war against Napoleon exposed them to Spanish and British aggression. It was with this great influx of persons neither savage nor enlightened, neither white nor black, neither slave nor truly free, that the famous quadroon caste arose and flourished. If Calalou, in the verse, was one of these quadroon fair ones, the song is its own explanation. (See Pov'piti Momzel Zizi, page 825.)

"Poor little Miss Zizi!" is what it means — "She has pain, pain in her little heart." "À li" is simply the Creole possessive form; "corps à moi" would signify simply myself. Calalou is wearing a Madras turban; she has on an embroidered petticoat; [they tell their story and] Zizi has achings in her heart. And the second stanza moralizes: "When you wear the chain of love" — maybe we can make it rhyme:

"When love's chains upon thee lie
Bid all happiness good-bye."

Poor little Zizi! say we also. Triumphant Calalou! We see that even her sort of freedom had its tawdry victories at the expense of the slave. A poor freedom it was, indeed: To have f. m. c. or f. w. c. tacked in small letters upon one's name perforce and by law, that all might know that the bearer was not a

real freeman or freewoman, but only a free man (or woman) of color,—a title that could not be indicated by capital initials; to be the unlawful mates of luxurious bachelors, and take their pay in muslins, embroideries, prunella, and good living, taking with them the loathing of honest women and the salacious derision of the blackamoor; to be the sister, mother, father, or brother of Calalou; to fall heir to property by sufferance, not by law; to be taxed for public education and not allowed to give that education to one's own children; to be shut out of all occupations that the master class could reconcile with the vague title of gentleman; to live in the knowledge that the law pronounced "death or imprisonment at hard labor for life" against whoever should be guilty of "writing, printing, publishing, or distributing anything" having a tendency to create discontent among the free colored population": that it threatened death against whosoever should utter such things in private conversation; and that it decreed expulsion from the State to Calalou and all her kin of any age or condition if only they had come in across its bounds since 1807. In the enjoyment of such ghastly freedom as this the flesh-pots of Egypt sometimes made the mouth water and provoked the tongue to sing its regrets for a past that seemed better than the present. (See Bon D'jé, page 826.)

Word for word we should have to render it,— "In times when I was young I never pondered — indulged in reverie, took on care," an archaic French word, *zongler*, still in use among the Acadians also in Louisiana; "mo zamein zonglé, bon D'jé" — "good Lord!" "*Açtaïr*" is "à cette heure" — "at this hour," that is, "now — these days." "These days I am getting old — I am pondering, good Lord!" etc. Some time in the future, it may be, some Creole will give us translations of these things, worthy to be called so. Meantime suffer this:

"In the days of my youth not a dream had I, good Lord!

These times I am growing old, full of dreams am I, good Lord!

I have dreams of those good times gone by! (*ter*)

When I was a slave, one boss had I, good Lord!
These times when I'm needing rest all hands serve I,
good Lord!

I have dreams," etc.

III.

THE LAY AND THE DIRGE.

THERE were other strains of misery, the cry or the vagabond laugh and song of the friendless orphan for whom no asylum door would open, but who found harbor and food in the fields and wildwood and the forbidden

places of the wicked town. When that Creole whom we hope for does come with his good translations, correcting the hundred and one errors that may be in these pages, we must ask him if he knows the air to this:

"Pitis sans popa, pitis sans moman,
Qui ça 'ou' zaut' fé pou' gainein l'a'zanc,¹
No courri l'aut' bord pou' cercé patt ç'at'²
No tournein bayou pou' péç'é patassa;³
Et v'là comm ça no té fé nou' l'a'zan.

"Pitis sans popa, pitis sans moman,
Qui ça 'ou' zaut' fé, etc.
No courri dans bois fouillé latanié⁴,
No vend' so racin' pou' fou'bi' planç'é;
Et v'là comm' ça, etc.

"Pitis sans popa, etc.
Pou' fé di thé n'a fouillé sassaf'as,
Pou' fé di l'enc' no po'té grain' sougras;⁵
Et v'là, etc.

"Pitis sans popa, etc.
No courri dans bois ramassé cancos;
Avé' nou' la caze no trappé zozos;⁷
Et v'là, etc.

"Pitis sans popa, etc.
No courri à soir c'ez Mom'selle Maroto,
Dans la rie St. Ann ou no té zoué loto;
Et v'là," etc.

"Little ones without father, little ones without mother,
What do you to keep soul and body together?
The river we cross for wild berries to search;
We follow the bayou a-fishing for perch;
And that's how we keep soul and body together.

"Little ones without, etc.
Palmetto we dig from the swamp's bristling stores
And sell its stout roots for scrubbing the floors;
And that's how, etc.

"Little ones, etc.
The sassafras root we dig up; it makes tea;
For ink the ripe pokeberry clusters bring we;
And that's how, etc.

"Little ones, etc.
We go to the woods *cancos* berries to fetch,
And in our trap cages the nonpareils⁸ catch;
And that's how, etc.

"Little ones, etc.
At evening we visit Mom'selle Maroto,
In St. Ann's street, to gamble awhile at keno;
And that's how we keep soul and body together."

Here was companionship with nature — the companionship of the vagabond. We need not

doubt that these little orphan vagrants could have sung for us the song, from which in an earlier article we have already quoted a line or two, of Cayetano's circus, probably the most welcome intruder that ever shared with the man Friday and his song-dancing fellows and sweet-hearts the green, tough sod of Congo Square.

"C'est Miché Cayétane,
Qui sorti là Havane
Avec so chouals⁹ et so macacs.¹⁰
Li gainein ein nhomme qui dancé dans sac;
Li gainein qui dancé si yé la main;
Li gainein zaut', à choual, qui boir' di vin;
Li gainein oussi ein zein, zoli mom'selle,
Qui monté choual sans bride et sans selle!
Pou' di' tou' ça mo pas capab';
Mé mo souvien ein qui 'valé sab'!
Yé n'en oussi tou' sort' bétail.
Yé pas montré pou la nègrail';
Gniapas là dotchians dos-brilé,¹¹
Pou' fé tapaze et pou' hirlé;
Cé gros madame et gros miché,
Qui ménein là tous pitits yé,
'Oir Miché Cayétane,
Qui 'rivé là Havane
Avec so chouals et so macacs."

Should the Louisiana Creole negro undertake to render his song to us in English, it would not be exactly the African-English of any other State in the Union. Much less would it resemble the gross dialects of the English-torturing negroes of Jamaica, or Barbadoes, or the Sea Islands of Carolina. If we may venture —

"Dass Cap'm Cayetano,
W'at comin' fum Havano,*
Wid 'is monkey' an' 'is nag'!
An' one man w'at dance in bag,
An' mans dance on dey han'—cut shine'
An' gallop hoss sem time drink wine!
An' b'u'ful young missy dah beside,
Ridin' 'dout air sadd' aw brid'e;¹²
To tell h-all dat—he cann' be tole.
Man teck a sword an' swall' 'im whole!
Beas'es'¹³ ev'y sawt o' figgah!
Dat show ain't fo' no common niggah!
Dey don' got deh no po' white cuss'—
Sunbu't back!—to holla an' fuss.
Dass ladies fine, and gennymuns gran',
Fetchin' dey chilluns dah—all han'!
Fo' see Cayetano,
W'at come fum Havano
Wid 'is monkey' an' 'is nag'!"

¹⁰ Macaques.

¹¹ "Gniapas là dotchians dos-brilé."

"Il n'y a pas là des dotchians avec les dos brûlés."

The *dotchian dos-brilé* is the white trash with sunburnt back, the result of working in the fields. It is an expression of supreme contempt for the *pitits blancs*—low whites—to contrast them with the *gros madames* et *gros michies*.

¹² Riding without e'er a saddle or bridle.

¹³ Beasts—wild animals.

* To turn final *a* into *o* for the purpose of rhyme is the special delight of the singing negro. I used to hear as part of a moonlight game,—

¹ L'argent—money.
² "We go to the other side" [of the river] "to get cats' paws,"
³ a delicious little blue swamp berry.
⁴ The perch. The little sunfish or "pumpkin seed," miscalled through the southwest.
⁵ Dwarf palmetto, whose root is used by the Creoles as a scrubbing-brush.
⁶ Pokeberries. ⁷ *Cancos*, Indian name for a wild purple berry.
⁸ Oiseaux, birds.
⁹ The nonpareil, pape, or painted hunting, is the favorite victim of the youthful bird-trappers.
⁹ Chevals—chevaux.

Come, young man, what chews tobacco, I had a wife in South Cal-li - no; Her name was ole Aunt Di-noh.

A CANDJO.

A remarkable peculiarity of these African Creole songs of every sort is that almost without exception they appear to have originated in the masculine mind, and to be the expression of the masculine heart. Untrained as birds, their males made the songs. We come now, however, to the only exception I have any knowledge of, a song expressive of feminine sentiment, the capitulation of some belle Layotte to the tender enticement of a Creole-born chief or *candjo*. The pleading tone of the singer's defense against those who laugh at her pretty chagrin is—it seems to me—touching. (See *Criole Candjo*, page 826.)

But we began this chapter in order to speak of songs that bear more distinctly than anything yet quoted the features of the true lay or historical narrative song, commemorating pointedly and in detail some important episode in the history of the community.

It is interesting to contrast the solemnity with which these events are treated when their heroes were black, and the broad buffoonery of the song when the affair it celebrates was one that mainly concerned the masters. Hear, for example, through all the savage simplicity of the following rhymeless lines, the melancholy note that rises and falls but never intermits. The song is said to be very old, dating from the last century. It is still sung, but the Creole gentleman who procured it for me from a former slave was not able to transcribe or remember the air.

LUBIN.

Tremblant-terr¹ vini 'branlé moulin;
 Tonnerr' chiel² tombé bourlé³ moulin;
 Tou' moun⁴ dans moulin là péri.
 Temoins vini qui vend⁵ Libin.
 Yé dit Libin metté di fé.
 Yé hissé saffaud⁶ pou' so la tête.⁷

¹ Tremblement de terre — earthquake.
⁶ Echafaud.

² Ciel.

³ Brulée.

⁴ Tout le monde.

⁵ Vendaient—sold, betrayed.

⁷ So la tête: Creole possessive form for *his* head.

"MISTRESS FLEW INTO A PASSION."

Saïda! m'allé mourri, Saïda!
 Mo zamis di comm' ça: "Libin,
 Faut to donn' Zilié to bitin'.¹"
 Cofaire² mo sré donnein Zilié?
 Pou' moin Zilié zamein lavé;³
 Zilié zamein 'passé⁴ pou moin.
 Saïda! m'allé mourri, Saïda!

An earthquake came and shook the mill;
 The heavens' thunders fell and burned it;
 Every soul in the mill perished.
 Witnesses came who betrayed Lubin.
 They said he set the mill on fire.
 They raised a scaffold to take off his head.

Saïda! I am going to die!
 My friends speak in this way: "Lubin,
 You ought to give Julia your plunder."
 Why should I give it to Julia?
 For me Julia never washed clothes;
 Julia never ironed for me.

Saïda! I am going to die!

Or notice again the stately tone of lamentation over the fate of a famous negro insurrectionist, as sung by old Madeleine of St. Bernard parish to the same Creole friend already mentioned, who kindly wrote down the lines on the spot for this collection. They are fragmentary, extorted by littles from the shattered memory of the ancient crone. Their allusion to the Cabildo places their origin in the days when that old colonial council administered Spanish rule over the province.

OUARRÀ ST. MALO.

Aïe! zein zens, vini fé ouarrà
 Pou' pôv' St. Malo dans l'embas!
 Yé ç'assé li avec yé chien,
 Yé tiré li ein coup d'fizi,

Yé halé li la cyprier,
 So bras yé 'tassé⁵ par derrier,
 Yé 'tassé so la main divant;
 Yé 'marré⁶ li apé queue choul,
 Yé trainein li zouqu'à la ville.
 Divant michés là dans Cabil'e
 Yé quisé⁷ li li fé complot
 Pou' coupé cou à tout ye blancs.
 Yé 'mandé li qui so compères;
 Pôv' St. Malo pas di' a-rien!
 Zize⁸ là li lir' so la sentence,
 Et pis⁹ li fé dressé potence.
 Yé halé choul — ç'arete parti —
 Pôv' St. Malo resté pendi!
 Eine hèr soleil deza levée
 Quand yé pend li si la levée.
 Yé laissé so corps balancé
 Pou' carancro gaginein manzé.

THE DIRGE OF ST. MALO.

Alas! young men, come, make lament
 For poor St. Malo in distress!
 They chased, they hunted him with dogs,
 They fired at him with a gun,

They hauled him from the cypress swamp.
 His arms they tied behind his back,
 They tied his hands in front of him;

¹ Butin: literally plunder, but used, as the word plunder is by the negro, for personal property.

² Pourquoi faire.

³ Washed (clothes).

⁴ Ironed.

⁵ Attachée.

⁶ Amarré, an archaism, common to negroes and

⁷ Accusée.

⁸ Juge.

⁹ Puis.

Acadians: moored, for fastened.

They tied him to a horse's tail,
 They dragged him up into the town.
 Before those grand Cabildo men
 They charged that he had made a plot
 To cut the throats of all the whites.
 They asked him who his comrades were;
 Poor St. Malo said not a word!
 The judge his sentence read to him,
 And then they raised the gallows-tree.
 They drew the horse — the cart moved off —
 And left St. Malo hanging there.
 The sun was up an hour high
 When on the Levee he was hung;
 They left his body swinging there,
 For carrion crows to feed upon.

It would be curious, did the limits of these pages allow, to turn from such an outcry of wild mourning as this, and contrast with it the clownish flippancy with which the great events are sung, upon whose issue from time to time the fate of the whole land — society, government, the fireside, the lives of thousands — hung in agonies of suspense. At the same time it could not escape notice how completely in each case, while how differently in the two, the African has smitten his image into every line: in the one sort, the white, uprolled eyes and low wail of the savage captive, who dares not lift the cry of mourning high enough for the jealous ear of the master; in the other, the antic form, the grimacing face, the brazen laugh, and self-abasing confessions of the buffoon, almost within the whisk of the public jailer's lash. I have before me two songs of dates almost fifty years apart. The one celebrates the invasion of Louisiana by the British under Admiral Cochrane and General Pakenham in 1814; the other, the capture and occupation of New Orleans by Commodore Farragut and General Butler in 1862.

It was on the morning of the twenty-third of December, 1814, that the British columns, landing from a fleet of barges and hurrying along the narrow bank of a small canal in a swamp forest, gained a position in the open plain on the banks of the Mississippi only six miles below New Orleans, and with no defenses to oppose them between their vantage-ground and the city. The surprise was so complete that, though they issued from the woods an hour before noon, it was nearly three hours before the news reached the town. But at nightfall General Jackson fell upon them and fought in the dark the engagement which the song commemorates, the indecisive battle of Chalmette.

The singer ends thus:

"Fizi z'Anglé yé fé bim! bim!
 Carabin Kaintock yé fé zim! zim!
 Mo di' moin, sauvé to la peau!
 Mo zété corps au bord do l'eau;
 Quand mo rivé li té fé clair.

Madam' li prend' ein coup d'colère;
 Li fé donn' moin ein quat' piqué
 Passequé mo pas sivi mouchié;
 Mais moin, mo vo mié quat' piqué
 Passé ein coup d'fizi z'Anglé!"

"The English muskets went bim! bim!
 Kentucky rifles went zim! zim!
 I said to myself, save your skin!
 I scampered along the water's edge;
 When I got back it was day-break.
 Mistress flew into a passion;
 She had me whipped at the 'four stakes,'
 Because I didn't stay with master;
 But the 'four stakes' for me is better than
 A musket shot from an Englishman."

The story of Farragut's victory and Butler's advent in April, 1862, is sung with the still lighter heart of one in whose day the "quatre piquets" was no longer a feature of the calaboose. Its refrain is:

"An-hé!
 Qui ça qui rivé;
 C'est Ferraguitt et p'i Botlair,
 Qui rivé."

The story is long and silly, much in the humor of

"Hark! hark!
 The dogs do bark."

We will lay it on the table.

IV.

THE VOODOOS.

THE dance and song entered into the negro worship. That worship was as dark and horrid as bestialized savagery could make the adoration of serpents. So revolting was it, and so morally hideous, that even in the West Indian French possessions a hundred years ago, with the slave-trade in full blast and the West Indian planter and slave what they were, the orgies of the Voodooos were forbidden. Yet both there and in Louisiana they were practiced.

The Aradas, St. Méry tells us, introduced them. They brought them from their homes beyond the Slave Coast, one of the most dreadfully benighted regions of all Africa. He makes the word *Vaudaux*. In Louisiana it is written *Voudou* and *Voodoo*, and is often changed on the negro's lips to *Hoodoo*. It is the name of an imaginary being of vast supernatural powers residing in the form of a harmless snake. This spiritual influence or potentate is the recognized antagonist and opposite of *Obi*, the great African manitou or deity, or him whom the Congoes vaguely generalize as *Zombi*. In Louisiana, as I have been told by that learned Creole scholar the late Alexander Dimitry, *Voodoo* bore as a title of

THE VODOO DANCE.

greater solemnity the additional name of Maignan, and that even in the Calinda dance, which he had witnessed innumerable times, was sometimes heard, at the height of its frenzy, the invocation—

“Aïe ! Aïe !
Voodoo Magnan !”

The worship of Voodoo is paid to a snake kept in a box. The worshipers are not merely a sect, but in some rude, savage way also an order. A man and woman chosen from their own number to be the oracles of the serpent deity are called the king and queen. The queen is the more important of the two, and even in the present dilapidated state of the worship in Louisiana, where the king's office has almost or quite disappeared, the queen is still a person of great note.

She reigns as long as she continues to live. She comes to power not by inheritance, but by election or its barbarous equivalent. Chosen for such qualities as would give her a natural supremacy, personal attractions among the rest, and ruling over superstitious fears and desires of every fierce and ignoble sort, she wields no trivial influence. I once saw, in her extreme old age, the famed Marie Laveau. Her dwelling was in the quadroon quarter of New Orleans, but a step or two from Congo Square, a small adobe cabin just off the sidewalk, scarcely higher than its close board fence, whose batten gate yielded to the touch and revealed the crazy doors and windows spread wide to the warm air, and one or two tawny faces within, whose expression was divided between a pretense of contemptuous inattention and a frowning resentment of the intrusion. In the center of a small room whose ancient cypress floor was worn with scrubbing and sprinkled with crumbs of soft brick—a Creole affectation of superior cleanliness—sat, quaking with feebleness in an ill-looking old rocking-chair, her body bowed, and her wild, gray witch's tresses hanging about her shriveled, yellow neck, the queen

A VOODOO.

of the Voodoos. Three generations of her children were within the faint beckon of her helpless, wagging wrist and fingers. They said she was over a hundred years old, and there was nothing to cast doubt upon the statement. She had shrunken away from her skin; it was like a turtle's. Yet withal one could hardly help but see that the face, now so withered, had once been handsome and commanding. There was still a faint shadow of departed beauty on the forehead, the spark

of an old fire in the sunken, glistening eyes, and a vestige of imperiousness in the fine, slightly aquiline nose, and even about her silent, woe-begone mouth. Her grandson stood by, an uninteresting quadron between forty and fifty years old, looking strong, empty-minded, and trivial enough; but his mother, her daughter, was also present, a woman of some seventy years, and a most striking and majestic figure. In features, stature, and bearing she was regal. One had but to look on her, impute her brilliancies — too untamable and severe to be called charms or graces — to her mother, and remember what New Orleans was long years ago, to understand how the name of Marie Laveau should have driven itself inextricably into the traditions of the town and the times. Had this visit been postponed a few months it would have been too late. Marie Laveau is dead; Malvina Latour is queen. As she appeared presiding over a Voodoo ceremony on the night of the 23d of June, 1884, she is described as a bright mulattress of about forty-eight, of "extremely handsome figure," dignified bearing, and a face indicative of a comparatively high order of intelligence. She wore a neat blue, white-dotted calico gown, and a "brilliant *ignon* (turban) gracefully tied."

It is pleasant to say that this worship, in Louisiana, at least, and in comparison with what it once was, has grown to be a rather trivial affair. The practice of its midnight forest rites seemed to sink into inanition along with Marie Laveau. It long ago diminished in frequency to once a year, the chosen night always being the Eve of St. John. For several years past even these annual celebrations have been suspended; but in the summer of 1884 they were — let it be hoped, only for the once — resumed.

When the queen decides that such a celebration shall take place, she appoints a night for the gathering, and some remote, secluded spot in the forest for the rendezvous. Thither all the worshipers are summoned. St. Méry, careless of the power of the scene, draws in practical, unimaginative lines the picture of such a gathering in St. Domingo, in the times when the "*véritable Vaudaux*" had lost but little of the primitive African character. The worshipers are met, decked with kerchiefs more or less numerous, red being everywhere the predominating color. The king, abundantly adorned with them, wears one of pure red about his forehead as a diadem. A blue ornamental cord completes his insignia. The queen, in simple dress and wearing a red cord and a heavily decorated belt, is beside him near a rude altar. The silence of midnight is overhead, the gigantic forms and shadows and still, dank airs of the tropical

forest close in around, and on the altar, in a small box ornamented with little tinkling bells, lies, unseen, the living serpent. The worshipers have begun their devotions to it by presenting themselves before it in a body, and uttering professions of their fidelity and belief in its power. They cease, and now the royal pair, in tones of parental authority and protection, are extolling the great privilege of being a devotee, and inviting the faithful to consult the oracle. The crowd makes room, and a single petitioner draws near. He is the senior member of the order. His prayer is made. The king becomes deeply agitated by the presence within him of the spirit invoked. Suddenly he takes the box from the altar and sets it on the ground. The queen steps upon it and with convulsive movements utters the answers of the deity beneath her feet. Another and another suppliant, approaching in the order of seniority, present, singly, their petitions, and humbly or exultingly, according to the nature of the responses, which hangs on the fierce caprice of the priestess, accept these utterances and make way for the next, with his prayer of fear or covetousness, love, jealousy, petty spite or deadly malice. At length the last petitioner is answered. Now a circle is formed, the caged snake is restored to the altar, and the humble and multifarious oblations of the worshipers are received, to be devoted not only to the trivial expenses of this worship, but also to the relief of members of the order whose distresses call for such aid. Again, the royal ones are speaking, issuing orders for execution in the future, orders that have not always in view, mildly says St. Méry, good order and public tranquillity. Presently the ceremonies become more forbidding. They are taking a horrid oath, smearing their lips with the blood of some slaughtered animal, and swearing to suffer death rather than disclose any secret of the order, and to inflict death on any who may commit such treason. Now a new applicant for membership steps into their circle, there are a few trivial formalities, and the Voodoo dance begins. The postulant dances frantically in the middle of the ring, only pausing from time to time to receive heavy alcoholic draughts in great haste and return more wildly to his leapings and writhings until he falls in convulsions. He is lifted, restored, and presently conducted to the altar, takes his oath, and by a ceremonial stroke from one of the sovereigns is admitted a full participant in the privileges and obligations of the devilish freemasonry. But the dance goes on about the snake. The contortions of the upper part of the body, especially of the neck and shoulders, are such as threaten to dislocate them. The queen shakes the box

MARIE LAVEAU.

and tinkles its bells, the rum-bottle gurgles, the chant alternates between king and chorus —

“Eh!-eh! Bomba, honc! honc! *
Canga bafio tay,
Canga moon day lay,
Canga do keelah,
Canga li——”

* “Hen! hen!” in St. Méry’s spelling of it for French pronunciation. As he further describes the sound in a foot-note, it must have been a horrid grunt.

There are swoonings and ravings, nervous tremblings beyond control, incessant writhings and turnings, tearing of garments, even biting of the flesh — every imaginable invention of the devil.

St. Méry tells us of another dance invented in the West Indies by a negro, analogous to

the Voodoo dance, but more rapid, and in which dancers had been known to fall dead. This was the "Dance of Don Pedro." The best efforts of police had, in his day, only partially suppressed it. Did it ever reach Louisiana? Let us, at a venture, say no.

To what extent the Voodoo worship still obtains here would be difficult to say with certainty. The affair of June, 1884, as described by Messrs. Augustin and Whitney, eye-witnesses, was an orgy already grown horrid enough when they turned their backs upon it. It took place at a wild and lonely spot where the dismal cypress swamp behind New Orleans meets the waters of Lake Pontchartrain in a wilderness of cypress stumps and rushes. It would be hard to find in nature a more painfully desolate region. Here in a fisherman's cabin sat the Voodoo worshipers cross-legged on the floor about an Indian basket of herbs and some beans, some bits of bone, some oddly wrought bunches of feathers, and some saucers of small cakes. The queen presided, sitting on the only chair in the room. There was no king, no snake—at least none visible to the onlookers. Two drummers beat with their thumbs on gourds covered with sheepskin, and a white-wooled old man scraped that hideous combination of banjo and violin, whose head is covered with rattlesnake skin, and of which the Chinese are the makers and masters. There was singing—"M'allé couri dans désér" ("I am going into the wilderness"), a chant and refrain not worth the room they would take—and there was frenzy and a circling march, wild shouts, delirious gesticulations and posturings, drinking, and amongst other frightful nonsense the old trick of making fire blaze from the mouth by spraying alcohol from it upon the flame of a candle.

But whatever may be the quantity of the Voodoo worship left in Louisiana, its superstitions are many and are everywhere. Its charms are resorted to by the malicious, the jealous, the revengeful, or the avaricious, or held in terror, not by the timorous only, but by the strong, the courageous, the desperate. To find under his mattress an acorn hollowed out, stuffed with the hair of some dead person, pierced with four holes on four sides, and two

small chicken feathers drawn through them so as to cross inside the acorn; or to discover on his door-sill at daybreak a little box containing a dough or waxen heart stuck full of pins; or to hear that his avowed foe or rival has been pouring cheap champagne in the four corners of Congo Square at midnight, when there was no moon, will strike more abject fear into the heart of many a stalwart negro or melancholy quadroon than to face a leveled revolver. And it is not only the colored man that holds to these practices and fears. Many a white Creole gives them full credence. What wonder, when African Creoles were the nurses of so nearly all of them? Many shrewd men and women, generally colored persons, drive a trade in these charms and in oracular directions for their use or evasion; many a Creole—white as well as other tints—female, too, as well as male—will pay a Voodoo "*monteure*" to "make a work," *i. e.*, to weave a spell, for the prospering of some scheme or wish too ignoble to be prayed for at any shrine inside the church. These milder incantations are performed within the witch's or wizard's own house, and are made up, for the most part, of a little pound cake, some lighted candle ends, a little syrup of sugar-cane, pins, knitting-needles, and a trifle of anisette. But fear naught; an Obi charm will enable you to smile defiance against all such mischief; or if you will but consent to be a magician, it is they, the Voodoos, one and all, who will hold you in absolute terror. Or, easier, a frizzly chicken! If you have on your premises a frizzly chicken, you can lie down and laugh—it is a checkmate!

A planter once found a Voodoo charm, or *ouanga* (wongah); this time it was a bit of cotton cloth folded about three cow-peas and some breast feathers of a barn-yard fowl, and covered with a tight wrapping of thread. When he proposed to take it to New Orleans his slaves were full of consternation. "Marse Ed, ef ye go on d'boat wid dat-ah, de boat'll sink wi' yer. Fore d'Lord, it will!" For some reason it did not. Here is a genuine Voodoo song, given me by Lafcadio Hearn, though what the words mean none could be more ignorant of than the present writer. They are rendered phonetically in French.

PLANTER AND VODOO CHARM.

And another phrase: "Ah tingouai yé, Ah tingouai yé, Ah ouai ya, Ah ouai ya, Ah tingouai yé, Do sé dan go-do, Ah tingouai yé," etc.

V.

SONGS OF WOODS AND WATERS.

A LAST page to the songs of the chase and of the boat. The circumstances that produced them have disappeared. There was a time, not so long ago, when traveling in Louisiana was done almost wholly by means of the paddle, the oar, or the "sweep." Every plantation had its river or bayou front, and every planter his boat and skilled crew of black

oarsmen. The throb of their song measured the sweep of the oars, and as their bare or turbaned heads and shining bodies, naked to the waist, bowed forward and straightened back in ceaseless alternation, their strong voices chanted the praise of the silent, broad-hatted master who sat in the stern. Now and then a line was interjected in manly boast to their own brawn, and often the praise of the master softened off into tender laudations of the charms of some black or tawny Zilié, 'Zabette, or Zalli. From the treasures of the old chest already mentioned comes to my hand, from the last century most likely, on a ragged yellow sheet of paper, written with a green ink, one of these old songs. It would

THE BLACK HUNTER.

take up much room; I have made a close translation of its stanzas :

ROWERS' SONG.

Sing, lads ; our master bids us sing.
For master cry out loud and strong.
The water with the long oar strike.
Sing, lads, and let us haste along.

'Tis for our master we will sing.
We'll sing for our young mistresses.
And sweethearts we must not forget —
Zoé, Mérente, Zabelle, Louise.

Sing, fellows, for our own true loves.
My lottery prize ! Zoé, my belle !
She's like a wild young doe, she knows
The way to jump and dance so well !

Black diamonds are her bright, black eyes,
Her teeth and lilies are alike.
Sing, fellows, for my true love, and
The water with the long oar strike.

See ! see ! the town ! Hurrah ! hurrah !
Master returns in pleasant mood.
He's going to treat his boys all 'round.
Hurrah ! hurrah for master good !

From the same treasury comes a hunting song. Each stanza begins and ends with the loud refrain : "*Bomboula ! bomboula !*" Some one who has studied African tongues may be able to say whether this word is one with *Bamboula*, the name of the dance and of the drum that dominates it. *Oula* seems to be an

infinitive termination of many Congo verbs, and *boula*, De Lanzières says, means to beat. However, the dark hunters of a hundred years ago knew, and between their outcries of the loud, rumbling word sang, in this song, their mutual exhortation to rise, take guns, fill powder-horns, load up, call dogs, make haste and be off to the woods to find game for master's table and their own grosser *cuisine*; for the one, deer, squirrels, rabbits, birds; for the other, *chat onés* (raccoons), that make "*si bon gombo*" (such good gumbo!). "Don't fail to kill them, boys,—and the tiger-cats that eat men; and if we meet a bear, we'll vanquish him! Bomboula! bomboula!" The lines have a fine African ring in them, but — one mustn't print everything.

Another song, of wood and water both, though only the water is mentioned, I have direct from former Creole negro slaves. It is a runaway's song of defiance addressed to the high sheriff Fleuriau (Charles Jean Baptiste Fleuriau, Alguazil mayor), a Creole of the Cabildo a hundred and fifteen years ago. At least one can think so, for the name is not to be found elsewhere.

O Zé - né - ral Flo - ri - do! C'est vrai yé pas ca - pab' pran moin! O
 O Gen - e - ral Flo - ri - do! In - deed fo' true dey can't catch me! O

Zé - né - ral La Flo - ri - o! C'est vrai yé pas ca - pab' pran moin!
 Gen - e - ral La Fleu - ri - au! In - deed fo' true dey can't catch me!

2. Yen a ein counan si la mer } *Bis.*
 C'est vrai, etc.
2. Dey got* one schooner out at sea } *Bis.*
 Indeed fo' true, etc.

Sometimes the black man found it more convenient not to run away himself, but to make other articles of property seem to escape from custody. He ventured to forage on his own account, retaining his cabin as a base

of operations, and seeking his adventures not so far from the hen-coop and pig-pen as rigid principles would have dictated. Now that he is free, he is willing to reveal these little pleasantries—as one of the by-gones—to the eager historian. Much nocturnal prowling was done on the waters of the deep, forest-darkened bayous, in *pirogues* (dug-outs). For secret signals to accomplices on shore they resorted to singing. What is so innocent as music! The words were in some African tongue. We have one of these songs from the negroes themselves, with their own translation and their own assurance that the translation is correct. The words have a very Congo-ish sound. The Congo tongue knows no *r*; but the fact is familiar that in America the negro interchanges the sounds of *r* and *l* as readily as does the Chinaman. We will use both an English and a French spelling. (De Zab, page 827.)

The whole chant consists of but six words besides a single conjunction. It means, its singers avowed, "Out from under the trees our boat moves into the open water—bring us large game and small game!" *Dé zab* sounds like *des arbs*, and they called it French,

but the rest they claimed as good "Affykin." We cannot say. We are sappers and miners in this quest, not philologists. When they come on behind, if they ever think it worth their while to do so, the interpretation of this strange song may be not more difficult than that of the famous inscription discovered by Mr. Pickwick. But, as well as the present writer can know, all that have been given here are genuine antiques.

* "Dey got" is a vulgarism of Louisiana Creoles, white and colored, for "There is." It is a transfer into English of the French idiom *Il y a*.

COMPENSATION.

IN that new world toward which our feet are set,
 Shall we find aught to make our hearts forget
 Earth's homely joys and her bright hours of bliss?
 Has heaven a spell divine enough for this?
 For who the pleasure of the spring shall tell,
 When on the leafless stalk the brown buds swell,
 When the grass brightens and the days grow long,
 And little birds break out in rippling song?

O sweet the dropping eve, the blush of morn,
 The starlit sky, the rustling fields of corn,
 The soft airs blowing from the freshening seas,
 The sunflecked shadow of the stately trees,
 The mellow thunder and the lulling rain,
 The warm, delicious, happy summer rain,
 When the grass brightens and the days grow long,
 And little birds break out in rippling song!

O beauty manifold, from morn till night,
 Dawn's flush, noon's blaze and sunset's tender light!
 O fair, familiar features, changes sweet
 Of her revolving seasons, storm and sleet
 And golden calm, as slow she wheels through space,
 From snow to roses,—and how dear her face,
 When the grass brightens, when the days grow long,
 And little birds break out in rippling song!

O happy earth! O home so well beloved!
 What recompense have we, from thee removed?
 One hope we have that overtops the whole,—
 The hope of finding every vanished soul,
 We love and long for daily, and for this
 Gladly we turn from thee, and all thy bliss,
 Even at thy loveliest, when the days are long,
 And little birds break out in rippling song.

Celia Thaxter.

JOHN BODEWIN'S TESTIMONY.

BY MARY HALLOCK FOOTE,

Author of "The Led-Horse Claim," "Friend Barton's Concern," etc.

XXIII.

IN REBUTTAL.

THE afternoon sitting opened cheerfully with Bodewin's cross-examination. The men with few exceptions, had lunched, and, with vests opened on account of the increasing heat, were prepared to enjoy the baiting of this probably conceited young man, who took such airs of gloomy reticence, and whose information seemed to be so largely in excess of his desire to impart it.

The lawyer for the plaintiff, listening with apparent negligence to Bodewin's account of his capture, saw that it was a tale calling for but little talent in the cross-examination to make ridiculous to a Western jury. It had excited marked surprise in the court-room among those present who knew Bodewin by reputation as a cool fellow and a man of long experience in the West, well acquainted with the risk of solitary journeys in that part of the country, at a time when scarcely a week passed without a stage being stopped and a file of passengers called on to "hold up their hands." The weakness of Bodewin's story was brought out and embellished with local allusions and such wit as the speaker had at his command. He enlarged upon Bodewin's magnanimity, as Mr. Craig had called it, towards his captors. Such magnanimity was certainly unusual, and to a stranger, unacquainted with the character of the witness, seemed to demand some further explanation, besides that transcendent Christian forbearance which the learned counsel on the other side had attributed to his witness.

Was the witness quite sure that he had not some other and more natural, not to say human reason for condoning such a serious and exasperating offense as the restraint of his person and actions, at a time when both were imperatively required elsewhere? Had captivity by chance been sweetened to him? We are commanded to love our enemies, but no law, civil or religious, that the counsel could remember, required a man to keep his enemies' secrets, especially when they were secrets of a nature likely to be damaging to his own character. There were usually two sides to bargains of that kind. "Now as

to that message," the plaintiff's counsel asked suddenly, in the hardest of his nasal tones, "might one ask, since it was of so personal a nature, if it was a message from a lady?" There was said to be a lady in every case; the lawyer hoped this case was not to be an ungallant exception to the rule. Bodewin was again supported by the court in his refusal to answer, but the lawyer's wit was of the kind which makes the average jurymen grateful to its author. The weightier but less amusing portions of Bodewin's testimony were lost sight of in the story of his capture, which could ill bear the scrutiny Harkins's counsel had succeeded in concentrating upon it, while calling upon the jury to wonder at the witness's reasons for twice refusing to answer the questions put to him. The juror who had been snubbed by the court was in no doubt whatever as to the duplicity of Bodewin's character, and the general feeling was against him, when Mr. Craig said, at the close of his examination:

"Your Honor, this rests the case for the defense."

A mingled stir of relief and expectation had begun to pervade the court-room, when the plaintiff's counsel rose and said that he would like to introduce a few witnesses in rebuttal. People who were leaving the room returned to their seats again, and no one was surprised when the name of James Keesner was called. They would now have the story of the surveys and sale of the Eagle Bird over again from Harkins's side.

James Keesner testified that on the 5th of September, somewhere about noon, John Bodewin came to his cabin in the north woods near the lake, and asked him to let him stay there quietly until the Eagle Bird trial was over. That he had known Bodewin, off and on, for some years, through Colonel Harkins; that Colonel Harkins had said Bodewin would never testify against him on account of something that passed between them at Deadwood three years ago, something about a woman, that Bodewin didn't want talked about. That Bodewin didn't explain to them why he did not wish to go on the trial, but just said he didn't want to and wouldn't, and wanted to stay there till the trial was over. That Bodewin had been to the cabin before, not often, but once or

twice that summer as he was passing through the woods. The cabin had been built three years before, when they were working the claim near it; they had quit work on the claim for a year, and had only been back there since spring. That they lived very quiet in the woods, Bodewin keeping close to the cabin on account of not wanting to be seen by any one passing. That he and the witness's daughter Louisa, called Babe, were always together, he helping her about her work or just sitting around looking at her. That Babe was seventeen and worth looking at. She wasn't used to men like Bodewin, that called themselves gentlemen. That a year or so before Bodewin had sent her his picture in joke like, by Harkins, hearing Harkins say what a beauty she was growing. That he set himself to make her like him. That it was easy done. That he, the witness, had been troubled about the way things looked, but thought it best not to say anything, Bodewin being there for so short a time and Babe as innocent as the day she was born. That he was watching out for them the evening before they went off. Bodewin was sitting on the bench in front of the cabin, talking low with Babe, their heads close together; that he himself kept walking up and down, up and down, pulling on his old pipe, and watching out behind the trees; that when he could not see them any longer for night coming on, he came up short to them and ordered them into the house. Bodewin had looked mad and gone straight to bed. Babe was for going off too, but he had kept her by and given her a talking to.

Perhaps he had been hard on her, but what was a man to do with such foolishness going on, and Babe his only girl and her mother dead? He described the situation of the rooms in the cabin, and went on with his story. How in the morning, early, Tony had gone out for water and found the black horse was missing and they two the only ones left in the cabin. Bodewin was gone, and Babe was gone. Her bed had not been slept in. The boards of the floor had been taken up to make room for Bodewin to crawl up from below. If his girl had gone wrong, it was the fault of Bodewin's ways, different to what she was used to, and his being continually round trying to make her like him, and she having no mother or woman to talk to her. Any one who ever saw his girl could see she was a good girl. She hadn't had any chance, anyhow, to be anything else.

Here Keesner paused and wiped his face and beard. His lean hands were trembling, and his voice was hoarse with the excitement of speech in the presence of so large and at-

tentive an audience. Under his unfeigned trouble, there was the satisfaction of being himself a figure of unwonted importance on an occasion likely to be memorable in that region.

"Did I ever see my girl again?" he repeated. "Never, either living or dead; but plenty saw her. There isn't a man from the camp in this room, I may say, but has seen her, and can speak to what I say, that she was well-grown and handsome, with as good a look to her as any girl need to have. Nobody that ever saw her could take her for any poor truck. She was born a long ways from any of your camps, or cities either. She knew the look of the trees better than she did men's looks. She was easy lied to."

Being recalled to his narrative, Keesner went on to say that Tony, his son, wouldn't eat nor sleep, but was hunting Bodewin, while he himself staid by, in case Babe should come home. That in the afternoon the black horse came straying back through the woods, the saddle on, but the stirrups crossed over the saddle and the bridle hanging from the pommel. That the next afternoon, being the day but one after Babe left, Harkins rode out to the cabin and told him his girl was dead—dead, but first deserted by the man that led her away.

"This day week," said Keesner, "my girl was buried by strangers. She was stoned to death by the emptying of a car while she was crossing the waste-dump up at the Eagle Bird, where she'd come a-huntin' for John Bodewin. Gentlemen," said the witness, turning his red, convulsed countenance upon the jury, "that man Bodewin walked behind my girl's dead body when they carried her up the hill to the mine; he heard all the fuss and the racket, and he never said a word. He saw her layin' there for the whole town to stare at with the very shoes on her feet she'd followed him in away from her home, and he never said a word; never owned to it he'd ever set eyes on her before; never once said she was a good girl, with folks of her own belonging to her. He let them say what they would of her. She was nothin' to him no more."

"Why didn't Colonel Harkins say he knew her?" Keesner repeated in answer to the counsel's question. "Because when he see my daughter layin' there, and nobody to claim her, he knew it meant trouble, the kind of trouble that's better not talked of. He knowed Babe never got in that shape without help. 'Who's the man?' he says to me. 'John Bodewin's the man,' I says. 'You want to git even with him?' he says. 'That's what I'm layin' for,' says I. 'Hold on, then. Wait,' says he, 'your time'll come. Words bite sharper than bullets

when a man's thin-skinned.' And I've hel' on and I've waited, and now I've said my say, and you can ask Anthony, my son there, if every word ain't God's truth."

Mr. Craig sat stupefied, making no effort to impede the witness or arrest his words by timely objections. The case had gone out of his hands and beyond him. It was no longer a question of Mr. Newbold's property, but of John Bodewin's honor. The lady who sat next to Josephine was weeping hysterically. Men were muttering together. Mr. Craig, fearing that Keesner's story might only gain strength on investigation, and seeing that the witness had the whole court with him, waived his right of cross-questioning, and the next witness was called.

In the conference before the trial between Harkins and the Keesners, in the cabin in the wood, Tony had stipulated that "Dad" should "do the lyin'." He "was used to it." As for himself, the less talking they made him do the better. Harkins had accepted Tony's estimate of his own powers, and he was not called upon to corroborate the more fanciful portions of his father's narrative. But the parts which Harkins had supplied, assuring his confederates that they were necessary to complete Bodewin's disgrace, were not the strongest parts of James Keesner's story. There remained enough which Tony could savagely confirm without fear of entanglement.

There was only one more witness for the rebuttal. The friendship between Bodewin and Hillbury was not generally known to the excited group of people who awaited the next development in this singular trial; but to one or two of those whose suspense was keenest, the painfulness of the scene reached its climax when the name of Edward Wales Hillbury was called by the counsel for the plaintiff.

Mr. Craig was sharply roused by it. His old dislike for Bodewin, lately intensified by their mutual relations, had never been inconsistent with respect. He looked at Bodewin keenly, and said to himself, "Here has been some cruel lying. Hillbury will be sorry for what he is going to do, if he could have helped doing it. I'll make him sorry for it!" the perverse little lawyer vowed to himself. Now that there seemed to be abundant cause for distrusting Bodewin, he suddenly felt himself bound to do battle for him. Besides, Bodewin was his witness.

Hillbury's direct examination brought out the fact of his accidental visit to the cabin in the woods and his interview with Babe, including the incident of Bodewin's photograph. Babe had informed her father of this visit in detail, knowing him to be engaged in a plot of some kind against the original of the pic-

ture and hoping that it might frighten, or possibly deter him, through fear of discovery. Keesner had treasured up his daughter's communication as likely to be interesting to Harkins. Harkins had found it extremely interesting, and the result of Babe's warning had been Hillbury's summons to testify against his friend.

The counsel then asked Hillbury if Mr. Bodewin had ever said anything to him which would lead him to suppose that Colonel Harkins had any hold upon him. Hillbury replied with evident reluctance that Mr. Bodewin had once said that he was under an obligation to Colonel Harkins. Repeated questions forced from him the admission that Mr. Bodewin had spoken of the obligation as a delicate and strenuous one, but added that Mr. Bodewin often used extravagant expressions in speaking of quite simple matters, and declared that he had attached no particular importance to the words.

"At the time," the counsel suggested.

"At the time," Hillbury allowed the suggestion.

"At any subsequent time did you regard them more seriously?"

"When Mr. Bodewin was suddenly missing, I naturally recalled everything, even the slightest noteworthy thing connected with him that had happened near the time of his disappearance, this conversation among others."

Hillbury then identified the unknown girl who was killed at the Eagle Bird mine as the one he had seen and talked with in the cabin. When asked if Mr. Bodewin had ever spoken to him of this girl or of the cabin, the witness replied that he had not.

"You were then greatly surprised to find his photograph there, were you not?" the counsel asked.

"I was."

"Did you ever question him about it?"

"I did not."

"Why not?"

"For one reason, there was no opportunity to do so, between the time of my visit to the cabin and Mr. Bodewin's disappearance."

"You have had opportunities since his return to speak to him about it, have you not?"

"I have."

"Still you made no allusion to this incident which was such a matter of surprise to you?"

"No, not directly."

"Have you ever in any way invited his confidence on this subject?"

"In a general way I have invited his confidence on this and other subjects."

"Did he respond?"

"He did not. But it may be that my manner was at fault. One is not always happy

on such occasions ; and it has never been my habit to press inquiries of a personal nature upon my friends."

"And you wish I would be equally considerate with you," the counsel concluded with a flourish of courtesy. "That will do, Mr. Hillbury."

Mr. Craig began his cross-examination by asking Hillbury how long he had known Mr. Bodewin.

"Fifteen years," was the reply.

Had their relations during that time been friendly ?

"Yes."

"Invariably ?"

"Yes."

What were their relations at the present time ? Hillbury's momentary hesitation was covered by an objection promptly raised by the opposite counsel. The question was allowed, and Hillbury replied that he was not in a position to say how Mr. Bodewin might regard him at that moment ; but the answer had the effect of an evasion, and Mr. Craig felt that he had gained his first point. How was it, he next asked, that a friend of Mr. Bodewin's, one who had been his friend for fifteen years, had made no search for him when he was missing under circumstances calculated to excite the gravest apprehensions for his safety ?

Mr. Hillbury replied that the organized search set on foot by the town stood a better chance of success, in cases of that kind, than would a single individual, even with the stimulus of his friendship for the object of the search.

"The organized search," Mr. Craig retorted, "consisted of three or four men who rode about the country, and drank a little more whisky than usual for a few days ; the search then resolved itself into gossip about Bodewin's character and intentions, and bets as to his probable fate. Was that enough to satisfy a friendship of fifteen years ?"

"I did not say that it was," Mr. Hillbury replied.

"Well, was it ?"

"In my own case, it was not."

"What further effort, if any, did you make to find your friend ?"

"I went in search of him myself."

"Oh, indeed ! And how much time, pray, did you give to this individual search ?" asked Mr. Craig, who knew that Hillbury had been seen in camp or its neighborhood nearly every day during Bodewin's absence.

"A little more than half a day."

"I suppose you found him ?" Mr. Craig said, with an ironical glance at the jury.

Mr. Hillbury made no response to this supposition.

"Were you satisfied with the result of your half-a-day's search ?"

"In one sense, yes."

"In what sense was that ?"

"In the sense that I found him."

A sensation in the court, in the midst of which Mr. Craig's irony was extinguished.

"Where did you find him ?" he asked mechanically, while desperately trying to arrange his future questions, in case Hillbury's answer should turn out to be as bad as he feared.

"In the cabin in the North woods."

"Which cabin ?"

"The one I have already described, where I saw the photograph of Mr. Bodewin."

"What was Mr. Bodewin doing when you found him, as you say ?" Mr. Craig was now trusting to the chance of getting the witness involved by rapidly multiplying unimportant questions. Hillbury's pale countenance facing him began to show signs of distress. Mr. Craig pressed the question.

"What was he doing ?"

"I don't know *what* he was doing," said Hillbury, with a kind of violence.

"How near were you to him ?"

"Twice as far from him, perhaps, as I am from you."

"Yet you don't know what he was doing ! Did you ask him ?"

"I did not speak to him."

"You did not speak to him ! What did you do, pray ?"

"I looked at him, and then went back to my horse, mounted, and rode away."

"A singular and touching interview, truly, between friends of fifteen years, one of whom had been missing for some time under an implication of danger. Was Mr. Bodewin alone when you saw him, and were you too much overcome, as I conclude, by your feelings, to speak to him ?"

"He was not."

"Who was with him ?"

"A young woman."

"Any one else ?"

"To all appearances they were alone."

"Were they talking together ?"

"No."

"Well, 'to all appearances' what were they doing ?" Mr. Craig went on stupidly ; but a strange look in Hillbury's face, almost like a warning unspoken, arrested him. "Did Mr. Bodewin see you, or know of your neighborhood ?" he hurried on, trying to bury the previous question in a new one.

"I do not think he did," said Hillbury, dropping his eyes. He knew that Craig had understood him at last, and that the ordeal was over.

But Craig could not accept his defeat without one more effort.

"You were there, then, not to find your friend, but to spy upon his actions?"

"I was there to find him, to help him if he needed such help as I alone could give him, to procure additional help if required. Finding him safe and apparently happy, I did not offer my services. The offer of my society it seemed better, under the circumstances, to postpone."

"Have you ever described this incident before?"

"I have never spoken of it until to-day."

"You seem to have saved it carefully for the time when it would be most likely to injure your friend of fifteen years."

"That is your inference, for which I am not responsible."

Hillbury was released, inwardly cursing Craig for a "rash, intruding fool," and writhing under his own revolting part in the day's work. And Craig could think of nothing that would have made things worse, except to have had his wife present to witness his blunders.

XXIV.

THE NIGHT AFTER THE TRIAL.

It was the talk of the town that evening that Harkins had won his suit, Bodewin, the chief witness for the defense, having forsworn himself, and his testimony having been practically set aside by the jury; that there had been shameful disclosures as to his character; that Tony Keesner, brother of the girl he had wronged, was hunting for Bodewin, swearing he would shoot him at sight. Bets were being offered in every drinking-saloon of the city as to the result of the meeting. The town seemed to have emptied itself into the streets, at this hour of coolness and gayety. Children's voices were shrill in the gardened suburbs; the light rush of wheels was loud and low, in quick alternation, on the broad avenues looking outward from the city. A wind from the mountains, setting across the sun-warmed plain, revived with its wild, sweet breath the day's languors.

How many heart-breaks go to make up that song of a city at night! On her bed, that loomed white in the darkened room, Josephine lay and listened to this voice of many voices, dream-like, far away from that burning core of anguish which was the center of her being. Shame could not approach Bodewin as he lived in her thoughts. He had loved the girl who was dead, there had been a necessity for secrecy, everything had been misjudged and misrepresented, and Bodewin had been

too proud or too wretched to explain. That he had been base it was out of the power of the woman who loved him to believe. That he loved the girl whose beauty still ached in Josephine's remembrance, she could well believe. That her death had complicated his position in some cruel way, she could understand — or rather she tried to understand nothing; she believed and suffered. But the dumb cry of her anguish was not for herself — it was for Bodewin. Where was he that night? What had been left to him? Everything was gone, and there lived not a soul who could comfort him. She had dreamed that they two were strangely, perhaps perilously sympathetic, but while she had been balancing her maidenly subtleties of conduct, the current of his life had sunk out of sight, like those rivers that run along in sunshine and then suddenly disappear in the quicksands.

About nine o'clock that evening, in one of the thoroughfares of the town, two pistol-shots were heard, fired in quick succession. Word was borne from street to street, with a clamor of voices and a hurry of feet, that Harkins in the hour of his triumph was dead. It reached the great, gas-lit house, with its tiers of balconied windows, open to the night, where Josephine lay; it floated up from smoking-room to parlor, and pervaded the corridors in bursts of excited talk. It reached Josephine's door in a sound of imperative knocking. She started up. Her father spoke to her from the passage. She rose and opened the door. The room was faintly lighted from the street.

"Sitting in the dark, Jose?" her father said, reaching for her hand. "I hoped you were in bed and asleep, but I came up, thinking you might have been awakened by the stir in the house. A dreadful thing has happened. The town is ringing with it! Did you hear the shots?"

Josephine did not answer.

Her father had drawn her down upon his lap, in the great chair he had sunk into. He sighed, and rubbed his handkerchief over his damp forehead.

"That last shot sent Harkins to his account!"

"Who ——" Josephine began, and the great dread in her eyes finished the question.

"He and that young Keesner were in some place drinking together, or Keesner was drinking and Harkins was keeping watch of him. Keesner saw Bodewin pass on the street. He rushed out and fired one shot at him, and missed. Harkins followed him and grabbed him from behind, before he could shoot again. Keesner whirled, and in the struggle Harkins got the second barrel. They fell together,

Harkins underneath. He never spoke. Keesner's friends got him away before the police came up. But Harkins got what was meant for Bodewin. Why, Josephine!"

Josephine was sobbing on her father's neck. "Thank God!" she whispered, not knowing that she had spoken.

Bodewin had brought his horse down from the mountains, intending to leave him on a ranch for the winter. He had himself expected to go East after the trial; but now he had no plans, only to get out of the town as quickly as possible, and alone. Across the plains many roads and trails led towards the distant mountain passes, to the south and west.

Baldy had found a trail and was following it, with his head low, his ears playing backwards and forwards, knowing that his master had given him the direction of their course, and intelligently responsive to the trust.

Where he was going, what he was going to do, Bodewin did not yet know. It was enough for the present that he was in motion. But the motion was not so rapid or so exciting as to take the place of thought. The darkness was peopled with faces, poignant with wounded surprise or reproach or contempt, their looks all concentrated upon himself as in a nightmare. Babe Keesner's face he saw more constantly and vividly than any other. Although he could not definitely accuse himself, his conscience was not clear when he thought of her. Of all who had suffered through him, she had suffered most, and she had lost everything. Now that it was too late he could see the madness of his course with regard to her—the blind pertinacity with which he had kept that wild and foolish promise her death had extorted from him. From the night when he followed the wagon that bore her body to the camp, he had felt that he was marked for trouble; but he had not foreseen that it could involve any one but himself. He might have asked for another hearing at the trial, for Babe's sake if not for his own, but he could not have gone on the witness-stand again without being summoned and questioned by Craig—Craig, who could not know what questions to ask, and whose capacity for blundering might be measured by his cross-examination of Hillbury. He would not have been allowed to tell an uninterrupted story without a running fire of objections from the opposite counsel. He had no proofs to offer that easy and cynical crowd to which his appeal must have been made, except his own word, and that had been broken down before them. These were some of the excuses which Bodewin made for a silence which covered so much wrong and pain; but the true explanation of

it lay deeper than all his reasons, in the nature of the man himself. No one who knew him well would have been surprised that he was silent—after hearing his reputation sworn away before an assemblage of men ready, to a man, to believe him guilty—even had he felt that there was a single person present to whom his disgrace mattered more than to Hillbury—Hillbury, whose testimony had completed the case against him.

Bodewin's anguish, when he thought of Josephine, left no room for conjecture as to what she might have felt in witnessing his shame. The trial scene had branded him for life. The infamy of it was known to but a few people, but it would spread. Already he could hear the story of it repeated in every city where he had ever been known. There was nothing to be done but to live it down in the years that were left to him of his life. He felt already old, and yet as if he should never die. In the mean time he would do Babe the justice and give himself the consolation of telling the true story to Josephine. That she would believe him, without proofs, he did not doubt. Such generous belief was one of the necessities of her nature. He would get away into some corner of the world where he was not known, and think it all over and write her a letter. Already there was a strange, poor comfort in the thought.

XXV.

JOSEPHINE AND HILLBURY.

JOSEPHINE had been home nearly a month when Bodewin's letter came. It was a thick letter with the postmark only of some railroad on the envelope. She opened it, with the joyless certainty that she was to read the story of Babe Keesner written by her unhappy lover. There were a number of sheets closely written without date or signature, and within them was a note addressed to herself. She read:

"MY DEAR MISS NEWBOLD: When I asked you on the night of Babe Keesner's death if you could still have faith in me, even if circumstances condemned me, I spoke in weakness, foreseeing what some of the consequences of that night were likely to be, and feeling that the one thing I could not bear was that you should doubt me. It is a consolation to me, even now, to remember how readily and cordially you replied to my presumptuous claim upon your faith. You were in distress yourself that night. I frightened and bewildered you, yet I remember you did not shrink from me or evade my selfish question. You must have thought of it in the court-room, and it must have seemed to you a shameless and paltry advantage for me to have taken of your generosity. I dare not picture to myself all that you must have thought of me that day.

"And yet I know—God knows how I know it—that you will not doubt the truth of what I ask you

here to read — the inclosed story of my unhappy acquaintance with the Keesner family, from the hour of my capture by the father and son, to my last words with the daughter before her death. No one who believed Keesner's story would have believed mine, had I insisted upon telling it in the court-room to save Babe's good name and my own; there were other reasons why I could not tell it there and then.

"I put it in your hands now, to repeat to whom it may concern, or, if you think better, to keep as a trust from one woman to another, conveyed to you by me. For it is not so much *my* story as the story of Babe Keesner. My own story I have already told you — all but the end of it. It ends in my hopeless love for you.

"Yours, JOHN TRISTRAM BODEWIN."

The story Josephine put carefully away for the time when it should be needed; but the letter that was from Bodewin to herself alone she kept always with her, and read over and over the words in which he had called himself her lover. For a little while the joy of knowing as well as trusting that he was guiltless, and the more selfish joy of knowing herself beloved, helped her to bear the thought of his self-exile; but soon she began to ask herself, each day with a sharper anxiety, how long that exile was to last. He had cut himself off from any hope of an answer to his letter. She knew not where he had hidden himself. She searched the papers for personal items from the remotest states and territories, and often her heart stood still at the glimpse of a name, and she feared to read the record of some lonely death, in the tragedy of which she had no part. She could not bring herself to show Bodewin's letter to her father; his justification in that quarter she felt must come through some one else besides herself. Her life was full of duties and little cares that once had made her sufficiently happy, but now it seemed to her like the swollen November currents of the river that flowed past her window — heavily circling and swooning back upon itself, yet borne helplessly onward.

It was about this time that Hillbury, on his way to New York, passed through Kansas City and stopped over one train for the sake of seeing Josephine. He sent her a note from his hotel on the morning of his arrival, asking her permission to call in the afternoon.

Josephine welcomed this opportunity as the one she had long waited for. Hillbury, of all others, was the one whom it most concerned to hear Babe Keesner's story — the one it most behooved to cancel, as far as might be, the wrong that had been done. She would not trust herself with Bodewin's defense. Hillbury should have the story as it had been given to her, in the very words of Bodewin's letter.

In the weeks since the trial, Hillbury had been settling with himself in regard to Josephine. He had come to a decision none the

less impassioned that it was tardy and deliberate. He loved her; she was everything his wife should be, except that in some ways she needed development. He felt that he was singularly fitted for the happy task of aiding that development. It was not in Hillbury's nature to be humble, even in his love. Why should he be, indeed? He was thoroughly equipped and disciplined for exact work and refined enjoyment, for appreciation or for judgment: why not for love? Each separate problem of his life as it presented itself had been solved by him in the most satisfactory manner. The problem next in order was this beautiful young woman, whose divine capacity for love he believed in and longed to prove. He had watched the progress of Bodewin's influence over her, at first with curiosity, but later with deepening unrest. That influence was at an end now; it never occurred to Hillbury that it could have survived the revelations of the trial. The juxtaposition of his own happiness, supposing happiness to be in store for him, with his friend's downfall was painful. But life was full of such pain, and the Nemesis that had overtaken Bodewin could not be appeased by any private renunciations of his own.

Did Hillbury but know it, his sorrow for his friend, and the trouble of mind it had cost him, together with his own share in Bodewin's condemnation, had done much to soften his pride of individuality, and to widen the gate of his well-guarded heart for love to creep in.

He was surprised to find how nervous he was becoming, while he waited for Josephine after sending up his card.

He watched her with keen pleasure as she came down the long room to meet him. Her beauty impressed him not more than her earnestness and entire unconsciousness of herself. She did not smile, but her face showed a gladness that was almost exaltation. Hillbury was not humble, but he was honest and clear-sighted. He could not take that unexpected deep joy in her face all to himself. He would have to come many times to see her before he would have earned such a beautiful look of greeting as that. It troubled him to think of the unknown agencies that might be swaying her life away from him, even during these moments she was apparently giving to him. She held a bulky letter, which she kept in her hands, bending and crushing it, while she replied to his inquiries about her father and the incidents of their journey. For some time they talked of indifferent things, carefully on Hillbury's part, avoiding any allusion to their common experiences in the camp, or to any person connected with them. It was Hillbury's intention to commence again on a new basis

with Josephine, ignoring as far as possible the unfortunate beginning of their acquaintance—ignoring it until they had become intimate enough to return to it from a common point of view. Then they would talk of it together, with assured sympathy, as of everything else in both of their lives that had been remembered with pleasure or with pain. This thought stealing into his mind was almost confusing in its sweetness. There was a little silence. Then Josephine bent towards him suddenly, her hands clasped over the letter in her lap. "We are thinking of the same thing, I know. Why should we not speak of it?" she said, looking almost imploringly at Hillbury.

"Of what are you thinking?" he asked.

"Of the day when I saw you last. It seems to me I have thought of nothing else ever since." She did not see that her words were a blow to Hillbury. "I know," she went on, "how you must have suffered in doing what they made you do. It was worse for you almost than for your friend. For you believed he had sinned, and he knew that he had not."

She gave Hillbury a moment in which to speak, but he was silent.

"How strange it is," she continued, with an absent look of pain, "that the truth can be more cruelly false even than falsehood itself. The proofs were terrible, but it was the proofs that lied."

"How do you know that?" Hillbury asked, sternly. He felt as if he were now on his own defense.

"I have the true story here, in his own words. All those fatal omissions he was obliged to make—they are all explained here." She half opened the letter and held it towards Hillbury. "You are to read it," she urged, as he made no movement to take it. "You are the one of all others who *must* read it."

Hillbury had recognized the handwriting. "If it is imperative that I should read it, why was it not addressed to me?"

"You forget there was a woman sacrificed with him," said Josephine coldly. "He has written in her defense, not in his own. But her cause and his are inextricable. In telling the truth about her, he shows how he himself has been misjudged."

"If there is anything he could have explained and did not, he has done a great wrong to others besides himself. A man owes the truth about himself to his friends at all times, and at certain times he owes it to all men. The trial was one of those occasions. Bodewin had no right to make omissions in his testimony. It is not the truth that is sometimes false, it is half the truth."

"But one may become involved through sympathy—through tenderness for others. He

was bound by a promise to one who was dying, absolutely helpless and at his mercy."

It was unfortunate that these hastily chosen words of Josephine's called up a picture that was almost revolting to a man of Hillbury's stern probity and hatred of morbid sentiment. "I cannot imagine," he replied with deep-toned impatience, "any circumstances that should excuse a man for making an unconditional promise to conceal the truth, or a part of it."

"It is very possible that you cannot," said Josephine; "but that was not the question at the trial. The charges they made against him there are answered in this letter. Your own statements are answered. You owe it to yourself to read it." She offered him the letter again. She was hurt and disappointed by Hillbury's manner. She had expected that he would welcome Bodewin's explanations with unhesitating joy, but now it seemed as if he required some indorsement of the message itself. He took the letter, and was about to put it away in his pocket-book, when Josephine interposed: "Oh, I cannot give it up to you; I must ask you to read it now. There are not many pages."

"I will return it to you promptly," said Hillbury. "I would rather read it, if you please, when I am alone; you think me possibly more indifferent in this matter than I am."

It was impossible for Josephine to explain to Hillbury her feeling of passionate proprietorship in Bodewin's letter. It had come like a revelation, vouchsafed to her alone, out of the sad mystery of his fate. It was, to her simple imagination, the sole and sufficient proof of his innocence. She could not part with it, even for a day. Her pride deserted her in this dilemma; she looked helplessly at Hillbury, with tears in her eyes.

"Read it to me yourself," said Hillbury suddenly. "The words will come home to me more if I hear them uttered." He was not slow to comprehend her feeling. He suspected that he had made a dreary mistake—not the first one of that strange, unhappy summer. He wanted some sure proof of it. There could be none surer than to hear Josephine tell Bodewin's story in his own words.

She hesitated but a moment over the alternative. Then going to the window and seating herself between the heavy partings of the curtains, she began to read. At first her voice trembled and the pages of thin paper rustled slightly in her fingers. But soon she had lost herself in the story. Hillbury listened, but not with joy, for Bodewin's justification was his own sentence, and the final blow to the hope which had brought him there. There was no mistaking the source of this passion for jus-

tice that thrilled in the girl's voice and made the blood in her cheek its witness. He saw the sweet delusion he had been cherishing fade, and in its place he faced only the cold, enduring peace of reparation for a wrong unconsciously committed, but no less cruel in its consequences. He saw where he had failed in his faith towards his friend. Failures or mistakes of any kind were bitter things for Hillbury to acknowledge; but while he silently owned his shortcomings his habit of justice made him just, even to himself. He did not accuse himself extravagantly. He had judged his friend only as he himself would have submitted to be judged by others.

When in the course of the narrative Josephine came to the incident of the photograph, Hillbury interrupted her. He did not understand Bodewin's allusion to his relations with Harkins through the death of his sister. Josephine laid down the letter and repeated to him the story of Ellen Eustace's death.

"Was that the 'obligation'—the 'delicate personal obligation' that Bodewin suffered from?" Hillbury exclaimed. "Poor fellow!" he added gently. Bodewin's family pride and his sensitiveness through his sister would be sure to touch Hillbury far more nearly than any entanglement of sentiment, of gratitude, with a young woman of a class beneath him.

"How strange that he never told you that story!" Josephine murmured in the pause.

"May I add how strange that he told it to you!"

Josephine hung her head. "Before the trial," she explained falteringly, "he had told me many things about himself which our short acquaintance did not entitle me to know. But it came about through my presuming to ask him why he would not be my father's witness." Josephine felt how Hillbury would regard this statement. When the story had progressed as far as the scene on the porch, when Babe had submitted to have her eye treated, the reader laid the letter down and looked at Hillbury. "Is it not true," she said, "that proofs can lie? The only thing that can be trusted is character. A man thirty years old should have one. His friends, I think, should know what it is, and—forgive me—I think they should let no evidence, hardly the evidence of their senses, shake the faith that has once been given."

If Josephine was merciless, it was because Hillbury seemed to her so little moved.

"Spare me," he said in a low voice. "Yours was the better part; but it is possible that only a man can fully measure a man's temptations. And the effect of a thing *seen* is tremendous."

When Josephine had folded the letter, Hillbury rose and walked slowly towards the window where she sat. He still held his hat and gloves, and as he bent over her hand in farewell, he looked merely a perfectly dressed and irreproachable afternoon visitor taking his leave. Yet never in his life before had he been so deeply moved.

"What I have learned from you, Miss Newbold, makes it necessary that I should see John Bodewin as soon as possible. Can you tell me where he is?"

"I have no idea," said Josephine.

"Does his letter give no clew?"

She shook her head. Her overwrought nerves were giving way, and she could not trust herself to speak.

"Wherever he is," said Hillbury slowly, in his fine, sad accent, "I will find him if he be living. When I see him I shall wish to say to him the thing that will be most comforting. He must be very sore——" He waited a moment. Josephine could not speak. "Your perceptions throughout have been so much truer than mine," he continued,— "can you not give me the right words to say? There must be no more blundering. What shall I say that will be most sure to bring him back to us?"

"Oh," said Josephine, "if you find him tell him I wish to see him; I have something to say to him myself."

"I will find him," Hillbury repeated, "and he will come."

"I will find him, and he will come!" Many times, in the days that followed Hillbury's visit, Josephine repeated these words to herself, and saw again his sad yet satisfied smile of prophecy. She lived upon the words until the promise was fulfilled.

XXVI.

THE DESERT STATION.

ONE day of the following summer an overland train, westward-bound, left two of its passengers at a station on the desert plains, consisting of one frame house, a "dug-out," a section house, and a water-tank. It was not a meal station; no through train would stop there until the following day. A conveyance called a "jerky" would arrive in two hours' time from some obscure habitation of men in the desert, and continue thence to its next stopping-place, thirty miles away. But even this poor chance of rescue was not known to the sympathetic car-load of passengers who were now abandoning two of their number to their fate.

The self-devoted ones were a woman in her first youth and a man, not so young by sev-

eral years. Both were interesting in appearance, and, as if to complete the contrast between herself and her surroundings, the girl was quietly but intelligently dressed in the height of the summer's fashion for young lady tourists, in the world where the fashions are a record of the seasons as they pass. While her companion was directing the porter who carried their hand-luggage, the young woman walked to the end of the short platform and stood there looking before her eagerly. In her happy eyes there was something like recognition of the scene, or a remembrance of some other scene which it vividly recalled. Strongly characterized as it was, there was indeed nothing singular in the view. Hundreds of miles of such country can be seen by the traveler west of the Missouri River. The sage-brush was turning gray with the long summer's deepening dust; the blue of the cloudless sky was darker than the sun-blanchd plain; rising afar off where sky and desert meet, a range of peaks showed their snow-covered tops, like white sails on the horizon.

The young girl and her traveling companion stood side by side as the train moved off, watching the little colony, of which they had lately been a part, receding from their gaze down the lessening lines of the track. Two or three heads looked back at them from open windows. A young man sitting on the steps of the rear car waved his hat to them, with the compassion of one who goes with the majority for the pathetic minority left behind.

The two who were in the minority did not respond; they turned and smiled at each other.

"They are *sorry* for us!" said Josephine.

The man on the rear car was a mere speck in the distance. Bodewin stooped and kissed

her for the look with which she said those words.

The noise of the train died away, and they were left standing alone on the heated boards of the platform, enfolded in the stillness of the desert. Gradually their stunned ears became accustomed to the fainter range of sounds around them. The ticket agent, who had partially satisfied his curiosity with regard to them, and returned to the solitude of his official duties, could be heard rustling a newspaper and grating a chair across the floor within. The hurried click, click of the telegraph machine asserted itself imperatively, like the voice of the world they had left warning them to come back. The wind from off the desert, blowing in their faces, seemed to call to them from that unknown region whither they were venturing together. Josephine lifted her outstretched arms and welcomed it with a thrill of joy that was keen with the memory of pain. It was the wind of the high valley where she and Bodewin had ridden together; it was the plain's wind that had rattled the dusty lattices outside of the room where she lay, alone with her anguish, the evening after the trial.

Wind of the great Far West, soft, electric, and strong, blowing up through gates of the great mountain ranges, over miles of dry savanna, where its playmates are the roving bands of wild horses, and the dust of the trails which it weaves into spiral clouds and carries like banners before it! Wind of prophecy and of hope, of tireless energy and desire that life shall not satisfy! Who that has heard its call in the desert, or its whisper in the mountain valleys, can resist the longing to follow, to prove the hope, to test the prophecy!

THE END.

Mary Hallock Foote.

PAST.

THERE, as she sewed, came floating through her head
 Odd bits of poems, learned in other days
 And long forgotten in the noisier ways
 Through which the fortunes of her life now led;
 And looking up, she saw upon the shelf
 In dusty rank her favorite poets stand,
 All uncaressed by her fond eye or hand;
 And her heart smote her, thinking how herself
 Had loved them once and found in them all good
 As well as beauty, filling every need;
 But now they could not fill the emptiness
 Of heart she felt ev'n in her gayest mood.
 She wanted once no work her heart to feed,
 And to be idle once was no distress.

Winifred Howells.

ITALY, FROM A TRICYCLE.

WE left the monastery the next morning. It took courage on our part. But we knew it was best to go quickly. Every day we fell more under the dreamy influence of the place and became less willing for action. We must hasten from Monte Oliveto, for the very reason which led Blessed Bernardo to it — to flee temptation. The *Abate* was in our room by half-past seven. Dom Giuseppe was in the church saying mass, but had sent his farewells. He himself had not yet said mass, so he could not drink his coffee with us, but he sat by while we had ours. We would not reach San Quirico till noon, he feared, and we must have something in our pockets to eat in the meantime, and he went to his room and came back with two cakes. He brought besides two letters he had written introducing us to monks at San Pietro in Perugia. Then he came downstairs and out to the stable, though he was fasting and the morning was wet and cloudy and cold. We did not get on the tricycle at once. We remembered the road too well. The *Abate* walked by our side, now and then patting J—— on the back and calling him affectionately, "Giuseppe, Giuseppe," and kept with us until, at some little distance from the gateway, we mounted the machine. After he had said good-bye he stood quietly watching us. Then there came a turn in the road which hid him from us, and when we saw him again he was walking on the foot-path below the cypresses, with two little boys who had come out with him. He was on his way to take Dom Giuseppe's place at the altar. And then we went on sadly, for we knew that we should not come to another resting-place where there was such perfect relief for pilgrims that are weary and faint in the way.

As the road was difficult going up, so was it dangerous coming down, and again we had to walk. To add to our discomfort, before long it began to rain, and it was so cold we had to blow on our fingers to keep them warm. During the night it had snowed on the far mountain ranges. Beyond Buonconvento when we had returned to the post-road we went fast enough, but only for a while. There were more mountains to cross, up which J—— could not go very fast because of the burden, or knapsack, that was on his back. Out of very shame I took my share in pushing and pulling the tricycle. Once or twice we had long coasts; but in places the road in descending wound as often as a small St. Gothard railway, and

coasting would have been too great a risk. It rained at intervals, but at times the sun almost broke through the clouds which followed it in long gray sweeps from the white masses which rested on the snow-capped mountains bounding the horizon. To our right, Monte Amiata, bare and rugged and with white top, was always in sight, and once, above it, the clouds rolled away, leaving a broad stretch of greenish-blue sky. There were many crosses by the wayside, and they were different from any we had yet seen. On each, above spear and sponge, was a black cock, rudely carved to look as if it were crowing. Just before we came to San Quirico, and towards noon, we saw at the foot of one of these crosses an old weary-looking peasant, with head bowed, as if he listened for the Angelus.

We were prepossessed against San Quirico before we reached it. Olives with vines hanging from them, in defiance of Virgil, brown fields, and red and yellow trees could not reconcile us to the long climb up the mountain. It was worth our trouble, however, if only to see the cathedral. We left the tricycle at the *trattoria*, and at our leisure looked at the portal and its pillars, with quaintly carved capitals of animals and birds, and those others, joined together with a Celtic-like twist and resting on leopards, and the two sea-monsters above. And while we looked at the grotesque gargoyles on the walls and the two figures for columns and the lions on the side doorway, two *carabinieri* from a neighboring window examined us as if we were equal curiosities. This fine building is an incongruity in San Quirico, which, for our first impressions proved right, is at best but a poor place. We were cheated in it as we had never been before. When we went back to the *trattoria* four men were eating their dinner inside the fire-place in the kitchen. But we were ushered into what I suppose was the best room. It was dining-room and bed-chamber combined. On one side was a long table, on the other the bed. The dressing-table served as buffet, and the *padrona* brought from its drawers the cheese and apples for our dessert. In the garden below, for we were in the second story, weeds like corn grew so tall that they shaded the window. What happened in that room, and the difference that arose between the *padrona* and ourselves, are facts too unpleasant to recall!

After San Quirico there was the same barrenness. We turned aside to visit Pienza,

because we were so curious to see the cathedral and palaces Pius II. built there in the fond hope of turning his native village into an important town. We saw the great brown buildings, marked with the fine crescents of the Piccolomini and the papal tiara and keys, as out of place in Pienza as the cathedral in San Quirico. We looked closer at the old stone well and its beautiful wrought-iron work; J—— made a sketch of a fine courtyard, and then we were on our way again. Near Montepulciano we came to a thickly wooded country, and all the bells rang out as if in welcome when, after working up the long road, so winding that at times the city was completely hidden, we rode into its now dark and cold streets.

It was in this high hill town that one of the pilgrims fell by the way. For two days J—— was too ill to ride, and we feared our pilgrimage had come to an end. We staid at the albergo Marzocco. It was on the fifth floor of an old palace, and the entrance was through the kitchen. The *padrone* had a *pizzicheria*, or pork-shop, across the street. When anything was wanted at the albergo, it was brought from the shop. Every time I went to my window I saw messengers on their way between the two establishments. But no man can serve two masters. The *pizzicheria* drove a more thriving trade, and the albergo suffered in consequence. It was left in charge of a youth of unparalleled stupidity, who seldom understood what we asked for, and when he did declared it was something not to be had. But a friend was sent to us in our need.

It happened in this way. The first morning we went out for a walk, and while we were sitting in a *café* the door opened and a young Italian, dressed à l'Anglaise, even to his silver-headed cane, came in. He took a seat at the table next to us. When his coffee was brought he asked the *cameriere* if he had seen the English lady and gentleman who had arrived the evening before on a *velocipede*. No, the *cameriere* had not; he knew nothing of these *forestieri*. There was a pause while the young Italian sipped his coffee. But presently he turned to us and said in good English, but with a marked accent:

"I beg pardon, sare, but was it not you who came to Montepulciano on a tricycle?"

"Yes," J—— said, rather curtly.

"Ah, I thought so!" the Italian continued, well satisfied with the answer. "I have seen it — a Humber. It is a beautiful machine. I myself do ride a bicycle, the *Special Clob*, 'Touring Clob,' and to the *Speedvell Clob*. You know it? I do belong to the 'Cyclists' All the champions belong to that *Clob*. I did propose some one for director at the last

meeting; you will see my name on that account in the papers. Here is my card, but in the country around Montepulciano all call me Sandro or Sandrino. I have ridden from Florence to Montepulciano in one day. I have what you call the wheel-fever," and he smiled apologetically and stopped, but only to take breath.

We were fellow-cyclers, and that was enough. He was at once our friend, though our greeting in return was not enthusiastic, and though our record would have disgusted the *Speedvell Clob*. He was sorry J—— was not well. He could sympathize. He was feeling *very bad* himself, because the day before he had gone on his bicycle as far as Montalcino with a gun to *keel the leetle birds*. It was too far even for a champion. But he had taken the water — Janos — he had great faith in the waters. The cognac had by this time made J—— better, and we started to leave the *café*. Sandrino, to give him his Montepulciano name, insisted on paying for everything. We must let him have that favor, he said, and also another. He was not a native of the town. He was a Roman, as he supposed we could see by his nose. But still he would like to do us the honors of the place. He would take us to see so fine a church. We could not but be pleased with it. It was only a step. Foolishly we went. The step was a long one. It took us half-way down the mountain-side to the Madonna di San Biagio. But J—— was by this time really too wretched to look at anything, and we turned back at once. As we walked slowly up again Sandrino explained that he had lived in England several years, and it turned out that he had the English as well as the wheel fever. All his clothes were from London, he said, even his flannels, and he pulled down his sleeve that we might see. He smoked English tobacco. A friend sent it to him, and he showed us the small paper box tied with a string in which he kept it. And most of his news was English, too. His friends wrote him. He had just had a letter — see — and he opened it. — There had been fearful riots in England. He cared much for the politics of the country. But the refrain to all he said was praise of cycling. He offered to ride with us when we left Montepulciano. He could go any day but the next, which was his twenty-first birthday, and when he was to have a great dinner and many friends and much wine. He would call, if we would allow him, and with profession of great friendship he left us at the door of the albergo.

He was true to his word. He came twice the following day. The first time he had stopped, he said, to tell us he did hear from friends

THE GATE OF SAN QUIRICO.

in Castiglione del Lago who, if we would ride to-morrow, would be glad to see us at lunch. "There will be nothing much," he concluded. "They will make no preparations. We just take whatever they have. It will be some little thing." Though in the first glory of his twenty-one years, he went with me to a drug-gist's to act as interpreter. But I think he was repaid by his pleasure in carrying back a bottle of his favorite waters. The *cameriere*, when he saw it, with his usual cleverness followed into the room with three glasses. If we had asked for three, he would have brought one. Sandrino's second visit was in the evening, after he had eaten his great dinner and drunk much wine, which had again made him feel *very bad*. Had we ever tasted the famous Montepulciano, "king of all wine"? he asked. No? Well, then, we must before leaving the town. It was not to be had in the shops. He had been presented with many bottles. He repeated his invitation to lunch in Castiglione, and it seemed that other friends in a villa near Cortona would also be charmed to see us, and to give us wine if we were tired. He was very lavish with the hospitality of his friends.

The next morning J—— was much better, and we decided to ride. Sandrino arrived at half-past seven and breakfasted with us. In the uniform of the *Speedvell Clobber*, its monogram in silver on his cap, he was even more English than he had been the day before. Our last experience at the albergo was characteristic. The *cameriere*, overcome by Sandrino's appearance, became incapable of action. We

called for our coffee and rolls in vain. Finally we all, our guest included, made a descent upon the kitchen and forced him to bestir himself.

It was Sunday morning, and the news of our going had been noised abroad. The aristocracy as well as the people turned out to see us off. Many of Sandrino's friends lingered in the barber-shop across the street. Others waited just without the city gate with his mother and sister. When Sandrino saw the crowd here, he sprang upon his *Special Clobber*, worked with one foot and waved the other in the air, rode to the little park beyond and back, and then jumped off, hat in hand, at his mother's side with the complacent smile of a champion. Indeed, the whole ride that day savored of the circus. He went down hills with his legs stretched straight out on either side. On level places he made circles and fancy figures in the road. Whenever we passed peasants, and there were many going to church, he shrieked a warning, shrill as a steam-engine whistle. No wonder he said he had no use for a bell! He spoke to all the women, calling them his "beautiful cousins." And in villages the noise he made was so great that frightened people, staring at him, could not look behind, so that several times we all but rode over men and women who walked backward right into our wheels. And all the while J——, like the ring-master, kept calling and shrieking and no one paid the least attention to him.

Our way was through the beau-

MONTEPULCIANO MARKET.

LEAVING MONTEPULCIANO.

tiful Val di Chiana, no longer pestilential and full of stench as in Dante's day, but fresh and fair, and in places sweet with clematis. There were no fences or hedges, and it stretched from mountains to mountains, one wide lovely park. About half-way to Castiglione we came to the boundary line between Tuscany and Umbria, a canal with tall poplars on its banks, throwing long reflections into the water below, where a boat lay by the reeds. We stopped there some little time. Sandrino was polite, but I could see he did not approve. What would the *Speedwell Cloop* have thought? Farther on, when we waited again, near a low farm-house under the oaks, he wheeled quickly on. But presently he came back. "Oh," he said, "I thought you must have had an accident!"

There could be no lovelier lake town than Castiglione del Lago. The high hill on which it stands projects far into Lake Thrasimene. The olives, which grow from its walls down the hillside into the very water, are larger and finer with more strangely twisted trunks than any I have ever seen. As we came near the town we rode between them, looking beneath their silvery-gray branches out to the pale-blue, quiet lake beyond. A woman came from under their shade with a bundle of long reeds on her head. A priest passed us on a donkey. We left our machines in a stable at the foot of the hill, and walked through the streets. Here Sandrino's invitation came to nought. His friends were away. Whatever *leetle thing* we had must be found elsewhere. So we went to a *trattoria*, where another of his friends, a serious, polite young man, who, we learned afterwards, owns the town and all the country thereabouts, sat and talked with us while we ate our lunch. Poor Sandrino! He had to pay for his English clothes and foreign friends! The *padrona*, backed by the *padrone* from the kitchen below, asked

him no less than five francs for our macaroni and wine. A dispute, loud because of the distance between the disputants, followed; but in the end Sandrino paid four francs, though half that sum would have been enough. It was some consolation for us to know that we, *forestieri*, had never been cheated so outrageously.

It was pleasant wandering through the town, with the grave young man as guide, to the Palazzo Comunale, where the red and white flag of the Duke of Cornia waving outside was the same as that painted in the old frescoes within, and where councilmen, holding council, bowed to us as we passed; and then to the old deserted castle which, with its gray battlemented walls and towers, was not unlike an English ruin. But it was pleasanter

IN THE VAL DI CHIANA.

CASTIGLIONE DEL LAGO.

when, Sandrino having kissed his friend, we were on the road again, riding between yellow mulberries by the side of the lake. Sheep were grazing in the swamps. Donkeys and oxen were at rest in the meadows. But the peasants, mass heard, were at work again. Women on ladders were stripping the mulberries of their leaves; men on their knees were digging in the fields.

At the villa, Sandrino's friends were at home. At the gate the gay bicyclist gave his war-cry. A young lady ran out between the roses and chrysanthemums in the garden and by the red wall where yellow pumpkins were sunning, to welcome him. Then her mother and sister came and also gave him greeting. They received us with courtesy. We were led into the drawing-room, a bare, barn-like place with cold brick floor, where there were three or four chairs, a table, an old piano, faded cretonne curtains hung on rough sticks at the windows, and small drawings, which might have been torn from a child's drawing-book, pinned on the wall. A man in blue coat and trousers, such as the peasants wear, followed us in and sat down by the young ladies. He was one of her men, the signora explained. Then we had the wine Sandrino promised, and we became very friendly. One of the daughters knew a little English, but when we spoke to her she hid her face in her hands and laughed and blushed. She never, never would dare to say a word before us, she declared. She was very arch and girlish. One minute she played a waltz on the piano; the next she teased Sandrino, and there was much pleasantry between them. The mother spoke French after a fashion, but when she had anything to say she relapsed into Italian. She lived in Rome, she said. We must come and see her there. But would we not now stay at her villa all night, instead of in Cor-

tona? Then she squeezed my hand. "*Vous êtes bien sympathique!*" she said, and I think she meant to compliment me. Her husband, it seems, was a banker in Rome, and would be pleased, so she told us through Sandrino's interpretation, to do anything and everything for us.

Mother and daughters, men and maids, all walking amiably together, came to the garden-gate with us. The signora here squeezed my hand a second time. The skittish young lady said "good-bye" and then hid behind a bush, and her sister gave us each some roses. It was here, too, we were to part with Sandrino. He must be in Montepulciano by six. More friends were coming. Would we write him postal cards to tell him of the distance and time we made? And that

BY LAKE THRASIMENE.

map of Tuscany we said we would give him, would we not remember it? He was going to take some great rides, and it would help him. Then we turned one way, and he, riding his best for the young ladies, the other, to be seen by us no more.

It was roses all the way to Cortona. They grew in villa gardens and along the road up the mountain; there were even a few among the olives, on the terraces whose stone supports make the city look from below as if it were surrounded by many walls instead of one only. It was disheartening when, having come to the albergo, we found the lower floor, by which we entered, the home of pigs and

was useless to try and dodge him. No matter how long we were in churches or by what door we came out, he was always waiting in exactly the right place. In our indignation we would not ask him the way, but we did of some other boys, who forthwith led us such a wild-goose chase that I think before it was over there was not a street or corner of the town unvisited by us. We next employed an old man as guide. Of course he knew all about Luca Signorelli. He could show us all his frescoes and pictures in Cortona. Some of them were bad enough, as he supposed the signore knew; they were painted in the artist's youth. But we wanted to see his house? Ah!

we had but to follow him, and he led us in triumph to that of Pietro da Cortona. As this would not do, he consulted with an old woman who recommended a visit to a certain *padre*. The *padre* was in his kitchen. He had never heard of Signorelli's house, and honestly admitted his ignorance. But could he show us some fine frescoes or sell us antiquities? This failing, our guide hunted for some friends who, he declared, knew everything. But they were not in their shop, nor in the *caff  *, nor on the piazza, and in despair he took us to see another priest. The latter wore a jockey-cap and goggles, and was a learned man. He had heard of a life of

Signorelli by a German. He had never read it, nor indeed could he say where it was to be had; but he knew there was such a book. He was certain our hunt was useless, since Signorelli had lived in so many houses the city could not afford to put tablets on them all, and so not one was marked. He himself was a professional letter-writer, and if the signore had any letters he wished written — ? We then gave up the search and dismissed the old man with a franc, though he declared himself still willing to continue it. It was in this way we saw Cortona.

For the last few days we had begun to be

TWO GENTLEMEN OF VERONA.

donkeys and oxen. The major was right, I thought; Cortona was a rough place. The contrast when, on the third floor of this establishment, we were shown into a large, clean, really well-furnished room, with window overlooking the valley, made us neglect to drive a close bargain with the *padrona*, a neglect for which we suffered later.

The principal event of our stay in Cortona was a hunt for Luca Signorelli's house. Why we were so anxious to find it I did not know then, nor do I now; but we were very earnest about it. At the start a youth pursued us with the persistence of a government spy. It

CORTONA.

haunted by the fear of the autumn rains. If they were as bad as Virgil says and were to fall in dense sheets, tearing the crops up by the roots while black whirlwinds set the stubble flying and vast torrents filled ditches and raised rivers, the roads must certainly be made unrideable. Since the morning we left Monte Oliveto the weather had been threatening, and now in Cortona there were heavy showers. As we sat in our room at the albergo after our long tramp, and J—— made a sketch from

the window, we saw the sky gradually covered with dark clouds. The lake, so blue yesterday, was gray and dull. The valley and the mountains were in shadow, save where the sun, breaking through the clouds, shone on a small square of olives and spread a golden mist over Monte Amiata. Before J—— had finished the gold faded into white and then deepened into purple, and we determined to be off early in the morning.

The next day I was tired and in no humor

ON THE HILL.

for riding. J—— wanted for once to try the tricycle without luggage over the Italian roads. It was settled then between us that I should go alone by train to Perugia, where we would meet. It was a beautiful coast down the mountain between the olives, four miles with feet up. The clouds had rolled away during the night, and it was bright and warm at the station when J—— left me to go on his way. It was quiet, too, and for some time I was alone with the porters. But presently a young wo-

gave me her card,—Elena. Olas, *nata* Bocci, was her name. I wrote mine on a slip of paper, and when the train, only an hour late, came, we parted with great friendship. A regiment of soldiers was on its way to Perugia and made the journey very lively. Peasants, who had somehow heard of its coming, were in wait at every station with apples and chestnuts and wine, over which there was much noisy bargaining. At other times the soldiers sang. As the train carried us by the lake, from

which the mountains in the distance rose white and shadowy and phantom-like; and by Passignano, built right in the water with reeds instead of flowers around the houses, and where fishermen were out in their boats near the weirs; and then by Maggiore and Ellera on their hill-tops, I heard the constant refrain of the soldiers' song, and it reminded me of my friend at Cortona, for it was a plaintive regret for "*Poverina mia*." Then there came a pause in the singing, and a voice called out, "*Ecco, Perugia!*" I looked from the carriage window, and there far above on the mountain I saw it, white and shining, like a beautiful city of the sun.

At the station J—— met me. He had been waiting an hour. He had made the thirty-six miles between Cortona and Perugia in three hours and a half! Many officers with their wives were in the station, and in their curiosity so far forgot their usual dignity as to surround him and pester him with questions as to his whence and whither, and what speed he could make. It is a long way from the station up the mountain to the town, but we went faster than we had

ever climbed mountain before, for we tied the tricycle to the back of the diligence. J—— rode and steered it, but I sat inside, ending my journey as I had begun it, in commonplace fashion. The driver was full of admiration. We must go to Terni on our *velocipede*, he said, for in the mountains beyond Spoleto we would go down-hill for seven miles. *Ecco!* no need of a diligence then!

The *padrone* of the albergo at Perugia was a man of parts. He could speak English. When we complimented him on a black cat which was always in his office, he answered, with eyes fixed on vacancy, and pausing be-

AN OLD TEMPLE.

man, with a child in her arms, came by. She stopped and looked at me sympathetically. I spoke to her, and then she came nearer and patted me on the shoulder and said, "*Poverina!*" It seems she had seen J—— bring me to the station and then turn back by himself. I do not know what she thought was the trouble, but she felt sorry for me. She was the wife of the telegraph operator and lived in rooms above the station. She took me to them, and then she brought me an illustrated Italian translation of "*Gil Blas*" to look at, while she made me a cup of coffee. Every few minutes she sighed and said again, "*Poverina!*" She

"Piping down the Valley wild;
Piping songs of pleasant gloom."

"PIPING DOWN THE VALLEY."

tween each word like a child saying its lesson: "Yes-it-is-a-good-cat. I-have-one-dog-and-four-cats. This-cat-is-the-fa-ther-of-the-oth-er-cats. One-are-red-and-three-is-white." And when we had occasion to thank him, he knew enough to tell us we were very much obliged. But we gave him small chance to display his powers. There was little to keep us in the albergo when after a few minutes' walk we could be in the piazza, where the sun shone on Pisano's fountain, and on the Palazzo of the Baglioni and the Duomo opposite. But what a fall was there! A couple of *gendarmes*, priests walking two by two, a few beggars, were the only people we saw in this broad piazza, where at one time men and women, driven to frenzy by the words of Fra Bernardino, spoken from the pulpit by the Duomo door, almost fell into the fire they had kindled to burn therein their false hair and ornaments, their dice and cards; and where at another Baglioni fought, with the young Raphael looking on to later paint one at least of the combatants.

The Grifonettos and Astores who feasted on blood, could they return to life and to their native town, would have little sympathy with the captains and colonels

who now drink tamarind water in the *caffés*, booted and spurred though the latter be. The *caffé* is everywhere the lounging-place of Italian officers, but in Perugia it seemed to be their headquarters. There was one on the Corso, a few doors from the Palazzo, which they specially patronized. They were there in the morning even before the shops were opened, and again at noon, and yet again in the evening, while at other times they walked to and fro in front of it, as if on guard. But though the youngest as well as the oldest patronized it, the distinctions of rank between them were observed as scrupulously as Dickens says they are with the Chat-ham and Rochester aristocracy. The

PASSIGNANO.

colonel associated with nothing lower than a major, the latter, in turn, drawing the line at the captain, and so it went down to the third lieutenant, who lorded it only over the common soldier. On the whole I think the lesser officers had the best of it; for whether they eat cakes and drank sweet

a third came in their place and gave us welcome. He showed J—— the inner cloister, to which I could not go. Women were not allowed there. It was because of my skirts, he said; and yet he, too, wore skirts, and he spread out his cassock on each side. While they were gone I waited in the church. I

THE BRONZE PONTIFF'S BENEDICTION, PERUGIA.

drinks, or played cards, they were always sociable and merry. Whereas, sometimes the colonel sat solitary in his grandeur, silent except for the few words with the boy selling matches as he hunted through the stock to find a box with a pretty picture.

We were long enough in Perugia to carry the *Abate's* letters to San Pietro. The monks to whom they were written were away, but

wonder if ghostly voices are never heard within it. The monks, long dead, whose love and even life it was to make it beautiful until its walls and ceilings were rich and glowing, its choir a miracle of carving, and its sacristy hung with prayer-inspiring pictures, have, like the Baglioni, cause to bewail the degenerate latter day. The beauty they created now lives but for the benefit of a handful of

MILLS ON THE TIBER.

monks, whose monastery is turned into a Boys' Agricultural School, and for the occasional tourist. Later from the high terrace of the park opposite San Pietro we saw the boys in their blue blouses digging and hoeing in the fields under the olives, where probably the monks themselves once worked. There is in this little park an amphitheater with archway, bearing the Perugian griffin in the center. It is shaded by dense ilex-trees, from whose branches a raven must once have croaked; for evil has come upon the place, as it has upon the gray monastery so near it. Instead of nobles and knights and men-at-arms and councillors of state, two or three poor women with their babies sat on the stone benches gossiping. And as we lingered there in the late afternoon there came from San Pietro the sound, not of monks chanting vespers, but of some one playing the "Blue Danube" on an old jingling piano. Only the valley below, and the Tiber winding through it, and the mountains beyond are unchanged!

When we left Perugia in the early morning, we passed first by the statue of Julius II., thus receiving, we said to each other, the bronze pontiff's benediction. We imagined this to be an original idea; but it is useless

to try to be original. Since then we have remembered the same thought came to Miriam and Donatello when they made the statue their trysting-place. Then we rode through the piazza, where a market was being held, and where at one end a long row of women all holding baskets of eggs stood erect, though all around other women and even men, selling fruit and vegetables, sat comfortably on low stools. Out on the other side of the Porta Romana we saw that while Perugia was bright and clear in the sunlight, a thick white mist

GOING HOME.

SANTA MARIA DEGLI ANGELI.

covered the valley, so that it looked as if a great lake, bounded by the mountains, lay below. The chrysanthemums and marigolds, hanging over high garden walls, and the grass by the roadside glistened with dew. Shining silver cobwebs hung on the hedges. Before many minutes, so fast did we go, we were riding right into the mist. We could see but a few feet in front of us, and the olives on either side, through the heavy white veil, looked like specters. We passed no one but a man carrying a lantern and a cage of owls. It seemed but natural that so uncanny a ride should lead to a home of shadows. And when we came to the tomb of the Volumnii at the foot of the mountain, we left the tricycle without, and went down for a while into its darkness and damp. When we came out

the mist had disappeared and the road lay through sunshine.

A little farther on we had our first near view of the Tiber. We crossed it by the old Ponte San Giovanni, so narrow that there was not room for us to pass a boy and donkey just in front. J—— called, and the boy pushed his donkey close to the stone wall; but for all that he could not pass. Even as he called he was stopped by a sudden pain in his side, the result probably of his descent into the tomb while he was still warm, for he had back-pedaled coming down the mountain. And so we waited for many minutes on the bridge to see, not the yellow Tiber one always hears about, but a river blue in mid-stream, white where it came running over the mill-wheel and down the dam, and red and yellow

A FROWN OF DISAPPROVAL, ASSISI.

and green where it reflected the poplars and oaks, and the skirts and handkerchiefs of the women washing on its banks. But after the bridge we left the river, for we were bound for Assisi. We had a quiet, peaceful ride for several miles on the Umbrian plain, where in the old times no one dared to go without the permission of the Baglioni, between vineyards and fields where men were plowing, and through insignificant little villages, and until we came out upon the large piazza in front of Santa Maria degli Angeli. It was crowded with peasants, for market was just over, and there came from every side the sound of many voices. When we rode by we were surrounded at once, two or three men keeping close to our side to sing the praises of the hotels at Assisi and shower their cards upon us. They pursued us even into the church and as far as the little hermitage beneath the dome, to tell us that each and all could speak English. If the Umbrians about Assisi were always like this, Saint Francis was a wise man to hide himself in the woods and to make friends with beasts and birds. Over the sunny roads beyond Santa Maria, where he and Fra Egidio walked singing and exhorting men and women to repentance, we wheeled imploring, or rather commanding, them to get out of the way. It was a hard pull up the mountain-side, the harder because the great monastery on its high foundations seemed always so far above us. When almost at the city gate a monk in brown robes, the knotted cord about his waist, passed. He stopped to look, but it was with a frown of disapproval; I think Saint Francis would have smiled.

It was just noon when we reached Assisi, but we rode no more that day. We spent the afternoon in the town of Saint Francis. The albergo we selected from the many recommended was without the large cloisters of the monastery. The *cameriere* at once remembered that J—— had been there before, though eighteen months had passed since his first visit. The signore had two ladies with him

FOLIGNO.

then, he said. He was delighted with the *velocipede*. It was the first time in all his life he had seen one with three wheels. Nothing would do but he must show us the finest road to Rome. He spread our map on the table as we eat our dinner, and put on his glasses, for he was a little bad in the eyes, he explained, and then he pointed out the very route we had already decided upon. *Ecco!* here, between Spoleto and Terni, we should have a long climb up the mountain, but then there would be seven miles down the other side. Ah! that would be fine! This long coast to Terni was clearly to make up for the hardships we had already endured on toilsome up-grades.

After dinner we went to the church. Goethe, when he was in Assisi, saw the old Roman Temple of Minerva and then, that his pleasure in it might not be disturbed, refused to look at anything else in the town and went quickly on his way. But when I passed out of the sunlight into the dark lower church and under the low rounded arches to the altar with Giotto's angels and saints above, it seemed to me he was the loser by his great love for classic beauty. Many who have been to this wonderful church have written descriptions of it, but none have really told, and indeed no one can ever tell, how wonderful it is. The upper church, with its great lofty nave and many windows through which the light streams

TREVÌ.

in on the bright frescoed walls, is beautiful. But this lower one, with its dark subdued color and its dim light and the odor of incense which always lingers in it, is like the embodiment of the mystery and love that inspired the saint in whose honor it was built. In it one understands, for the first time perhaps, what it is for which the followers of St. Francis give up life and action. Whoever were to be long under the influence of this place must, I thought, always stay, like an old gray-haired monk, kneeling before a side altar, wrapt in contemplation. And yet on the very threshold I found three or four brothers laughing and joking with two women.

The next morning, as we started down the mountain outside of Assisi, the machine

rode by Spello with its old Roman gateway and ruined amphitheater. But the hill here was not steep, and then again there came a level stretch into Foligno, the first lowland town to which we had come since we left Poggibonsi, and which, with its mass of roofs and lofty dome rising high above the city walls, looked little like the Foligno in Raphael's picture. Already in our short ride, for it is but ten miles from Assisi to Foligno, we noticed a great difference in the people. It was not only that many of the women wore bodices and long ear-rings, and turned their handkerchiefs up on top of their heads, but they, and the men as well, were less polite and more stupid than the Tuscans or the Umbrians about Perugia. Few spoke to us, and one woman to whom we said

THE SLEEPING SHEPHERD.

seemed to be trying to run away with us, and J—— bade me back-pedal. But for all my hard work it went the faster until, to my surprise, J—— suddenly steered it into a stone pile by the roadside. "The brake is broken!" was his explanation as we slowly upset. Fortunately, however, it had only slipped from its place, and though we could not mend it properly, we could fasten it in after a fashion and so manage to use it for the time being.

From Assisi to Terni was a long day's ride by towns and villages, through fair valleys and over rough mountains. From the foot of the mountain at Assisi, past Monte Subasio, which, bare and rocky, towered above the lower olive-covered hills, the road was level until we

good-morning was so startled that she thanked us in return, as if unused to such civilities. For all J——'s shouts of *a destra!* — to the right — and *eccomi!* they would not make room for us; and now in Foligno one woman, in her stupidity or obstinacy, walked directly in front of the machine, and when the little wheel caught her dress, through no fault of ours, cried "Accidente voi!" the *voi*, instead of *le*, being a far greater insult than the wishing us an accident. Even the beasts we met were stupid as the people. At our coming horses, donkeys, and oxen tried to run. We therefore looked for at least a light skirmish when, beyond Foligno, a regiment of cavalry in marching order advanced upon us. But the soldiers

stood our charge bravely. Only the officer was routed and retreated into the gutter. Then, forgetting military discipline, he turned his back upon his men to see us ride.

We were now on the old Via Flaminia and in the valley of Clitumnus, Virgil's country. The poet's smiling fields and tall, stiff oaks, his white oxen and peasants behind the plow or enjoying the cool shade, were on either side. Crossing the fields were many stony beds of streams, now dry, lined with oaks and chestnuts, under whose shade women were filling large baskets with acorns and leaves. The upturned earth was rich and brown. Through the trees or over them we saw the whitish-blue sky, the purple mountains, some pointed like pyramids, and the gray olive hills with little villages in their hollows, and before long Trevi on its high hill-top. And then we came to the temple of the river god Clitumnus, of which Pliny writes, and where the little river, in which Virgil says the white

WILLING TO RACE.

flocks for the sacrifice bathed, runs below, an old mill on its bank and one willow bending over it. At the village of Le Vene, near the source of the stream, we stopped at a wine-shop to eat some bread and cheese. There was no one there but the *padrone* and a dwarf who wore a decent suit of black clothes, and a medallion of the Pope on his watch-chain. He had come in a carriage which waited for him at the door. I think he was a drummer. He drank much wine, and spoke to us in a

F. B. M. L.
Rome - 1880

GATHERING LEAVES.

TWO CARABINIERI.

vile patois. Indeed, the people thereabouts all spoke in dialects worse, I am sure, than any Dante heard at the mouth of Hell. He had traveled and had been in Florence, where he had seen a *velocipede*, but not like ours. It was finer, or perhaps, he should say, more commodious. The seats were side by side, and it had an umbrella attached, and it was worked by the hands. It went, oh, so fast! and he intimated that we could not hope to rival its speed. I suppose our machine without an umbrella seemed to him like a ship without a sail. But I think he had another tale to tell when, ten minutes later, he having started before we did, we passed him on the road. We were going so fast, I only had time to see that in his wonder the reins fell from his hands.

Then came the small, wretched village of San Giacomo, with its old castle built up with the houses of the poor, and then Spoleto, where we lunched in a *trattoria* of the people which was much troubled by a plague of flies. A company of Bersagliere, red caps on the back of their heads and blue tassels dangling down their backs, sat at one table, ordering with much merriment their soup and meat and macaroni to be cooked *à la Bersagliere*. At another two young men were evidently enjoying an unwonted feast. And at the table with us were three peasants, one of whom had brought his bread in his pocket. He eat his soup for dessert, and throughout the meal used his own knife in preference to the knife and fork laid at his place. Two dogs, a cat, and a hen wandered in from the piazza, and dined on the bits of macaroni dropped by the not over-careful soldiers. The *cameriere* greeted us cordially. He too had a machine, he said, but had never heard of velocipedes with three wheels. His had but two; the signore must see

it. And before he would listen to our order for lunch, he showed J—— his bicycle, a bone-shaker. He was very proud of it. He had ridden as far as Terni. Ah! what a beautiful time we would have before the afternoon was over. Seven miles down the mountain!

The thought of this coast made us leave Spoleto with light hearts, though we knew that first must come a hard climb, and for some distance we went by the dried-up bed of a wide stream, meeting many priests on foot and peasants on donkeys. But as the way became steeper we left the stream far below, and came into a desolate country where the mountains were covered with scrub oaks, and priests and peasants disappeared. We soon gave up riding. J—— tied a rope to the tricycle and pulled while I pushed. The sun was now hidden behind the mountain and the way was shady. But still it was warm work and wearisome; for before long the road became almost perpendicular and was full of loose stones. How much more of this was there? we asked a woman watching swine on the hillside. "A mile," was her answer, and yet she must have known there were at least three. Finally, after what seemed hours of toiling, we asked another peasant standing in front of a lonely farm-house how much farther it still was to the top. "You are here now," she said. She at least was truthful. A few feet more, and we looked down a road as precipitous as that up which we had come, and so winding that we could see short stretches of it, like so many terraces, all the way down the mountain. We walked for

A HAT STORE.

about a hundred yards, and it was as hard to hold back the machine as before it had been to push it. Then we began to ride, but the strain on the brake loosened the handle a second time. We dismounted, and J—— tried to push it back into place. It snapped in two pieces in his hands. Here we were, eight miles from Terni in a lonely mountain road in the evening — the sun had already set — with a brakeless machine. The seven miles' coast to which we had looked forward for days was to be a walk after all.

However, there was nothing to do but to walk into Terni. It was so cold we had to put on our heavy coats. Presently the moon rose above the mountains on our left. By its light we could see the white road, the high hills which shut us in on every side, and the sloping banks of the stream below. On and

was a second of despair, but J—— was now not to be trifled with, and he gave a yell of command, which was an effectual Open Sesame. And so we rode on through lively streets and piazza, to the hotel, to supper, and to bed!

I know little of Terni, except that the hotel is so cold that the *cameriere* comes into the dining-room in the morning with hat on and wrapped in overcoat and muffler, and that there is an excellent blacksmith in the town; for the next morning, as soon as J—— had had the brake mended, we went on our way. The *padrone* was surprised at the shortness of our stay. Did we not know there were waterfalls, and famous ones too, but three miles distant? We could not take the time to visit them? Well, then, at least we must look at their picture, and he showed us a chromo

A KNIGHT OF THE CAMPAGNA.

on we walked, all the time holding back the tricycle. But at last we began to meet more people. Men with carts and donkeys went by at long intervals, but they spake never a word, and we too were silent. Now and then we heard the near tinkling of cow-bells, and came to olive gardens, where in the moonlight the black, twisted trunks took grotesque goblin shapes, and the branches threw a net-work of shadows across our path. Then we came to a railroad, and we knew we were at the foot of the mountains, and that Terni was not far off. We were at the end of the seven miles' coast and could ride again. Shortly after the lights of Terni were in sight. Then we wheeled by a foundry, with great furnace in full blast; by a broad avenue with rows of gas-jets, to the gates of the city to find them shut. There

past on the hotel omnibus. I am afraid he took us for sad Philistines. But the fear of another kind of waterfall was still a goad to hurry us onwards. Now we were so near our journey's end, no wonder, however great, could have led us from the straight path.

There was a great *festa* that day, and all along the street and out on the country road we met men and women in holiday dress, carrying baskets and bunches and wreaths of pink chrysanthemums. In Narni, on the heights which Martial called inaccessible, men were lounging in the piazza or playing cards in the *caffè*. For the shepherds alone there was no rest from every-day work. Before we reached even Narni, but ten miles across the valley from Terni, we saw several driving their sheep and goats into the broad

FIRST GLIMPSE OF ST. PETER'S.

meadows. They wore goatskin breeches, and by that sign alone we should have known we were nearing Rome. We lunched at Narni on coffee and cakes, for it was the last town through which we would pass on that day's ride. It was here Quintus, in its Roman days, staid so long that Martial reproached him for his wearisome delay. Could he come to it now, I doubt if his friend would have the same reason for complaint. It did not seem an attractive place, and when we asked a man about the country beyond, he said it was "*bruto*." We did not learn till afterwards that this applied to the people, and not to the country, and that here we ought to have been briganded.

We were now high up on the mountain, on one side steep rocks, on the other a deep precipice. Far below in a narrow valley ran the little river Nar, and on the bank above it the railroad. It was not an easy road to travel, and often the hills were too steep to coast or to climb. The few farm-houses by the way were closed, for the peasants had gone to church. We saw an occasional little gray town crowning the top of sheer gray cliffs, like those in Albert Dürer's pictures, or an old castle either deserted or else with farm-house built in its ruins, where

peasants leaned over the battle-memented walls. But the only villages through which we rode were Otricoli, just before we descended to the valley of the Tiber, and where we created so great a sensation that an old woman selling chestnuts, cooked, I think, by a previous generation, was at first too frightened to wait on us, and Borghetto, on the other side of the valley, where we saw in the piazza the stage from Cività Castellana, where we were to spend the night.

We went with much content over the plain by the Tiber, where there were broad grassy stretches full of sheep and horses, and here and there the shepherds' gypsy-looking huts. It was such easy work now that we eat our chestnuts as we rode; but beyond the bridge, on which Sixtus V. and Clement VIII. and Gregory XIII. have, in true papal fashion, left their names, the hills began again. On we toiled, beneath shady oaks and by rocky places, until we came out on a wide upland. From the treeless road the meadows rolled far beyond to high mountains on whose sloping side the blue smoke of charcoal-burners curled upward. The moon had already risen, and in the west the setting sun filled the sky with glowing amber light, against which the tired peasants going home were sharply silhouetted.

We were glad to see Cività Castellana. One or two men in answer to our questions had told us we were close to it, but we did not believe them. The fields seemed to stretch for miles before us, and there was not a house or tower in sight. But suddenly the road turned and went down-hill, and there below was the city perched on tufa cliffs, a deep ravine sur-

THE PONTE MOLLE.

rounding it. Two *carabinieri*, in cocked hats and folded cloaks like the famous two solitary horsemen, were setting out on their night patrol. Vespers were just over in the church near the bridge, and along the way where happy little Etruscan school-boys once whipped homewards their treacherous

pity on my sad plight. He came out and with a stick mowed the people back. Then J—— returned, having found a room in the first house, which the *padrone* had thought fit to conceal until the last.

The albergo was but a "middling inn." We were lodged in the garret, in a room the

FROM VIA FLAMINIA NEAR PONTE MOLLE.

school-master, little Italian boys and girls let loose from church ran after us, torturing us with their shrill cries. Soon their elders joined them, and we were closely beset with admirers. The town, too, was in a hubbub about us, and in the streets through which we wheeled men and women came from their houses to follow in our train. At the door of the albergo, where we were detained for several minutes, the entire population collected. We had difficulty in getting a room. The *festa*, the *padrone* said, had brought many country people into the town, and the inns were full to overflowing. If J—— would go with him he would see what could be done for us. The search led them through three houses. In the mean time I kept guard over the machine. It was well I did, for once J—— had gone the natives closed upon me. Toddlers and gray-haired men, ragged peasants and gorgeous officers pushed and struggled together in their desire to see. Every now and then a stealthy hand was thrust through the crowd and felt the tire or tried the brake. I turned from left to right, crying *Guarda! Guarda!* I lifted exploring hands from the wheels. But in vain. What was one against so many? A man sitting in the doorway took

size of a large closet. The way to it led through another bed-chamber, long and low, in which four cots were ranged in a row along the wall. When we crossed it on the way downstairs to dinner, I devoutly prayed that on our return four night-caps would not be nodding on the pillows.

Fortunately we were the first to go to bed in the garret. All through the night, however, for the mattress was hard and I slept little, I heard loud snores and groans, and the sound of much tossing to and fro. We rose early in the morning, but when we opened our door the cots were empty, though they had not been so long. Indeed, early as we were, the whole town was stirring when we came downstairs. But who ever knew the hour when the people of an Italian town were not up and abroad? No sooner had J—— brought the tricycle from the stable, where it had been kept all night, to the albergo, than the piazza was again crowded. On they all came with us, men, women, and children, hooting and shouting, jumping and dancing through the vilely paved streets, and finally sprawling over the walls and on the rocks beyond the gate.

There they all staid until we had gone down the hill over the bridge crossing the

stream at its foot, and up the hill on the opposite side, passing from their sight around the first curve. Soon we were on an upland and now really at the beginning of the Campagna. The morning was cold. For many miles we rode through a champaign gleaming white with frost. But as the sun rose higher in the heavens, and the yellow light, which had at first spread over the sky, faded and left a clear blue expanse above, the air grew warmer and the frost disappeared. The road wound on and on between oak woods and wide cultivated fields, and green grassy plains which gradually changed into great sweeps of rolling treeless country, like the moors. By the roadside were thick bushes of low green sage and tangled blackberries, and in places the broad flagstones of the old Flaminian Way, with weeds and dandelions and pretty purple flowers growing from the crevices. Sometimes a paving of smaller stones stretched all across the road, so that for a minute or two we were badly shaken, or else, coming on them suddenly at the foot of a hill, all but upset. Truly, as has been said, it could have been no joke for the old Romans to ride. To our left rose the great height of Soracte, not snow-covered as Horace saw it, but bare and brown save where purple shadows lay. At first we met numbers of peasants, all astride of donkeys, going towards Cività Castellana, families riding together and eating as they went. Later, however, no one passed but an occasional lonely rider, who in his long cloak and high-pointed hat looked a genuine Fra Diavolo; or else sportsmen and their dogs. It is strange that though we saw many of the latter, we never once heard the singing or chirping of birds. There were hillsides and fields full of large black cattle, or herds of horses, or flocks of sheep and goats. There were shepherds, too, sleeping in the shade, or by the roadside leaning on their staffs or ruling their flock with rod and rustic word as in the days when Poliziano sung. And if there was no bird's song to break the silence of the Campagna, there was instead a loud baaing of sheep led by the shrill, piercing notes of the lambs. If it was to such an accompaniment that Corydon and Thyrsis sang in rivalry, their songs could have been poetical only in Virgil's verse.

How hard we worked now that our pilgrimage was almost ended! We scarcely looked at the little village through which we wheeled and where a White Brother was going from door to door, nor at the ruins which rose here and there in the hollows and on the slopes of the hills; and when at last we saw on the horizon the dome coming up out of the broad, undulating plain, we gave it but a

short greeting and then hurried on faster than ever. We would not even go to Castel Novo, which lies a quarter of a mile or so from the road, but eat our hasty lunch in a *trattoria* by the wayside, while a man, an engineer he said he was, showed us drawings he had made on his travels and asked about our ride. How brave it was of the signora to work, he exclaimed, and how brave of the signore to sketch from his *velocipede*! And after this "the hills their heights began to lower," and with feet up we went like the wind, and every time we looked at the dome it seemed larger and more clearly defined against the sky. But about six miles from Rome our feet were on the pedals again and we were working with all our might. Sand and loose stones covered the road, which grew worse until, in front of the staring pink quarantine building, the stones were so many that in steering out of the way of one we ran over another, and the jar it gave us loosened the screw of the luggage-carrier. We were so near Rome we let it go. This was a mistake. But a little farther, and the whole thing gave way and bags and knapsack rolled in the dust. It took some fifteen minutes to set it to rights again; and all the time we stood in the shadeless road, under a burning sun, for the heat in the lower plains of the Campagna was as great as if it were still summer. As the luggage-carrier was slightly broken, we were afraid to put too great a strain upon it, and for the rest of the journey the knapsack went like a small boy swinging on behind.

Like those other pilgrims, we were much discouraged because of the way. But at last, wheeling by pink and white *trattorie*, whose walls were covered with illustrated bills of fare, and coming to an open place where street-cars were going and coming, the Ponte Molle, over a now yellow Tiber, lay before us, and we were under the shadow of the dome we had from afar watched for many hours. Over the bridge we went with cars and carts, between houses and gardens and wine-shops, where there was a discord of many hurdy-gurdies, to the Porta del Popolo, and so into Rome. *Carabinieri* were lounging about the gate, and carriages were driving to the Pincian; but we rode on and up the street on the right of the piazza. When we had gone a short distance we asked a man at a corner our way to the Piazza di Spagna. We should have taken the street to our left, he said, but now we could reach it by crossing the Corso diagonally. As we did so we heard a loud *ssst* behind us, and we saw a *gendarme* running up the street; but we went on. When we wheeled into the Piazza di Spagna, however, a second, almost breathless, ran out in front of us, and

"ASPETTO!"

cried, "*Aspetto!*" (wait!) But still we rode. "*Aspetto!*" he cried again, and half drew his sword. In a minute we were surrounded. Models came flying from the Spanish steps; an old countryman carrying a fish affectionately under his arm, bootblacks, clerks from the near shops, young Roman swells,—all these and many more gathered about us.

"*Aspetto!*" the *gendarme* still cried.

"*Perche?*" we asked.

And then his fellow-officer whom we had seen on the Corso came up. "*Descendere!*" he said in fierce tones of command.

"*Perche?*" we asked again.

"*Per Christo!*" was his only answer.

The crowd laughed with glee. Hackmen shouted their applause. It was ignominious, perhaps, but the wisest policy, to get down and walk to our hotel.

What pilgrim of old times thought his pilgrimage really over until he had given, either out of his plenty or his nothing, in alms? Two months later we too gave our mite, not to the church or to the poor, but to the Government; for we were then summoned before a police magistrate and fined ten francs for "*furious* riding on the Corso, and refusing to descend when ordered!"

And so our pilgrimage ended.

Elizabeth Robins Pennell.

THE WATER-TEXT.

WATCHING my river marching overland,
By mighty tides transfigured and set free,—
My river, lapped in idle-hearted mirth,
Made at a touch a glory to the earth,
And leaving, wheresoever falls his hand,
The balm and benediction of the sea,—

O soon, I know, the hour whereof we dreamed,

The saving hour miraculous, arrives!

When, ere to darkness winds our sordid course,
Some glad, new, potent, consecrating force
Shall speed us, so uplifted, so redeemed,
Along the old worn channel of our lives.

Louise Imogen Guiney.

THE MINISTER'S CHARGE;

OR, THE APPRENTICESHIP OF LEMUEL BARKER.*

BY W. D. HOWELLS,

Author of "Venetian Life," "A Modern Instance," "The Rise of Silas Lapham," etc.

VIII.

LEMUEL entered a lighted doorway from a bricked courtyard, and found himself with twenty or thirty houseless comrades in a large, square room, with benching against the wall for them to sit on. They were all silent and quelled-looking, except a young fellow whom Lemuel sat down beside, and who, ascertaining that he was a new-comer, seemed disposed to do the honors of the place. He was not daunted by the reserve native to Lemuel, or by that distrust of strangers which experience had so soon taught him. He addressed him promptly as mate, and told him that the high, narrow, three-sided tabling in the middle of the room was where they would get their breakfast, if they lived.

"And I guess I shall live," he said. "I notice I 'most always live till breakfast-time, whatever else I do, or I don't do; but sometimes it don't seem as if I *could* saw my way through that quarter of a cord of wood." At a glance of inquiry which Lemuel could not forbear, he continued: "What I mean by a quarter of a cord of wood is that they let you exercise that much free in the morning, before they give you your breakfast: it's the doctor's orders. This used to be a school-house, but it's in better business now. They got a kitchen under here, that beats the Parker House; you'll smell it pretty soon. No whacking on the knuckles here any more. All serene, I tell you. You'll see. I don't know how I should got along without this institution, and I tell the manager so, every time I see him. That's him, hollering 'Next,' out of that room there. It's a name he gives all of us; he knows it's a name we'll answer to. Don't you forget it when it comes your turn."

He was younger than Lemuel, apparently, but his swarthy, large-mouthed, droll-eyed face affirmed the experience of a sage. He wore a blue flannel shirt, with loose trousers belted round his waist, and he crushed a soft felt hat between his hands; his hair was clipped close to his skull, and as he rubbed it now and then it gave out a pleasant, rasping sound.

The tramps disappeared in the order of

their vicinity to the manager's door, and it came in time to this boy and Lemuel.

"You come along with me," he said, "and do as I do." When they entered the presence of the manager, who sat at a desk, Lemuel's guide nodded to him, and handed over his order for a bed.

"Ever been here before?" asked the manager, as if going through the form for a joke.

"Never." He took a numbered card which the manager gave him, and stood aside to wait for Lemuel, who made the same answer to the same question, and received his numbered card.

"Now," said the young fellow, as they passed out of another door, "we ain't either of us 'Next' any more. I'm Thirty-nine, and you're Forty, and don't you forget it. All right, boss," he called back to the manager; "I'll take care of him! This way," he said to Lemuel. "The reason why I said I'd never been here before," he explained on the way down, "was because you got to say something when he asks you. Most of 'em says last fall or last year, but I say never, because it's just as true, and he seems to like it better. We're going down to the dressing-room now, and then we're going to take a bath. Do you know why?"

"No," said Lemuel.

"Because we can't help it. It's the doctor's orders. He thinks it's the best thing you can do, just before you go to bed."

The basement was brightly lighted with gas everywhere, and a savory odor of onion-flavored broth diffused itself through the whole place.

"Smell it? You might think that was supper, but it ain't. It's breakfast. You got a bath and a night's rest as well as the quarter of a cord of wood between you and that stew. Hungry?"

"Not very," said Lemuel faintly.

"Because if you say you are they'll give you all the bread and water you can hold now. But I ruther wait."

"I guess I don't want anything to-night," said Lemuel, shrinking from the act of beggary.

"Well, I guess you won't lose anything in

the long run," said the other. "You'll make it up at breakfast."

They turned into a room where eight or ten tramps were undressing; some of them were old men, quite sodden and stupefied with a life of vagrancy and privation; others were of a dull or cunning middle-age. Two or three were as young as Lemuel and his partner, and looked as if they might be poor fellows who had found themselves in a strange city without money or work; but it was against them that they had known where to come for a night's shelter, Lemuel felt.

There were large iron hooks hanging from the walls and ceiling, and his friend found the numbers on two of them corresponding to those given Lemuel and himself, and brass checks which they hung around their necks.

"You got to hang your things on that hook, all but your shoes and stockings, and you got to hang on to *them* yourself. Forty's your number, and forty's your hook, and they give you the clothes off'n it in the morning."

He led the way through the corridor into a large room where a row of bath-tubs flanked the wall, half of them filled with bathers, who chatted in tones of subdued cheerfulness under the pleasant excitement of unlimited hot and cold water. As each new-comer appeared a black boy, perched on a window-sill, jumped down and dashed his head from a large bottle which he carried.

"Free shampoo," explained Lemuel's mate. "Doctor's orders. Only you have to do the rubbing yourself. I don't suppose *you* need it, but some the pardners here couldn't sleep without it," he continued, as Lemuel shrank a little from the bottle, and then submitted. "It's a regular night-cap."

The tramps recognized the humor of the explanation by a laugh, intended to be respectful to the establishment in its control, which spread along their line, and the black boy grinned.

"There ain't anything mean about the Wayfarer's Hotel," said the mate; and they all laughed again, a little louder.

Each man, having dried himself from his bath, was given a coarse linen night-gown; sometimes it was not quite whole, but it was always clean; and then he gathered up his shoes and stockings and went out.

"Hold on a minute," said the mate to Lemuel, when they left the bath-room. "You ought to see the kitchen." And in his night-gown, with his shoes in his hand, he led Lemuel to the open door which that delicious smell of broth came from. A vast copper-topped boiler was bubbling within, and trying to get its lid off. The odor made Lemuel sick with hunger.

"Refrigerator in the next room," the mate lectured on. "Best beef-chucks in the market;

fish for Fridays—we don't make any man go against his religion in *this* house; pots of butter as big as a cheese,—none of your oleo-margarine,—the real thing every time; potatoes and onions and carrots laying around on the floor; barrels of hard-tack; and bread, like sponge,—bounce you up if you was to jump on it,—baked by the women at the Chardon Street Home. Oh, I tell you we do things in style here."

A man who sat reading a newspaper in the corner looked up sharply. "Hello, there! what's wanted?"

"Just dropped in to wish you good-night, Jimmy," said Lemuel's mate.

"You clear out!" said the man good-humoredly, as if to an old acquaintance, who must not be allowed to presume upon his familiarity.

"All right, Jimmy," said the boy. He set his left hand horizontally on its wrist at his left shoulder and cut the air with it in playful menace as the man dropped his eyes again to his paper. "They're all just so in this house," he explained to Lemuel. "No nonsense, but good-natured. *They're* all right. They know me."

He mounted two flights of stairs in front of Lemuel to a corridor, where an attendant stood examining the numbers on the brass checks hung around the tramps' necks as they came up with their shoes in their hands. He instructed them that the numbers corresponded to the cots they were to occupy, as well as the hooks where their clothes hung. Some of them seemed hardly able to master the facts. They looked wistfully, like cowed animals, into his face as he made the case clear.

Two vast rooms exquisitely clean, like the whole house, opened on the right and left of the corridor, and presented long phalanxes of cots, each furnished with two coarse blankets, a quilt, and a thin pillow.

"Used to be school-rooms," said Lemuel's mate in a low tone.

"Cots thirty-nine and forty," said the attendant, looking at their checks. "Right over there, in the corner."

"Come along," said the mate, leading the way, with the satisfaction of an habitué. "Best berth in the room, and about the last they reach in the morning. You see, they got to take us as we come when they call us, and the last feller in at night's the first feller out in the morning, because his bed's the nearest the door."

He did not pull down the blankets of his cot at once, but stretched himself out on the quilt that covered them. "Cool off a little first," he explained. "Well, this is what I call comfort, mate, heigh?"

Lemuel did not answer. He was watching

the attendant with a group of tramps who could not find their cots.

"Can't read, I suppose," said the mate, a little disdainfully. "Well, look at that old chap, will you!" A poor fellow was fumbling with his blankets, as if he did not know quite how to manage them. The attendant had to come to his help, and tuck him in. "Well, there!" exclaimed the mate, lifting himself on his elbow to admire the scene. "I don't suppose he's ever been in a decent bed before. Hayloft's *his* style, or a board-pile." He sank down again, and went on: "Well, you do see all kinds of folks here, that's a fact. Sorry there ain't more in to-night, so's to give you a specimen. You ought to be here in the winter. Well, it ain't so lonesome now in summer as it used to be. Sometimes I used to have nearly the whole place to myself, summer nights, before they got to passin' these laws against tramps in the country, and lockin' 'em up when they ketched 'em. That drives 'em into the city summers now; because they're always sure of a night's rest and a day's board here if they ask for it. But winter's the time. You'll see all these cots full then. They let on the steam-heat, and it's comfortable; and it's always airy and healthy." The vast room was, in fact, perfectly ventilated, and the poor who housed themselves that night, and many well-to-do sojourners in hotels, had reason to envy the vagrants their free lodging.

The mate now got under his quilt, and turned his face toward Lemuel, with one hand under his cheek. "They don't let *every* body into this room, 's I was tellin' ye. This room is for the big-bugs, you know. Sometimes a drunk will get in, though, in spite of everything. Why, I've seen a drunk at the station-house, when I've been gettin' my order for a bed, stiffen up so 't the captain himself thought he was sober; and then I've followed him round here, wobblin' and corkscrewin' all over the sidewalk; and then I've seen him stiffen up in the office again, and go through his bath like a little man, and get into bed as drunk as a fish; and maybe wake up in the night with the man with the poker after him, and make things hum. Well, sir, one night there was a drunk in here that thought the man with the poker was after him, and he just up and jumped out of this window behind you — three stories from the ground."

Lemuel could not help lifting himself in bed to look at it. "Did it kill him?" he asked.

"Kill him? *No!* You can't kill a *drunk*. One night there was a drunk got loose here, and he run down-stairs into the wood-yard, and he got hold of an axe down there, and it took five men to get that axe away from that drunk. He was goin' for the snakes."

"The snakes!" repeated Lemuel. "Are there snakes in the wood-yard?"

The other gave a laugh so loud that the attendant called out, "Less noise over there!"

"I'll tell you about the snakes in the morning," said the mate; and he turned his face away from Lemuel.

The stories of the drunks had made Lemuel a little anxious; but he thought that attendant would keep a sharp lookout, so that there would not really be much danger. He was very drowsy from his bath, in spite of the hunger that tormented him, but he tried to keep awake and think what he should do after breakfast.

IX.

"COME, turn out!" said a voice in his ear, and he started up, to see the great dormitory where he had fallen asleep empty of all but himself and his friend.

"Make out a night's rest?" asked the latter. "Didn't I tell you we'd be the last up? Come along!" He preceded Lemuel, still drowsy, down the stairs into the room where they had undressed, and where the tramps were taking each his clothes from their hook, and hustling them on.

"What time is it, Johnny?" asked Lemuel's mate of the attendant. "I left my watch under my pillow."

"Five o'clock," said the man, helping the poor old fellow who had not known how to get into bed to put on his clothes.

"Well, that's a pretty good start," said the other. He finished his toilet by belting himself around the waist, and "Come along, mate," he said to Lemuel. "I'll show you the way to the tool-room."

He led him through the corridor into a chamber of the basement where there were bright rows of wood-saws, and ranks of saw-horses, with heaps of the latter in different stages of construction. "House self-supporting, as far as it can. We don't want to be beholden to anybody if we can help it. We make our own horses here; but we can't make our saws, or we would. Ever had much practice with the wood-saw?"

"No," said Lemuel, with a throb of homesickness, that brought back the hacked log behind the house, and the axe resting against it; "we always chopped our stove-wood."

"Yes, that's the way in the country. Well, now," said the other, "I'll show you how to choose a saw. Don't you be took in by no new saw because it's bright and looks pretty. You want to take a saw that's been filed and filed away till it ain't more'n an inch and a half deep; and then you want to tune it up, just so, like a banjo,—not too tight, and not

too slack,—and then it'll slip through a stick o' wood like—lyin'." He selected a saw, and put it in order for Lemuel. "There!" He picked out another. "Here's *my* old stand-by!" He took up a saw-horse at random, to indicate that one need not be critical in that, and led through the open door into the wood-yard, where a score or two of saws were already shrilling and wheezing through the wood.

It was a wide and lofty shed, with piles of cord-wood and slabs at either end, and walled on the farther side with kindling, sawed, split, and piled up with admirable neatness. The place gave out the sweet smell of the woods from the bark of the logs and from the fresh section of their grain. A double rank of saw-horses occupied the middle space, and beside each horse lay a quarter of a cord of wood, at which the men were toiling in sullen silence for the most part, only exchanging a grunt or snarl of dissatisfaction with one another.

"Morning, mates," said Lemuel's friend cheerfully, as he entered the shed, and put his horse down beside one of the piles. "Thought we'd look in and see how you was gettin' along. Just stepped round from the Parker House while our breakfast was a-cookin'. Hope you all rested well?"

The men paused, with their saws at different slopes in the wood, and looked round. The night before, in the nakedness in which Lemuel had first seen them, the worst of them had the inalienable comeliness of nature, and their faces, softened by their relation to their bodies, were not so bad; they were not so bad, looking from their white night-gowns; but now, clad in their filthy rags, and caricatured out of all native dignity by their motley and misshapen attire, they were a hideous gang, and all the more hideous for the grin that overspread their stubby muzzles at the boy's persiflage.

"Don't let me interrupt you, fellows," he said, flinging a log upon his horse, and dashing his saw gayly into it. "Don't mind me! I know you hate to lose a minute of this fun; I understand just how you feel about it, and I don't want you to stand upon ceremony with *me*. Treat me just like one of yourselves, gents. This beech-wood is the regular Nova Scotia thing, ain't it? Tough and knotty! I can't bear any of your cheap wood-lot stuff from around here. What I want is Nova Scotia wood every time. Then I feel that I'm gettin' the worth of my money." His log dropped apart on each side of his horse, and he put on another. "Well, mates," he rattled on, "this is lovely, ain't it? I wouldn't give up my little quarter of a cord of green Nova Scotia before breakfast for anything; I've got into the way of it, and I can't live without it."

The tramps chuckled at these ironies, and the attendant who looked into the yard now and then did not interfere with them.

The mate went through his stint as rapidly as he talked, and he had nearly finished before Lemuel had half done. He did not offer to help him, but he delayed the remnant of his work, and waited for him to catch up, talking all the while with gay volubility, joking this one and that, and keeping the whole company as cheerful as it was in their dull, sodden nature to be. He had a floating eye that harmonized with his queer, mobile face, and played round on the different figures, but mostly upon Lemuel's dogged, rustic industry as if it really amused him.

"What's your lay after breakfast?" he asked, as they came to the last log together.

"Lay?" repeated Lemuel.

"What you goin' to do?"

"I don't know; I can't tell yet."

"You know," said the other, "you can come back here and get your dinner, if you want to saw wood for it from ten till twelve, and you get your supper if you'll saw from five to six."

"Are you going to do that?" asked Lemuel cautiously.

"No, sir," said the other; "I can't spare the time. I'm goin' to fill up for all day at breakfast, and then I'm goin' up to lay round on the Common till it's time to go to the police court; and when that's over I'm goin' back to the Common ag'in, and lay round the rest of the day. I hain't got any leisure for no such nonsense as wood-sawin'. I don't mind the work, but I hate to waste the time. It's the way with most o' the pardners, unless it's the green hands. That so, pards?"

Some of them had already gone in to breakfast; the smell of the stew came out to the wood-yard through the open door. Lemuel and his friend finished their last stick at the same time, and went in together, and found places side by side at the table in the waiting-room. The attendant within its oblong was serving the men with heavy quart bowls of the steaming broth. He brought half a loaf of light, elastic bread with each, and there were platters of hard-tack set along the board, which every one helped himself from freely, and broke into his broth.

"Morning, Jimmy," said the mate, as the man brought him and Lemuel their portions. "I hate to have the dining-room chairs off a-paintin' when there's so much style about everything else, and I've got a visitor with me. But I tell him he'll have to take us as he finds us, and stand it this mornin'." He wasted no more words on his joke, but, plunging his large tin spoon into his bowl, kept his breath to cool his broth, blowing upon it with easy

grace, and swallowing it at a tremendous rate, though Lemuel, after following his example, still found it so hot that it brought the tears into his eyes. It was delicious, and he was ravenous from his twenty-four hours' fast; but his companion was scraping the bottom of his bowl before Lemuel had got half-way down, and he finished his second as Lemuel finished his first.

"Just oncet more for both of us, Jimmy," he said, pushing his bowl across the board; and when the man brought them back he said, "Now I'm goin' to take it easy and enjoy myself. I can't never seem to get the good of it till about the third or fourth bowl. Too much of a hurry."

"Do they give you four bowls?" gasped Lemuel in astonishment.

"They give you four barrels, if you can hold it," replied the other proudly; "and some the mates *can*, pretty near. They got an awful tank, as a general rule, the pards has. There ain't anything mean about this house. They don't scamp the broth, and they don't shab the measure. I do wish you could see that refrigerator oncet. Never been much at sea, have you, mate?"

Lemuel said he had never been at sea at all.

The other leaned forward with his elbows on each side of his bowl, and lazily broke his hard-tack into it. "Well, I have. I was shipped when I was about eleven years old by a shark that got me drunk. I wanted to ship, but I wanted to ship on an American vessel for New Orleans. First thing I knowed I turned up on a Swedish brig bound for Venice. Ever been to It'ly?"

"No," said Lemuel.

"Well, I hain't but oncet. Oncet is enough for *me*. I run away while I was in Venice, and went ashore—if you can call it ashore; it's all water, and you got to go round in boats, gondolas they call 'em there—and went to see the American counsul, and told him I was an American boy, and tried to get him to get me off. But he couldn't do anything. If you ship under the Swedish flag you're a Swede, and the whole United States couldn't get you off. If I'd 'a' shipped under the American flag I'd 'a' been an American, I don't care if I was born in Hottentot. That's what the counsul said. I never want to see that town ag'in. I used to hear songs about Venice: 'Beautiful Venice, Bride of the Sea'; but I think it's a kind of a hole of a place. Well, what I started to say was that when I turn up in Boston now,—and I most generally do,—I don't go to no sailor boardin'-house; I break for the Wayfarer's Lodge every time. It's a temperance house, and they give you the worth o' your money."

"Come! hurry up!" said the attendant. He wiped the table impatiently with his towel, and stood waiting for Lemuel and the other to finish. All the rest had gone.

"Don't you be too fresh, pard," said the mate, with the effect of standing upon his rights. "Guess if you was on your third bowl, you wouldn't hurry."

The attendant smiled. "Don't you want to lend us a hand with the dishes?" he asked. "Who's sick?" asked the other in his turn.

"Johnny's got a day off."

The boy shook his head. "No; I couldn't. If it was a case of sickness, of course I'd do it. But I couldn't spare the time; I couldn't really. Why, I ought to be up on the Common now."

Lemuel had listened with a face of interest.

"Don't you want to make half a dollar, young feller?" asked the attendant.

"Yes, I do," said Lemuel eagerly.

"Know how to wash dishes?"

"Yes," answered the boy, not ashamed of his knowledge, as the boy of another civilization might have been. Nothing more distinctly marks the rustic New England civilization than the taming of its men to the performance of certain domestic offices elsewhere held dishonorably womanish. The boy learns not only to milk and to keep the milk-cans clean, but to churn, to wash dishes, and to cook.

"Come around here, then," said the attendant, and Lemuel promptly obeyed.

"Well, now," said his mate, "that's right. I'd do it myself if I had the time." He pulled his soft wool hat out of his hip pocket. "Well, good-morning, pards. I don't know as I shall see you again much before night." Lemuel was lifting a large tray, heavy with empty broth-bowls. "What *time* did you say it was, Jimmy?"

"Seven o'clock."

"Well, I just got time to get there," said the other, putting on his hat, and pushing out of the door.

At the moment Lemuel was lifting his tray of empty broth-bowls, Mr. Sewell was waking for the early quarter-to-eight breakfast, which he thought it right to make—not perhaps as an example to his parishioners, most of whom had the leisure to lie later, but as a sacrifice, not too definite, to the lingering ideal of suffering. He could not work before breakfast,—his delicate digestion forbade that,—or he would have risen still earlier; and he employed the twenty minutes he had between his bath and his breakfast in skimming the morning paper.

Just at present Mr. Sewell was taking two morning papers: the "Advertiser," which he had always taken, and a cheap little one-cent

paper, which had just been started, and which he had subscribed for experimentally, with the vague impression that he ought to encourage the young men who had established it. He did not like it very well. It was made up somewhat upon the Western ideal, and dealt with local matters in a manner that was at once a little more lively and a little more intimate than he had been used to. But before he had quite made up his mind to stop it, his wife had come to like it on that very account. She said it was interesting. On this point she used her conscience a little less actively than usual, and he had to make her observe that to be interesting was not the whole duty of journalism. It had become a matter of personal pride with them respectively to attack and defend the "Sunrise," as I shall call the little sheet, though that was not the name; and Mr. Sewell had lately made some gain through the character of the police reports, which the "Sunrise" had been developing into a feature. It was not that offensive matters were introduced; the worst cases were in fact rather blinked; but Sewell insisted that the tone of flippant gayety with which many facts, so serious, so tragic for their perpetrators and victims, were treated was odious. He objected to the court being called a Mill, and prisoners Grists, and the procedure Grinding; he objected to the familiar name of Uncle for the worthy gentleman to whose care certain offenders were confided on probation. He now read that department of the "Sunrise" the first thing every morning, in the hope of finding something with which to put Mrs. Sewell hopelessly in the wrong; but this morning a heading in the foreign news of the "Advertiser" caught his eye, and he laid the "Sunrise" aside to read at the breakfast-table. His wife came down in a cotton dress, as a tribute to the continued warmth of the weather, and said that she had not called the children, because it was Saturday, and they might as well have their sleep out. He liked to see her in that dress; it had a leafy rustling that was pleasant to his ear, and as she looked into the library he gayly put out his hand, which she took, and suffered herself to be drawn toward him. Then she gave him a kiss, somewhat less business-like and preoccupied than usual.

"Well, you've got Lemuel Barker off your mind at last," she divined, in recognition of her husband's cheerfulness.

"Yes, he's off," admitted Sewell.

"I hope he'll stay in Willoughby Pastures after this. Of course it puts an end to our going there next summer."

"Oh, I don't know," Sewell feebly demurred.

"I do," said his wife, but not despising his insincerity enough to insist that he did also.

The mellow note of an apostle's bell—the gift of an æsthetic parishioner—came from below, and she said, "Well, there's breakfast, David," and went before him down the stairs.

He brought his papers with him. It would have been her idea of heightened coziness at this breakfast, which they had once a week alone together, not to have the newspapers; but she saw that he felt differently, and after a number of years of married life a woman learns to let her husband have his own way in some unimportant matters. It was so much his nature to have some sort of reading always in hand, that he was certainly more himself, and perhaps more companionable, with his papers than without them.

She merely said, "Let me take the 'Sunrise,'" when she had poured out his coffee, and he had helped her to cantaloupe and steak, and spread his "Advertiser" beside his plate. He had the "Sunrise" in his lap.

"No, you may have the 'Advertiser,'" he said, handing it over the table to her. "I was down first, and I got both the papers. I'm not really obliged to make any division, but I've seen the 'Advertiser,' and I'm willing to behave unselfishly. If you're very impatient for the police report in the 'Sunrise,' I'll read it aloud for you. I think that will be a very good test of its quality, don't you?"

He opened the little sheet, and smiled teasingly at his wife, who said, "Yes, read it aloud; I'm not at all ashamed of it."

She put the "Advertiser" in her lap, and leaned defiantly forward, while she stirred her coffee, and Sewell unfolded the little sheet, and glanced up and down its columns. "Go on! If you can't find it, I can."

"Never mind! Here it is," said Sewell, and he began to read:

"The mill opened yesterday morning with a smaller number of grists than usual, but they made up in quality what they lacked in quantity."

"Our friend's metaphor seems to have weakened under him a little," commented Sewell, and then he pursued:

"A reasonable supply of drunks were dispatched——"

"Come, now, Lucy! you'll admit that this is horrible?" he broke off.

"No," said his wife, "I will admit nothing of the kind. It's flippant, I'll allow. Go on!"

"I can't," said Sewell; but he obeyed.

"A reasonable supply of drunks were dispatched, and an habitual drunk, in the person of a burly dame from Tipperary, who pleaded not guilty and then urged the "poor childer" in extenuation, was sent down the harbor for three months; Uncle Cook had been put in

charge of a couple of young frailties whose hind name was woman——

"How do you like that, my dear?" asked Sewell exultantly.

Mrs. Sewell looked grave, and then burst into a shocked laugh. "You must stop that paper, David! I can't have it about for the children to get hold of. But it *is* funny, isn't it? That will do——"

"No, I think you'd better have it all now. There can't be anything worse. It's funny, yes, with that truly infernal drollery which the newspaper wits seem to have the art of." He read on:

"—'when a case was called that brought the breath of clover-blossoms and hay-seed into the sultry court-room, and warmed the cockles of the habitués' toughened pericardiums with a touch of real poetry. This was a case of assault with intent to rob, in which a lithe young blonde, answering to the good old Puritanic name of Statira Dudley, was the complainant, and the defendant an innocent-looking, bucolic youth, yclept——'"

Sewell stopped and put his hand to his forehead.

"What is it, David?" demanded his wife. "Why don't you go on? Is it too scandalous?"

"No, no," murmured the minister.

"Well?"

"I *can't* go on. But you must read it, Lucy," he said, in quite a passion of humility. "And you must try to be merciful. That poor boy——that——"

He handed the paper to his wife, and made no attempt to escape from judgment, but sat submissive while she read the report of Lemuel's trial. The story was told throughout in the poetico-jocular spirit of the opening sentences; the reporter had felt the simple charm of the affair, only to be ashamed of it and the more offensive about it.

When she had finished Mrs. Sewell did not say anything. She merely looked at her husband, who looked really sick.

At last he said, making an effort to rise from his chair, "I must go and see him, I suppose."

"Yes, if you can find him," responded his wife with a sigh.

"Find him?" echoed Sewell.

"Yes. Goodness knows what more trouble the wretched creature's got into by this time. You saw that he was acquitted, didn't you?" she demanded in answer to her husband's stare.

"No, I didn't. I supposed he was convicted, of course."

"Well, you see it isn't so bad as it might be," she said, using a pity which she did not perhaps altogether feel. "Eat your breakfast now, David, and then go and try to look him up."

"Oh, I don't want any breakfast," pleaded the minister.

He offered to rise again, but she motioned him down in his chair. "David, you shall! I'm not going to have you going about all day with a headache. Eat! And then when you've finished your breakfast, go and find out which station that officer Baker belongs to, and he can tell you something about the boy, if any one can."

Sewell made what shift he could to grasp these practical ideas, and he obediently ate of whatever his wife bade him. She would not let him hurry his breakfast in the least, and when he had at last finished, she said: "Now you can go, David. And when you've found the boy, don't you let him out of your sight again till you've put him aboard the train for Willoughby Pastures, and seen the train start out of the depot with him. Never mind your sermon. I will be setting down the heads of a sermon, while you're gone, that will do *you* good, if you write it out, whether it helps any one else or not."

Sewell was not so sure of that. He had no doubt that his wife would set down the heads of a powerful sermon, but he questioned whether any discourse, however potent, would have force to benefit such an abandoned criminal as he felt himself, in walking down his brown-stone steps, and up the long brick sidewalk of Bolingbroke street toward the Public Garden. The beds of geraniums and the clumps of scarlet-blossomed salvia in the little grass-plots before the houses, which commonly flattered his eye with their color, had a suggestion of penal fires in them now, that needed no lingering superstition in his nerves to realize something very like perdition for his troubled soul. It was not wickedness he had been guilty of, but he had allowed a good man to be made the agency of suffering, and he was sorely to blame, for he had sinned against himself. This was what his conscience said, and though his reason protested against his state of mind as a phase of the religious insanity which we have all inherited in some measure from Puritan times, it could not help him. He went along involuntarily framing a vow that if Providence would mercifully permit him to repair the wrong he had done, he would not stop at any sacrifice to get that unhappy boy back to his home, but would gladly take any open shame or obloquy upon himself in order to accomplish this.

He met a policeman on the bridge of the Public Garden, and made bold to ask him at once if he knew an officer named Baker, and which station he could be found at. The policeman was over-rich in the acquaintance of two officers of the name of Baker,

and he put his hand on Sewell's shoulder, in the paternal manner of policemen when they will be friendly, and advised him to go first to the Neponset street station, to which one of these Bakers was attached, and inquire there first. "Anyway, that's what I should do in your place."

Sewell was fulsomely grateful, as we all are in the like case; and at the station he used an urbanity with the captain which was perhaps not thrown away upon him, but which was certainly disproportioned to the trouble he was asking him to take in saying whether he knew where he could find Officer Baker.

"Yes, I do," said the captain; "you can find him in bed, upstairs. But I'd rather you wouldn't wake a man off duty if you don't have to, especially if you don't know he's the one. What's wanted?"

Sewell stopped to say that the captain was quite right, and then he explained why he wished to see Officer Baker.

The captain listened with nods of his head at the names and facts given. "Guess you won't have to get Baker up for that. I can tell you what there is to tell. I don't know where your young man is now, but I gave him an order for a bed at the Wayfarer's Lodge last night, and I guess he slept there. You a friend of his?"

"Yes," said Sewell, much questioning inwardly whether he could be truly described as such. "I wish to befriend him," he added savingly. "I knew him at home, and I am sure of his innocence."

"Oh, I guess he's *innocent* enough," said the captain. "Well, now, I tell you what you do, if you want to befriend him; you get him home quick as you can."

"Yes," said Sewell, helpless to resent the officer's authoritative and patronizing tone. "That's what I wish to do. Do you suppose he's at the Wayfarer's Lodge now?" asked Sewell.

"Can't say," said the captain, tilting himself back in his chair, and putting his quill toothpick between his lips like a cigarette. "The only way is to go and see."

"Thank you very much," said the minister, accepting his dismissal meekly, as a man vowed to ignominy should, but feeling keenly that he was dismissed, and dismissed in disgrace.

At the Lodge he was received less curtly. The manager was there with a long morning's leisure before him, and disposed to friendliness that Sewell found absurdly soothing. He turned over the orders for beds delivered by the vagrants the night before, and "Yes," he said, coming to Lemuel's name, "he slept here; but nobody knows where he is by this time. Wait a bit, sir!" he added to Sewell's fallen countenance. "There was one of the

young fellows staid to help us through with the dishes this morning. I'll have him up; or maybe you'd like to go down and take a look at our kitchen? You'll find him there, if it's the one. Here's our card. We can supply you with all sorts of firewood at less cost than the dealers, and you'll be helping the poor fellows to earn an honest bed and breakfast. This way, sir!"

Sewell promised to buy his wood there, put the card respectfully into his pocket, and followed the manager downstairs, and through the basement to the kitchen. He arrived just as Lemuel was about to lift a trayful of clean soup-bowls, to carry it upstairs. After a glance at the minister, he stood still with dropped eyes.

Sewell did not know in what form to greet the boy on whom he had unwillingly brought so much evil, and he found the greater difficulty in deciding as he saw Lemuel's face hardening against him.

"Barker," he said at last, "I'm very glad to find you—I have been very anxious to find you."

Lemuel made no sign of sympathy, but stood still in his long check apron, with his sleeves rolled up to his elbow, and the minister was obliged to humble himself still further to this figure of lowly obstinacy.

"I should like to speak with you. Can I speak with you a few moments?"

The manager politely stepped into the storeroom, and affected to employ himself there, leaving Lemuel and the minister alone together.

x.

SEWELL lost no time. "I want you to go home, Barker. I feel that I am wholly to blame, and greatly to blame, for your coming to Boston with the expectation that brought you, and that I am indirectly responsible for all the trouble that has befallen you since you came. I want to be the means of your getting home, in any way you can let me."

This was a very different way of talking from the smooth superiority of address which the minister had used with him the other day at his own house. Lemuel was not insensible to the atonement offered him, and it was not from sulky stubbornness that he continued silent, and left the minister to explore the causes of his reticence unaided.

"I will go home *with* you, if you like," pursued the minister, though his mind misgave him that this was an extreme which Mrs. Sewell would not have justified him in. "I will go with you, and explain all the circumstances to your friends, in case there should be any misunderstanding—though in that event I should have to ask you to be my

guest till Monday." Here the unhappy man laid hold of the sheep, which could not bring him greater condemnation than the lamb.

"I guess they won't know anything about it," said Lemuel, with whatever intention.

It seemed hardened indifference to the minister, and he felt it his disagreeable duty to say, "I am afraid they will. I read of it in the newspaper this morning, and I'm afraid that an exaggerated report of your misfortunes will reach Willoughby Pastures, and alarm your family."

A faint pallor came over the boy's face, and he stood again in his impenetrable, rustic silence. The voice that finally spoke from it said, "I guess I don't want to go home, then."

"You *must* go home!" said the minister, with more of imploring than imperiousness in his command. "What will they make of your prolonged absence?"

"I sent a postal to mother this morning. They lent me one."

"But what will you do here, without work and without means? I wish you to go home with me — I feel responsible for you — and remain with me till you can hear from your mother. I'm sorry you came to Boston; it's no place for you, as you must know by this time, and I am sure your mother will agree with me in desiring your return."

"I guess I don't want to go home," said Lemuel.

"Are you afraid that an uncharitable construction will be placed upon what has happened to you by your neighbors?" Lemuel did not answer. "I assure you that all that can be arranged. I will write to your pastor, and explain it fully. But in any event," continued Sewell, "it is your duty to yourself and your friends to go home and live it down. It would be your duty to do so even if you had been guilty of wrong, instead of the victim of misfortune."

"I don't know," said Lemuel, "as I want to go home and be the laughing-stock."

Against this point Sewell felt himself helpless. He could not pretend that the boy would not be ridiculous in the eyes of his friends, and all the more ridiculous because so wholly innocent. He could only say, "That is a thing which you must bear." And then it occurred to him to ask, "Do you feel that it is right to let your family meet the ridicule alone?"

"I guess nobody will speak to mother about it more than once," said Lemuel, with a just pride in his mother's powers of retort. A woman who, unaided and alone, had worn the Bloomer costume for twenty years in the heart of a commentative community like Willoughby Pastures, was not likely to be without a cutting tongue for her defense.

"But your sister," urged Sewell; "your brother-in-law," he feebly added.

"I guess they will have to stand it," replied Lemuel.

The minister heaved a sigh of hopeless perplexity. "What do you propose to do, then? You can't remain here without means. Do you expect to sell your poetry?" he asked, goaded to the question by a conscience peculiarly sore on that point.

It made Lemuel blush. "No, I don't expect to sell it now. They took it out of my pocket on the Common."

"I am glad of that," said the minister as simply, "and I feel bound to warn you solemnly that there is absolutely *no* hope for you in that direction."

Lemuel said nothing.

The minister stood baffled again. After a bad moment he asked, "Have you anything particular in view?"

"I don't know as I have."

"How long can you remain here?"

"I don't know exactly."

Sewell turned and followed the manager into the refrigerator room, where he had remained patiently whistling throughout this interview.

When he came back, Lemuel had carried one trayful of bowls upstairs, and returned for another load, which he was piling carefully up for safe transportation.

"The manager tells me," said Sewell, "that practically you can stay here as long as you like, if you work; but he doesn't think it desirable you should remain, nor do I. But I wish to find you here again when I come back. I have something in view for you."

This seemed to be a question, and Lemuel said, "All right," and went on piling up his bowls. He added, "I shouldn't want you to take a great deal of trouble."

"Oh, it's no trouble," groaned the minister. "Then I may depend upon seeing you here any time during the day?"

"I don't know as I'm going away," Lemuel admitted.

"Well, then, good-bye for the present," said Sewell; and after speaking again to the manager, and gratefully ordering some kindling which he did not presently need, he went out, and took his way homeward. But he stopped half a block short of his own door, and rang at Miss Vane's. To his perturbed and eager spirit it seemed nothing short of a divine mercy that she should be at home. If he had not been a man bent on repairing his wrong at any cost to others, he would hardly have taken the step he now contemplated without first advising with his wife, who, he felt sure, would have advised against it. His

face did not brighten at all when Miss Vane came briskly in, with the "*How d'y'e do?*" which he commonly found so cheering. She pulled up the blind and saw his knotted brow.

"What is the matter? You look as if you had got Lemuel Barker back on your hands."

"I have," said the minister briefly.

Miss Vane gave a wild laugh of delight. "You *don't* mean it!" she sputtered, sitting down before him, and peering into his face. "What *do* you mean?"

Sewell was obliged to possess Miss Vane's entire ignorance of all the facts in detail. From point to point he paused; he began really to be afraid she would do herself an injury with her laughing.

She put her hand on his arm and bowed her head forward, with her face buried in her handkerchief. "What—what—do you suppose—pose—they did with the *po-po-poem* they stole from him?"

"Well, one thing I'm sure they *didn't* do," said Sewell bitterly. "They didn't *read* it."

Miss Vane hid her face in her handkerchief, and then plucked it away, and shrieked again. She stopped, with the sudden calm that succeeds such a paroxysm, and, "Does Mrs. Sewell know all about this?" she panted.

"She knows everything, except my finding him in the dish-washing department of the Wayfarer's Lodge," said Sewell gloomily, "and my coming to you."

"Why do you come to me?" asked Miss Vane, her face twitching and her eyes brimming.

"Because," answered Sewell, "I'd rather not go to her till I have done something."

Miss Vane gave way again, and Sewell sat regarding her ruefully.

"What do you expect me to do?" She looked at him over her handkerchief, which she kept pressed against her mouth.

"I haven't the least idea what I expected you to do. I expected you to tell me. You have an inventive mind."

Miss Vane shook her head. Her eyes grew serious, and after a moment she said, "I'm afraid I'm not equal to Lemuel Barker. Besides," she added with a tinge of trouble, "I have *my* problem already."

"Yes," said the minister sympathetically.

"How has the flower charity turned out?"

"She went yesterday with one of the ladies, and carried flowers to the city hospital. But she wasn't at all satisfied with the result. She said the patients were mostly disgusting old men that hadn't been shaved. I think that now she wants to try her flowers on criminals. She says she wishes to visit the prisons."

Sewell brightened forlornly. "Why not let her reform Barker?"

This sent Miss Vane off again. "Poor

boy!" she sighed, when she had come to herself. "No, there's nothing that I can do for him, except to order some firewood from his benefactors."

"I did that," said Sewell. "But I don't see how it's to help Barker exactly."

"I would gladly join in a public subscription to send him home. But you say he won't *go* home?"

"He won't go home," sighed the minister.

"He's determined to stay. I suspect he would accept employment, if it were offered him in the right spirit."

Miss Vane shook her head. "There's nothing I can think of except shoveling snow. And as yet it's rather warm October weather."

"There's certainly no snow to shovel," admitted Sewell. He rose disconsolately. "Well, there's nothing for it, I suppose, but to put him down at the Christian Union, and explain his checkered career to everybody who proposes to employ him."

Miss Vane could not keep the laughter out of her eyes; she nervously tapped her lips with her handkerchief, to keep it from them. Suddenly she halted Sewell in his dejected progress toward the door. "I might give him my furnace."

"Furnace?" echoed Sewell.

"Yes. Jackson has 'struck' for twelve dollars a month, and at present there is a 'lock-out,'—I believe that's what it's called. And I had determined not to yield as long as the fine weather lasted. I knew I should give in at the first frost. I will take Barker now, if you think he can manage the furnace."

"I've no doubt he can. Has Jackson really struck?" Miss Vane nodded. "He hasn't said anything to me about it."

"He probably intends to make special terms to the clergy. But he told me he was putting up the rates on all his 'fambles' this winter."

"If he puts them up on me, I will take Barker too," said the minister boldly. "If he will come," he added with less courage. "Well, I will go round to the Lodge, and see what he thinks of it. Of course, he can't live upon ten dollars a month, and I must look him up something besides."

"That's the only thing I can think of at present," said Miss Vane.

"Oh, you're indefinitely good to think of so much," said Sewell. "You must excuse me if my reception of your kindness has been qualified by the reticence with which Barker received mine this morning."

"Oh, do tell me about it!" cried Miss Vane.

"Some time I will. But I can assure you it was such as to make me shrink from another

interview. I don't know but Barker may fling your proffered furnace in my teeth. But I'm sure we both mean well. And I thank you, all the same. Good-bye."

"Poor Mr. Sewell!" said Miss Vane, following him to the door. "May I run down and tell Mrs. Sewell?"

"Not yet," said the minister sadly. He was too insecure of Barker's reception of him to be able to enjoy the joke.

When he got back to the Wayfarer's Lodge, whither he made himself walk in penance, he found Lemuel with a book in his hand, reading, while the cook stirred about the kitchen, and the broth, which he had well under way for the midday meal, lifted the lid of its boiler from time to time and sent out a joyous whiff of steam. The place had really a coziness of its own, and Sewell began to fear that his victim had been so far corrupted by its comfort as to be unwilling to leave the refuge. He had often seen the subtly disastrous effect of bounty, and it was one of the things he trembled for in considering the question of public aid to the poor. Before he addressed Barker, he saw him entered upon the dire life of idleness and dependence, partial or entire, which he had known so many Americans even willing to lead since the first great hard times began; and he spoke to him with the asperity of anticipative censure.

"Barker!" he said, and Lemuel lifted his head from the book he was reading. "I have found something for you to do. I still prefer you should go home, and I advise you to do so. But," he added, at the look that came into Lemuel's face, "if you are determined to stay, this is the best I can do for you. It isn't a full support, but it's something, and you must look about for yourself, and not rest till you've found full work, and something better fitted for you. Do you think you can take care of a furnace?"

"Hot air?" asked Lemuel.

"Yes."

"I guess so. I took care of the church furnace last winter."

"I didn't know you had one," said the minister, brightening in the ray of hope. "Would you be willing to take care of a domestic furnace—a furnace in a private house?"

Lemuel pondered the proposal in silence. Whatever objections there were to it in its difference from the aims of his ambition in coming to Boston he kept to himself; and his ignorance of city prejudices and sophistications probably suggested nothing against the honest work to his pride. "I guess I should," he said at last.

"Well, then, come with me."

Sewell judged it best not to tell him whose

furnace he was to take care of; he had an impression that Miss Vane was included in the resentment which Lemuel seemed to cherish toward him. But when he had him at her door, "It's the lady whom you saw at my house the other day," he explained. It was then too late for Lemuel to rebel, and they went in.

If there was any such unkindness in Lemuel's breast toward her, it yielded promptly to her tact. She treated him at once, not like a servant, but like a young person, and yet she used a sort of respect for his independence which was soothing to his rustic pride. She put it on the money basis at once; she told him that she should give him ten dollars a month for taking care of the furnace, keeping the sidewalk clear of snow, shoveling the paths in the back yard for the women to get at their clothes-lines, carrying up and down coal and ashes for the grates, and doing errands. She said that this was what she had always paid, and asked him if he understood and were satisfied.

Lemuel answered with one yes to both her questions, and then Miss Vane said that of course till the weather changed they should want no fire in the furnace, but that it might change any day, and they should begin at once and count October as a full month. She thought he had better go down and look at the furnace and see if it was in order; she had had the pipes cleaned, but perhaps it needed blacking; the cook would show him how it worked. She went with him to the head of the basement stairs, and calling down, "Jane, here is Lemuel, come to look after the furnace," left him and Jane to complete the acquaintance upon coming in sight of each other, and went back to the minister. He had risen to go, and she gave him her hand, while a smile rippled into laughter on her lips.

"Do you think," she asked, struggling with her mirth to keep unheard of those below, "that it is quite the work for a literary man?"

"If he is a man," said Sewell courageously, "the work won't keep him from being literary."

Miss Vane laughed at his sudden recovery of spirit, as she had laughed at his dejection; but he did not care. He hurried home, with a sermon kindling in his mind so obviously that his wife did not detain him beyond a few vital questions, and let him escape from having foisted his burden upon Miss Vane with the simple comment, "Well, we shall see how that will work."

As once before, Sewell tacitly took a hint from his own experience, and, enlarging to more serious facts from it, preached effort in the erring. He denounced mere remorse. Better not feel that at all, he taught; and he declared that what is ordinarily distinguished

from remorse as repentance was equally a mere corrosion of the spirit unless some attempt at reparation went with it. He maintained that though some mischiefs — perhaps most mischiefs — were irreparable so far as restoring the original status was concerned, yet every mischief was reparable in the good will and the good deed of its perpetrator. Do what you could to retrieve yourself from error, and then, not leave the rest to Providence, but keep doing. The good, however small, must grow if tended and nurtured like a useful plant, as the evil would certainly grow like a wild and poisonous weed if left to itself. Sin, he said, was a terrible mystery; one scarcely knew how to deal with it or to attempt to determine its nature; but perhaps — he threw out the thought while warning those who heard him of its danger in some aspects — sin was not wholly an evil. We were so apt in this world of struggle and ambition to become centered solely in ourselves, that possibly the wrong done to another — the wrong that turned our thoughts from ourselves, and kept them bent in agony and despair upon the suffering we had caused another, and knew not how to mitigate — possibly this wrong, nay, certainly this wrong was good in disguise. But, returning to his original point, we were to beware how we rested in this despair. In the very extremity of our anguish, our fear, our shame, we were to gird ourselves up to reparation. Strive to do good, he preached; strive most of all to do good to those you have done harm to. His text was "Cease to do evil."

He finished his sermon during the afternoon, and in the evening his wife said they would run up to Miss Vane's. Sewell shrank from this a little, with the obscure dread that Lemuel might have turned his back upon good fortune, and abandoned the place offered him, in which case Sewell would have to give a wholly different turn to his sermon; but he consented, as indeed he must. He was as curious as his wife to know how the experiment had resulted.

Miss Vane did not wait to let them ask. "My dear," she said, kissing Mrs. Sewell and giving her hand to the minister in one, "he is a pearl! And I've kept him from mixing his native luster with Rising Sun Stove Polish by becoming his creditor in the price of a pair of overalls. I had no idea they were so cheap, and you can see that they will fade, with a few washings, to a perfect Millet blue. They were quite his own idea, when he found the furnace needed blacking, and he wanted to use the fifty cents he earned this morning toward the purchase, but I insisted upon advancing the entire dollar myself. Neatness, self-respect, awe-inspiring deference! — he is each and every one of them in person."

Sewell could not forbear a glance of triumph at his wife.

"You leave us very little to ask," said that injured woman.

"But I've left myself a great deal to tell, my dear," retorted Miss Vane, "and I propose to keep the floor; though I don't really know where to begin."

"I thought you had got past the necessity of beginning," said Sewell. "We know that the new pearl sweeps clean," — Miss Vane applauded his mixed metaphor, — "and now you might go on from that point."

"Well, you may think I'm rash," said Miss Vane, "but I've thoroughly made up my mind to keep him."

"Dear, *dear* Miss Vane!" cried the minister. "Mrs. Sewell thinks you're rash, but I don't. What do you mean by keeping him?"

"Keeping him as a fixture — a permanency — a continuosity."

"Oh! A continuosity? I know what that is in the ordinary acceptance of the term, but I'm not sure that I follow your meaning exactly."

"Why, it's simply this," said Miss Vane. "I have long secretly wanted the protection of what Jane calls a man-body in the house, and when I saw how Lemuel had blacked the furnace, I knew I should feel as safe with him as with a whole body of troops."

"Well," sighed the minister, "you have not been rash, perhaps, but you'll allow that you've been rapid."

"No," said Miss Vane, "I won't allow that. I have simply been intuitive — nothing more. His functions are not decided yet, but it is decided that he is to stay; he's to sleep in the little room over the L, and in my tranquilized consciousness he's been there years already."

"And has Sibyl undertaken Barker's reformation?" asked Sewell.

"Don't interrupt! Don't anticipate! I admit nothing till I come to it. But after I had arranged with Lemuel I began to think of Sibyl."

"That was like some ladies I have known of," said Sewell. "You women commit yourselves to a scheme, in order to show your skill in reconciling circumstances to the irretrievable. Well?"

"*Don't* interrupt, David!" cried his wife.

"Oh, let him go on," said Miss Vane. "It's all very well, taking people into your house on the spur of the moment, and in obedience to a generous impulse; but when you reflect that the object of your good intentions slept in the Wayfarer's Lodge the night before, and in the police station the night before that, and enjoys a newspaper celebrity in connection with a case of assault and battery with intent to rob, — why, then you *do* reflect!"

"Yes," said Sewell, "that is just the point where I should begin."

"I thought," continued Miss Vane, "I had better tell Sibyl all about it, so if by any chance the neighbors' kitchens should have heard of the case — they read the police reports very carefully in the kitchens —"

"They do in some drawing-rooms," interrupted Sewell.

"It's well for you they do, David," said his wife. "Your protégé would have been in your refuge still, if they didn't."

"I see!" cried the minister. "I shall have to take the 'Sunrise' another week."

Miss Vane looked from one to the other in sympathetic ignorance, but they did not explain, and she went on.

"And if they should hear Lemuel's name, and put two and two together, and the talk should get to Sibyl — well, I thought it all over, until the whole thing became perfectly lurid, and I wished Lemuel Barker was back in the depths of Willoughby Pastures —"

"I understand," said Sewell. "Go on!"

Miss Vane did so, after stopping to laugh. "It seemed to me I couldn't wait for Sibyl to get home — she spent the night in Brookline, and didn't come till five o'clock — to tell her. I began before she had got her hat or gloves off, and she sat down with them on, and listened like a three-years' child to the Ancient Mariner, but she lost no time when she understood the facts. She went out immediately and stripped the nasturtium bed. If you could have seen it when you came in, there's hardly a blossom left. She took the decorations of Lemuel's room into her own hands at once; and if there is any saving power in nastur-

tiums, he will be a changed person. She says that now the great object is to keep him from feeling that he has been an outcast, and needs to be reclaimed; she says nothing could be worse for him. I don't know how she knows."

"Barker might feel that he was disgraced," said the minister, "but I don't believe that a whole system of ethics would make him suspect that he needed to be reclaimed."

"He makes me suspect that I need to be reclaimed," said Miss Vane, "when he looks at me with those beautiful honest eyes of his."

Mrs. Sewell asked, "Has he seen the decorations yet?"

"Not at all. They are to steal upon him when he comes in to-night. The gas is to be turned very low, and he is to notice everything gradually, so as not to get the impression that things have been done with a design upon him." She laughed in reporting these ideas, which were plainly those of the young girl. "Sh!" she whispered at the end.

A tall girl, with a slim vase in her hand, drifted in upon their group like an apparition. She had heavy black eyebrows with beautiful blue eyes under them, full of an intensity unrelieved by humor.

"Auntie!" she said severely, "have you been telling?"

"Only Mr. and Mrs. Sewell, Sibyl," said Miss Vane. "Their knowing won't hurt. He'll never know it."

"If he hears you laughing, he'll know it's about him. He's in the kitchen now. He's come in the back way. Do be quiet." She had given her hand without other greeting in her preoccupation to each of the Sewells in turn, and now she passed out of the room.

(To be continued.)

W. D. Howells.

APRIL'S LADY.

IT was fortunate that when the editor of the "Dark Red" magazine first did me the honor to request a story from my pen, I had one ready for him, and one, moreover, with which I was so well satisfied. I had so long vainly desired to be really asked for a contribution, and thus raised from the numerous and indiscriminate company of scribblers who send hopeful manuscripts to the magazines, and in trembling uncertainty await the issue, that it is not strange my bosom swelled with gratified pride, and that I dispatched my copy with so perfect a sense of complacency that I almost seemed to condescend a little in letting the editor have it.

I was fond of that story. I experienced a certain delight in recalling the circumstances under which it was composed, and I felt in it

that confidence which an author is sure to have in work which has sprung spontaneously and as it were full-grown from his brain. Every literary worker, down to the veriest penny-a-liner of them all, knows the difference between a tale which makes itself, so to speak, growing unforced into beauty and completeness like a crystal, and a laboriously constructed piece of work, be it contrived never so ingeniously and cleverly. The fiction I sent to the editor of the "Dark Red" was of the former variety. It had come into my head all of itself, as the children say, while I was traveling between New York and Boston, so complete and so distinct that I scarcely seemed to have more to do with its creation than the later putting upon paper.

The circumstances were these:

I had reached the Grand Central depot just in time to catch the morning train; and as the cars swept out of the station, I settled myself into a seat with a comfortable and something too self-satisfied feeling. In the first place, I was glad to be out of New York; partly because it was hot and dusty there, partly because I am not over-fond of Gotham, and partly because I had sundry pleasant bachelor friends and divers good times awaiting me at the Boston end of my journey. I looked out upon the sunny landscape, over which the splendors of an April day cast a glow of warmth and brightness, smiled at the remembrance of a retort I had made at the Century Club on the previous evening which seemed to me rather neat, and then with a sort of mental nod of farewell to all the outside world I took up my book and prepared to follow the fortunes of the woful and wicked, but thoroughly charming French heroine with whose adventures I was at that particular time occupying myself. To my vexation, however, I discovered that instead of the second volume I had taken the first, and as I had no especial desire to peruse again the somewhat detailed account of the heroine's youth, her career at school, her first confession and early marriage,—all these being preliminary to the impropriety and the interest of the book, which, after the reprehensible manner of French novels, began together,—I laid down the volume with a sigh, and resigned myself to a ride of unalleviated dullness.

A resource instantly presented itself, however, in the page which the lady in the seat before me was reading. As I glanced up I saw that she was entertaining herself with poetry, and the next moment a familiar line caught my eye:

"If you were April's lady, and I were lord of May."

"Swinburne," I mused, "or a collection of selected poems, perhaps. Wiseacres would say one ought to know what a reader is like by the book she reads; but in the first place that's nonsense, and in the second place I don't know what book she is reading. She has an exquisite ear, and her hair is something bewildering. 'If you were April's lady.' April's lady should be a capricious creature, all smiles and tears, with winning ways and willful wiles; impulsive and wayward, and thoroughly enchanting. It would not";—my thoughts ran on in a professional turn, while my eyes dwelt appreciatively if somewhat presumptuously upon the lovely curve of my neighbor's neck—"it would not be a bad notion to write a story of such a maiden and call it 'April's Lady.' Let me see, what should it be like?"

And upon this impulse I fell to pondering, when suddenly, as if by magic, a tale pre-

sented itself all complete in my mind. My mental action appeared to me more like that of remembering than of creating, so real and so complete was the pretty history. The self-willed, volatile damsel whose fortunes it concerned seemed one whom I had known and whom I might meet again some day. In my mind she assumed, it is true, an outward semblance similar to that of the lady before me, upon whose back I fixed my regards in an absorbed stare, which should have disturbed her could looks make themselves felt. She did not move, however, and as she did not turn the leaf of her book, I fancied she might have fallen into a reverie as deep as my own. I had not been able fully to see her face, although a lucky turn had given me a glimpse of a profile full of character and beauty, and which made me desire to behold more. I did not, however, trouble myself about the exact details of my heroine's features, for every story-teller has a stock of choice personal charms with which to endow his fictitious children, but continued to gloat over my little romance; and so vividly was the tale of "April's Lady" impressed upon my mind that although some weeks elapsed before I found time to put it upon paper, I found not the slightest difficulty in recalling even its most trifling incidents.

Almost the whole of my journey was taken up in turning the story over in my mind, and when we drew into the Boston station, and my neighbor closed her volume to begin the collection of her numerous feminine possessions, I had half a mind to lean forward and thank her for having given me, although unconsciously, so good a story.

It did seem to me, even after I had sent my manuscript off and the dreadful moment came when one realizes that it is too late to make changes and consequently thinks of plenty of things he wishes to alter, that "April's Lady" was the best work I had ever done. I had let a month or two pass between its first writing and the final revision, and I was pretty well satisfied that I had produced a really capital story. I fondly hoped Mr. Lane, the editor of the "Dark Red," would be moved by its excellence to give me further orders; and the eagerness with which I one morning tore open an envelope upon which I recognized his handwriting may be easily enough imagined, at least by members of the literary guild. My impatience gave place to profound astonishment as I read the following note:

OFFICE DARK RED MAGAZINE,
BOSTON, September 27.

MY DEAR MR. GRAY: Can you drop into my office to-morrow about noon? By some odd coincidence I received a story very similar to your "April's Lady,"

and bearing the same title, several days earlier, and should like to talk with you about it.

Very truly yours,

J. Q. LANE.

I was utterly confounded. I racked my brains to discover who could possibly have stolen my story, and even suspected the small black girl who dusted my rooms, although the sooty little morsel did not know one letter from another. The first draft of the story had lain in my desk for some time, it was true, yet that any literary burglar should have forced an entrance and then contented himself with copying this seemed, upon the whole, scarcely probable. I ransacked my memory for some old tale which I might unconsciously have plagiarized, but I could think of nothing; and moreover I reflected that the coincidence of names certainly could not be accounted for in this way, even did I recall the germ of my plot.

I presented myself at the office of the "Dark Red" at the hour appointed with a clear conscience, it is true, but with positively no suggestion whatever to offer in regard to the method by which a copy of my story could have reached the editor in advance of my own manuscript.

Mr. Lane received me with the conventionally cordial manner which is as much a part of editorial duties as is the use of the blue pencil, and without much delay came to the business of the call.

"There is something very singular about this affair," he said, laying out my manuscript, and beside it another which I could see was written in a running feminine hand. "If the stories were a little more alike, I should be sure one was copied from the other; as it is, it is inconceivable that they have not at least a common origin. Where did you get your idea?"

"Why, so far as I know," I replied in perplexity, "I evolved it from my inner consciousness, but the germ may have been the unconscious recollection of some incident or floating idea. I've tried to discover where I did get the fancy, but without a glimmer of success. Who sent you the other version?"

"A lady of whose integrity I am as sure as I am of yours. That's the odd part of it. Besides, you are both of you too clever to plagiarize, even if you weren't too honest. The mere similarity of theme isn't so strange; that happens often enough; but that the title of the stories should be identical, and that in each the heroine should be named May——"

"Is her heroine named May?" I interrupted in astonishment, "Why, then, she must have seen my copy; or," I added, a new thought striking me, "she must have got the name in the same way I did. I took the title of the story and the name of the heroine from a line of Swinburne, and——"

"And," interrupted the editor in turn,

catching up the manuscript before him, "so did she."

And he showed me, written at the head of the page:

"If you were April's lady, and I were lord of May."

"Well," I remarked, with a not unnatural mingling of philosophy and annoyance, "it is all of a piece with my theory that ideas are in the air and belong, like wild geese, to whoever catches them first; but it is vexatious, when I captured a fancy that particularly pleased me, to find that some woman or other has been smart enough to get salt on its tail-feathers before I did."

Mr. Lane smiled at my desperate air, and at that moment his little office-boy, whom I particularly detest because of the catlike stillness and suddenness of his movements, silently produced first himself and then a card.

"Agnes Graham," read Mr. Lane. "Here is your rival to speak for herself. I hope you don't mind seeing her?"

"Oh, by no means," I replied rather ungraciously. "Let us see what she is like and what she will have to say about this puzzle."

The name was not wholly new to me, as I had seen it signed to various magazine articles, concerning which at this moment I had only the most vague and general idea. I was sitting with my back to the door, and in rising I still kept my face half turned away from the lady who entered, but I saw the reflection of her face in a mirror opposite without any sense of recognition. As she advanced a step or two, however, and half passed me, I knew her. The delicate ear, the fine sweep of the neck, the knot of golden brown hair, were all familiar. It was the lady who had sat before me in the cars from New York on that April day.

As she turned in recognition of Mr. Lane's introduction, a faint flush seemed to show that she too recognized me, although I was unable to understand how she should know me, since she certainly had not turned her head once in the entire journey. I set it down to pure feminine intuition, not having wholly freed myself from that masculine superstition which regards woman's instinct as a sort of supernatural clairvoyance.

My sensations on discovering her identity were not wholly unlike those of a man who inadvertently touches a charged Leyden jar.

"Good heavens!" I exclaimed, "what a psychological conundrum, or whatever you choose to call it. The whole matter is as plain to me now as daylight."

"Well?" Mr. Lane asked, while Miss Graham regarded me with an air which seemed to question whether my insanity were of a dangerous type.

"Pardon me, Miss Graham, if I cross-question you a little," I went on, becoming somewhat excited. "You came from New York on the morning train on Wednesday, the fifteenth — no, the sixteenth of last April, did you not?"

"Yes," she answered, her color again a trifle heightened, but her appearance being rather that of perplexity than of self-consciousness.

"And on the way you read Swinburne till you came to the line,

'If you were April's lady, and I were lord of May';

and it occurred to you what a capital name for a story 'April's Lady' would be?"

"Yes," she repeated; and then, with a yet more puzzled air, she turned to Mr. Lane to ask, "Is this mind-reading?"

"I'm sure I don't know," returned he. "Mr. Gray can best tell what it is."

"And the rest of the way to Boston," I continued, ignoring the interruption, "you were elaborating your story. You took the heroine's name from the same line, and had a pun at the climax about the hero's becoming 'lord of May.'"

"No," Miss Graham retorted, beginning to enter into the spirit of the situation. "I deny the pun, although I acknowledge the rest. The pun I didn't even think of."

"Well, you see I haven't read your manuscript, but I own I fell so low that I put in the pun myself. At least the old gentleman with a scar on his cheek, who sat in the corner of the car, gave you hints for —"

"The uncle," broke in Miss Graham, with a gleeful laugh at the remembrance of the oddity of the old gentleman's appearance. "But how in the world did you know?"

"Oh, he did me. We evidently had the same mental experience; which proves, I suppose, that we are literary Corsican brothers or something of the sort."

"But the great question to be settled is," Mr. Lane observed, bringing in, after some further talk, the editorial consideration, "whose story this really is."

"Miss Graham's, by all means," I said instantly. "Hers was first in the field, and if I hadn't impertinently looked over her shoulder, I shouldn't have had any share in it whatever."

Miss Graham laughed, showing a delicious dimple, and Mr. Lane, who evidently had no desire to settle the question under discussion, looked inquiringly at her for a response to my words.

"You are very generous, Mr. Gray," she answered; "but in the first place my story has never been accepted for the 'Dark Red,' and in the second, as the stories really ought to stand on their merits, I shall certainly not venture to

put mine into competition with yours, but prefer to pocket my manuscript and retire."

"I fear," was my reply, "that I discover rather a tendency to sarcasm in what you say than any true humility. Of course the first point is one for Mr. Lane to settle."

The editor cleared his throat with some embarrassment, but before he found the words he wanted, Miss Graham spoke again.

"I had not the slightest idea of being sarcastic, for, of course, it goes without saying that your story is better than mine; but since you choose to take it in that way, I am willing to leave the whole matter to Mr. Lane. He is at least the only person who has read both manuscripts."

"Really," Mr. Lane said, thus pushed into a corner, "I am extremely sorry to find myself placed in so trying a situation. There are points in which each story excels, and the best result would undoubtedly be attained by welding them together."

"If that could be done," said Miss Graham thoughtfully.

"Now, in Mr. Gray's version," he continued, "the heroine is more attractive and real."

"That," I interpolated, trying to cover the awkwardness I felt by a jest, "is the first time in all my literary experience that the character I thought best in a story I'd written has seemed so to the editorial mind."

The dark eyes of my neighbor gave me a bright, brief glance, but whether of sympathy with my statement or of contempt for the feebleness of my attempts at being jocose, I could not determine.

"While Miss Graham," went on the editorial comment, "has decidedly the advantage in her hero."

Miss Graham flushed slightly, but offered no remark in reply to this opinion beyond a smile which seemed one of frank pleasure. We sat in silence a moment, a not unnatural hesitancy preventing my making a proposition which had presented itself to my mind.

"If it will not seem impertinent to Miss Graham," I ventured at length, "I would propose that we really do try the experiment of collaboration on this story. I have never worked with anybody, but I promise to be tractable; and the thing had so odd a beginning that it is a pity to thwart the evident intention of destiny that we shall both have a hand in it."

To this proposition the lady at first returned a decided and even peremptory negative; but my persuasions, seconded by those of Mr. Lane, who was partly curious and partly anxious to escape from the necessity of arbitrating in the matter, in the end induced her to alter her decision.

The result of the interview was that when we left the office of the "Dark Red" Miss Graham had my manuscript and I hers, and that an appointment had been made for my calling upon her with a view to an interchange of comments and criticisms.

Upon the appointed evening I presented myself at the home of Miss Graham, and almost without the usual conventionalities concerning the weather we proceeded to discuss the stories. We began with great outward suavity and courtesy the exchange of compliments, which were so obviously formal and perfunctory that in a moment more we looked into each other's faces and burst into laughter, which if hardly polite was at least genuine.

"Come," I said, "now the ice is broken and we can say what we really think; and I must be pardoned for saying that that hero of yours, whom Mr. Lane praised, is the most insufferable cad I've encountered this many a day. He can't be set off against that lovely girl in my story. Why, the truth is, Miss Graham, I meant her to be what I fancied you might be. She's the ideal I built up from seeing you in the cars."

"I must say," Miss Graham retorted with spirit, "that if you meant that pert heroine of yours for *me*, I am anything but complimented."

"It is a pity, then, that you didn't intend your hero for me, and we should have been more than quits."

She blushed so vividly that a sudden light burst upon me.

"Good heavens!" I exclaimed, "he does have my eyes and beard; but you didn't see me. It isn't possible——"

"But it is," interrupted she, desperately. "With a mirror directly before me all the way from New York, do you suppose I could help seeing you! I'm sure you kept your eyes on me steadily enough to give me a good excuse."

I whistled rudely; whereat she looked offended, and we went on from one thing to another until we had got up a very respectable quarrel indeed. There is nothing more conducive to a thoroughly good understanding between persons of opposite sex than a genuine quarrel; and having reached the point where there was no alternative but to separate in anger or to apologize, we chose the latter course, and, having mutually humbled ourselves, after that got on capitally.

"It is my deliberate conviction," she observed, when we at length got upon a footing sufficiently familiar for jesting, "that this story is really mine, and that you purloined it from me by some mysterious clairvoyance."

"That may be," I admitted. "I once guessed that a man was a bartender by the way he

stirred his coffee at the steamer table, and that got me a very pretty reputation as a seer for a day or two; and very likely the truth is that I was all the time a mind-reader without knowing it."

She smiled good-naturedly—more good-naturedly, indeed, than the jest deserved; and from that moment our acquaintance got on famously. The story was far from advancing as rapidly, however. A very brief time sufficed to reduce both versions of "April's Lady" to hopeless confusion, but to build from the fragments a new and improved copy was a labor of much magnitude. Circumstances, moreover, conspired to hinder our work. It was necessary that we verify our impressions of material we had used, and to do this we were obliged to attend the theater together, to read together various poems, and together to hear a good deal of music. A little ingenuity, and a common inclination to prolong these investigations, effected so great a lengthening out that it was several months before we could even pretend to be ready to begin serious work upon the story; and even then we were far from agreeing in a number of important particulars.

"Agnes," I remarked, one February evening, when we were on our way home from a concert to which we had boldly gone without even a pretense that it was in the remotest way connected with our literary project, "I fear we are becoming demoralized, and it seems to me the only hope of our ever completing 'April's Lady' is to put everything else aside for the time being and give our minds to it. I can get my work arranged and you can finish those articles for 'The Quill' by the middle of March. Then we can be quietly married and go to some nice, old-fashioned place—say St. Augustine—for a couple of months and get this *magnum opus* on paper at last."

"As to being married," returned she sedately, "have you considered that we could not possibly make a living, since we should inevitably be always writing the same things?"

"Why, that is my chief reason," I retorted, "for proposing it. Think how awkward it is going to be if either of us marries somebody else, and then we write the same things. It is a good deal better to have our interests in common if our inventive faculty is to be so."

"There is something in what you say," Agnes assented; "and it would be especially awkward for you, since the invention is in my head."

"Then we will consider it all arranged."

"Oh, no, George; by no means. I couldn't think of it for a minute!"

Whether she did think of it for a minute is a point which may be left for the settling of

those versed in the ways of the female mind; certain it is that the programme was carried out—except in one trifling particular. We were quietly married, we did go to St. Augustine, but as for doing anything with the story, that was quite another thing. We did not finish it then, and we have not finished it yet, and I have ceased to have any very firm con-

fidence that we ever shall finish it; although, whenever arises one of those financial crises which are so painfully frequent in the family of a literary man, and we sit down to consider possible resources, one or the other of us is sure sooner or later to observe:

“And then there is ‘April’s Lady,’ you know.”

TOY DOGS.

ENGLISH TOY TERRIER. (LIFE SIZE.)

UNDER the general term of toy dogs are classified all the smaller breeds kept as pets of the household. The date of the introduction of these diminutive specimens is as difficult to determine as the origin of the breeds. In the old book of John Caius on “*Englishe Dogges*,” translated into English by Abraham Hening in 1576, he devotes the third section to the “delicate, neate, and pretty kind of dogges called the Spaniel gentle or the Comforter, in Latine *Melitæus* or *Fotor*.” The Comforter is represented as having its

origin in the island of Malta. Fifty years ago the varieties of toy dogs were much more numerous than at present, as we read of the Italian greyhound, the Shock dog, the King Charles and Blenheim spaniels, the Comforter, the Maltese dog, the Lion dog, the Pug, the small Danish dog, the Roquet, the Mopsie, and the Artoise dog. Of those in the foregoing list which have disappeared, the Shock dog was said to have been a cross between the King Charles and small poodle, with long and slightly curled hair. The Comforter was a

white dog with black or brown patches, long ears, a broad forehead, sharp muzzle, and long hair. It was a very popular dog at the beginning of this present century. The Lion dog had long silky hair about the head, neck, and shoulders, and a tuft at the end of the tail, the body and legs being smooth. The small Danish, Roquet, Mopsie, and Artoise dogs were evidently local names for dogs allied to the pug. Buffon took upon himself the responsibility of subdividing them from their common progenitor the pug.

mitted to relieve it of squareness. Muzzle short and blunt, cut square down from the nose as if with a knife. The entire muzzle should be jet-black, the color extending to the eyes. The cheek-moles should stand out clear and distinct black spots, and the thumb-mark on the skull, together with the trace or line extending from the head to the tail down the middle of the back, should be as black and as distinctly drawn as possible. Color is very difficult to obtain. If the mask is light, the thumb-mark and trace as well as the black

ENGLISH PUG, "CHAMPION JOE."

THE PUG.

At the present date the old distinct types of Willoughby and Morrison pugs are no longer recognized. The dog is so plastic in the hands of the breeder that it takes but few years before a more perfect dog is produced, combining the best points of different strains. When fanciers can indulge in ecstasies over the beauty of a well-nigh perfect bull-dog, there is no reason why a pug should not be called good-looking. It is perhaps because there are so very few good pugs that many people fail to see anything attractive about the breed. The main point or what is known as the "type" or "character" of this breed is its compact shape. The pug must be broad-chested, thick-bodied, and stand squarely on good, straight legs. A leggy pug with a tucked-up loin, such as one sees every day on Fifth Avenue, is a pug only in name. The head should be large, but the skull must not be domed or "apple-headed," a gentle curve between the ears being all that is per-

toe-nails are apt to be missing; and if the latter are very dark, then we find the black of the muzzle extending up the forehead, and giving the dog a "dirty" face. The favorite way for the ears is to have them drop over in front like a fox-terrier's. This is known as "button" ears. Others throw their ears back like the bull-dog, and that is called "rose" ears. A neat button ear looks for all the world like a piece of fine black velvet on a well-wrinkled skull, the black lines of the wrinkles showing clear and distinct from the silver or fawn jacket, with the thumb-mark showing diamond-shaped in the center. The eyes are large, prominent, and have a soft, beseeching expression, except when the animal is excited, when they are bright and sparkling. Pugs are very subject to affections of the eyes, which if not cared for will result in blindness. It is a matter of no consequence on which side the tail is carried, so long as it is tightly curled and lies as flat as possible to the hip.

MEXICAN HAIRLESS DOG "ME TOO." (OWNED BY MRS. H. T. FOOTE.)

KING CHARLES SPANIELS.

As the name implies, this breed is an old and well-established one, having been fashionable in the time of King Charles II.; but since then the breed has undergone many changes. According to Vandyke, the toy spaniels of his day were liver and white, and Lely introduces a small white spaniel with brown spots in his portrait of Mary, the consort of James II. The court ladies of Charles the Second's time preferred the introduction of lambs in their portraits, and Nell Gwynne and the Duchesses of Cleveland and Portsmouth are so painted. It is not exactly clear how the present black-and-tan spaniel came by his name if the dogs of King Charles's time were of such a variety of colors as our authorities would have us believe. Sir William Jardine in 1843 says the King Charles spaniel was in general black and white, but he is a poor authority to refer to, as he fails to notice the Blenheim spaniels, spoken of in 1820 in the "Sportsman's Repository" as having been brought to a high degree of perfection by the Duke of Marlborough twenty years before. In Captain Thomas Brown's work published in 1829, he says: "This dog is found of all colors; but those which are black, with tanned cheeks and legs, are considered the purest breed." "Stonehenge," in his earlier editions, says: "The color is black and tan more or less

mixed with white, the less the better"; and in a later edition of "Dogs of the British Islands," he says: "A rich black and tan is demanded without white, the black, tan, and white variety being discarded. The Blenheims, on the other hand, must on no account be whole-colored." According to that it would be difficult to say where "Stonehenge" would place the all-red spaniel. On the other hand, the "Book of the Dog" says that white is a perfectly legitimate King Charles color, and laments the partial disappearance of the black, white, and tan dog. This authority also asserts that the red dog is a Blenheim, red being a Blenheim and not a King Charles color. It should be borne in mind, however, that a black-and-tan spaniel with white on its breast is not a tricolor. The latter should have a white muzzle and blaze running well up the skull, white chest and legs, and more or less white on the body, with tan spots above the eyes, and on the muzzle, cheeks, and under side of the tail and ears, and some have ticks on their legs. The black and tan should be of a rich glossy black and deep-red tan, the latter appearing on the muzzle, legs, and under side of the tail, with spots above the eyes and on the side of the cheek; in fact, the markings of a terrier or Gordon setter. The usual color fault is a washy or "clayey" tan, which the fancier corrects by a cross with the red spaniel. The

The shape of the toy spaniel is purely an arbitrary one, and the fancy dictates that the muzzle must be square and short, with a deep indentation or "stop" between the eyes, which must be large and prominent and dark in color. The skull is now required to be large and round, bulging out in front so as even to overhang the end of the nose, the muzzle seemingly driven back into the head. The ears should be set on the side of the head, low down on a level with the eyes, and they should be long and well clothed with long silken hair, as free from curl as possible. The coat should be soft and long and as flat, and straight as possible; a curly coat is a fault which is fur-

shire, and is pronounced as if spelt *Blen-em*. The general description of the King Charles spaniel applies to it, but it is seldom that it is seen with such profusion of coat, although, judging from the increased interest now being taken in the breed in England, they have doubtless improved much in quality. The color of the Blenheim is usually described as red and white, but the red is really more of an orange, and the white should be pearly white. A properly marked specimen should have a white muzzle slightly ticked with red, and a blaze running up the forehead and widening towards the top of the head, in the center of which is an orange spot about the

KING CHARLES AND BLENHEIM SPANIELS.

ther aggravated by repeated washings. Careful brushing is much better for the texture and lay of the coat. The legs and tail should be plentifully feathered, the hair growing out from between the toes, which makes the feet appear much larger than they really are. In shape the toy spaniel should be very cobby — short and thick — with a deep and wide chest, short, straight legs, and a short back. So long as the King Charles does not exceed ten pounds and is not too high on the legs, his shape is usually about right, and it can make but little difference in a breed in which fifty per cent. of the points is awarded to head properties and thirty to coat.

THE BLENHEIM SPANIEL.

THE name of the breed is obtained from the Duke of Marlborough's estate in Oxford-

shire, and is pronounced as if spelt *Blen-em*. The general description of the King Charles spaniel applies to it, but it is seldom that it is seen with such profusion of coat, although, judging from the increased interest now being taken in the breed in England, they have doubtless improved much in quality. The color of the Blenheim is usually described as red and white, but the red is really more of an orange, and the white should be pearly white. A properly marked specimen should have a white muzzle slightly ticked with red, and a blaze running up the forehead and widening towards the top of the head, in the center of which is an orange spot about the

THE JAPANESE SPANIEL.

THE dog-show nomenclature of this country has decided that the small black-and-white spaniel with the pug tail which comes from Japan and China shall be called the Japanese

JAPANESE PUG. (BY PERMISSION OF MME. DESNOYERS.)

spaniel, while in England it is sometimes called the Japanese pug. The best specimen I have ever seen was erroneously entered in the miscellaneous class of New York in 1882 as a Pekinese spaniel, it having been brought direct from Pekin. In some of the English papers reference has from time to time been made to Japanese "pugs" other than black and white, but I have never seen any of them. In the absence of any recognized standard, I consider the general characteristics of the toy spaniel ought to govern, and that we should have a much more compact dog with longer coat and more profuse feather than is to be usually seen at our shows. The dog referred to above was of that character, the feather on the fore-legs being at least three inches long, whereas usually it is not over an inch. The ears and tail of the Jap differ materially from the English spaniels, the former being small, V-shaped, and set more like a fox-terrier's. The tail, instead of being carried on a level with the back, as in the case of most spaniels, is tightly curled like a pug dog's. The forehead also is very protuberant, and it is claimed

that the Japanese spaniel has been used to produce the present abnormal head development of the English spaniels, a supposition which I take the liberty of questioning for several reasons which need not now be set forth.

THE ITALIAN GREYHOUND.

THERE is probably no more delicate dog than the Italian greyhound, and on account of the difficulty of rearing them they are extremely scarce. It is somewhat remarkable, however, that the city of Edinburgh, Scotland, notorious as it is for the trying nature of its climate, should be the place where Italian greyhounds are the special fancy. The dogs exhibited at our shows during the last year or two as Italian greyhounds are simply monstrosities. The Italian greyhound should not exceed seven pounds in weight, and should be as much under that as possible; whereas the dogs which now win prizes are ten or twelve pounds weight and but little better than "whippets" or racing dogs. The general outline is that of the English greyhound, but as the

latter is nearly ten times as heavy, there is a marked difference between the two breeds. In the greyhound speed and strength are the characteristics, and in the Italian delicacy; hence, although very light, he is yet rather a tall dog. The smallness of his bones enables him to add inches to his height and enhance the fragility of his appearance. Unlike the toy spaniel, in which fifty per cent. of the standard points go to head properties, we find that forty-five per cent. of the scale for the Italian greyhound is taken up for color, symmetry, and size, and but fifteen per cent. for head. "Stonehenge" gives fifteen points for color, and regulates the color scale as follows: whole golden fawn, 15; whole dove fawn, 14; whole blue fawn, 13, whole stone fawn, 12; whole cream-colored or white

taking breeders of Huddersfield, Bradford, and the surrounding district in Yorkshire, England. Some of our authorities have attempted to throw a great deal of mystery about the origin of the Yorkshire terrier, where none in reality exists. If we consider that the mill operatives who originated the breed by careful selection of the best long-coated small terriers they could find were nearly all ignorant men, unaccustomed to imparting information for public use, we may see some reason why reliable facts have not been easily attained. These early writers show but little knowledge of the possibilities of selection. "Stonehenge," for instance, in his early editions speaks of it as being impossible for a dog with a three-inch coat and seven-inch beard to be

YORKSHIRE TERRIERS.

with black tips, 10; whole red or yellow with black muzzle, 6; whole black, or plain red or yellow, 5; whole blue, 4; parti-colored, 0. It will not be altogether pleasant to owners who speak of the beautiful white ring around their favorite's neck, or his white chest and feet, to find that these markings deprive their favorite of any value on account of color. The ears should not be pricked, but thrown back,—“rose-eared,”—and they should be very fine in the leather. Mr. Mason imported two good specimens in 1881, but both are now dead; and although every effort has been made to secure a good specimen for illustration, the task had to be abandoned.

THE YORKSHIRE TERRIER.

By common consent the title of dandy of the dog world has been given to the little exquisite whose existence we owe to the pains-

a descendant of the soft-coated Scotch terrier without a cross of some kind. The absurdity of this is shown when within a few years of the date of his writing Yorkshire terriers were shown with twelve inches of coat. Then again he speaks of the King Charles spaniel as being employed to give the blue and tan, than which a more ridiculous statement could not have been penned. To get a blue and tan, long, straight, silky coat, breeders were not likely to employ a black-and-tan dog with a wide chest, tucked-up loin, a round bullet head, large protruding eyes, and heavy spaniel ears. The idea is too absurd to entertain for a moment. As arrayed against all the conjectures of theorists, I have in my possession a letter from Mrs. M. A. Foster, of Bradford, England, who in writing of her dog “Bradford Hero,” the winner of ninety-seven first prizes, says: “The pedigree of ‘Bradford Hero’ includes all the best dogs for thirty-five years

SANDERSON'S "JIM"—SKYE TERRIER.

back, and they were all originally bred from Scotch terriers, and shown as such until a few years back. The name Yorkshire terrier was given to them on account of their being improved so much in Yorkshire."

It is no easy task to keep a Yorkshire terrier in show condition; indeed, the show dog leads an unnatural existence. He must be fed from the hand with bread dipped in tea or a little gravy, and every care taken to prevent him from soiling his coat. His hind-feet are tied up in little linen boots so that he cannot scratch himself, and his life is spent in a small inclosure or wire cage, except when liberated for a little run. Before being sent to a show, he is carefully washed to take out of his coat the oil that has been applied to keep the hair from matting. The process of drying him after his bath is a most tedious one, as the comb and brush must be kept in operation till every individual hair is thoroughly dry down to the very root. The coat is then a light silken mass which the least puff of wind will raise up in a fleecy cloud. After the bath, it is usual to touch lightly with oil, but this requires to be very skillfully done, so as to avoid the least appearance of the foreign matter. The use of a brush which has been used on an oiled dog is commonly sufficient. The proper color of the Yorkshire terrier is a blue body, with fawn-colored face shading off into a tan on the legs. The ears, which are usually cropped, show darker than their surrounding head coat. The tail is docked and should be carried straight out, and is well feathered. Fashion ordains that blue and tan shall be the color, but the silver-bodied terrier is decidedly preferred by buyers of house pets here. Dealers are not

slow to take advantage of this, and the silvers which are comparatively worthless in England are imported in large numbers to satisfy the popular demand, and a handsome profit realized on them. It is almost unnecessary to state that when kept as a pet, with the free run of the house, the long silky coat of the Yorkshire terrier soon becomes broken and reduced in length, and the constant washings to which his fond mistress subjects him tend still further to curtail the dog's main beauty as well as to bleach out the blue of the body coat.

TOY TERRIERS.

At shows there are usually two classes given—one for rough-haired toys, and the other for smooths under seven pounds. The former is made up of a lot of little nondescripts, with sometimes a toy Skye terrier included, but for the main part they are mongrel Yorkshires or small broken-haired terriers. In the smooth class, the specimens are nearly all black-and-tan terriers, and it is these alone that require any attention. The neater and smaller the specimen the better, provided it is covered with hair. These diminutive inbred toys are apt to lose their hair, and are then only shivering monstrosities. In markings the toy black-and-tan should approach as nearly as possible the requirements of the large-sized black-and-tan terrier. The head should also approximate in shape to the large terrier, but with diminution in size of body it seems well-nigh impossible to retain the narrow, flat skull, which will run to the "apple-headed" order.

GLIMPSES OF LONGFELLOW IN SOCIAL LIFE.

"To live in hearts we leave behind is not to die."

THIS sketch of Longfellow, done from life, will preserve, we trust, in spite of its unstudied lines, some features of the man which might be lost in a more labored or more important work. He was himself so simple in the plan and habit of his life that it is well to recall him as he lived and walked among us, before his statue is placed on the pedestal of his just fame.

From his early youth Longfellow was a scholar, and his acquisition of foreign languages was most unusual.

As his reputation widened, he was led to observe this to be a gift as well as an acquirement. It gave him the convenient and agreeable power of entertaining the foreigners who sought his society. He said one evening, late in life, that he could not help being struck with the little trouble it was to him to recall any language he had ever studied, even though he had not spoken it for years. He had found himself talking Spanish, for instance, with considerable ease a few days before. He said he could not recall having even read anything in Spanish for many years, and it was certainly thirty since he had given it any study. Also it was the same with German. "I cannot imagine," he continued, "what it would be to take up a language and try to master it at this period of my life. I cannot remember how or when I learned any of them;—to-night I have been speaking German, without finding the least difficulty."

Hawthorne once said in speaking of his own early life and the days at Bowdoin College, where he and Longfellow were in the same class, that no two young men could have been more unlike. Longfellow, he explained, was a tremendous student, and always carefully dressed, while he himself was extremely careless of his appearance, no student at all, and entirely incapable at that period of appreciating Longfellow. Later in life a warm friendship grew up between them, and I find a little note from Longfellow in which he says he has had a sad letter from Hawthorne, and adds: "I wish we could have a little dinner for him, of two sad authors and two jolly publishers, nobody else!"

Of Longfellow's student-days Mr. Fields once wrote: "I hope they keep bright the little room numbered twenty-seven in Maine Hall in Bowdoin College, for it was in that pleasant apartment, looking out on the pine

groves, that the young poet of nineteen wrote many of those beautiful earlier pieces, now collected in his works. These early poems were all composed in 1824 and 1825, during his last years in college, and were printed first in a periodical called 'The United States Literary Gazette,' the sapient editor of which magazine once kindly advised the ardent young scholar to give up poetry and buckle down to the study of law! 'No good can come of it,' he said; 'don't let him do such things; make him stick to prose!' But the pine-trees waving outside his window kept up a perpetual melody in his heart, and he could not choose but sing back to them."

One of the earliest pictures I find of the every-day life of Longfellow when a youth is a little anecdote told by him in humorous illustration of the woes of young authors. I quote from a brief diary.—"Longfellow amused us to-day by talking of his youth, and especially with a description of the first poem he ever wrote, called 'The Battle of Lovell's Pond.' It was printed in a Portland newspaper one morning, and the same evening he was invited to the house of the Chief Justice to meet his son, a rising poet just returned from Harvard. The Judge rose in a stately manner during the evening and said to his son: 'Did you see a poem in to-day's paper upon the Battle of Lovell's Pond?' 'No, sir,' said the boy, 'I did not.' 'Well, sir,' responded his father, 'it was a very stiff production. G——, get your own poem on the same subject, and I will read it to the company.' The poem was read aloud, while the perpetrator of the 'stiff production' sat, as he said, very still in a corner."

Nor did the young author find a speedy pecuniary value accorded to his labors. He amused his friends one day by confessing that Mr. Buckingham paid him one year's subscription of the "Boston Courier," for his translation of the "Coplas de Manrique," and several prose articles. After this he sent his poems to Messrs. Little and Brown, who presented him the volume in which they appeared and sundry other books as compensation.

What a singular contrast was this beginning to his future literary history. Late in life his publisher wrote: "I remember how instantaneously in the year 1839 'The Voices of the Night' sped triumphantly on its way! At

present Longfellow's currency in Europe is almost unparalleled. Twenty-four publishing houses in England have issued the whole or a part of his works. Many of his poems have been translated into Russian and Hebrew. 'Evangeline' has been translated three times into German, and 'Hiawatha' has not only gone into nearly all the modern languages, but can now be read in Latin. I have seen translations of all Longfellow's principal works, in prose and poetry, in French, Italian, German, Spanish, Portuguese, Dutch, Swedish, and Danish. The Emperor of Brazil has himself translated and published 'Robert of Sicily,' one of the poems in 'Tales of a Wayside Inn,' into his native tongue, and in China they use a fan which has become immensely popular on account of the 'Psalm of Life' being printed on it in the language of the Celestial Empire. Professor Kneeland, who went to the national millennial celebration in Iceland, told me that when he was leaving that far-away land, on the verge almost of the Arctic circle, the people said to him: 'Tell Longfellow that we love him; tell him we read and rejoice in his poems; tell him that Iceland knows him by heart.' To-day there is no disputing the fact that Longfellow is more popular in the best sense than any other living poet; that his books are more widely circulated, command greater attention, and bring more copyright money than those of any other author, not excepting Tennyson, now writing English verse!"

There was always a striking contrast between the perfect modesty and simplicity of Longfellow and the blare of popularity which beset him. Though naturally of a buoyant disposition and fond of pleasure, he lived as far as possible from the public eye, especially during the last twenty years of his life. The following note gives a hint of his natural gayety, and details one of the many excuses by which he always declined to speak in public; the one memorable exception being that beautiful occasion at Bowdoin, when he returned in age to the scenes of his youth and read to the crowd assembled there to do him reverence his poem entitled "Morituri Salutamus." After speaking of the reasons which must keep him from the Burns festival, he adds:

"I am very sorry not to be there. You will have a delightful supper, or dinner, whichever it is; and human breath enough expended to fill all the trumpets of Iskander for a month or more.

"I behold as in a vision a friend of ours, with his left hand under the tails of his coat, blowing away like mad; and, alas! I shall not be there to applaud. All this you must do for me; and also eat my part of the haggis, which I hear is to grace the feast. This shall be your duty and your reward."

The reference in this note to the trumpets of Iskander is the only one in his letters

regarding a poem which was a great favorite of his, by Leigh Hunt, called "The Trumpets of Doolkarnein." It is a poem worthy to make the reputation of a poet, and is almost a surprise even among the varied riches of Leigh Hunt. Many years after this note was written, Longfellow used to recall it to those lovers of poetry who had chanced to escape a knowledge of its beauty.

In spite of his dislike of grand occasions, he was a keen lover of the opera and theater. He was always the first to know when the opera season was to begin and to plan that we might have a box together. He was always ready to hear "Lucia" or "Don Giovanni," and to make a festival time at the coming of Salvini or Neilson. There is a tiny notelet among his letters, with a newspaper paragraph neatly cut out and pasted across the top, detailing the names of his party at a previous appearance at a theater, a kind of notoriety which he particularly shuddered at; but in order to prove his determination in spite of everything, he writes below:

"Now for 'Pinafore,' and another paragraph! Saturday afternoon would be a good time."

He easily caught the gayety of such occasions, and in the shadow of the box-curtains would join in the singing or the recitative of the lovely Italian words with a true poet's delight. The strange incidents of a life subject to the taskmaster Popularity are endless. One day he wrote:

"A stranger called here and asked if Shakspeare lived in this neighborhood. I told him I knew no such person. Do you?"

Day by day he was besieged by every possible form of interruption which the ingenuity of the human brain could devise; but his patience and kindness, his determination to accept the homage offered him in the spirit of the giver, whatever discomfort it might bring himself, was continually surprising to those who watched him year by year. Mr. Fields wrote: "In his modesty and benevolence I am reminded of what Pope said of his friend Garth: 'He is the best of Christians without knowing it.'"

In one of Longfellow's notes he alludes humorously to the autograph nuisance:

"Do you know how to apply properly for autographs? Here is a formula I have just received on a postal card:

"DEAR SIR: As I am getting a collection of the autographs of all honorable and worthy men, and think yours such, I hope you will forfeit by next mail. Yours, etc."

And of that other nuisance, sitting for a portrait, he laughingly wrote one day: "Two or three sittings"—that is the illusory phrase. Two or three sittings have become a standing

joke." And yet how seldom he declined when it was in his power to serve an artist! His generosity knew no bounds.

When a refusal of any kind was necessary, it was wonderful to see how gently it was expressed. A young person having written from a Western city to request him to write a poem for her class, he said: "I could not write it, but tried to say 'No' so softly that she would think it better than 'Yes.'"

He was distinguished by one grace which was almost peculiar to himself in the time in which he lived—his tenderness toward the undeveloped artist, the man or woman, youth or maid, whose heart was set upon some form of ideal expression, and who was living for that. Whether they possessed the power to distinguish themselves or not, to such persons he addressed himself with a sense of personal regard and kinship. When fame crowned the aspirant, no one recognized more keenly the perfection of the work, but he seldom turned aside to attract the successful to himself. To the unsuccessful he lent the sunshine and overflow of his own life, as if he tried to show every day afresh that he believed noble pursuit and not attainment to be the purpose of our existence.

In a letter written in 1860 Longfellow says:

"I have no end of poems sent me for candid judgment and opinion. Four cases on hand at this moment. A large folio came last night from a lady. It has been chasing me round the country; has been in East Cambridge and in West Cambridge, and finally came by the hands of Policeman S—— to my house. I wish he had waived examination, and committed it (to memory). What shall I do? These poems weaken me very much. It is like so much water added to the Spirit of Poetry."

And again he writes:

"I received this morning a poem with the usual request to give 'my real opinion' of it. I give you one stanza."

After quoting the verse and giving the subject of the poem, he continues:

"In his letter the author says, 'I did so much better on poetry than I thought I could as a beginner, that I really have felt a little proud of my poems.' He also sends me his photograph 'at sixty-five years of age,' and asks for mine 'and a poem' in return. I had much rather send him these than my 'real opinion,' which I shall never make known to any man, except on compulsion and under the seal of secrecy."

His kindness and love of humor carried him through many a tedious interruption. He generously overlooked the fact of the subterfuges to which men and women resorted in order to get an interview, and to help them out made as much of their excuses as possible. Speaking one day of the people who came to see him at Nahant, he said: "One man, a perfect stranger, came with an omnibus full of ladies. He descended, introduced himself, then returning to the omnibus took out all

the ladies, one, two, three, four, and five, with a little girl, and brought them in. I entertained them to the best of my ability, and they staid an hour. They had scarcely gone when a forlorn woman in black came up to me on the piazza, and asked for a dipper of water. 'Certainly,' I replied, and went to fetch her a glass. When I brought it she said, 'There is another woman just by the fence who is tired and thirsty; I will carry this to her.' But she struck her head as she passed through the window and spilled the water on the piazza. 'Oh, what have I done!' she said. 'If I had a floor-cloth, I would wipe it up.' 'Oh, no matter about the water,' I said, 'if you have not hurt yourself.' Then I went and brought more water for them both, and sent them on their way, at last, refreshed and rejoicing." Once Longfellow drew out of his pocket a queer request for an autograph, saying "that the writer loved poetry in most any style, and would he please copy his 'Break, break, break' for the writer?" He also described in a note a little encounter in the street, on a windy day, with an elderly French gentleman in company with a young lady, who introduced them to each other. The Frenchman said:

"Monsieur, vous avez un fils qui fait de la peinture."

"Oui, Monsieur."

"Il a du mérite. Il a beaucoup d'avenir."

"Ah," said I, "c'est une belle chose que l'avenir."

The elderly French gentleman rolled up the whites of his eyes and answered:

"Oui, c'est une belle chose; mais vous et moi, nous n'en avons pas beaucoup!"

"Superfluous information!"

H. W. L."

It would be both an endless and unprofitable task to recall many more of the curious experiences which Longfellow's popularity brought down upon him. There is a passage among Mr. Fields's notes, however, in which he describes an incident during Longfellow's last visit to England, which should not be overlooked. Upon his arrival, the Queen sent a graceful message, and invited him to Windsor Castle, where she received him with all the honors; but he told me no foreign tribute touched him deeper than the words of an English hod-carrier, who came up to the carriage door at Harrow, and asked permission to take the hand of the man who had written the "Voices of the Night."

There are many letters belonging to the phase of Longfellow's life dwelt upon in this sketch, but they belong more properly to his biography. There is a brief note, however, written in 1849, which gives a pleasant idea of the close relation already existing between him and his publisher. He writes:

"MY DEAR FIELDS: I am extremely glad you like the new poems so well. What think you of the inclosed instead of the sad ending of 'The Ship'? Is it

better? . . . I send you also 'The Lighthouse' once more; I think it is improved by your suggestions. See if you can find anything more to retouch. And finally, here is a letter from Hirst. You see what he wants, but I do not like the idea of giving my 'Dedication' to the 'Courier.' Therefore I hereby give it to you, so that I can say it is disposed of.

"Am I right or wrong?"

There was no break nor any change in this friendship during the passing of the years; but in 1861 there is a note containing only a few words, which shows that a change had fallen upon Longfellow himself, a shadow which never could be lifted from his life. He writes:

"MY DEAR FIELDS: I am sorry to say No instead of Yes; but so it must be. I can neither write nor think; and I have nothing fit to send you but my love, which you cannot put into the magazine."

For ever after the death of his wife he was a different man. His friends suffered for him and with him, but he walked alone through the valley of the shadow of death. They were glad when he turned to his work again, and still more glad when he showed a desire for their interest in what he was doing.

It was not long before he began to busy himself continuously with his translation of the "Divina Commedia," and in the journal of 1863 I find:

"August.—A delightful day with Longfellow at Nahant. He read aloud the last part of his new volume of poems, in which each one of a party of friends tells a story. Ole Bull, Parsons, Monti, and several other characters are introduced."

"September 1st.—A cold storm by the seashore, but there was great pleasure in town in the afternoon. Longfellow, Paine, Dwight, and Fields went to hear Walcker play the great new organ in the Music Hall for the first time since its erection. Afterwards they all dined together. Longfellow comes in from Cambridge every day, and sometimes twice a day, to see George Sumner, who is dying at the Massachusetts General Hospital."

"September 19th.—Longfellow and his friend George W. Greene, Charles Sumner, and Dempster the singer, came in for an early dinner. A very cozy, pleasant little party. The afternoon was cool, and everybody was in kindly humor. Sumner shook his head sadly when the subject of the English ironclads was mentioned. The talk prolonged itself upon the condition of the country. Longfellow's patriotism flamed. His feeling against England runs more deeply and strongly than he can find words to express. There is no prejudice nor childish partisanship, but it is hatred of the course she has pursued at this critical time. Later, in speaking of poetry and some of the less known and younger poets, Longfellow recalled some good passages in the

poems of Bessie Parkes and Jean Ingelow. As evening approached we left the table and came to the library. There in the twilight Dempster sat at the piano and sang to us, beginning with Longfellow's poem called 'Children,' which he gave with a delicacy and feeling that touched every one. Afterwards he sang the 'Bugle Song' and 'Turn, Fortune,' which he had shortly before leaving England sung to Tennyson; and then after a pause he turned once more to the instrument and sang 'Break, break, break.' It was very solemn, and no one spoke when he had finished, only a deep sob was heard from the corner where Longfellow sat. Again and again, each time more uncontrolled, we heard the heart-rending sounds. Presently the singer gave us another and less touching song, and before he ceased Longfellow rose and vanished from the room in the dim light without a word."

"September 27th.—Longfellow and Greene came in town in the evening for a walk and to see the moonlight in the streets, and afterwards to have supper. . . . He was very sad, and seemed to have grown an old man since a week ago. He was silent and absent-minded. On his previous visit he had borrowed Sidney's 'Arcadia' and Christina Rossetti's poems, but he had read neither of the books. He was overwhelmed with his grief, as if it were sometimes more than he could endure."

"Sunday, October.—Took five little children to drive in the afternoon, and stopped at Longfellow's. It was delightful to see their enjoyment and his. He took them out of the carriage in his arms and was touchingly kind to them. His love for children is not confined to his poetic expressions or to his own family; he is uncommonly tender and beautiful with them always."

I remember there was one little boy of whom he was very fond, and who came often to see him. One day the child looked earnestly at the long rows of books in the library, and at length said:

"Have you got 'Jack the Giant-Killer'?"

Longfellow was obliged to confess that his library did not contain that venerated volume. The little boy looked very sorry, and presently slipped down from his knee and went away; but early the next morning Longfellow saw him coming up the walk with something tightly clasped in his little fists. The child had brought him two cents with which he was to buy a "Jack the Giant-Killer" to be his own.

He did not escape the sad experiences of the war. His eldest son was severely wounded, and he also went, as did Dr. Holmes and other less famous but equally anxious parents, in search of his boy.

The diary continues:

"December 14th.—Went to pass the afternoon with Longfellow, and found his son able to walk about a little. He described his own arrival at a railway station south of Washington. He found no one there but a rough-looking officer, who was walking up and down the platform. At each turn he regarded Longfellow, and at length came up, and taking his hand said:

"Is this Professor Longfellow? It was I who translated 'Hiawatha' into Russian. I have come to this country to fight for the Union."

In the year 1865 began those Wednesday evenings devoted to reading the new translation of Dante. They were delightful occasions. Lowell, Norton, Greene, Howells, and such other Dante scholars or intimate friends as were accessible, made up the circle of kindly critics. Those evenings increased in interest as the work progressed, and when it was ended and the notes written and read, it was proposed to reread the whole rather than to give up the weekly visit to Longfellow's house. In 1866 he wrote to Mr. Fields:

"Greene is coming expressly to hear the last canto of 'Paradiso' to-morrow night, and will stay the rest of the week. I really hoped you would be here, but as you say nothing about it I begin to tremble. Perhaps, however, you are only making believe and will take us by surprise. So I shall keep your place for you.

"This is not to be the end of all things. I mean to begin again in September with the dubious and difficult passages; and if you are not in too much of a hurry to publish, there is still a long vista of pleasant evenings stretching out before us. We can pull them out like a spy-glass. I am shutting up now to recommence the operation."

In December of the same year he wrote:

"The first meeting of the Dante Club Redivivus is on Wednesday next. Come and be bored. Please not to mention the subject to any one yet awhile, as we are going to be very quiet about it."

"January, 1867.—Dante Club at Longfellow's again. They are revising the whole book with the minutest care. Lowell's accuracy is surprising and of great value to the work; also Norton's criticisms. Longfellow stands apart at his desk taking notes and making corrections, though of course no one can know yet what he accepts."

Longfellow's true life was that of a scholar and a dreamer; and everything besides was a duty, however pleasurable or beautiful the experience might become in his gentle acceptance. He was seldom stimulated to external expression by others. Such excitement as he could express again was always self-excitement; anything external rendered him at once a listener and an observer. For this reason it is peculiarly difficult to give any idea of his lovely presence and character to those who

have not known him. He did not speak in epigrams. It could not be said of him:

"His mouth he could not ope,
But out there flew a trope."

Yet there was an exquisite tenderness and effluence from his presence which was more humanizing and elevating than the eloquence of many others.

Speaking one day of his own reminiscences, Longfellow said, "that however interesting such things were in conversation, he thought they seldom contained legitimate matter for bookmaking; and ——'s life of a poet, just then printed, was, he thought, peculiarly disagreeable, chiefly because of the unjustifiable things related of him by others. This strain of thought brought to his mind a call he once made with a letter of introduction, when a youth in Paris, upon Jules Janin. The servant said her master was at home, and he was ushered immediately into a small parlor, in one corner of which was a winding stairway leading into the room above. Here he waited a moment while the maid carried in his card, and then returned immediately to say he could go up. In the upper room sat Janin under the hands of a barber, his abundant locks shaken up in wild confusion, in spite of which he received his guest, quite undisturbed, as if it were a matter of course. There was no fire in the room, but the fire-place was heaped with letters and envelopes, and a trail of the same reached from his desk to the grate. After a brief visit Longfellow was about to withdraw, when Janin detained him, saying: 'What can I do for you in Paris? Whom would you like to see?'

"I should like to know Madame George Sand."

"Unfortunately that is impossible! I have just quarreled with Madame Sand!"

"Ah! then, Alexandre Dumas—I should like to take him by the hand!"

"I have quarreled with him also, but no matter! *Vous perdiez vos illusions.*'

"However, he invited me to dine the next day, and I had a singular experience; but I shall not soon forget the way in which he said, '*wous perdiez vos illusions.*'"

"When I arrived on the following day I found the company consisted of his wife and himself, a little red-haired man who was rather quiet and cynical, and myself. Janin was amusing and noisy, and carried the talk on swimmingly with much laughter. Presently he began to say hard things about women, when his wife looked up reproachfully and said, 'Déjà, Jules!' During dinner a dramatic author arrived with his play, and Janin ordered him to be shown in. He treated the poor fellow brutally, who in turn bowed low to the great power. He

did not even ask him to take a chair. Madame Janin did so, however, and kindly too. The author supplicated the critic to attend the first appearance of his play. Janin would not promise to go, but put him off indefinitely, and presently the poor man went away. Longfellow said he tingled all over with indignation at the treatment the man received, but Janin looked over to his wife, saying, 'Well, my dear, I treated this one pretty well, didn't I?'

"'Better than sometimes, Jules,' she answered."

Altogether it was a strange scene to the young American observer.

"*July, 1867.*—Passed the day at Nahant. As Longfellow sat on the piazza wrapped in his blue camlet cloak, he struck me for the first time as wearing a venerable aspect. Before dinner he gathered wild roses to adorn the table, and even gave a careful touch himself to the arrangement of the wines and fruits. He was in excellent spirits, full of wit and lively talk. Speaking of the use and misuse of words, he quoted Chateaubriand's mistake (afterwards corrected) in his translation of 'Paradise Lost,' when he rendered

'Siloa's brook that flowed
Fast by the oracle of God'

as

'Le ruisseau de Siloa qui coulait rapidement.'"

In talking about natural differences in character and temperament, he said of his own children that he agreed with one of the old English divines who said, "Happy is that household wherein Martha still reproves Mary!"

In February, 1868, it was decided that Longfellow should go to Europe with his family. He said that the first time he went abroad it was to see places alone and not persons; the second time he saw a few persons, and so pleasantly combined the two; he thought once that on a third visit he should prefer to see people only; but all that was changed now. He had returned to the feeling of his youth. He was eager to seek out quiet places and wayside nooks, where he might rest in retirement and enjoy the beautiful country sights of Europe undisturbed.

The following year found him again in Cambridge, refreshed by his absence. The diary continues: "He has been trying to further the idea of buying some of the low lands in Cambridge for the colleges. If this can be done, it will save much future annoyance to the people from wretched hovels and bad odors, besides holding the land for a beautiful possession forever. He has given a good deal of money himself. This might be called 'his latest work.'"

"*January, 1870.*—Longfellow and Bayard Taylor came to dine. Longfellow talked of

translators and translating. He advanced the idea that the English from the insularity of their character were incapable of making a perfect translation. Americans, French, and Germans, he said, have much larger adaptability to and sympathy in the thought of others. He would not hear Chapman's Homer or anything else quoted on the other side, but was zealous in enforcing this argument. He anticipates much from Taylor's version of Faust. All this was strikingly interesting, as showing how his imagination wrought with him, because he was arguing from his own theory of the capacity of the races and in the face of his knowledge of the best actual translations existing to-day, the result of the scholarship of England.

"Longfellow speaks of difficulty in sleeping. In his college days and later he had the habit of studying until midnight and rising at six in the morning, finding his way as soon as possible to his books. Possibly this habit still prevents him from getting sufficient rest. However light may be the literature in which he indulges before going to bed, some chance thought may strike him as he goes up the stairs with the bedroom candle in his hand which will preclude all possibility of sleep until long after midnight.

"His account of Jules Janin during this last visit to Europe was an odd little drama. He had grown excessively fat, and could scarcely move. He did not attempt to rise from his chair as Longfellow entered, but motioned him to a seat by his side. Talking of Victor Hugo and Lamartine, 'Take them for all in all, which do you prefer?' asked Longfellow.

"'Charlatan pour charlatan, je crois que je préfère Monsieur de Lamartine,' was the reply.

"Longfellow amused me by making two epigrams:

"What is autobiography?

It is what a biography ought to be."

And again:

"When you ask one friend to dine,

Give him your best wine!

When you ask two,

The second best will do!"

"He brought in with him two poems translated from Platen's 'Night-Songs.' They are very beautiful.

"What dusky splendors of song there are in King Alfred's new volume,' he said. 'It is always a delight to get anything new from him. His "Holy Grail" and Lowell's "Cathedral" are enough for a holiday, and make this notable."

When Longfellow talked freely as at this dinner, it was difficult to remember that he was not really a talker. The natural reserve of his nature made it sometimes impossible for him to express himself in ordinary inter-

course. He never truly made a confidant of anybody except his Muse.

"I never thought," he wrote about this time, "that I should come back to this kind of work. It transports me to my happiest years, and the contrast is too painful to think of." And again in calmer mood: "The 'ruler of the inverted year' (whatever that may mean) has, you perceive, returned again, like a Bourbon from banishment, and is having it all his own way, and it is not a pleasant way. Very well, one can sit by the fire and read, and hear the wind roar in the chimney, and write to one's friends, and sign one's self 'yours faithfully,' or as in the present instance, 'yours always.'"

His sympathetic nature was ever ready to share and further the gayety of others. He wrote one evening:

"I have been kept at home by a little dancing-party to-night. . . . I write this arrayed in my dress-coat with a rose in my buttonhole, a circumstance, I think, worth mentioning. It reminds me of Buffon, who used to array himself in his full dress for writing 'Natural History.' Why should we not always do it when we write letters? We should, no doubt, be more courtly and polite, and perhaps say handsome things to each other. It was said of Villemain that when he spoke to a lady he seemed to be presenting her a bouquet. Allow me to present you this postscript in the same polite manner, to make good my theory of the rose in the buttonhole."

How delightful it is to catch the intoxication of the little festival in this way. In his endeavor to further the gayeties of his children he had received again a reflected light and life which his love for them had helped to create.

"December 14, 1870.—Taylor's 'Faust' is finished, and Longfellow is coming with other friends to dinner to celebrate the ending of the work. . . .

"A statuette of Goethe was on the table. Longfellow said Goethe never liked the statue of himself by Rauch, from which this copy was made. He preferred above all others a bust of himself by a Swiss sculptor, a copy of which Taylor owns. He could never understand, he continued, the story of that unpleasant interview between Napoleon and Goethe. Eckermann says Goethe liked it, but Longfellow thought the Emperor's manner of address had a touch of insolence in it. The haunts of Goethe in Weimar were pleasantly recalled by both Longfellow and Taylor, to whom they were familiar; also that strange portrait of him taken standing at a window, and looking out over Rome, in which nothing but his back can be seen.

"I find it impossible to recall what Longfellow said, but he scintillated all the evening. It was an occasion such as he loved best. His *jeux d'esprit* flew rapidly right and left, often setting the table in a roar of laughter, a most unusual thing with him."

There was evidently no such pleasure to Longfellow as that of doing kindnesses. One of many notes bearing on such subjects belongs to this year, and begins:

"A thousand thanks for your note and its inclosure. There goes a gleam of sunshine into a dark house, which is always pleasant to think of. I have not yet got the senator's sunbeam to add to it; but as soon as I do, both shall go shining on their way."

"January, 1871.—Dined at Longfellow's, and afterwards went upstairs to see an interesting collection of East Indian curiosities. Passing through his dressing-room, I was struck with the likeness of his private rooms to those of a German student or professor; a Goethean aspect of simplicity and space everywhere, with books put up in the nooks and corners and all over the walls. It is surely a most attractive house!"

Again I find a record of a dinner at Cambridge: "The day was spring-like, and the air full of the odors of fresh blossoms. As we came down over the picturesque old staircase, he was standing with a group of gentlemen near by, and I heard him say aloud unconsciously, in a way peculiar to himself, 'Ah, now we shall see the ladies come downstairs!' Nothing escapes his keen observation—as delicate as it is keen."

And in the same vein the journal rambles on:

"Friday.—Longfellow came in to luncheon at one o'clock. He was looking very well; . . . his beautiful eyes fairly shone. He had been at Manchester-by-the-Sea the day before to dine with the Curtises. Their truly romantic and lovely place had left a pleasant picture in his mind. Coming away by the train, he passed in Chelsea a new soldiers' monument which suggested an epigram to him that he said, laughingly, would suit any of the thousand of such monuments to be seen about the country. He began somewhat in this style:

"The soldier asked for bread,
But they waited till he was dead,
And gave him a stone instead,
Sixty and one feet high!"

"We all returned to Cambridge together, and being early for our own appointment elsewhere, he carried us into his library and read aloud 'The Marriage of Lady Wentworth.' E—, with pretty girlish ways and eyes like his own, had let us into the old mansion by the side door, and then lingered to ask if she might be allowed to stay and hear the reading too. He, consenting, laughingly lighted a cigar and soon began. His voice in reading was sweet and melodious, and it was touched with tremulousness, although this was an easier poem to read aloud than many others, being strictly narrative. It is full of New England life and a beautiful addition to his works. He has a fancy for

making a volume, or getting some one else to do it, of his favorite ghost stories, 'The Flying Dutchman,' 'Peter Rugg,' and a few others."

On another occasion the record says:

"Passed the evening at Longfellow's. As we lifted the latch and entered the hall-door, we saw him reading an old book by his study lamp. It was the 'Chansons d'Espagne,' which he had just purchased at what he called the massacre of the poets; in other words, at the sale that day of the library of William H. Prescott. He was rather melancholy, he said: first, on account of the sacrifice and separation of that fine library; also because he is doubtful about his new poem, the one on the life of our Saviour. He says he has never before felt so cast down.

"What an orderly man he is! Well-ordered, I should have written. Diary, accounts, scraps, books—everything where he can put his hand upon it in a moment."

"December, 1871.—Saturday Mr. Longfellow came in town and went with us to hear twelve hundred school children sing a welcome to the Russian Grand Duke in the Music Hall. It was a fine sight, and Dr. Holmes's hymn, written for the occasion, was noble and inspiring. Just before the Grand Duke came in I saw a smile creep over Longfellow's face. 'I can never get over the ludicrousness of it,' he said. 'All this array and fuss over one man!' He came home with us afterwards, and lingered awhile by the fire. He talked of Russian literature—its modernness, and said he had sent us a delightful novel by Tourguéneff, 'Liza,' in which we should find charming and vivid glimpses of landscape and life like those seen from a carriage window. We left him alone in the library for a while, and returning found him amusing himself over the 'Ingoldsby Legends.' He was reading the 'Coronation of Victoria,' and laughing over Count Froganoff, who could not get prog enough, and was found eating underneath the stairs. He wants to have a dinner for Bayard Taylor, whose coming is always the signal for a series of small festivities. His own 'Divine Tragedy' is just out, and everybody speaks of its simplicity and beauty."

"April.—In the evening Longfellow came in town for the purpose of hearing a German gentleman read an original poem, and he persuaded me to go with him. The reader twisted his face up into frightful knots, and delivered his poem with vast apparent satisfaction to himself if not to his audience. It was fortunate on the whole that the production was in a foreign tongue, because it gave us the occupation, at least, of trying to understand the words—the poem itself possessing not the remotest interest for either of us. It was in the old sentimental German style familiar to the readers

of that literature. Longfellow amused me as we walked home by imitating the sing-song voice we had been following all the evening. He also recited in the original that beautiful little poem by Platen, 'In der Nacht, in der Nacht,' in a most delightful manner. 'Ah,' he said, 'to translate a poem properly it must be done into the meter of the original, and Bryant's "Homer," fine as it is, has this great fault, that it does not give the music of the poem itself.' He came in and took a cigar before walking home over the bridge alone. . . .

"Emerson asked Longfellow at dinner about his last visit to England, of Ruskin and other celebrities. Longfellow is always reticent upon such subjects, but he was eager to tell us how very much he had enjoyed Mr. Ruskin. He said it was one of the most surprising things in the world to see the quiet, gentlemanly way in which Ruskin gave vent to his extreme opinions. It seems to be no effort to him, but as if it were a matter of course that every one should give expression to the faith that is in him in the same unvarnished way as he does himself, not looking for agreement, but for conversation and discussion. 'It is strange,' Ruskin said, 'being considered so much out of harmony with America as I am, that the two Americans I have known and loved best, you and Norton, should give me such a feeling of friendship and repose.' Longfellow then spoke of Mrs. Matthew Arnold, whom he liked very much—thought her, as he said, 'a most lovely person.' Also of the 'beautiful Lady Herbert,' as one of the most delightful of women. . . .

"Longfellow came in to an early dinner to meet Mr. Joseph Jefferson, Mr. William Warren, and Dr. Holmes. He said he felt like one on a journey. He had left home early in the morning, had been sight-seeing in Boston all day, was to dine and go to the theater with us afterwards. The talk naturally turned upon the stage. Longfellow said he thought Mr. Charles Mathews was entirely unjust in his criticisms upon Mr. Forrest's *King Lear*. He considered Mr. Forrest's rendering of the part as very fine and close to nature. He could not understand why Mr. Mathews should under-rate it as he did. Longfellow showed us a book given him by Charles Sumner. In it was an old engraving (from a painting by Giulio Clovio) of the moon, in which Dante is walking with his companion. He said it was a most impressive picture to him. He knew it in the original; also there is a very good copy in the Cambridge Library among the copies of illuminated manuscripts."

There is a little note belonging to this period full of poetic feeling and giving more than a hint at the wearfulness of interrupting visitors:

"I send you the pleasant volume I promised you yesterday. It is a book for summer moods by the seaside, but will not be out of place on a winter night by the fireside. . . . You will find an allusion to the 'blue borage flowers' that flavor the claret-cup. I know where grows another kind of bore-age that embitters the goblet of life. I can spare you some of this herb, if you have room for it in your garden or your garret. It is warranted to destroy all peace of mind, and finally to produce softening of the brain and insanity.

" 'Better juice of vine
Than berry wine!
Fire! fire! steel, oh, steel!
Fire! fire! steel and fire!'"

The following, written in the spring of the same year, gives a hint of what a festival season it was to him while the lilacs which surround his house were in bloom:

"Here is the poem, copied for you by your humble scribe. I found it impossible to crowd it into a page of note-paper. Come any pleasant morning, as soon after breakfast or before as you like, and we will go on with the 'Michael Angelical' manuscript. I shall not be likely to go to town while the lilacs are in bloom."

The rambling diary continues: "To-day Longfellow sent us half a dozen bottles of wine, and after them came a note saying he had sent them off without finding time to label them. 'They are wine of Avignon,' he added, 'and should bear this inscription from Redi:

" 'Benedetto
Quel claretto
Che si spilla in Avignone.'"

About this period Longfellow invited an old friend, who had fallen into extreme helplessness from ill health, to come and make him a visit. It was a great comfort to his friend, a scholar like himself, "to nurse the dwindling faculty of joy" in such companionship, and he lingered many weeks in the sunshine of the old house. Longfellow's patience and devoted care for this friend of his youth was a signal example of what a true and constant heart may do unconsciously, in giving expression and recognition to the bond of a sincere friendship. Long after his friend was unable to rise from his chair without assistance or go unaccompanied to his bedroom, Longfellow followed the lightest unexpressed wish with his sympathetic vision and performed the smallest offices unbidden. "Longfellow, will you turn down my coat-collar?" I have heard him say in a plaintive way, and it was a beautiful lesson to see the quick and cheerful response which would follow many a like suggestion.

In referring to this trait of his character, I find among the notes made by Mr. Fields on Longfellow: "One of the most occupied of all our literary men and scholars, he yet finds time for the small courtesies of existence, those minor attentions that are so often neglected. One day, seeing him employed in cutting something from a newspaper, I asked him

what he was about. 'Oh,' said he, 'here is a little paragraph speaking kindly of our poor old friend Blank; you know he seldom gets a word of praise, poor fellow, nowadays, and thinking he might not chance to see this paper, I am snipping out the paragraph to mail to him this afternoon. I know that even these few lines of recognition will make him happy for hours, and I could not bear to think he might perhaps miss seeing these pleasant words so kindly expressed.'"

"*May Day, 1876.*—Longfellow dined with us. He said during the dinner, when we heard a blast of wintry wind howling outside, 'This is May day enough; it does not matter to us how cold it is outside.' He was inclined to be silent, for there were other and brilliant talkers at the table, one of whom said to him in a pause of the conversation, 'Longfellow, tell us about yourself; you never talk about yourself.' 'No,' said Longfellow gently, 'I believe I never do.' 'And yet,' continued the first speaker eagerly, 'you confessed to me once——' 'No,' said Longfellow, laughing, 'I think I never did.'"

And here is a tiny note of compliment, graceful as a poet's note should be:

"I have just received your charming gift, your note and the stately lilies; but fear you may have gone from home before my thanks can reach you.

"How beautiful they are, these lilies of the field; and how like American women! Not because 'they neither toil nor spin,' but because they are elegant and 'born in the purple.'"

There is a brief record in 1879 of a visit to us in Manchester-by-the-Sea. Just before he left he said, "After I am gone to-day, I want you to read Schiller's poem of the 'Ring of Polycrates,' if you do not recall it too distinctly. You will know then how I feel about my visit." He repeated also some English hexameters he had essayed from the first book of the *Iliad*. He believes the work may be still more perfectly done than has ever yet been achieved. We drove to Gloucester wrapped in a warm sea-fog. His enjoyment of the green woods and the sea-breeze was delightful to watch. "Ay me! ay me! woods may decay," but who can dare believe such life shall cease from the fair world!

Seeing the Portland steamer pass one night, a speck on the horizon, bearing as he knew his daughter and her husband, he watched it long, then said, "Think of a part of yourself being on that moving speck."

The Sunday following that visit he wrote from Portland:

"Church-bells are ringing; clatter of church-going feet on the pavement; boys crying 'Boston Herald'; voices of passing men and women; these are the sounds that come to me at this upper window, looking down into the street.

"I contrast it all with last Sunday's silence at Man-

chester-by-the-Sea, and remember my delightful visit there. Then comes the thought of the moonlight and the music and Shelley's verses,

"As the moon's soft splendor
O'er the faint, cold starlight of heaven
Is thrown."

and so on

"To some world far from ours,
Where moonlight and music and feeling
Are one."

"How beautiful this song would sound if set to music by Mrs. Bell, and chanted by her in the twilight."

Later he inclosed the song, which is as follows, and I venture to reprint it because it is seldom found among Shelley's poems:

AN ARIETTE FOR MUSIC.

To a lady singing to her accompaniment on the guitar.

As the moon's soft splendor
O'er the faint, cold starlight of heaven
Is thrown,
So thy voice most tender
To the strings without soul has given
Its own.

The stars will awaken,
Though the moon sleep a full hour later
To-night;
No leaf will be shaken,
Whilst the dews of thy melody scatter
Delight.

Though the sound overpowers,
Sing again, with thy sweet voice revealing
A tone
Of some world far from ours,
Where music and moonlight and feeling
Are one.

He added:

"I find the song in my scrap-book, and send it to save you the trouble of hunting for it.

"H. W. L."

It was first reprinted in "The Waif," a thin volume of selections published by Longfellow many years ago. "The Waif" and "The Estray" preserved many a lovely poem from oblivion, till it should find its place at length among its fellows.

Already in 1875 we find Longfellow at work upon his latest collection of poems, which he called "Poems of Places." It was a much more laborious and unrewarding occupation than he had intended, and he was sometimes weary of his self-imposed task. He wrote at this period:

"No politician ever sought for Places with half the zeal that I do. Friend and Foe alike have to give Place to
Yours truly "H. W. L."

Again he says:

"What evil demon moved me to make this collection of 'Poems of Places'? Could I have foreseen the time it would take, and the worry and annoyance it would bring with it, I never would have undertaken it. The worst of it is, I have to write pieces now and then to fill up gaps."

More and more his old friends grew dear to him as the years passed and "the goddess Neuralgia," as he called his malady, kept him chiefly at home. He wrote in 1877:

"When are you coming back from your Cottage on the Cliffs? The trees on the Common and the fountains are calling for you.

"Thee, Tityrus, even the pine trees,
The very fountains, the very
Copses are calling."

Perhaps also your creditors. At all events I am, who am your debtor."

The days were fast approaching when the old things must pass away. He wrote tenderly:

"I am sorry to hear that you are not quite well yourself. I sympathize with you, for I am somebody else. It is the two W's, Work and Weather, that are playing the mischief with us. . . . You must not open a book; you must not even look at an inkstand. These are both contraband articles, upon which we have to pay heavy duties. We cannot smuggle them in. Nature's custom-house officers are too much on the alert."

In 1880 he again wrote, describing the wedding of the daughter of an old friend:

"A beautiful wedding it was; an ideal village wedding, in a pretty church, and the Windmill Cottage of our friend resplendent with autumnal flowers. In one of the rooms there was a tea-kettle hanging on a crane in the fire-place.

"So begins a new household. But Miss Neilson's death has saddened me, and yesterday Mrs. Horsford came with letters from Norway, giving particulars of Ole Bull's last days, his death and burial. The account is very touching. All Bergen's flags at half-mast; telegrams from the King; funeral oration by Björnson. The dear old musician was carried from his island to the mainland in a steamer, followed by a long line of other steamers. No Viking ever had such a funeral."

And here the extracts from letters and journals must cease. It was a golden sunset, in spite of the increasing infirmities which beset him; for he could never lose his pleasure in making others happy, and only during the few last days did he lose his own happiness among his books and at his desk. The influence his presence gave out to others, of calm good cheer and tenderness, made those who knew him feel that he possessed, in larger measure than others, what Jean Paul Richter calls "a heavenly unfathomableness which makes man godlike, and love towards him infinite." Indeed this "heavenly unfathomableness" was a strong characteristic of his nature, and the gracious silence in which he often dwelt gave a rare sense of song without words. Therefore, perhaps on that day when we gathered around the form through which his voice was never again to utter itself, and heard his own words upon the air saying, "Weep not, my friends! rather rejoice with me. I shall not feel the pain, but shall be gone, and you shall have another friend in heaven," it was impossible not to believe that he was with us still, the central spirit, comforting and uplifting the circle of those who were most dear to him.

Annie Fields.

SISTER TABEA.

TWO weather-beaten stone buildings at Ephrata, in Pennsylvania, remain as monuments on this side of the water of the great pietistic movement in Germany in the early part of the eighteenth century. One of these was called "Bethany," the other "Sharon." A hundred and thirty or forty years ago there were other buildings with these, and the softening hand of time had not yet touched any of them. The doorways were then, as now, on the ground level, the passages were just as narrow and dusky, the cells had the same little square windows to let in the day. But the stones in that day had a hue that reminded one of the quarry, the mortar between them was fresh, the shingles in the roof had gathered no moss and very little weather-stain; the primeval forests were yet within the horizon, and there was everywhere an air of newness, of advancement, and of prosperity about the Dunkard Convent. One sees now neither monks nor nuns in these narrow hallways; monks and nuns are nowhere about Ephrata, except in the graveyard where all the brethren of Bethany, and all the sisters who once peopled Sharon, sleep together in the mold. But in the middle of the eighteenth century their bare feet shuffled upon the stairs as, clad in white hooded cloaks descending to the very ground, they glided in and out of the low doors, or assembled in the little chapel called "Zion" to attend service under the lead of their founder, Conrad Beissels. In the convent, where he reigned supreme, Beissels was known as Brother Friedsam; later he was reverently called Father Friedsam Gottrecht, a name that, like all their convent names, had plenty of mystical significance attached to it.

But monks and nuns are men and women; and neither cloister life, nor capuchin hoods and cloaks, nor bare feet, nor protracted midnight services, can prevent heart-burnings and rivalries, nor can all of these together put down—what is most to be dreaded in a monastery—the growth of affection between man and woman. What could be done to tame human nature into submission, to bring it to rejoice only in unearthly meditations, and a contented round of self-denial and psalm-singing, Brother Friedsam had tried on his followers with the unsparing hand of a religious enthusiast. He had forbidden all animal food. Not only was meat of evil tendency, but milk, he said, made the spirit heavy and narrow; butter and cheese pro-

duced similar disabilities; eggs excited the passions; honey made the eyes bright and the heart cheerful, but did not clear the voice for music. So he approved chiefly of those plain things that sprang direct from the earth, particularly of potatoes, turnips, and other roots, with a little bread-soup and such-like ghostly diet. For drink he would have nothing but what he called "innocent clear water," just as it flowed from the spring.

But even a dish of potatoes and turnips and beets and carrots, eaten from wooden trenchers, without milk or butter or meat, was not sufficient to make the affections and passions of men and women as ethereal as Friedsam wished. He wedded his people in mystic marriage to "the Chaste Lamb," to borrow his frequent phrase. They sang ecstatically of a mystical city of brotherly and sisterly affection which they, in common with other dreamers of the time, called Philadelphia, and they rejoiced in a divine creature called in their mystical jargon *Sophia*, which I suppose meant wisdom, wisdom divorced from common sense. These anchorites did not eschew social enjoyment, but held little love-feasts to which the sisters now invited the brethren, and next the brethren entertained the sisters—with unbuttered parsnips and draughts of innocent clear water, no doubt.

That which was most remarkable at Ephrata, and that out of which grows my story, was the music. Brother Friedsam, besides his cares of organization, finance, and administration, and his mystical theological speculations, was also a poet. Most of the songs sung in the little building called "Zion" were written by him—songs about "the lonesome turtle-dove in the wilderness," that is, the church; songs in praise of the mystical marriage of virgins with the chaste Lamb; songs about the Philadelphian brotherhood of saints, about the divine Sophia, and about many other things which no man can understand, I am sure, until he has first purified himself from the gross humors of the flesh by a heavenly diet of turnips and spring water. To the brethren and sisters who believed their little community in the Pennsylvania woods to be "the Woman in the Wilderness" seen by St. John, these words represented the only substantial and valuable things in the wide universe; and they sang the songs of Conrad Beissels with as much fervor as they could have sung the songs of heaven itself.

Beissels — the Friedsam of the brotherhood — was not only the poet but the composer of the choral songs, and a composer of rare merit. The music he wrote is preserved as it was copied out with great painstaking by the brethren and sisters. In looking over the wonderful old manuscript note-book, the first impression is one of delight with the quaint symbolic illuminations wrought by the nuns of Ephrata upon the margins. But those who know music declare that the melodies are lovely, and that the whole structure of the harmonies is masterful, and worthy of the fame they had in the days when monks and nuns performed them under the lead of Brother Friedsam himself. In the gallery of Zion house, but concealed from the view of the brethren, sat the sisterhood, like a company of saints in spotless robes. Below, the brethren, likewise in white, answered to the choir above in antiphonal singing of the loveliest and most faultless sort. Strangers journeyed from afar over rough country roads to hear this wonderful chorus, and were moved in the depths of their souls with the indescribable sweetness and loftiness of the music, and with the charm and expressiveness of its rendering by these pale-faced other-worldly singers.

But their perfection of execution was attained at a cost almost too great. Brother Friedsam was a fanatic, and he was also an artist. He obliged the brethren and sisters to submit to the most rigorous training. In this, as in religion, he subordinated them to his ideals. He would fain tune their very souls to his own key; and he exacted a precision that was difficult of attainment by men and women of average fallibility and carelessness. The men singers were divided into five choruses of five persons each; the sisters were classified, according to the pitch of their voices, into three divisions, each of which sang or kept silent, according to the duty assigned to it in the note-book. At the love-feasts these choruses sat side by side at the table, so as to be ready to sing together with perfect precision whenever a song should be announced. At the singing-school Brother Friedsam could not abide the least defect; he rated roundly the brother or sister who made any mistake; he scourged their lagging aspirations toward perfection. If it is ever necessary to account for bad temper in musicians, one might suggest that the water-gruel diet had impaired his temper and theirs; certain it is that out of the production of so much heavenly harmony there sprang discord. The brethren and sisters grew daily more and more indignant at the severity of the director, whom they revered as a religious guide, but against whom, as a musical conductor, they rebelled in their hearts.

The sisters were the first to act in this crisis. At their knitting and their sewing they talked about it, in the kitchen they discussed it, until their hearts burned within them. Even in illuminating the note-book with pretty billing turtle-doves, and emblematic flowers such as must have grown in paradise, since nothing of the sort was ever known in any earthly garden — even in painting these, some of the nuns came near to spoiling their colors and their page with tears.

Only Margaretha Thome, who was known in the convent as "Sister Tabea," shed no tears. She worked with pen and brush, and heard the others talk; now and then, when some severe word of Brother Friedsam was repeated, she would look up with a significant flash of the eye.

"The Hofcavalier doesn't talk," said Sister Thecla. This Thecla had given the nickname of "Hofcavalier," *noble courtier*, to Tabea at her first arrival in the convent on account of her magnificent figure and high carriage.

"You shouldn't give nicknames, Sister Thecla."

The last speaker was a sister with an austere face and gray eyes which had no end of cold-blooded religious enthusiasm in them.

"I need not give you a nickname," retorted Thecla to the last speaker; "Brother Friedsam did that when he called you Jael. You are just the kind of a person to drive a tent-nail through a man's head."

"If he were the enemy of the Church of God," said Jael, in a voice as hard as it was sincere.

Then the talk drifted back to the singing-school and Brother Friedsam's severity.

"But why doesn't the Hofcavalier speak?" again persisted Thecla.

"When the Hofcavalier speaks, it will be to Brother Friedsam himself," answered Tabea.

The temerity of this proposition took Thecla's breath, but it set the storm a-going more vigorously than before among the sisterhood, who, having found somebody ready to bell the cat, grew eager to have the cat belled. Only Sister Jael, who for lack of voice was not included in either of the three choruses of the sisterhood, stoutly defended Brother Friedsam, thinking, perhaps, that it was not a bad thing to have the conceit of the singers reduced; indeed, she was especially pleased that Tabea, the unsurpassed singer of the sisters' gallery, should have suffered rebuke.

At length it was agreed that Tabea should tell Brother Friedsam that the sisters did not intend to go to singing-school again.

Then Tabea lifted up her dark head and regarded the circle of women in white garments about her.

"You are all brave now, but when Brother Friedsam shakes his finger at you, you will every one of you submit as though you were a set of redemptioners bought with his money. When I tell Brother Friedsam that I shall not come to singing-school, I shall stick to it. He may get his music performed by some one else. He will not call me a 'ninnny' again."

"There spoke the Hofcavalier," giggled Thecla.

"Sister Tabea," said Jael, "if you go on as you are going, you will end by leaving the convent and breaking your vows. Mark my words."

"I am going to finish this turtle-dove first, though," said Tabea, gayly.

It was finally agreed that if Tabea would speak to the Director on behalf of the sisterhood, the sisters would resolutely stand by their threat, and that they would absent themselves from Brother Friedsam's music-drills long enough to have him understand that they were not to be treated like children. To the surprise of all, Tabea left her work at once, covered up her head with the hood attached to her gown, and sought the lodge of Brother Friedsam, which stood between Bethany and Sharon.

When Tabea was admitted to the cell, and stood before the revered Friedsam, she felt an unexpected palpitation. Nor was Beissels any more composed. He could never speak to this girl without some mental disturbance.

"Brother Friedsam," she said, "I am sent by the sisters to say that they are very indignant at your treatment of them in the rehearsals, and that they are not going to attend them hereafter."

Beissels's sensitive lips quivered a moment; this sudden rebellion surprised him, and he did not at first see how to meet it.

"You suggested this course to them, I suppose?" he said after a pause.

"No, Brother Friedsam, I had nothing to do with it until now. But I think they are right, and I hope they will keep to their word. You have been altogether too hard on us."

The Director made no reply, but wearily leaned his pale, refined face upon his hand and looked up at Tabea. This look of inquiry had something of unhappiness in it that touched the nun's heart, and she was half sorry that she had spoken so sharply. She fumbled for the wooden latch of the door presently, and went out with a sense of inward defeat and annoyance.

"The Hofcavalier does not come back with head in the air," murmured Thecla. "A bad sign."

"I gave the message," said Sister Tabea, "and Brother Friedsam did not say whether the four parts sung by the men would be suffi-

cient or not. But I know very well what he will do; he will coax you all back within a week."

"And you will leave the convent and break your vows; mark my words," said Sister Jael, with sharpness.

"It will be after I get this page finished, I tell you," said Tabea. But she did not seem in haste to finish the page, for, not choosing to show how much she had been discomposed by Brother Friedsam's wistful and inquiring look, she gathered up her brush, her colors, and the note-book page on which she had been at work, and went up the stairs alongside the great chimney, shutting herself in her cell.

Once there, the picture of Friedsam's face came vividly before her. She recalled her first meeting with him at her mother's house on the Wissahickon, and how her heart had gone out to the only man she had ever met whose character was out of the common. I do not say that she had consciously loved him as she listened to him, sitting there on the home-made stool in her mother's cabin, and talking of things beyond comprehension. But she could have loved him, and she did worship him. It was the personal fascination of Brother Friedsam and her own vigorous hatred of commonplace that had led her three years before to join the sisterhood in the Sharon house. She did not know to what degree a desire for Beissels's companionship had drawn her to accept his speculations concerning the mystical Sophia and the Philadelphian fellowship. But the convent had proved a disappointment. She had seen little of the great Brother Friedsam, and he had given her, instead of friendly notice and approval, only a school-master's scolding now and then for slight faults committed in singing a new piece.

As she sat there in gloomy meditation Jael's evil prediction entered her mind, and she amused herself with dreams of what might take place if she should leave the convent and go out into the world again.

In putting away her papers a little note fell out.

"The goose at it again," she said.

She had that day received some blank paper from the paper-mill of the community, and Daniel Scheible had put this little love-letter into the package of which he was the bearer. He had sent such letters before, and Tabea, though she had not answered them, had kept them, partly because she did not wish to inform those in authority of this breach of rule, partly because so much defiance of the law of the place gave a little zest to a monotonous life, and partly because she was a young woman, and therefore not displeased with affection, even from a youth in whom she had no more than a friendly interest.

Scheible's parents had been Dunkards, persecuted in Europe, who had sought refuge from their troubles by the bad expedient of taking ship for Philadelphia, with an understanding that they were, according to custom, to be sold for a term of years to pay the fare. Among a multitude who died on the passage from the overcrowding and bad food were Daniel's father and mother, and the little lad was sold for the rest of his minority to pay his own fare as well as that of the dead members of his family. As a promising boy, he had been bought by the Ephrata brotherhood and bred into the fraternity. With the audacity of youth he had conceived a great passion for Tabea, and now that his apprenticeship was about to expire he amused her with surreptitious notes. To-day, for the first time, Tabea began to think of the possibility of marrying Scheible, chiefly, perhaps, from a vague desire to escape from the convent, which could not but be irksome to one of her spirit. Scheible was ambitious, and it was his plan, as she knew, to go to Philadelphia to make his fortune; and she and he together, what might they not do? Then she laughed at herself for such a day-dream, and went out to do her share of household duties, singing melliflously, as she trod barefoot through the passages, a mystic song of hope and renunciation:

"Welt, packe dich;
Ich sehne mich
Nur nach dem Himmel.
Denn droben ist Lachen und Lieben und Leben;
Hier unten ist Alles dem Eiteln ergeben."

Which rendered may read:

"World, get you gone;
I strive alone
To attain Heaven.
There above is laughter, life, and love;
Here below one must all vanity forego."

But though to-day she sang of the laughter that is above, she was less unworldly on the morrow. Brother Friedsam, as she had foreseen, began to break down the rebellion about the singing-school. He was too good a strategist to attack the strong point of the insurrection first. He began with good-natured Thœcla, who could laugh away yesterday's vexations, and so one by one he conquered the opposition in detail. He shrank from assailing the Hofcavalier until he should win the others, knowing well the obstinacy of her resolution. And when all the rest had yielded he still said nothing to Tabea, either because he deemed it of no use, or because he thought neglect might do her rebellious spirit good. But if this last were his plan, he had miscalculated the vigor of her determination.

"Do you know," said the good-hearted, gossipy little Sister Persida, coming into

Tabea's cell two or three days later, "that the sisters have all yielded to Brother Friedsam? He coaxed and managed them so, you know. Has he talked to you?"

"No."

"You'll have to give up when he does. Nobody can resist Brother Friedsam."

"I can."

"You always scare me so, Sister Tabea; I wouldn't dare hold up my head as you do."

But when Persida had gone out, the high head of the Hofcavalier went down a little. She felt that the man whom she in some sort worshiped had put upon her a public slight. He did not account it worth his while to invite her to return. She had missed her chance to refuse. Just what connection Brother Friedsam's slight had with Daniel Scheible's love-letters I leave the reader to determine. But in her anger she fished these notes out of a basket used to hold her changes of white raiment, and read them all over slowly, line by line, and for the first time with a lively interest in their contents. They were very ingenious; and they very cleverly pictured to her the joys of a home of her own with a devoted husband. She found evidences of very amiable traits in the writer. But why should I trace in detail the curious but familiar process by which a girl endows a man with all the qualities she wishes him to possess?

The very next day Scheible, who had been melancholy ever since he began to send to Tabea letters that brought no answer, was observed to be in a mood so gleeful that his companions in the paper-mill doubted his sanity. The fountain of this joy was a note from Tabea stowed away in the pocket of his gown. She had not signed it with her convent title, but with the initials M. T., for her proper name, Margaretha Thome. There were many fluctuations in Tabea's mind and many persuasive notes from Scheible before the nun at length promised to forsake the convent, now grown bitter to her, for the joys of a home. Even then Daniel could not help feeling insecure in regard to a piece of good fortune so dazzling, and he sent note after note to urge her to have the day for the wedding fixed.

Meantime the young man created but little sensation by leaving the mill, as his term of apprenticeship had expired, and he had never professed much attachment to the brotherhood.

Sister Tabea had persistently omitted the rehearsals, and so the grand chorals were now given on the Sabbaths without her voice, and Jael had felt no little exultation at this state of things. At length, after much wavering, Tabea made a final resolution to leave the convent, and to accept the love of the ad-

venturous youth who had shown so persistent an affection for her.

As soon as the day of the wedding was arranged by means of the surreptitious notes which she continued to exchange with Scheible, she prepared to leave Sharon and Ephrata. But nothing could be farther from her plans than the project proposed by her lover that she should elope with him at night. Tabea meant to march out with all her colors flying.

First of all she went to see the sinister prophetess, Sister Jael.

"I've finished that turtle-dove, Sister Jael, and now I am going to leave the sisterhood, and marry Daniel Scheible."

Nothing is so surprising to a prophet as the fulfillment of his most confident prediction. Jael looked all aghast, and her face splintered into the most contradictory lines in the effort to give expression to the most conflicting emotions.

"I'm astonished at you," she said reprovingly, when she got breath.

"Why, I thought you expected it," replied Tabea.

"Will you break your vow?"

"Yes. Why shouldn't a woman break a vow made by a girl? And so, good-bye, Sister Jael. Can't you wish me much joy?"

But Jael turned sharply away in a horror that could find no utterance.

Thecla laughed as was her wont, and wished Tabea happiness, but intimated that Daniel was a bold man to undertake to subdue the Hofcavalier. Sister Persida's woman's heart was set all a-flutter, and she quite forgot that she was trying to be a nun, and that she belonged to the solitary and forsaken turtle-dove in the wilderness. She whispered in Tabea's ear: "You'll look so nice when you're married, dear, and Daniel will be so pleased, and the young men will steal your slipper off your foot at the dinner-table, and how I wish I could be there to see you married. But oh, Tabea! I don't see how you dare to face them all. I'd just run away with all my might if I were in your place."

And so each one took the startling intelligence according to her character, and soon all work was suspended, and every inmate of Sharon was gathered in unwonted excitement in the halls and the common room.

When Tabea passed out of the low-barred door of Sharon she met the radiant face of Scheible, who had tied his two saddle-horses a little way off.

"Come quickly, Tabea," he said with impatience.

"No, Daniel; it won't do to be rude. I must tell Brother Friedsam good-bye."

"No, don't," said Daniel, turning pale with

terror. "If you go in to see the Director, you will never come with me."

"Why won't I?" laughed the defiant girl.

"He's a wizard, and has charms that he gets out of his great books. Don't go in there; you'll never get away."

Daniel held to the Pennsylvania Dutch superstitions, but Tabea only laughed and said, "I am not afraid of wizards." She looked the Hofcavalier more than ever as she left the trembling fellow and went up to the door of Brother Friedsam's lodge.

"She isn't afraid of the *devil*," muttered Scheible.

Tabea knocked at the door.

"Come in and welcome, whoever thou art," said the Director within.

But when she had lifted the latch and pushed back the door, squeaking on its wooden hinges, Tabea found that Friedsam was engaged in some business with the Prior of the convent, the learned Dr. Peter Miller, known at Ephrata as Brother Jabez. Friedsam did not at first look up. The delay embarrassed her; she had time to see, with painful clearness, all the little articles in the slenderly furnished room. She noticed that the billet of wood which lay for a pillow, according to the Ephrata custom, on a bare bench used for a bed, was worn upon one side with long use; she saw how the bell-rope by means of which Friedsam called the brethren and sisters to prayers at any hour in the night, hung dangling near the bench, so that the bell might be pulled on a sudden inspiration even while the Director was rising from his wooden couch; she noted the big books; and then a great reverence for his piety and learning fell upon her, and a homesick regret; and Scheible and the wedding frolic did not seem so attractive after all. Nevertheless she held up her head like a defiant Hofcavalier.

After a time Brother Jabez with a kind greeting passed her, and the Director, looking up, said very gently:

"I wish you a very good day, Sister Tabea."

"I am no longer Sister Tabea, but Margaretha Thome. I have said adieu to all in Sharon, and now I come to say good-bye to Brother Friedsam. I am going to lay aside these garments and marry Daniel Scheible."

She held out her hand, but Friedsam was too much stunned to see it.

"You have broken your vow! You have denied the Lord!"

There was no severity in his despondent rebuke; it had the vibration of an involuntary cry of surprise and pain.

Tabea was not prepared for this. Severity she could have defied; but this cry of a prophet awakened her own conscience, and

she trembled as though she was in the light of a clear-seeing divine judgment.

"You can speak so, Brother Friedsam, for you have no human weaknesses. I am not suited to a convent; I never can be happy here. I am not submissive. I want to be necessary to somebody. Nobody cares for me here. You do not mind whether I sing in the chorals or not, and you will be better pleased to have me away, *and I am going.*" Then, finding that the Director remained silent, she said, with emotion: "Brother Friedsam, I have a great reverence for you, but I wish you knew something of the infirmities of a heart that wants to love and to be loved by somebody, and then maybe you would not think so very hardly of Tabea after she has gone."

There was a tone of beseeching in these last words which Tabea had not been wont to use.

The Director looked more numb now than ever. Tabea's words had given him a rude blow, and he could not at once recover. His lips moved without speaking, and his face assumed a look betokening inward suffering.

"Great God of wisdom, must I then tell her?" said Friedsam when he got breath. He stood up and gazed out of the square window in indecision.

"Tabea," he said presently, turning full upon her and looking in her now pale face upturned to the light, "I thought my secret would die in my breast, but you wring it from me. You say that I have no infirmities — no desire for companionship like other men or women. It is the voice of Sophia, the wisdom of the Almighty, that bids me humble myself before you this day."

Here he paused in visible but suppressed emotion. "These things," he said, pointing to his wooden couch, "these hardships of the body, these self-denials of my vocation, give me no trouble. I have one great soul-affliction, and that is what you reproach me for lacking; namely, the longing to love and to be loved. And that trial you laid upon me the first time I saw your face and heard your words in your mother's house on the Wissahickon. Oh, Tabea, you are not like the rest! you are not like the rest! Even when you go wrong, it is not like the rest. It is the vision of the life I might have led with such a woman as you that troubles my dreams in the night-time, when, across the impassable gulf of my irrevocable vow, I have stretched out my hands in entreaty to you."

This declaration changed instantly the color of Tabea's thoughts of life. Daniel Scheible and his little love-scribbles seemed to her lofty spirit as nothing, now that she saw herself in the light thrown upon her by the love of the

great master whose spirit had evoked Ephrata, and whose genius uttered itself in angelic harmonies. She loathed the little life that now opened before her. There seemed nothing in heaven or earth so desirable as to possess the esteem of Friedsam. But she stood silent and condemned.

"I have had one comfort," proceeded Brother Friedsam after a while. "When I have perceived your strength of character, when I have heard your exquisite voice uttering the melodies with which I am inspired, I have thought my work was sweeter because Tabea shared it, and I have hoped that you would yet more and more share it as years and discipline should ripen your spirit."

The Director felt faint; he sat down and looked dejectedly into the corner of the room farthest away from where Tabea stood. He roused himself in a few moments, and turned about again, to find Tabea kneeling on the flagstones before him.

"I have denied the Lord!" she moaned, for her judgment had now come completely round to Friedsam's stand-point. His condemnation seemed bitter than death. "Brother Friedsam, I have denied the Lord!"

Friedsam regarded the kneeling figure for a moment, and then he reached out his hands, solemnly placing them on her head with a motherly tenderness, while a tremor went through his frame.

"Thou, dear child, shalt do thy first work over again," he said. "Thou shalt take a new vow, and when thou art converted then shalt thou, like Peter, strengthen the others." And withdrawing his hands, he said: "I will pray for you, Tabea, every night of my life when I hear the cock crow."

Tabea rose up slowly and went out at the door, walking no longer like a Hofcavalier, but like one in a trance. Dimly she saw the sisters standing without the door of Sharon; there was Thecla, with half-amused face, and there was Persida, curious as ever; there were Sister Petronella and Sister Blandina and others, and behind all the straight, tall form of austere Jael. Without turning to the right or left, Tabea directed her steps to the group at the door of Sharon.

"No! no! come, dear Tabea!" It was the voice of Daniel Scheible, whose existence she had almost forgotten.

"Poor Daniel!" she said, pausing and looking at him with pity.

"Don't say '*Poor Daniel*,' but *come*."

"Poor boy!" said Tabea.

"*You are bewitched*," he cried, seizing her and drawing her away. "I knew Friedsam would put a charm on you."

She absently allowed him to lead her a few

steps; then, with another look full of tender pity and regret at his agitated face, she extricated herself from his embrace, and walked rapidly to the door. Quickening her steps to escape his pursuing grasp, she pushed through the group of sisters and fled along the hallway, and up the stairs, closing the door of her cell and fastening down the latch.

Scheible, sure that she was under some evil spell, rushed after her, shook himself loose from the grip of Sister Jael, who sought to stop him, and reached the door of Tabea's cell. But all his knocking brought not one word of answer, and after a while Brother Jabez came in, and led the poor fellow out, to the great grief of Sister Persida, who in her heart thought it a pity to spoil a wedding.

The sisters who came to call Tabea to supper that evening also failed to elicit any response. Late in the night, when she had become calm, Tabea heard the crowing of a cock, and her heart was deeply touched at the thought that Friedsam, the revered Friedsam, now more than ever the beloved of her soul, was at that moment going to prayer for the disciple who had broken her vow. She rose from her bench and fell on her knees; and if she mistook the mingled feelings of penitence and human passion for pure devotion, she made the commonest mistake of enthusiastic spirits.

But she was not left long to doubt that Friedsam had remembered her; by the time that the cock had crowed the second time, the sound of the monastery bell, the rope of which hung just by Friedsam's bedside, broke abruptly into the death-like stillness, calling the monks and nuns of Ephrata to a solemn night-service. Tabea felt sure that Friedsam

had called the meeting at this moment by way of assuring her of his remembrance.

Daniel Scheible, who had wandered back to the neighborhood in the aimlessness of disappointment, heard the monastery bell waking all the reverberations of the forest, and saw light after light twinkle from the little square windows of Bethany and Sharon; then he saw the monks and nuns come out of Bethany and Sharon, each carrying a small paper lantern as they hastened to Zion. The bell ceased, and Zion, which before had been wrapped in night, shone with light from every window, and there rose upon the silence the voices of the choruses chanting an antiphonal song; and disconsolate Scheible cursed Friedsam and Ephrata, and went off into outer darkness.

When the first strophe had been sung below, and the sweet-voiced sisters caught up the antistrophe, Brother Friedsam, sitting in the midst, listened with painful attention, vainly trying to detect the sound of Tabea's voice. But when the second strophe had been sung, and the sisters began their second response, a thrill of excitement went through all as the long-silent voice of Sister Tabea rose distinctly above all, with even more of its old fervor and expression.

And the next Saturday, for the seventh day was the Ephrata Sabbath, Tabea took a new, solemn, and irrevocable vow; and from that time until the day of her death she was called Sister Anastasia — the name signifying that she had been reëstablished. What source of consolation Anastasia had the rest never divined. How should they guess that alongside her religious fervor a human love grew ethereally like an air-plant?

Much of this little story is fact. I have supplied details, dialogue, and passion. For the facts which constitute the groundwork I am chiefly indebted to Dr. Oswald W. Seidensticker's very valuable monograph,

entitled "Ephrata, eine amerikanische Klostergeschichte." The reader will find a briefer account of the monastery from the same learned and able writer, in *THE CENTURY* magazine for December, 1881.

Edward Eggleston.

YOUNG LOVE IS LORD.

IT is the fairies' time o' year,
Grim Winter's over, they are here;
Their finger tips the alders tinge,
Rimming the runs with frailest fringe,
While willows from their slumbers shaken,
In leafy fountains playing, waken.

It is the fairies' time o' year,
The skies recede and mountains near;
Each shadow startles, as it passes,
The shy emergence of the grasses;
The Fays are busy: brown and gray-
Behold! they're spirited away!

Young Love is Lord o' earth and air,
Keeps, day and night, his trystings there;
A quickening touch, a vital thrill
Links field to field, and hill to hill:
With downward look th' impassioned hours
Call softly to the coming flow'rs.

John Vance Cheney.

THE CONFEDERATE CRUISER "ALABAMA."

This sketch was made from a photograph (of a drawing) which Captain Semmes gave to a friend, with the remark that it was a correct picture of his ship. On the stocks, and until she went into commission, the *Alabama* was known as "No. 290," that being her number on the list of ships built by the Lairds. According to the volume, "Our Cruise in the Confederate States' War Steamer *Alabama*," she was a bark-rigged wooden propeller, of 1040 tons register; length of keel, 210 feet; length over all, 220; beam, 32; depth, 17. She carried two horizontal engines, each of 300 horse-power; she had stowage for 350 tons of coal. All her standing rigging was of wire. She had a double wheel placed just before the mizzen-mast, and on it was inscribed the motto, "*Aide-toi et Dieu t'aidera*."

The bridge was in the center, just before the funnel. She carried five boats: cutter and launch amidships, gig and whale-boat between the main and mizzen mast, and dingy astern. The main deck was pierced for twelve guns. She was elliptic stem; billet head; high bulwarks; cabin accommodations first-class; ward-room furnished with a handsome suite of state-rooms; the starboard steerage was for midshipmen, the port for engineers. Next came the engine-room, coal-bunkers, etc.; then the berth-deck, capable of accommodating 120 men. Under the ward-room were store-rooms; and under the steerage were shell-rooms; just forward of the firearms came the hold; next, the magazines; and forward of all, the boatswain's and sail-maker's store-rooms; the hold was all under the berth-deck.—EDITOR.

LIFE ON THE "ALABAMA."

BY ONE OF THE CREW.

SHIP AHOY!

ON the 3d of July, 1862, I signed in Liverpool the articles that made me one of the crew of the "290"—afterwards the *Alabama*.

The shipping agent, Campbell, warned me against Yankee spies, and assured me

After a day's delay we sailed round the north coast of Ireland, and in thirteen days arrived at Terceira, one of the Azore Islands. The "290" was by no means as fast as I had expected from report; she did not make over ten knots during her first trip, and had a fashion of burying herself when driven to speed, that set everything afloat. Of course her crew, in the "berth-deck," were none the more comfortable for this.

In a few days we were joined by an English bark, loaded with guns and war material, and went to work laying platforms for the heavy guns, and mounting the pivot-guns, one a very fine Blakely rifled hundred-pounder, and the other an eight-inch sixty-eight-pounder, smooth bore. As the Portuguese governor had ordered us out of the harbor, we had to do our work in a rolling sea, three miles from an anchorage. Before we had finished the steamer *Bahama* came in, bringing Captain Semmes and the remainder of the crew, also more guns, and, it was said, a large sum of money.

that in three months Great Britain would declare war against the United States. Next day I went aboard, and liked the look of the vessel. Everything, to a practiced eye, indicated the character of the ship. No platforms were laid, but the places for the pivot-guns were plainly marked; her magazines were finished and shot-boxes were lying about.

On the 28th of July, the *Alabama* passed out of the Mersey, on a supposed trial-trip, and anchored in a bay on the Welsh coast, where she was joined by most of her crew. We had about one hundred men, half of them sailors, the others being coal-passers, etc.

We all got liberty and went ashore. Familiar as I was with sailors' antics, this surpassed everything. The few policemen of the town were seized and mounted on the men's backs; the authorities were defied, and although no serious outrage was committed, the Portuguese

officials remonstrated with Semmes for turning such a gang loose on them. Most of these men had not yet signed articles, and of course the officers of the *Alabama* could not control them. When the time came for signing they were told they could stay or go; they "quit backing and filling," and came forward at once and were sent on board. The ship was "all adrift" like a midshipman's chest, and the

laughed at him, and suggested that "Chucks, the marine," had been at his tricks. Chucks is the "Robin Goodfellow" on board an English man-o'-war, who bears the blame of all mischief that can't be found out. I had been looking over the crew, and made up my mind that, on the whole, I had never been on a ship with such a bad lot. They were all sailors from clew to earing,—no haymakers

INVITATION TO "HEAVE TO."

boatswain's pipe was going all the time. We worked hard to clean the ship, and got her in order in two days. The crew were now divided into watches, and the routine life of a man-o'-war commenced.

We left Angra on a bright Sunday morning in company with the *Bahama*. Our officers came out in "full fig"; the scratch band played "Dixie"; all hands were mustered, and we saw the flag we were to fight under, for the first time, and heard the first of Captain Semmes's exhortations. He told us among other things that Providence would bless our endeavors to free the South from the Yankees, etc. A boatswain's mate behind me growled, "Yass, Providencelike to bless this yer crew!" During the night some one ornamented a bread-bag with a terrific skull and cross-bones and managed to fasten it to one of the mizzen-braces. In the morning the master-at-arms was hunting for the delinquent, but the men only

among them,—but they were mostly of that class, found in seaport towns all over the world, that ship for the "run" (from port to port), and not for the voyage, and are always a rough, mutinous set. They did not seem to care for the ship's officers, and were determined to stand no "man-o'-war dickey" from them.

When off watch the men began to overhaul each other's log, and to tell lies about their voyages. I was pleased to find that I had not an old shipmate aboard. The best man in the port watch, to which I belonged, was a Scotchman named Gill. He was about forty, very powerful, and could hold an ordinary man at arm's length clear of the deck. He was saturated with Calvinism, and could quote Scripture and sermons by the hour, but was, all the same, a daring, dangerous ruffian. According to his own account, he had been in numerous mutinies, in one case taking a Span-

LOOTING A PRIZE. (AFTER A SKETCH BY THE AUTHOR.)

ish brig, killing the officers, beaching her on the Deseada Key, in the Leeward Islands, and getting to Porto Rico in the launch with the plunder. This man's influence was bad, and he was the cause of much of the insubordination that took place on board.

I hadn't a great deal of admiration for our officers, First Officer Kell being the best; but the truth is, the only officer that sailors respect is a sharp, resolute, driving one. Fear is the best basis for discipline on a ship. The men got it into their heads that our captain had been a parson; and knowing the versatility of the average American, I would not have been surprised, as I had once sailed under an officer who had been an editor, school-master, Baptist preacher, had been in the legislature, and I believe in the penitentiary for slave-trading, and was withal a first-rate sailor. This did not raise Captain Semmes in the regard of the crew, who cursed him for a psalm-singer, and a "jury captain"; but the fact that with such a company he cruised nearly two years and kept his ship, shows that he had both judgment and resolution.

On the 3d of September we took our first prize, a whaling schooner, and for the first time in my life I saw a burning vessel. When the boat returned with the pris-

oners, there was some excitement, but it soon became a commonplace matter. The prisoners were placed on deck under a spar-rigged sail, and fared badly in stormy weather. Our berth-deck was so crowded that the hammocks touched all over, and this gave opportunities to the rough to annoy their quieter shipmates. My hammock was cut down three times in one night, the knittles being rendered useless, and I had to finish my "turn in" on the deck. As soon as our watch was called I waited for the guilty man at the forward companion-way, and nearly battered the life out of him. I was duly reported and lost my "grog" for ten days, but I was not "dumped" any more.

We were now taking prizes rapidly, being not over four hundred miles from New York, in the "rolling forties" directly in the track of American commerce. The treatment of the prisoners was fairly good and they were

DIVERSION ON DECK.

CHRISTMAS AT ARCAS KEYS. (AFTER A SKETCH BY THE AUTHOR.)

not ill-used on board, but the conduct of the boarding-crews was shameful; the officer in charge of the boat had no control over them, and they rushed below like a gang of pirates, breaking open the sailors' chests and taking from the persons of the prisoners everything that took their fancy. I never saw them in-

jure prisoners or use their weapons except to frighten their victims, but the wanton destruction of the clothes and effects of captured sailors was simply disgraceful. This sort of thing seriously affected the *morale* of the men, and had we then met an enemy of equal force, but of the usual standard of man-o'-

QUELLING A RIOT ON THE "ALABAMA." (AFTER A SKETCH BY THE AUTHOR. SEE PAGE 906.)

war discipline, we should have made a very poor show. The prisoners were of all nationalities, but their officers all seemed to be Americans by birth and were mostly a fine, gentlemanly lot. The old sea-dog element so common among English skippers in the East does not seem to exist among the American officers of the merchant marine; they might easily be mistaken for clerks, or even professors. Not so the old sailors in command of the "tea wagons" and East Indian ships,—their walk and lingo proclaim them sailors, and nothing else. One of the mates of a whaling-ship we took and burnt was a parson-like man and preached and prayed to his fellows. He was long and lanky, and two of our roughs began to haze him: but they mistook their calling, and in two minutes were so mauled and manhandled that it was reported aft; but the first officer said it served them right, much to the satisfaction of the honest man between decks.

On one of the prizes a man named George Forest was found. He had deserted from the Confederate service on the *Sumter*, and was recognized and put in irons. The same day the *Tonawanda* was taken; she was bonded and not burned. Forest was tried by court-martial, and lost his pay, etc.; then he was sent forward and put in our watch, where he at once fraternized with the Scotchman Gill and began to organize opposition. George Forest was a Yankee Irishman, born on Long Island. He was a first-class sailor, and had he possessed an education would have made his mark. He was tall, powerful, and had considerable manly beauty, and could talk to sailors better than any man I ever knew. He was a born mutineer, but was not as dangerous as old Gill, who could hold his tongue, which Forest could not. Having, as he said, nothing to lose but his life, as his pay was confiscated, he was openly insolent and defiant, and constantly in trouble, while the petty officers were afraid of him and his set. On a regular man-o'-war he would soon have ended his career; but, as Gill argued ingenuously, the *Alabama* had never been in a Southern port and was outside of the law, and it would be no mutiny to take the ship. There must have been something in this, or the officers would never have permitted what they did. In truth the expulsion of a dozen men would have made the captain secure in his authority, and I never could understand his forbearance. One means of maintaining discipline and subordination was wanting on the *Alabama*, and that was constant work. Where officers are enabled to command obedience to orders this is never neglected. "Teasing time" is well understood by merchant skippers, and

consists in overhauling the rigging, restowing stores, frequent mustering, and inspecting bags and hammocks. But we were so heavily manned, and so full of stores (a prime necessity in the case of a ship that could not command a port when needed), that we had barely room to swing our hammocks; in fact we could scarcely move without tumbling over somebody. The monotony was dreadful. After we had swept the ocean of prizes we had no excitement, and we cast about in every way to amuse ourselves. The ruffianly por-

AN OBJECT OF CURIOSITY. (AFTER A SKETCH BY THE AUTHOR.)

tion of the crew found their pleasure in hazing and ill-treating their duller and less resolute shipmates, and there were some fearful examples of this kind of work. We had sparring matches and single-stick playing, in both of which I excelled. Spinning yarns and singing songs were resources that never failed. The starboard watch made every man sing in turn under penalty of a pannikin of salt water, and our poets were kept busy in composing new ditties. One man had a splendid tenor voice; he was well educated and had been, he said, an officer in the Royal Navy, and was, like all disrated gentlemen that I have ever met, a "vicious and irreclaimable blackguard." How strange to hear him sing "The Lament of the Irish Emigrant," and "My Mary in Heaven" with taste and feeling, and the next moment disgust even his rude associates by a burst of obscene blasphemy. One sailor, a wonderful story-teller, who generally prefaced his yarns

with "When I sailed in the *Taprobane*, East Ingyman," was known as "Top-robbin." His imagination was prolific of horrors, and his grim and sepulchral visage aided in producing an effect on his hearers. His tales were of phantom ships, that sailed in the teeth of wind and current, and of ghastly women that came aboard in the height of storms, etc., and so realistic and impressive was his delivery that some of the worst ruffians in the watch sought their hammocks in fear and trembling. But the poor fellow came to grief in this wise. It was remarked that he had always missed his "tip" in the singing and had rather avoided the tuneful choir. He was on this particular night ordered to "pipe up" and no more temporizing about it. He put on a look of intense misery, and commenced:

"How Jerry Lee was hung at sea
For stabbing of his messmate true,
And his body did swing, a horrible thing,
At the sport of the wild sea-mew."

What a voice!—it was at once a squeaky treble and a hoarse bass. With one accord the men yelled to him to stop. He was assured "If you ever sing again in this ere watch while we're off soundings, we'll fire you through a lee port. Such a voice as that would raise a harrycane." Poor Top-robbin seemed glad to quit, remarking that he didn't sing for his own "diversion," and we all agreed with him.

Most of the songs would not look well in print, but they were nearly all squibs on the "Captain and his officers," and were bawled out without mitigation of voice, and no doubt heard in the mess-room aft. The belief that Captain Semmes had been a parson inspired many of these ditties, one of which ran as follows:

"Oh, our captain said, 'When my fortune's made,
I'll buy a church to preach in,
And fill it full of toots and horns,
And have a jolly Methodee screechin."

"And I'll pray the Lord from night to morn
To weather Old Yankee Doodle—
And I'll run a hinfant Sunday-school
With part of the Yankee's boodle."

The following was the last effort of the Muse and was sung the Saturday night before we left Cherbourg:

"We're homeward bound, we're homeward bound,
And soon shall land on English ground;
But ere that English land we see,
We first must lick the *Kersar-gee*."

But we didn't lick the *Kersar-gee*, and the poor poet realized the alternative, for I saw him crushed and mangled under a gun, just before I went over the side.

October 17th we struck a spell of bad weather, lasting five days. At one time I thought we should founder. The weather

main-brace parted, losing us the main-yard, fore-top and stay-sail. At one time the vessel was fairly on her beam-ends, and the decks were straight up and down. The ship was well handled, but was not, in my opinion, a weatherly craft, and I came to the conclusion that if we ran across one of the fast Yankee cruisers our career would come to an end.

November 18th we arrived at Martinique, and had an "ovation"; the exultation of the French over the disasters to Yankee commerce impressed me. A French corvette lying there gave a dinner to the officers. Gill licked two of the Frenchman's petty officers nearly to death, as his share of the entertainment, and our liberty was stopped in consequence. Forest swam on shore that night, and eluding sharks and lookouts, was hauled into one of the berth-deck ports with five gallons of the worst liquor I ever drank. It set the entire watch crazy. Forest kept comparatively sober, but old Gill "bowsed up his jib" until he could scarcely stand. Such an uproar I never heard; the lanterns were lit in defiance, and when the watch was called, the officer of the deck was saluted with all manner of "skrim-shander." The boatswain was knocked down and hurt by a blow from a belaying-pin, and everything loose was fired aft. The officers and marines, with the sober portion of the crew, now charged forward, and a terrible *mêlée* ensued. Gill knocked a gunner's mate's jaw out of place, and was laid out by a capstan-bar, and finally the drunken men were secured. Forest was identified by a port guard from shore, as the man who got the liquor, and as defiant as ever, was placed in double irons and under guard.

We now heard that a Yankee cruiser, the *San Jacinto*, was outside awaiting us. The general sentiment of the crew was to fight. We were tired of the monotony of hunting merchantmen and, win or lose, wanted a change. But our officers thought otherwise, and by the open and undisguised assistance of the French naval officers and shore authorities, signals were set to mislead the Yankee commander, and a pilot took us out by a route that enabled us to leave the island far astern by daybreak. On the 27th of November we arrived at the island of Blanquilla and coaled. We were about one hundred miles from the coast of South America. Forest was here sentenced to be sent ashore, to lose his pay and to be dismissed the service in disgrace. He snapped his fingers and swore to be even with the officers. We made up eighty dollars for him, and one of the boatmen took it ashore to him. I thought it a good riddance, but kept my opinion to myself.

After looking into Porto Rico we went

through the Mona passage, on the lookout for California steamers, and on the 27th of December we captured the *Ariel*. She was boldly sailed, and only came to, after a shot from our Blakely rifle had barely missed hulling her. As she was full of passengers, she was bonded and let go. We had up to this time taken nineteen prizes. December 24th, we came to the Arcas Keys, desolate sandbanks on the Caribbean Sea. Here we were to coal, and spend our Christmas-day, at liberty on shore. "Liberty on Christmas, the mean pirate!" sang out one of the port watch. "Well, here's for a quiet life—I can lick anything in the starboard watch!" In five minutes the whole front of the island was covered with combatants. Every one hit everybody else, and when the officer of the day sent a guard and boats to bring the men off, they had their hands full. Some of the men were badly hurt, and we had cause to remember our Christmas festivities at Arcas.

Sunday was our busy day. Half our prizes were taken on that day, and now our first action was to take place on Sunday, January 11, 1863. We knew from the orders given that we were in an enemy's vicinity and, accordingly, were at the guns when we saw through the dusk the bows of a small steamer, coming towards us. Her officers had no need to be taken unawares, as any good seaman would have seen that we were at quarters, guns manned. But she came within one hundred yards of us before hailing. We answered: "This is Her Britannic Majesty's steamer *Petrel*!" The answer came back, "This is the United States steamer *Hatteras*!" At the same moment we answered: "This is the Confederate steamer *Alabama*!" In fact, before they could well make out the hail, we gave her the whole broadside of our starboard batteries. We were not more than fifty yards away, and we heard the crash of the shot. She at once returned our fire—but it was evident her armament was light. After ten minutes' rapid firing some one called out, "The enemy is sinking," and we were ordered to stop firing, as the vessel had surrendered. Boats were manned, and in a few strokes of the oars we were alongside. Her bow was in the air, and she was going down stern foremost. In a few minutes her men and wounded were in the boats, and giving a wallow, the *Hatteras* went down. To me she looked more like a flimsy river steamer than a war vessel. Indeed, most Yankee cruisers look slim and slight compared with the more sturdy build of the English men-o'-war.

Much was said of our victory until we learned that the armament of the *Hatteras* had been four thirty-two-pounders, and that

we had only killed and wounded five of her crew. With our weight of guns we should have done more harm; but the truth is, that we had but few skilled gunners on board, and they were not at the heavy guns. Our gun drills were farcical, in my opinion. In fact, we never came within distance of man-o'-war drill or discipline.

We now sailed for Jamaica, going into Port Royal, and had a pleasant time. Here something occurred that few knew of. An Irishman called "King-post," from his build, being short and thick, was suspected of giving the officers information of the plans of Forest and his mates. He was closely watched and he knew it, but was on his guard. He took his liberty with the others, and of course got drunk. Seeing Gill and another man leading a third and going toward the suburbs, I followed and made out the third man to be King-post. I missed them, and as I knew that Gill was well acquainted with the Port, I at once conjectured, that he had seen me following them, and had changed his course. An hour after both men came back, and I joined them. I asked where the Irishman was. Gill looked at me with his hard gray eyes, and significantly said: "I dunna know, laddie, but he'll haud his tongue noo; and ye had better say naithing, yir a wise fallou." King-post never came back and was supposed to have deserted; but no doubt he fell a victim to those two ruffians. The crew broke all bounds here and nearly all the petty officers were disrated, much to their satisfaction, as they had no respect from the crew and were responsible for them to their officers. I could have been quartermaster, but declined.

We were now on the coast of San Domingo, a lovely view of wooded mountains and tropical vegetation. On the 2d of July the cry of fire was raised, and after much confusion all was made right. It came from the spirit-room, where one of the petty officers had entered with a naked light. We were making prizes now and then, and burning them, but to-day we were fairly beaten by a sailing vessel. When the lookout saw her it was toward sunset, and we set the English ensign, our usual ruse to deceive Uncle Sam; but this captain was wideawake, and piling on canvas he kept the weather-gauge. We could see that he was using every device that a good sailor knew to beat us. Our boatswain was an old clipper sailor and I asked him whether we were gaining on the chase. "Not an inch, and we are doing our best." The wind freshened and we tried long shot with our rifle-gun, but it was no use. The chase was a cloud of canvas, and was beautifully handled, and in my heart I wished her success. It

was now getting dark, and several times we saw a light and felt assured that we were forereaching on the ship, when our lookout on the yard sang out, "That's a floating light." Our Yankee had fooled us by this old device, for we saw no more of him.

It was a very common thing for the crews that boarded a prize to bring liquor back with them. Once some fifteen bottles of brandy were smuggled aboard, and all hands partook. As usual, there was a terrible time between decks. One petty officer was so badly hurt that it was thought he would die. Many of the men had grape-shot in a netted bag fastened to the wrist by a lanyard, and many a coward blow was given with these.

We hailed a large ship, June 30th, and fired a gun, which was at once returned, when we found that we were trying to bring to a British man-of-war, the *Diomedé*. She did not answer our ensign, but kept on her way in apparent disdain. We now left the South American coast and made for the Cape of Good Hope, taking a few prizes on the way, and late in July anchored in Saldanha Bay, about one hundred miles north of Cape Town. Here one of the engineers shot himself by accident and was buried. We sailed for Cape Town and many of the crew deserted. At Simon's Town the entire crew broke away, petty officers and all, and the quartermaster and twelve men left us.

We now sailed for the Eastern seas, and making captures here and there, arrived at Singapore December 22. We had one long chase after a fine clipper ship, the *Contest*, that but for our guns would have outsailed us. Her mate was an Englishman, and was put in irons after knocking down one of the officers and offering to fight any "pirate" on board. At one small island near the Straits of Sunda, garrisoned by Frenchmen, we had a stand-up fight with a gang of large baboons, and two of our men were badly bitten. I had my jacket taken clean off, at one clutch, and was glad to escape so easily. They threw stones and clubs like Tipperary men.

We sailed from Singapore for Table Bay, the weather being fearfully hot, and got there March 13th. I was approached in the middle watch by a man known as "Shakings," from his bushy yellow hair. He was a great crony of Gill's and told me that if I would stand in, they would make a rush aft, on the next night, and that we could easily take the ship; that the American consul would guarantee us one hundred thousand dollars, and see that no harm would come to us. I asked him who were with him, and he said four of the petty officers, and some twenty of the crew. I did not like this man, he had a bad eye, and I said I would think of it. I knew

Gill, bad as he was, could be trusted, and I spoke to him. He assured me that we would not be opposed by the petty officers, and one determined rush would do it! I told him that I was sure the officers were on the alert and that as we were going to England soon, it would scarce pay—and that the American consul would repudiate the whole affair and we would bring ourselves in the grip of English law. If we could run her into a Yankee port, it would be different. I thought of the wretched man at Port Royal and kept my own counsel.

We were told that our course was now for England and this had a good effect on the men. The Yankee flag seemed to become a stranger on the seas, and we had a dull time after leaving the African coast. We were off Lizard Point June 8th, with England dim and misty on the port bow. We took a pilot aboard and made Cherbourg on the 13th of June. There is no doubt that the ship needed repairs. She forged through the water, showing that her copper was stripping and that she had become a very tub in sailing. Her engines were out of order, and there was a constant thumping and fizzing in the engine-room. It was generally understood that in all probability her cruising would come to an end, for if she ventured into an English port that would be the last of her, as the English Government would stop her going out again. I do not think that I was ever so glad to get ashore in my life. On shore we soon heard of the U. S. steamer *Kearsarge*, and we were glad that we would have an opportunity of trying our guns on something like our match. The police in Cherbourg being well organized, our men behaved fairly well.

On the 15th of June at an early hour, it was told through the ship that the *Kearsarge* was coming through the east end of the harbor. From the berth-deck ports we had a fair look at her. She seemed low in the water, but was evidently in fighting trim. She steamed past us, at the rate of about nine knots, and out of the west opening. We heard from the gossip of the ward-room servants that Semmes had challenged the American consul. The men who worked the guns had no confidence in any but the Blakely rifle."

We got everything ship-shape and left Cherbourg for our last cruise on a bright Sunday morning, June 19th. We were escorted by a French armored vessel, and when we got outside we could see the *Kearsarge* awaiting us, about four miles away. Captain Semmes made us a short speech which was well received, though it seemed odd to me that an American should appeal to an Englishman's love of glory to animate him to fight the

"THE FIRST SHOT THAT STRUCK US MADE THE SHIP REEL."

speaker's own countrymen. But we cheered, and the French ship leaving us, we steamed straight for the *Kearsarge*. There is no doubt that Semmes was flurried and commenced firing too soon. We were, I should say, nearly a mile away, and I do not think a single shot told. The enemy circled around us and did not return our fire until within seven or eight hundred yards and then she let us have it. The first shot that struck us made the ship reel and shake all over. I was serving on one of the thirty-two-pounders, and my sponger was an old man-o'-war's man, who remarked after a look out of the port, "We might as well fire batter puddens as these pop-guns; a few more biffs like that last and we may turn turtle." He had scarcely spoken when a shell burst under our pivot-gun, tilting it out of range and killing five of the crew. "What is wrong with the rifle-gun?" was asked. "We don't seem to be doing the enemy any harm," while with slow precision came the crash of the heavy shell of the Yankee. One missile that seemed as big as a haystack whizzed over our heads, taking a section of the port bulwarks away, fortunately missing a man that was handling shot. He only remarked that he believed the Yankee was firing "steam-b'ilers" at us. Another shell struck us amidships, causing the ship to list to port so that our gun weighing three tons raced in, pinning one poor fellow against the port-sill. He died before we could get him clear. This was the missile that sunk the *Alabama*. "She's going down!" was the

cry, and all was confusion. Another shell struck about the water-line, and the vessel reeled like a drunken man. The dead and wounded were lying about the deck, which was red with blood. Our officers did their duty and the men at once began to get up the wounded. The cutter and launch were in the water, and the officers were trying to keep the men back till the wounded were all in; but certainly many of them were left, for I saw several on the berth-deck when I went below, and the boats were then full and pushing off. When it was certain that the ship was sinking, all order was at an end. I had £10 and a watch in a locker between decks, and I ran below, but they were gone.

"All hands on deck — ship's going down!" was called, and I had just got on the upper step of the forward companion-way when the water, entering the berth-deck ports, forced the air up and almost carried me off my legs. I cast my eyes around for a moment. Old Gill, with his head crushed under the carriage of the eight-inch gun, was lying there, his brawny hands clinching the breast of his jumper. Just as the water came over the stern I went over the port bulwarks. I was a good swimmer, and had not been in the water five minutes when a French pilot-boat came running past, and a brawny fellow in petticoats and top-boots dragged me out of the water. Three of our crew were on board and two more were picked up. One of the men told me that he had been hailed by the doctor to aid him in

CAPTAIN JOHN MCINTOSH KELL, EXECUTIVE OFFICER OF THE "ALABAMA."
(FROM A PHOTOGRAPH TAKEN IN SOUTHAMPTON IMMEDIATELY AFTER THE FIGHT.)

bringing a man from the lower deck, but did not wait, as the water was then coming into the lower deck ports. I had seen an officer at the after companion-way just before going over the side, and this was no doubt Dr. Llewellyn, who was drowned.

A steam-yacht was passing westward, which I recognized as the *Deerhound*, having seen her at Cherbourg. I had a good look at the *Kearsarge*, whose boats were approaching, but she did not seem injured in the least. Our French lugger bore away for Cherbourg, landing us about four in the afternoon. I had deposited £90 with a French money-changer before the action, so I was not badly off. We were beset with questions by Englishmen staying there, and I was amazed at their desire to belittle the victory of the *Kearsarge*. One grim old tar, who had been quartermaster in the Royal Navy and was saved with me, said

to the point, "We was whipped because she was a better ship, better manned; had better guns, better served; that's about the size of it," and he walked away. The next day I induced an English fishing-smack to take me to England, landing at Portsmouth.

We had inflicted great loss on private owners, but I am sure we did not aid the cause we fought for, in the least. I have seen somewhere an account of the taking of the *Hatteras*, that made it a daring achievement. To sneak up to an enemy under a false hail, and pour in a broadside of metal much heavier than she could return — surely, no English sailor will see anything to the national credit in this. The poor show we made with the *Kearsarge* however, disposed of the glory we achieved in burning defenseless merchantmen; and the "meteor flag," that Captain Semmes was so proud of, came down with a run.

CRUISE AND COMBATS OF THE "ALABAMA."

BY HER EXECUTIVE OFFICER.

THE *Alabama* was built by the Lairds, of Birkenhead, England, for the Confederate States Government, and in violation of no law. In the House of Commons these senior partner of the constructors stated "that she left Liverpool a perfectly legitimate transaction." Captain James D. Bulloch, as agent for the Confederacy, superintended her construction. As a "ruse" she was sent on a trial trip,

with a large party of ladies and gentlemen. A tug met the ship in the channel, and took off the guests, while the two hundred and ninetyeth ship built in the Laird yard proceeded on her voyage to the island of Terceira, among the Azores, whither a transport had preceded her with war material. Captain Raphael Semmes, with his officers, carried by the *Bahama*, met her there. Under the lee of the island, outside the marine league, we lashed our ships together, and made the transfer of armament and stores.

Arriving on Wednesday, August 20th, 1862, by Saturday night we had completed the transfer, and on Sunday morning, under a cloudless sky, upon the broad Atlantic, a common heritage, we put in commission the *Alabama*, by authority of the Confederate States Government. Thus empowered, we proceeded to ship such men from the crews of the several ships as were willing to sign the articles. Eighty men signed, and these formed the nucleus of our crew, the full complement being soon made up from the crews of our prizes. From the above date we commenced our cruise of twenty-two months, which was the most successful accomplishment of the work for which she was constructed of any single ship of any nation in any age.

The *Alabama* was built for speed rather than battle. Her lines were symmetrical and

fine; her material of the best. In fifteen minutes her propeller could be hoisted, and she could go through every evolution under sail without any impediment. In less time her propeller could be lowered; with sails furled, and yards braced within two points of a head-wind, she was a perfect steamer. Her speed, independent, was from ten to twelve knots; combined, and under favorable circumstances, she could make fifteen knots. When ready for sea she drew fifteen feet of water. She was barkentinerigged, with long lower masts, which enabled her to carry an immense spread of lower canvas, and to lay close to the wind. Her engines were three hundred horse-power, with a condensing apparatus that was indispensable. Since we lived principally upon provisions taken from our prizes, their water-supply was never sufficient. Our condenser enabled us to keep the sea for long periods, we having to seek a port only for coals.

Our armament consisted of eight guns: one Blakely hundred-pounder rifled gun, pivoted forward; one eight-inch solid-shot gun, pivoted abaft the mainmast; and six thirty-two pounders in broadside. Our crew numbered about one hundred and twenty men and twenty-four officers. Captain Semmes, an officer of high standing in the old navy, had studied law, paying particular attention to the international branch, and was admitted to the bar in Alabama, of which State he was a citizen. Thus he was eminently qualified for the position he was now called upon to assume. During the Mexican war he commanded the brig *Somers* in the blockade of Vera Cruz, and lost that unfortunate vessel in chase, during a norther, and narrowly escaped drowning. He afterwards accompanied the army to the city of Mexico, ever foremost in the path of duty and daring heroism. The writer, his executive officer, had served twenty years in the old navy, and had had the good fortune to accompany every expedition of a warlike nature fitted out by the United States during that period. In the Mexican war, on the coast of California, I served ashore and afloat; then with the gallant Commodore Perry, in his expedition to Japan, and again in the Paraguay expedition. Our second lieutenant, R. F. Armstrong, from Georgia, and third lieutenant, J. D. Wilson, from Florida, came out with us in the *Sumter*.

REAR-ADMIRAL RAPHAEL SEMMES, CAPTAIN OF THE "ALABAMA."

(FROM A PHOTOGRAPH IN POSSESSION OF MRS. J. MCINTOSH KELL; TAKEN IN ENGLAND AFTER THE LOSS OF HIS SHIP.)

They were just from Annapolis, each having resigned on the secession of their respective States. Both the father and grandfather of our fourth lieutenant, Arthur Sinclair, Jr., of Virginia, had been captains in the United States Navy. Our fifth lieutenant, John Lowe, of Georgia, had seen some service, and was a most efficient officer; our Acting Master I. D. Bulloch, of Georgia, was a younger brother of Captain James D. Bulloch. It will thus be

seen that the watch-officers of the ward-room were not ordinary material. A few months' experience in active service gave them confidence, and it may safely be affirmed that older heads could not have filled their places with greater efficiency. The remainder of our ward-room mess was made up of our surgeon, Dr. F. L. Galt, of Virginia, also of the old service; Dr. D. H. Llewellyn, of Wiltshire, England, who, as surgeon, came out in the ship when

under English colors, and joined us as assistant surgeon. First Lieutenant B. K. Howell, of the Marine Corps, brother-in-law to President Davis, was from Mississippi, and Mr. Miles J. Freeman, our chief engineer, had been with us in the *Sumter*. The steerage mess was made up of three midshipmen — E. M. Anderson of Georgia; E. A. Maffit of North Carolina, the son of the captain of the Confederate States steamer *Florida*; and George T. Sinclair of Virginia. The latter was afterwards detached from the *Alabama*, and made executive officer to Lieutenant Lowe on the *Tuscaloosa*, a tender that we commissioned. The *Tuscaloosa* had been the bark *Conrad* of Philadelphia, captured by us June 21, 1863. Upon our arrival at Cherbourg, Sinclair came at once to join his old ship, having heard of the contemplated engagement. Accompanying him came also Lieutenant William C. Whittle, Jr., of Virginia, a gallant young son of Commodore W. C. Whittle of the old navy, and Lieutenant John Grimball, a South Carolinian, offering their services for any position during the engagement. They were not permitted to join us, on the ground that it would be a violation of French neutrality. The remainder of the steerage mess was made up of young master's mates and engineers, most of whom had come out with us in the *Sumter*.

The eleventh day after going into commission we captured our first prize, not one hundred miles from where we hoisted our flag. After working round the Azores for some weeks, with fine breezes, we shaped our course for Sandy Hook. But we encountered frequent gales off the Newfoundland banks, and on the 16th of October lost our main-yard in a cyclone. Being considerably shaken up, we decided to seek a milder latitude. Running down to the Windward Islands, we entered the Caribbean Sea. Our prizes gave us regularly the mails from the United States, from which we gathered the fitting out of the army under General Banks for the attack on Galveston and the invasion of Texas, and the day on which the fleet would sail. Whereupon, Captain Semmes calculated about the time they would arrive, and shaped his course accordingly, coaling and refitting ship at the Arcas Keys. He informed me of his plan of attack, which was to sight the shipping off Galveston about the time that General Banks was due with his large fleet of transports, under the convoy perhaps of a few vessels of war. The entire fleet would anchor in the outer roadstead, as there is only sufficient water on the bar for light-drafts. All attention at such a time would be given to the disembarkation of the army, as there were no enemy's cruisers to molest them; our presence in

the Gulf was not even known. We were to take the bearing of the fleet, and after the mid watch was set and all quieted down, silently approach, steam among them with both batteries in action, slowly steam through their midst, pouring in a continuous discharge of shell to fire and sink as we went, and before the convoys could move we expected to accomplish our work and be off on another cruise.

But instead of sighting General Banks's fleet of transports we sighted five vessels of war at anchor, and soon after, our lookout reported a steamer standing out for us. We were then under topsails, only, with a light breeze, heading off shore, and gradually drawing our pursuer from the squadron. About dark she came up with us, and in an action of thirteen minutes we had sunk the *Hatteras*! She carried a larger crew than our own, and every living man on board of her was saved. General Banks, as it proved, had gone up the Mississippi with his fleet of transports. Knowing that the squadron would soon be upon us, every light on board ship was put under cover and we shaped our course for broader waters. During the night one of those fearful northers came sweeping after us, and under the circumstances was a welcome gale. Hoisting our propeller, we crowded all the sail she could bear, and soon were out of harm's way. As Captain Blake of the *Hatteras* (whom I had known in the old service) came on deck, he remarked upon the speed we were making, and gracefully saluted me with, "Fortune favors the brave, sir!" I wished him a pleasant voyage with us; and I am sure he, with his officers and men, received every attention while on board the *Alabama*.

We paroled them at Kingston, Jamaica, and after repairing a few shot-holes and coaling ship, we passed on to our work in the South Atlantic, taking our position at the cross-roads of the homeward-bound East India and Pacific trade, as pointed out by Commodore Matthew F. Maury, whose wind and current charts have marked the highways of commerce on the ocean as plainly as do the mile-posts on our public roads. After a few weeks of good work in that locality and along the coast of Brazil, we crossed over to the Cape of Good Hope, where we played "hide and seek" with the United States steamer *Vanderbilt*, whose commander, Captain Baldwin, had generously explained to Sir Baldwin Walker, the English admiral of the station at Simon's Town, "that he did not intend to fire a gun at the *Alabama*, but to run her down and sink her." We were not disposed to try issues with the *Vanderbilt*; so one night about eleven o'clock, while it blew a gale of wind from the south-east, we hove anchor

CHART OF THE CRUISE OF THE "ALABAMA."

NOTE: of the 66 captures, given on this chart, 52 were burned; 10 were released on bond, namely, the *Emily Farnum*, *Tenacutida*, *Baron De Castine*, *Union*, *Ariel*, *Washington*, *Belia*, *Thayer*, *Fountain*, *Morning Star*, and *Yuma*; 1 of the 10 not accounted for above, the *Hatteras* was sunk in action; the *Conrad* was released; the *Thetis*, *Thetis*, and became a cruiser, or "tender to the *Alabama*"; the *Sea Bird* was sold; the *Martha Wrenell*, captured in neutral waters, was released.

and steamed out of Simon's Bay. By morning we had made a good offing, and, setting what sail she could carry, hoisted our propeller and made a due south course. We ran down to the fortieth degree south latitude, where we fell in with westerly gales and bowled along nearly due east, until we shaped our course for the Straits of Java. Our long stretch across the Indian Ocean placed us in the China Sea, where we were least expected, and where we soon fell in with the China trade. In a few weeks we had so paralyzed the enemy's commerce that their ships were absolutely locked up in port, and neutrals doing all the carrying trade. Having thus virtually cleared the sea of the United States flag, we ran down to Singapore, coaled ship, and then turned westward through the Straits of Malacca, across to India, thence to the east coast of Africa. Passing through the Mozambique channel, we again touched in at the Cape of Good Hope, and thence crossed to the coast of Brazil.

Among the many prizes we captured and destroyed, we necessarily saw many varieties of the *genus homo* in the guise of the Yankee skipper. While taking the burning of their ships very philosophically as among the fortunes of war, some clung to "creature comforts" regardless of heavier losses. Upon one occasion, going aboard a fine ship, I told the captain "he might bring away his personal effects." He made a most ludicrous scene by earnestly appealing to me "to grant him one request," that he "might be permitted to take with him 'Spurgeon's Sermons' and a keg of very fine whisky." The sermons I granted, but told him the whisky must go overboard. The prisoners on board of the *Alabama* as a general practice were *not* put in irons, but were simply confined to an allotted space with a guard over them. The prisoners of the first half-dozen prizes taken were put in irons, including the captains and mates, at which the captains were very indignant, and remonstrated with Captain Semmes that their position should entitle them to different treatment. Captain Semmes replied that he confined them in irons in retaliation for the manner in which the agents of the U. S. Government had treated the purser of the C. S. steamer *Sumter*. The purser, under orders, was *en route* from Gibraltar to Cadiz in a French merchant steamer. Stopping at Tangier to put off and take on passengers and cargo, the purser walked on shore, and was there, in a neutral country, seized by the U. S. consul at the head of an armed force of Moorish soldiers, and brutally imprisoned, with heavy manacles. From there he was taken in irons by the U. S. armed vessel *Ino*,

and finally sent to New York in irons. The purser was a gentleman of unimpeachable character and high position. Again, there were occasions during the cruise when the number of prisoners warranted placing some in irons, but never were captains put in irons after that first measure of retaliation.

Our little ship was now showing signs of the active work she had been doing. Her boilers were burned out, and her machinery sadly in want of repairs. She was loose at every joint, her seams were open, and the copper on her bottom was in rolls. Captain Semmes decided to seek a port in Europe, and to go into dock.

One pleasant day, on the coast of Brazil, we captured a prize, and Captain Semmes said to me, "We will make a target of her. Up to this time we have carried out the instructions of the Department, destroying the enemy's commerce and driving it from every sea we have visited, while avoiding their cruisers. Should we now fall in with a cruiser not too heavy for us, we will give her battle." I at once called all hands to general quarters, and, taking convenient distance from our prize, practiced principally with shell to see the effect. Many of our fuses proved defective. Upon visiting the target I found that one of the hundred-pound shells had exploded on the quarter-deck, and I counted fifteen marks from its missiles, which justifies me in asserting that had the hundred-pound shell which we placed in the stern-post of the *Kearsarge* exploded, it would have changed the result of the fight. I at once examined every fuse and cap, discarding the apparently defective, and at the same time made a thorough overhauling of the magazine, as I thought, but the action with the *Kearsarge* proved that our entire supply of powder was damaged. The report from the *Kearsarge's* battery was clear and sharp, the powder burning like thin vapor, while our guns gave out a dull report, with thick and heavy vapor.

We now set our course for Europe, and on the 11th day of June, 1864, entered the port of Cherbourg, and at once applied for permission to go into dock. There being none but national docks, the Emperor had first to be communicated with before permission could be granted, and he was absent from Paris. It was during this interval of waiting, on the third day after our arrival, that the *Kearsarge* steamed into the harbor, for the purpose, as we learned, of taking on board the prisoners we had landed from our two last prizes. Captain Semmes, however, objected to this on the ground that the *Kearsarge* was adding to her crew in a neutral port. The

A CLIPPER ESCAPING FROM THE "ALABAMA." (SEE PAGE 907.)

authorities conceding this objection valid, the *Kearsarge* steamed out of the harbor, without anchoring. During her stay we examined her closely with our glasses, but she was keeping on the opposite side of the harbor, out of the reach of a very close scrutiny, which accounts for our not detecting the boxing to her chain

armor. After she left the harbor Captain Semmes sent for me to his cabin, and said: "I am going out to fight the *Kearsarge*; what do you think of it?" We discussed the battery and especially the advantage the *Kearsarge* had over us in her eleven-inch guns. She was built for a vessel of war, and we for

speed, and though she carried one gun less, her battery was more effective at point-blank range. While the *Alabama* carried one more gun, the *Kearsarge* threw more metal at a broadside; and while our heavy guns were more effective at a long range, her eleven-inch guns gave her greatly the advantage at close range. She also had a slight advantage in her crew, she carrying one hundred and sixty-two all told, while we carried one hundred and forty-nine. Considering well these advantages, we nevertheless decided to engage her as soon as we could coal ship.

Captain Semmes communicated through our agent to the U. S. consul that if Captain Winslow would wait outside the harbor he would fight him as soon as we could coal ship. I at once proceeded to get everything snug for action, and by Saturday night we had finished taking in coals, and had scrubbed the decks. I reported to Captain Semmes that the ship was ready for battle.

The next morning, Sunday, June 19th, between the hours of nine and ten o'clock, we weighed anchor, and stood out of the western entrance of the harbor, the French iron-clad frigate *Couronne* following us. The day was bright and beautiful, with a light breeze blowing. Our men were neatly dressed, and our officers in full uniform. The report of our going out to fight the *Kearsarge* had been circulated, and many persons from Paris and the surrounding country had come down to witness the engagement. They, with a large number of the inhabitants of Cherbourg, collected on every prominent point of the shore that would afford a view seaward. As we rounded the breakwater we discovered the *Kearsarge* about seven miles to the northward and eastward. We immediately shaped our course for her, called all hands to quarters, and cast loose the starboard battery. Upon reporting to the captain that the ship was ready for action, he directed me to send all hands aft, and mounting a gun-carriage, he made the following address:

"OFFICERS AND SEAMEN OF THE 'ALABAMA': You have at length another opportunity of meeting the enemy—the first that has been presented to you since you sunk the *Hatteras*! In the mean time you have been all over the world, and it is not too much to say that you have destroyed, and driven for protection under neutral flags, one-half of the enemy's commerce, which at the beginning of the war covered every sea. This is an achievement of which you may well be proud, and a grateful country will not be unmindful of it. The name of your ship has become a household word wherever civilization extends! Shall that name be tarnished by defeat? The thing is impossible! Re-

CHART OF THE ACTION.

member that you are in the English Channel, the theater of so much of the naval glory of our race, and that the eyes of all Europe are at this moment upon you. The flag that floats over you is that of a young Republic, which bids defiance to her enemy's whenever and wherever found! Show the world that you know how to uphold it! Go to your quarters."

In about forty-five minutes we were somewhat over a mile from the *Kearsarge*, when she headed for us, presenting her starboard bow. At a distance of a mile, we commenced the action with our one-hundred pounder

AN ELEVEN-INCH SHELL BURSTING ON THE "ALABAMA."

pivot-gun from our starboard bow. Both ships were now approaching each other at high speed, and soon the action became general with broadside batteries at a distance of about five hundred yards. To prevent passing, each ship used a strong port helm. Thus the action was fought around a common center, gradually drawing in the circle. At this range we used shell upon the enemy. Captain Semmes, standing on the horse-block abreast the mizzen-mast with his glass in hand, observed the effect of our shell. He called to me and said: "Mr. Kell, use solid shot; our shell strike the enemy's side and fall into the water." We were not at this time aware of the chain armor of the enemy, and attributed the failure of our shell to our defective ammunition. After using solid shot for some time, we alternated shell and shot. The enemy's eleven-inch shells were now doing severe execution upon our quarter-deck section. Three of them successively entered our eight-inch pivot-gun port: the first swept off the forward part of the gun's crew; the second killed one man and wounded several others; and the third struck the breast of the gun-carriage, and spun around on the deck, till

one of the men picked it up and threw it overboard. Our decks were now covered with the dead and the wounded, and the ship was careening heavily to starboard from the effects of the shot-holes on her water-line.

Captain Semmes ordered me to be ready to make all sail possible when the circuit of fight should put our head to the coast of France; then he would notify me at the same time to pivot to port and continue the action with the port battery, hoping thus to right the ship and enable us to reach the coast of France. The evolution was performed beautifully, righting the helm, hoisting the head-sails, hauling aft the fore try-sail sheet, and pivoting to port, the action continuing almost without cessation.

This evolution exposed us to a raking fire, but, strange to say, the *Kearsarge* did not take advantage of it. The port side of the quarter-deck was so encumbered with the mangled trunks of the dead that I had to have them thrown overboard, in order to fight the after pivot-gun. I abandoned the after thirty-two-pounder, and transferred the men to fill up the vacancies to the pivot-gun under the charge of young Midshipman Anderson, who

in the midst of the carnage filled his place like a veteran. At this moment the chief engineer came on deck and reported the fires put out, and that he could no longer work the engines. Captain Semmes said to me, "Go below, sir, and see how long the ship can float." As I entered the ward-room the sight was indeed appalling. There stood Assistant-Surgeon Llewellyn at his post, but the table and the patient upon it were swept away from him by an eleven-inch shell, which opened in the side of the ship an aperture that was fast filling the ship with water.

It took me but a moment to return to the deck and report to the captain that "we could not float ten minutes." He replied to me, "Then, sir, cease firing, shorten sail, and haul down the colors; it will never do in this nineteenth century for us to go down, and the decks covered with our gallant wounded." The order was promptly executed, after which the *Kearsarge* deliberately fired into us five shot.* I ordered the men to stand to their quarters, and not flinch from the shot of the enemy; they stood every man to his post most

ASSISTANT-SURGEON DAVID HERBERT LLEWELLYN.
(FROM A PORTRAIT IN THE LONDON "ILLUSTRATED NEWS.")

heroically. With the first shot fired upon us after our colors were down, the quartermaster was ordered to show a white flag over the stern, which order was executed in my pres-

* This unwarranted conduct of Captain Winslow's was evidently the result of a misapprehension on his part, which cannot be admitted as a reasonable excuse. In his letter (dated Cherbourg, June 21, 1864) to the Secretary of the Navy, he says: "Towards the close of the action between the *Alabama* and this vessel, all available sail was made on the former for the purpose of again reaching Cherbourg. When the object was apparent the *Kearsarge* was steered across the bow of the *Alabama* for a raking fire; but before reaching this point the *Alabama* struck. Uncertain whether Captain Semmes was using some ruse, the *Kearsarge* was stopped"—and continued his fire, for by his own words he thought Captain Semmes was making some ruse. The report that the *Alabama* fired her guns after the colors were down and she had shortened sail is not correct. There was a cessation in the firing of

our guns when we shifted our battery to port, after which we renewed the action. Almost immediately afterward the engineer reported the fires put out, when we ceased firing, hauled down the colors, and shortened sail. There was *no* gun fired from the *Alabama* after that. Captain Winslow may have thought we had surrendered when we ceased firing and were in the act of shifting the battery; but the idle report that junior officers had taken upon themselves to continue the action after the order had been given to cease firing is not worthy of notice. I did not hear after-firing, and the discipline of the *Alabama* would not have permitted it.—J. M. K.

In the letter from which Captain Kell quotes Captain Winslow does not speak of "continuing his fire." But in his detailed report (dated July 30, 1864) Captain Winslow says of the *Alabama*, after she had

winded and set sail: "Her port broadside was presented to us, with only two guns bearing, not having been able, as I learned afterward, to shift over but one. I saw now that she was at our mercy, and a few more guns well directed brought down her flag. I was unable to ascertain whether it had been hauled down or shot away; but a white flag having been displayed over the stern our fire was reserved. Two minutes had not more than elapsed before she again opened on us with the two guns on the port side. This drew our fire again, and the *Kearsarge* was immediately steamed ahead and laid across her bows for raking. The white flag was still flying, and our fire was again reserved. Shortly after this her boats were seen to be lowering, and an officer in one of them came alongside and informed us the ship had surrendered and was fast sinking."—EDITOR.

RETURNING FOR THE WOUNDED.

SINKING OF THE "ALABAMA."

ence. When the firing ceased, Captain Semmes ordered me to dispatch an officer to the *Kearsarge* to say that our ship was sinking, and to ask that they send boats to save our wounded, as our boats were disabled. The dingey, our smallest boat, had escaped damage. I dispatched Master's-mate Fullam with the request. No boats appearing, I had one of our quarter boats lowered, which was slightly injured, and I ordered the wounded placed in her. Dr. Galt, the surgeon who was in charge of the magazine and shell-room division, came on deck at this moment and was at once put in charge of the boat, with orders to "take the wounded to the *Kearsarge*." They shoved off just in time to save the poor fellows from going down in the ship.

I now gave the order for "every man to jump overboard with a spar and save himself from the sinking ship." To enforce the order, I walked forward and urged the men overboard. As soon as the decks were cleared, save of the bodies of the dead, I returned to the stern-port, where stood Captain Semmes with one or two of the men and his faithful steward, who, poor fellow! was doomed to a watery grave, as he could not swim. The *Alabama's* stern-port was now almost to the water's edge. Partly undressing, we plunged into the sea, and made an offing from the sinking ship, Captain Semmes with a life-preserver and I on a grating.

The *Alabama* settled stern foremost, launch-

ing her bows high in the air. Graceful even in her death-struggle, she in a moment disappeared from the face of the waters. The sea now presented a mass of living heads, striving for their lives. Many poor fellows sank for the want of timely aid. Near me I saw a float of empty shell-boxes, and called to one of the men, a good swimmer, to examine it; he did so and replied, "It is the doctor, sir, dead." Poor Llewellyn! he perished almost in sight of his home. The young Midshipman Maffit swam to me and offered his life-preserver. My grating was not proving a very buoyant float, and the white caps breaking over my head were distressingly uncomfortable, to say the least. Maffit said: "Mr. Kell, take my life-preserver, sir; you are almost exhausted." The gallant boy did not consider his own condition, but his pallid face told me that his heroism was superior to his bodily suffering, and I refused it. After twenty minutes or more I heard near me some one call out, "There is our first lieutenant," and the next moment I was pulled into a boat, in which was Captain Semmes, stretched out in the stern-sheets, as pallid as death. He had received during the action a slight contusion on the hand, and the struggle in the water had almost exhausted him. There were also several of our crew in the boat, and in a few moments we were alongside a little steam-yacht, which had come among our floating men, and by throwing them ropes saved many lives. Upon

reaching her deck, I ascertained for the first time that she was the yacht *Deerhound*, owned by Mr. John Lancaster, of England. In looking round I saw two French pilot-boats engaged in saving our crew, and finally two boats from the *Kearsarge*. To my surprise I found on the yacht Mr. Fullam, whom I had dispatched in the dingy to ask that boats be sent to save our wounded. He reported to me that our shot had literally torn the casing from the chain armor of the *Kearsarge*, indenting the chain in many places, which explained satisfactorily Captain Semmes's observation of the effect of our shell upon the enemy, "that they struck the sides and fell into the water."

Captain Winslow, in his report, I think, states "that his ship was struck *twenty-eight* times!" and I doubt if the *Alabama* was struck a greater number of times. I may not, therefore, be bold in asserting that had not the *Kearsarge* been protected by her iron cables, the result of the fight would have been different. Captain Semmes felt the more keenly the delusion to which he fell a victim (not knowing that the *Kearsarge* was chain-clad) from the fact that he was exceeding his instructions in seeking an action with the enemy; but to seek a fight with an iron-clad he conceived to be an unpardonable error. However, he had the satisfaction of knowing she was classed as a wooden gun-boat by the Federal Government; also that he had inspected her with most excellent glasses, and so far as outward appearances showed she displayed no chain armor. At the same time it must be admitted that Captain Winslow had the right unquestionably to protect his ship and crew. In justice to Captain Semmes I will state that the battle would never have been fought had he known that the *Kearsarge* wore an armor of chain beneath her outer covering. Thus was the *Alabama* lost by an error, if you please, but, it must be admitted, a *most pardonable* one, and not until "Father Neptune" claimed her as his own did she lower her colors.

The eleven-inch shells of the *Kearsarge* did fearful work, and her guns were served beautifully, being aimed with precision, and deliberate in fire. She came into action magnificently. Having the speed of us, she took her own position and fought gallantly. But she tarnished her glory when she fired upon a fallen foe. It was high noon of a bright, beautiful day, with a moderate breeze blowing to waft the smoke of battle clear, and nothing to obstruct the view at five hundred yards. The very fact of the *Alabama* ceasing to fire, shortening sail, and hauling down her colors simultaneously, must have attracted the attention of the officer in command

of the *Kearsarge*. Again, there is no reason given, why the *Kearsarge* did not steam immediately into the midst of the crew of the *Alabama*, after their ship had been sunk, and like a brave and generous foe, save the lives of her enemies, who had fought so nobly as long as they had a plank to stand upon. Were it not for the timely presence of the kind-hearted Englishman and the two French pilot-boats, who can tell the number of us that would have rested with our gallant little ship beneath the waters of the English Channel. I quote the following from Mr. John Lancaster's letter to the London "Daily News": "I presume it was because he *would* not or could not save them himself. The fact is that if the captain and crew of the *Alabama* had depended for safety altogether upon Captain Winslow, not one half of them would have been saved." *

* In his report of June 21, 1864, Captain Winslow said: "It was seen shortly afterwards that the *Alabama* was lowering her boats, and an officer came alongside in one of them to say that they had surrendered and were fast sinking, and begging that boats would be dispatched immediately for the saving of life. The two boats not disabled were at once lowered, and as it was apparent the *Alabama* was settling, this officer was permitted to leave in his boat to afford assistance. An English yacht, the *Deerhound*, had approached near the *Kearsarge* at this time, when I hailed and begged the commander to run down to the

"THE 'ALABAMA' SETTLED STERN FOREMOST, LAUNCHING HER BOWS HIGH IN THE AIR."

When Mr. Lancaster approached Captain Semmes, and said, "I think every man has been picked up; where shall I land you?" Captain Semmes replied, "I am now under the English colors, and the sooner you put me with my officers and men on English soil, the better." The little yacht moved rapidly away at once, under a press of steam, for Southampton. Armstrong, our second lieutenant, and some of our men who were saved by the French pilot-boats, were taken into Cherbourg. Our loss was nine killed, twenty-one wounded, and ten drowned.

It has been charged that an arrangement had been entered into between Mr. Lancaster and Captain Semmes, previous to our leaving Cherbourg, that in the event of the *Alabama* being sunk the *Deerhound* would come to our rescue. Captain Semmes and myself met Mr. Lancaster for the first time when rescued by him, and he related to us the circumstances that occasioned his coming out to see the fight. Having his family on board, his intention was to attend church with his wife and children, when the gathering of the spectators on the shore attracted their attention, the re-

port having been widely circulated that the *Alabama* was to go out that morning and give battle to the *Kearsarge*. The boys were clamorous to see the fight, and after a family discussion as to the propriety of going out on the Sabbath to witness a naval combat, Mr. Lancaster agreed to put the question to vote at the breakfast table, where the youngsters carried their point by a majority. Thus many of us were indebted for our lives to that inherent trait in the English character, the desire to witness a "passage at arms."

That evening we landed in Southampton, and were received by the people with every demonstration of sympathy and kindly feeling. Thrown upon their shores by the chances of war, we were taken to their hearts and homes with that generous hospitality which brought to mind with tenderest feeling our own dear Southern homes in *ante-bellum* times. To the Rev. F. W. Tremlett, of Belsize Park, London, and his household, I am indebted for a picture of English home life that time cannot efface, and the memory of which will be a lasting pleasure till life's end.

Jno. McIntosh Kell.

SUNNY SIDE, GA., April 16, 1885.

Alabama, as she was fast sinking and we had but two boats, and assist in picking up the men. He answered affirmatively and steamed towards the *Alabama*, but the latter sank almost immediately."

The following is an extract from Mr. John Lancaster's log, dated "Steam-yacht *Deerhound*, off Cowes:" "Sunday, June 10th, nine a. m. Got up steam, and proceeded out of Cherbourg harbor. Half-past ten, observed the *Alabama* steaming out of the harbor toward the Federal steamer *Kearsarge*. Ten minutes past eleven, the *Alabama* commenced firing with her starboard battery, the distance between the contending vessels being about one mile. The *Kearsarge* immediately replied with her starboard guns. A very sharp, spirited firing was kept up, shot sometimes

being varied by shells. In manœuvring, both vessels made seven complete circles at a distance of from a quarter to half a mile. At twelve a slight intermission was observed in the *Alabama's* firing, the *Alabama* making head-sail, and shaping her course for the land, distant about nine miles. At half-past twelve, observed the *Alabama* to be disabled and in a sinking state. We immediately made toward her, and in passing the *Kearsarge* were requested to assist in saving the *Alabama's* crew. At fifty minutes past twelve, when within a distance of two hundred yards, the *Alabama* sunk. We then lowered our two boats, and with the assistance of the *Alabama's* whale-boat and dingey, succeeded in saving about forty men, including Captain Semmes and thirteen officers. At one p. m. we steered for Southampton."—EDITOR.

THE UNITED STATES SCREW-SLOOP "KEARSARGE" AT THE TIME OF THE ENCOUNTER WITH THE "ALABAMA."

When the *Kearsarge* was at the Azores, a few months before the fight with the *Alabama*, Midshipman Edward E. Preble made a mathematically correct drawing of the ship, of a photograph of which the above is a sketch copy. After the fight alterations were made in the *Kearsarge* which considerably changed her appearance.—EDITOR.

THE DUEL BETWEEN THE "ALABAMA" AND THE "KEARSARGE."

BY THE SURGEON OF THE "KEARSARGE."

ON Sunday, the 12th of June, 1864, the *Kearsarge*, Captain John A. Winslow, was lying at anchor in the Scheldt, off Flushing, Holland. The cornet

suddenly appeared at the fore, and a gun was fired. These were unexpected signals that compelled absent officers and men to return to the ship. Steam was raised, and as soon as we were off, and all hands called, Captain Winslow gave the welcome news of a telegram from Mr. Dayton, our minister to France, announcing that the *Alabama* had arrived the day previous at Cherbourg; hence, the urgency of departure, the probability of an encounter, and the expectation of her capture or destruction. The crew responded with cheers. The succeeding day witnessed the arrival of the *Kearsarge* at Dover, for dispatches; and the day after (Tuesday) her appearance off Cherbourg, where we saw the Confederate flag flying within the breakwater. Approaching nearer, officers and men gathered in groups on deck and looked intently at the "daring rover," that had been able for two years to escape numerous foes and to inflict immense damage on our commerce. She was a beautiful specimen of naval architecture. The surgeon went on shore and obtained *pratique* (permission to visit the port) for boats. Owing to the neutrality limitation which would not allow us to remain in the harbor longer than twenty-four hours, it was inexpedient to enter the port. We placed a vigilant watch by turns at each of the harbor entrances, and continued it to the moment of the engagement.

On Wednesday Captain Winslow paid an official visit to the French admiral commanding the maritime district, and to the U. S. commercial agent, bringing on his return the unanticipated news that Captain Semmes had declared his intention to fight. At first the assertion was barely credited, the policy of the *Alabama* being regarded as opposed to a conflict, and to escape rather than to be exposed to injury, perhaps destruction; but the doubters were half convinced when the so-called challenge was known to read as follows:

"C. S. S. 'ALABAMA,' CHERBOURG, June 14, 1864.
"To A. BONFILS, Esq., CHERBOURG.

"SIR: I hear that you were informed by the U. S. Consul that the *Kearsarge* was to come to this port solely for the prisoners landed by me, and that she was to depart in twenty-four hours. I desire you to say to the U. S. Consul that my intention is to fight the *Kearsarge*, as soon as I can make the necessary arrangements. I hope these will not detain me more than until to-morrow evening, or after the morrow morning at furthest. I beg she will not depart before I am ready to go out.

I have the honor to be very respectfully, your obedient servant,
R. SEMMES, *Captain.*"

This communication was sent by Mr. Bonfils, the Confederate States commercial agent, to Mr. Liais, the United States commercial agent, with a request that the latter would furnish a copy to Captain Winslow for his guidance. There was no other challenge to combat. The letter that passed between the commercial agents *was* the challenge about which so much has been said. Captain Semmes informed Captain Winslow through Mr. Bonfils of his intention to fight; Captain Winslow informed Captain Semmes through Mr. Liais that he came to Cherbourg to fight, and had no intention of leaving. He made no other reply.

Captain Winslow assembled the officers and discussed the expected battle. It was probable the two ships would engage on parallel lines, and the *Alabama* would seek neutral waters in event of defeat; hence the necessity of beginning the action several miles from the breakwater. It was determined not to surrender, but to fight until the last, and, if need be, to go down with colors flying. Why Captain Semmes should imperil his ship was not understood, since he would risk all, and expose the cause of which he was a selected champion to a needless disaster, while the *Kearsarge*, if taken or destroyed, could be replaced. It was therefore concluded he would fight because he thought he should be the victor.

Preparations were made for battle, with no relaxation of the watch. Thursday passed; Friday came; the *Kearsarge* waited with ports down, guns pivoted to starboard, the whole battery loaded, and shell, grape and canister ready to use in any mode of attack or defense; yet no *Alabama* appeared. French pilots came on board and told of unusual arrangements made by the enemy, such as the hurried taking of coals, the transmission of valuable articles to the shore, such

REAR-ADMIRAL JOHN A. WINSLOW, CAPTAIN OF THE "KEARSARGE."
(FROM A PHOTOGRAPH TAKEN SOON AFTER THE FIGHT, IN POSSESSION OF PAYMASTER-GENERAL J. A. SMITH, U. S. N.)

as captured chronometers, specie, and the bills of ransomed vessels; and the sharpening of swords, cutlasses, and boarding-pikes. It was reported that Captain Semmes had been advised not to give battle. He replied he would prove to the world that his ship was not a privateer, intended only for attack upon merchant vessels, but a true man-of-war; further, he had consulted French officers, who all as-

serted that in his situation they would fight. Certain newspapers declared that he ought to improve the opportunity afforded by the presence of the enemy to show that his ship was not a "corsair," to prey upon defenseless merchantmen, but a real ship-of-war, able and willing to fight the "Federal" waiting outside the harbor. It was said the *Alabama* was swift, with a superior crew, and it was known that the

ship, guns, and ammunition were of English make.

A surprise by night was suggested, and precautionary means were taken; everything was well planned and ready for action, but still no *Alabama* came. Meanwhile the *Kearsarge* was cruising to and fro off the breakwater. A message was brought from Mr. Dayton, our minister at Paris, by his son, who with difficulty had obtained permission from the French admiral to visit the *Kearsarge*. Communication with either ship was prohibited, but the permission was given upon the promise of Mr. Dayton to return on shore directly after the delivery of the message. Mr. Dayton expressed the opinion that Captain Semmes would not fight, though acknowledging the prevalence of a contrary belief in Cherbourg. He was told that in the event of battle, if we were successful, the colors would be displayed at the mizzen, as the flag of victory. He went on shore with the intention of leaving for Paris without delay. In taking leave of the French admiral, the latter advised Mr. Dayton to remain over night, and mentioned the fixed purpose of Captain Semmes to fight on the following day, Sunday; and he gave the intelligence that there could be no further communication with the *Kearsarge*. Mr. Dayton passed a part of Saturday night trying to procure a boat to send off the acquired information, but the vigilance along the coast made his efforts useless. He remained, witnessed the battle, telegraphed the result to Paris, and was one of the first to go on board and offer congratulations.

At a supper in Cherbourg on Saturday night, several officers of the *Alabama* met sympathizing friends, the coming battle being the chief topic of conversation.

Confident of victory, they proclaimed the intent to sink the "Federal" or gain a "corsair." They rose with promises to meet the following night to repeat the festivity as victors, were escorted to the boat, and separated with cheers and best wishes for a successful return.*

Sunday the 19th came; a fine day, atmosphere somewhat hazy, little sea, light westerly wind. At ten o'clock the *Kearsarge* was near the buoy marking the line of shoals to the eastward of Cherbourg, at a distance of about

three miles from the entrance. The decks had been holystoned, the bright work cleaned, the guns polished, and the crew were dressed in Sunday suit. They were inspected at quarters and dismissed to attend divine service. Seemingly no one thought of the enemy; so long awaited and not appearing, speculation as to her coming had nearly ceased. At 10:20 the officer of the deck reported a steamer approaching from Cherbourg,—a frequent occurrence, and consequently it created no surprise. The bell was tolling for service when some one shouted, "She's coming, and heading straight for us!" Soon, by the aid of a glass, the officer of the deck made out the enemy and shouted, "The *Alabama*!" and calling down the ward-room hatch repeated the cry, "The *Alabama*!" The drum beat to general quarters; Captain Winslow put aside the prayer-book, seized the trumpet, ordered the ship about and headed seaward. The ship was cleared for action, with the battery pivoted to starboard.

The *Alabama* approached from the western entrance, escorted by the French iron-clad frigate *Couronne*, flying the pennant of the commandant of the port, followed in her wake by a small fore-and-aft-rigged steamer,

THE CREW OF THE "KEARSARGE" AT QUARTERS.

the *Deerhound*, flying the flag of the Royal Mersey Yacht Club. The commander of the frigate had informed Captain Semmes that his ship would escort him to the limit of the French waters. The frigate having convoyed the *Alabama* three marine miles from the coast, put down her helm, and steamed back into port without delay. The steam-yacht continued on, and remained near the scene of action.

Captain Winslow had assured the French admiral that in the event of an engagement

* This incident, and others pertaining to the *Alabama*, were told the writer by the officers who were taken prisoners.—J. M. B.

CAPTAIN JAMES S. THORNTON, EXECUTIVE OFFICER OF THE "KEARSARGE."
(FROM A PHOTOGRAPH TAKEN IN 1864.)

the position of the ship should be far enough from shore to prevent a violation of the law of nations. To avoid a question of jurisdiction and to avert an escape to neutral waters in case of retreat, the *Kearsarge* steamed to sea, followed by the enemy, giving the appearance of running away and being pursued. Between six and seven miles from the shore the *Kearsarge*, thoroughly ready, at 10:50 wheeled, at a distance of one and a quarter miles from her opponent, presented the starboard battery, and steered directly for her with design to close, or to run her down. The *Alabama* sheered and presented the starboard battery. More speed was ordered, the *Kearsarge* advanced rapidly and at 10:57 received a broadside of solid shot at a range of about eighteen hundred yards. This broadside cut away a little of the rigging, but the shot mostly passed over or fell short. It was apparent that Captain Semmes intended to fight at long range.

The *Kearsarge* advanced with increased speed, receiving a second and part of a third broadside, with similar effect. Captain Winslow wished to get at short range, as the guns were loaded with five-seconds shell. Arrived within nine hundred yards, the *Kearsarge*, fearing a fourth broadside with apprehended raking results, sheered, and broke her silence with the starboard battery. Each ship was now pressed under a full head of steam, the position being broadside and broadside, both employing the starboard guns.

Captain Winslow, fearful that the enemy would make for the shore, determined with a port helm to run under the *Alabama's* stern for raking, but was prevented by her sheering and keeping her broadside to the *Kearsarge*, which forced the fighting on a circular track, each ship, with a strong port helm, steaming around a common center, from a quarter to half a mile apart, and pouring its

fire into its opponent. There was a current setting to westward three knots an hour.

The action was now fairly begun. The *Alabama* changed from solid shot to shell. A shot from an early broadside of the *Kearsarge* carried away the spanker-gaff of the enemy, and caused his ensign to come down by the run. This incident was regarded as a favorable omen by the men, who cheered and went with increased confidence to their work. The fallen ensign reappeared at the mizzen. The *Alabama* returned to solid shot, and soon after fired both shot and shell to the end. The firing of the *Alabama* was rapid and wild, getting better near the close; that of the *Kearsarge* was deliberate, accurate, and almost from the beginning productive of dismay, destruction, and death.* The *Kearsarge* gunners had been cautioned against firing without direct aim, and had been advised to point the heavy guns below rather than above the water-line, and to clear the deck of the enemy with the lighter ones. Though subjected to an incessant storm of shot and shell, they kept their stations and obeyed instructions.

The effect upon the enemy was readily perceived, and nothing could restrain the enthusiasm of our men. Cheer succeeded cheer; caps were thrown in the air or overboard; jackets were discarded; sanguine of victory, the men were shouting as each projectile took effect: "That is a good one!" "Down, boys!" "Give her another like the last!" "Now we have her!" and so on, cheering and shouting to the end.

After exposure to an uninterrupted cannonade for eighteen minutes without casualties, a sixty-eight-pounder Blakely shell passed through the starboard bulwarks below the main rigging, exploded upon the quarter-deck, and wounded three of the crew of the after pivot-gun. With these exceptions, not an officer or man received serious injury. The three unfortunates were speedily taken below, and so quietly was the act done, that at the termination of the fight a large number of the men were unaware that any of their comrades were wounded. Two shots entered the ports occupied by the thirty-twos, where several men were stationed, one taking effect in the hammock-netting, the other going through the opposite port, yet none were hit. A shell exploded in the hammock-netting and set the ship on fire; the alarm calling for fire-quarters was sounded, and men detailed for such an emergency put out the fire, while the rest staid at the guns.

It is wonderful that so few casualties oc-

curred on board the *Kearsarge*, considering the number on the *Alabama*—the former having fired one hundred and seventy-three shot and shell, and the latter nearly double that number. The *Kearsarge* concentrated her fire and poured in the eleven-inch shells with deadly effect. One penetrated the coal-bunker of the *Alabama*, and a dense cloud of coal-dust arose. Others struck near the water-line between the main and mizzen masts, exploded within board, or passing through burst beyond. Crippled and torn, the *Alabama* moved less quickly and began to settle by the stern, yet did not slacken her fire, but returned successive broadsides without disastrous result to us.

Captain Semmes witnessed the havoc made by the shells, especially by those of our after pivot-gun, and offered a reward for its silence. Soon his battery was turned upon this particular offending gun for the purpose of silencing it. It was in vain, for the work of destruction went on. We had completed the seventh rotation on the circular track and begun the eighth; the *Alabama*, now settling, sought to escape by setting all available sail (fore-trysail and two jibs), left the circle, amid a shower of shot and shell, and headed for the French waters; but to no purpose. In winding the *Alabama* presented the port battery with only two guns bearing, and showed gaping sides through which the water washed. The *Kearsarge* pursued, keeping on a line nearer the shore, and with a few well-directed shots hastened the sinking condition. Then the *Alabama* was at our mercy. Her colors were struck and the *Kearsarge* ceased firing. Two of the junior officers, so I was told by our prisoners, swore they would never surrender, and in a mutinous spirit rushed to the two port guns and opened fire upon the *Kearsarge* [see page 919]. Captain Winslow, amazed at this extraordinary conduct of an enemy who had hauled down his flag in token of surrender, exclaimed, "He is playing us a trick; give him another broadside." Again the shot and shell went crashing through her sides, and the *Alabama* continued to settle by the stern. The *Kearsarge* was laid across her bows for raking, and in position to use grape and canister.

Over the stern of the *Alabama* a white flag was shown, and her ensign was half-masted, union down. Captain Winslow for the second time gave orders to cease firing. Thus ended the fight after a duration of one hour and two minutes. Captain Semmes in his report says: "Although we were now but four hundred yards from each other, the enemy fired upon me five times after my colors had been struck.

* Captain Semmes in his official report says: "The firing now became very hot, and the enemy's shot and shell soon began to tell upon our hull, knocking down, killing, and disabling a number of men in different parts of the ship."—J. M. B.

THE ELEVEN-INCH FORWARD PIVOT-GUN IN ACTION ON THE "KEARSARGE."

ON THE "KEARSARGE"—A TELLING SHOT.

It is charitable to suppose that a ship-of-war of a Christian nation could not have done this intentionally." He is silent as to the renewal by the *Alabama* of the fight after his surrender, an act which, in Christian warfare, would have justified the *Kearsarge* in continuing to fire until the *Alabama* had sunk beneath the waters.

Boats were now lowered from the *Alabama*. Her master's-mate, Fullam, an Englishman, came alongside the *Kearsarge* with a few of the wounded, reported the disabled and sinking condition of his ship, and asked for assistance. Captain Winslow inquired, "Does Captain Semmes surrender his ship?" "Yes," was the reply. Fullam then solicited permission to return with his boat and crew to assist in rescuing the drowning, pledging his word of honor that when this was done he would come on board and surrender. Captain Winslow granted the request. With less generosity he could have detained the officer and men, supplied their places in the boat from his ship's company, secured more prisoners, and afforded equal aid to the distressed. The generosity was abused, as the sequel shows. Fullam pulled to the midst of the drowning, rescued several officers, went to the yacht *Deerhound*, and cast his boat adrift, leaving a number of men struggling in the water.

It was now seen that the *Alabama* was settling fast. The wounded, and boys who could not swim, were sent away in the quarter boats, the waist boats having been destroyed. Cap-

tain Semmes dropped his sword into the sea and jumped overboard with the remaining officers and men.

Coming under the stern of the *Kearsarge* from the windward, the *Deerhound* was hailed, and her commander requested by, Captain Winslow to run down and assist in picking up the men of the sinking ship. Or, as her owner, Mr. John Lancaster, reported: "The fact is, that when we passed the *Kearsarge* the captain cried out, 'For God's sake, do what you can to save them': and that was my warrant for interfering in any way for the aid and succor of his enemies." The *Deerhound* was built by the Lairds at the same time and in the same yard with the *Alabama*. Throughout the action she kept about a mile to the windward of the contestants. After being hailed she steamed towards the *Alabama*, which sunk almost immediately after. This was at 12:24. The *Alabama* sunk in forty-five fathoms of water, at a distance of about four and a half miles from the breakwater, off the west entrance. She was severely hulled between the main and mizzen masts, and settled by the stern; the mainmast, pierced by a shot at the very last, broke off near the head and went over the side, the bow lifted high from the water, and then came the end. Suddenly assuming a perpendicular position, caused by the falling aft of the battery and stores, straight as a plumb-line, stern first, she went down, the jib-boom being the last to appear above water. Down sank the terror of merchantmen, riddled through and through,

AND CAPTAIN OF THE FORWARD PIVOT-GUN.
(FROM A PHOTOGRAPH OF THE OFFICERS TAKEN IN 1864.)

and as she disappeared to her last resting-place there was no cheer; all were silent.

The yacht lowered her two boats, rescued Captain Semmes (wounded in the hand by broken iron rigging), First-Lieutenant Kell, twelve officers, and twenty-six men, leaving the rest of the survivors to the two boats of the *Kearsarge*. Apparently aware that the forty persons he had rescued would be claimed, Mr. Lancaster steamed away as fast as he could directly for Southampton, without waiting for such surgical assistance as the *Kearsarge* might render. Captain Winslow permitted the yacht to secure his prisoners, anticipating their subsequent surrender. Again his confidence was misplaced, and he afterward wrote: "It was my mistake at the moment that I could not recognize an enemy who, under the garb of a friend, was affording assistance." The aid of the yacht, it is presumed, was asked in a spirit of chivalry, for the *Kearsarge*, comparatively uninjured, with but three wounded, and a full head of steam, was in condition to engage a second enemy. Instead of remaining at a distance of about four hundred yards from the *Alabama*, and from this position sending two boats, the other boats being injured, the *Kearsarge* by steaming close to the settling ship, and in the midst of the defeated, could have captured all — Semmes, officers, and men. Captain Semmes says: "There was no appearance of any boat coming to me from the enemy after the ship went down. Fortunately, however, the steam-yacht *Deerhound*, owned by a gentleman of Lancashire, England, Mr. John Lancaster, who was himself on board, steamed up in the midst of my

drowning men, and rescued a number of both officers and men from the water. I was fortunate enough myself thus to escape to the shelter of the neutral flag, together with about forty others, all told. About this time the *Kearsarge* sent one, and then, tardily, another boat."

This imputation of inhumanity is contradicted by Mr. Lancaster's assertion that he was requested to do what he could to save "the poor fellows who were struggling in the water for their lives."

The *Deerhound* edged to the leeward and steamed rapidly away. An officer approached Captain Winslow and reported the presence of Captain Semmes and many officers on board the English yacht. Believing the information authentic, as it was obtained from the prisoners, he suggested the expediency of firing a shot to bring her to, and asked permission. Captain Winslow declined, saying "it was impossible, the yacht was simply coming round." Meanwhile the *Deerhound* increased the distance from the *Kearsarge*; another officer spoke to him in similar language, but with more positiveness. Captain Winslow replied that no Englishman who carried the flag of the Royal Yacht Squadron could so act. The *Deerhound* continued her flight, and yet another officer urged the necessity of firing a shot. With undiminished confidence, Captain Winslow refused, saying the yacht was "simply coming round," and would not go away without communicating. Without this trust Captain Winslow might have arrested the yacht in her

flight, if only as a politic measure, reserving final action as to the seizure of the fugitives when time had afforded reflection. Had he regarded the wishes of his officers, he would have done so. The escape of the yacht and

clothes, supper, and grog with them. The conduct of the *Alabama's* Assistant-Surgeon Llewellyn, son of a British rector, deserves mention. He was unremitting in attention to the wounded during battle, and after the surrender superin-

CLOSE OF THE COMBAT — THE "KEARSARGE" GETTING INTO POSITION TO RAKE THE "ALABAMA."

her coveted prize was manifestly regretted. The bitterness of the regret was clear. The famed *Alabama*, "a formidable ship, the terror of American commerce, well armed, well manned, well handled," was destroyed, "sent to the bottom in an hour," but her commander had escaped; the victory seemed already lessened. It was held by the Navy Department that Captain Semmes violated the usages of war in surrendering to Captain Winslow through the agency of one of his officers, and then effecting an escape during the execution of the commission; that he was a prisoner of the United States Government from the moment he sent the officer to make the surrender.

The wounded of the survivors were brought on board the *Kearsarge* for surgical attendance. Seventy men, including five officers (Surgeon F. L. Galt, acting paymaster, Second Lieutenant J. D. Wilson, First Assistant-Engineer M. J. Freeman, Third Assistant-Engineer Pundt, and Boatswain McCloskey), were saved by the *Kearsarge's* boats and a French pilot-boat. Another pilot-boat saved Second Lieutenant Armstrong and some men who were landed at Cherbourg. Lieutenant Wilson was the only officer who delivered up his sword. He refused to go on board the *Deerhound*, and because of his honorable conduct Captain Winslow on taking his parole gave him a letter of recommendation. Our crew fraternized with their prisoners, and shared their

tended their removal to the boats, refusing to leave the ship while one remained. This duty performed, being unable to swim, he attached two empty shell-boxes to his waist, as a life-preserver, and jumped overboard. Nevertheless, he was unable to keep his head above water.

When the *Kearsarge* was cleared for action every man on the sick-list went to his station. The *Kearsarge* had three wounded, of whom one died in the hospital a few days after the fight. This was William Gowin, ordinary seaman, whose behavior, during and after battle, was worthy of the highest praise. Stationed at the after pivot-gun, he was seriously wounded in the leg by the explosion of a shell; in agony, and exhausted from the loss of blood, he dragged himself to the forward hatch, concealing the severity of his injury so that his comrades might not leave their stations for his assistance; fainting, he was lowered to the care of the surgeon, and when he revived he greeted the surgeon with a smile, saying, "Doctor, I can fight no more, and so come to you, but it is all right; I am satisfied, for we are whipping the *Alabama*"; and afterwards, "I will willingly lose my leg or my life if it is necessary." Lying upon his mattress, he paid attention to the progress of the fight, so far as could be known by the sounds on deck, his face showing satisfaction whenever the cheers of his shipmates were heard; with difficulty he waved his hand over his head, and joined in each cheer with a feeble voice. When a wounded

THE BOAT FROM THE "ALABAMA" ANNOUNCING THE SURRENDER AND ASKING FOR ASSISTANCE.

The picture shows shot-marks in the thin deal covering of the chain armor amidships.

shipmate on either side of him complained, he reproved him, saying, "Am I not worse hurt than you? and I am satisfied, for we are whipping the *Alabama*." Directly after the enemy's wounded were brought on board he desired the surgeon to give him no further attention, for he was "doing well," requesting that all aid be given to "the poor fellows of the *Alabama*." In the hospital he was patient and resigned, and happy in speaking of the victory. "This man, so very interesting by his courage and resignation," wrote the French surgeon-in-chief, received general sympathy; all desired his recovery and lamented his death. At a dinner given by loyal Americans in Paris to Captain Winslow and two of his officers, a telegram was received announcing the death of Gowin. His name was honorably mentioned, his behavior eulogized, and his memory drunk in silence.

At 3:10 P. M. the *Kearsarge* anchored in Cherbourg harbor close by the ship-of-war *Napoléon*, and was soon surrounded by boats of every description filled with excited and inquisitive people. Ambulances, by order of

the French admiral, were sent to the landing to receive the wounded, and thence they were taken to the Hôpital de la Marine, where arrangements had been made for their reception. Dr. Galt and all the prisoners except four officers were paroled and set on shore before sunset, at which Secretary Welles soon after expressed his disapprobation.

An incident that occasioned gratification was the coincidence of the lowering of the enemy's colors by an early shot from the *Kearsarge* already mentioned, and the unfolding of the victorious flag by a shot from the *Alabama*. The *Kearsarge's* colors were "stopped" at the mizzen, that they might be displayed if the ensign was carried away, and to serve as the emblem of victory in case of success. A shot from the last broadside of the *Alabama* passed high over the *Kearsarge*, carried away the halyards of the colors stopped at the mizzen, and in so doing pulled sufficiently to break the stop, and thereby unfurled the triumphant flag.

The *Kearsarge* received twenty-eight shot and shell, of which thirteen were in the hull,

the most efficient being abaft the main-mast. A hundred-pounder rifle shell entered at the starboard quarter and lodged in the stern-post. The blow shook the ship from stem to stern. Luckily it did not explode; otherwise the result would have been serious, if not fatal. A thirty-two-pounder shell entered forward of the forward pivot port, crushing the waterways, raising the gun and carriage, and lodged, but did not explode; else many of the gun's crew would likely have been injured by the fragments and splinters. The smoke-pipe was perforated by a rifle shell, which exploded inside and tore a ragged hole nearly three feet in diameter, and carried away three of the chain guys. Three boats were shattered. The cutting away of the rigging was mostly about the main-mast. The spars were left in good order. A large quantity of pieces of bursted shell was gathered from the deck and thoughtlessly thrown overboard. During the anchorage in Cherbourg harbor no assistance was received from shore, except that rendered by a boiler-maker in patching up the smoke-stack, every other repair being made by our own men.

Captain Semmes in his official report says:

"At the end of the engagement it was discovered, by those of our officers who went alongside the enemy's ship with the wounded, that her midship section on both sides was thoroughly iron-coated. The planking had been ripped off in every direction by our shot and shell, the chain broken and indented in many places, and forced partly into the ship's side. The enemy was heavier than myself, both in ship, battery, and crew; but I did not know until the action was over that she was also iron-clad."

The ships were well matched in size, speed, armament, and crew, showing a likeness rarely seen in naval battles.* The number of the ship's company of the *Kearsarge* was one hundred and sixty-three. That of the *Alabama*, from the best information, was estimated at one hundred and fifty; one hundred and thirty are actually reckoned. According to report additional men were taken on board at Cherbourg.

The chain plating was made of one hundred and twenty fathoms of sheet-chains, of one and seventh-tenths inch iron, covering a space amidships of forty-nine and one-half feet in length by six feet two inches in depth, stopped up and down to eyebolts with marlines, secured by iron dogs, and employed for the purpose of protecting the engines when the upper part of the coal-bunkers was empty, as happened during the action. The chains were

concealed by inch deal boards as a finish. The chain plating was struck by a thirty-two-pounder shot in the starboard gangway, which cut the chain and bruised the planking; and by a thirty-two-pounder shell, which broke a link of the chain, exploded, and tore away a portion of the deal covering. Had the shot been from the one-hundred-pounder rifle, the result would have been different, though without serious damage, because the shot struck five feet above the water-line, and if sent through the side would have cleared the machinery and boilers. It is proper therefore to assert that in the absence of the chain armor the result would have been nearly the same, notwithstanding the common opinion at the time that the *Kearsarge* was an "iron-clad" contending with a wooden ship. The chains were fastened to the ship's sides more than a year previous to the fight, while at the Azores. It was the suggestion of the executive officer, Lieut.-Commander James S. Thornton, to

THE SHELL IN THE STERN-POST OF THE "KEARSARGE."

The charge was withdrawn from the shell which was boxed in, in which condition it remained for months, until the ship reached Boston, where, when the vessel was repaired, a section of the stern-post containing the embedded shell was made and sent to the Navy Department, and was finally deposited in the Ordnance Museum, Navy Yard, Washington.—J. M. B.

hang the sheet-chain (or spare anchor-cable) over the sides, so as to protect the midship section, he having served with Admiral Faragut in passing the forts to reach New Orleans, and knowing its benefit on that occasion. The work was done in three days at a cost for material not exceeding seventy-five dollars. In our visits to European ports, the use of sheet-chains for protective purposes had

2 Engines of 300 horse-power each . .	2 of 400 each.	
Tonnage	1040 . .	1031

attracted notice and caused comment. It is strange that Captain Semmes did not know of the chain armor: supposed spies had been on board and had been shown through the ship as there was no attempt at concealment; the same pilot had been employed by both ships, and had visited each during the preparation for battle. The *Alabama* had bunkers full of coal, which brought her down in the water. The *Kearsarge* was deficient in seventy tons of coal for her proper supply, but the sheet-chains stowed outside, gave protection to her partly filled bunkers.

The battery of the *Kearsarge* consisted of seven guns: two eleven-inch pivots, smooth bore, one twenty-eight-pounder rifle, and four light thirty-two-pounders; that of the *Alabama* of eight guns: one sixty-eight-pounder pivot, smooth bore, one one-hundred-pounder pivot rifle, and six heavy thirty-two-pounders. Five guns were fought by the *Kearsarge* and seven by the *Alabama*, each with the starboard battery. Both ships had made thirteen knots an hour under steam; at the time of the battle the *Alabama* made ten knots. The masts of the *Kearsarge* were low and small; she never carried more than top-sail yards, depending upon her engines for speed. The greater size and height of the masts of the *Alabama* and the heaviness of her rig (barque) gave the appearance of a larger vessel than her antagonist.

Most of the line officers of the *Kearsarge* were from the merchant service, and of the crew only eleven men were of foreign birth. Most of the officers of the *Alabama* were formerly officers in the United States Navy; nearly all the crew were English, Irish, and Welsh, a few of whom were said to belong to the "Royal Naval Reserve." Captain Semmes said: "Mr. Kell, my first lieutenant, deserves great credit for the fine condition in which the ship went into action with regard to her battery, magazine, and shell-rooms"; and he assuredly had confidence in the speed and strength of his ship, as shown by the eagerness and dash with which he opened the fight. The prisoners declared that the best practice during the action was by the gunners who had been trained on board the *Excellent* in Portsmouth harbor.

The Blakely rifle was the most effective gun. The *Alabama* fought bravely and obstinately until she could no longer fight or float.

The contest was decided by the superiority of the eleven-inch Dahlgrens, especially the after-pivot, together with the coolness and accuracy of aim of the gunners of the *Kearsarge*, and notably by the skill of William Smith, the captain of the after-pivot, who in style and behavior was the counterpart of Long Tom Coffin in Cooper's "Pilot."

To the disparagement of Captain Winslow, it has been said that Lieutenant-Commander Thornton commanded the ship during the action. This is not true. Captain Winslow, standing on the horse-block abreast the mizzen-mast, fought his ship gallantly and, as is shown by the result, with excellent judgment. In an official report, he wrote:

"It would seem almost invidious to particularize the conduct of any one man or officer, in which all had done their duty with a fortitude and coolness which cannot be too highly praised, but I feel it due to my executive officer, Lieutenant-Commander Thornton, who superintended the working of the battery, to particularly mention him for an example of coolness and encouragement of the men while fighting, which contributed much towards the success of the action."

THIS Sunday naval duel was fought in the presence of more than fifteen thousand spectators, who upon the heights of Cherbourg, the breakwater, and rigging of men-of-war, witnessed "the last of the *Alabama*." Among them were the captains, their families, and crews of two merchant ships burnt by the daring cruiser a few days before her arrival at Cherbourg, where they were landed in a nearly destitute condition. Many spectators were provided with spy-glasses and camp-stools. The *Kearsarge* was burning Newcastle coals, and the *Alabama* Welsh coals, the difference in the amount of smoke enabling the movements of each ship to be distinctly traced. An excursion train from Paris arrived in the morning bringing hundreds of pleasure-seekers, who were unexpectedly favored with the spectacle of a sea-fight. A French gentleman at Boulogne-sur-Mer assured me that the fight was the conversation of Paris for more than a week.

John M. Browne.

NOTE: Eleven Confederate cruisers figured in the so-called "Alabama Claims" settlement with England. Named in the order of the damage inflicted by each, these cruisers were: the *Alabama*, *Shenandoah*, *Florida*, *Tallahassee*, *Georgia*, *Chickamauga*, *Nashville*, *Retribution*, *Sumter*, *Saltie*, and *Boston*. The actual losses inflicted by the *Alabama* (\$6,547,609.86, according to claims for ships and cargoes filed up to October 25, 1871) were only about \$60,000 greater than those inflicted by the *Shenandoah*. The sum total of the claims filed against the eleven cruisers for ships and cargoes, up to October 25, 1871, was \$17,900,633.46, all but about four millions of it being charged to the account of the *Alabama* and *Shenandoah*.

On May 8, 1871, the Treaty of Washington was completed, in accordance with which a Tribunal of Arbitration was appointed which assembled at Geneva. It consisted of Count Edward Sclopis, named by the King of Italy; Mr. Jacob Staempfli, named

by the President of the Swiss Confederation; Viscount d'Itajuba, named by the Emperor of Brazil; Mr. Charles Francis Adams, named by the President of the United States; and Sir Alexander Cockburn, named by the Queen of England. The Counsel for Great Britain was Sir Roundell Palmer (afterward Lord Selborne). The United States was represented by William M. Evarts and Caleb Cushing.

Claims were made by the United States for indirect and national losses, as well as for the actual losses represented by the nearly eighteen millions on ships and cargoes.

The Tribunal decided that England was in no way responsible for the \$1,160,153.95 of losses inflicted by the *Tallahassee*, *Georgia*, *Chickamauga*, *Nashville*, *Retribution*, and *Sumter*; and on September 14, 1871, it awarded \$15,500,000 damages for actual losses of ships and cargoes and interest, on account of the other five cruisers.—EDITOR.

MEMORANDA ON THE CIVIL WAR.

In Vindication of General Rufus King.

IN writing for THE CENTURY his recollections of "The Second Battle of Bull Run," General Pope has, perhaps inadvertently, used the exact language which in 1863, and long after, so bitterly hurt one of his most loyal subordinates. On page 452 of the January number these words appear:

"I sent orders to McDowell (supposing him to be with his command), and also direct to General King, several times during that night and once by his own staff-officer, to hold his ground at all hazards."

Now the casual reader, ignoring the commas before and after the words "and also direct to General King," would say that orders were sent to King several times that night and once by his own staff-officer. Indeed these words have been used as authority in the army, in histories, even in Congressional debate, for the statement that General King received repeated orders to hold his ground on the evening of August 28th, 1862, and abandoned it in spite of them.

No order or message of any kind, sort, or description reached General King that night from General Pope or any other superior officer; no staff-officer of General King saw or heard of General Pope that night; and, in point of fact, no matter how many he may have sent to McDowell, Pope has since admitted he sent none to King.

Early in '63, when those words first met General King's eyes he wrote at once to his late commander to have the error rectified. General Pope claimed that the construction of the sentence proved that McDowell was meant as the one to whom the repeated orders were sent, but at that time he thought he *had* sent *one* message to King by a staff-officer. I quote from his letter now in my possession, the italics being mine:

"It was far from my intention to imply even that any blame attached to you in the matter. . . . The officer came into my camp about ten o'clock looking for McDowell, to report the result of your action. I told him I had no idea where McDowell was, but to return at once to you with the message to hold your ground. He got something to eat, I think with Ruggles, and went off. . . . Whether he was on your staff or not I really do not know though I thought he was your staff-officer."

"Several officers of McDowell's staff came to me during the night looking for him, and to more than one of them I gave the same message *for McDowell*. If McDowell had been with his command as I supposed he was, Sigel and Reynolds could have been brought to your support. I was disappointed, of course, but did not for a moment attach any sort of blame to you. *I never knew whether the aide-de-camp reached you that night or not*, but I felt always perfectly satisfied that whether he did or not you had done the very best you could have done under the circumstances."

Now the aide-de-camp in question was Houston of the Corps of Engineers, serving on McDowell's staff. He had witnessed the severe engagement of King's division, west of Groveton, and sometime after dark had ridden off through the woods in search of his general who had not been seen by King or his officers since two o'clock in the afternoon. McDowell in

hunting for Pope got lost in the woods, and Houston, hunting for McDowell, stumbled in on Pope's camp late at night, told there of King's battle, got refreshment, he says, of Ruggles, and went off; but he remembers no message from Pope to King, and if there was one, which he doubts, he did not deliver it, for he never attempted to return to King, but went on in search of McDowell until he found him late the following day. No other officer from King got within range of Pope that night, so far as rigid investigation has ever disclosed, and that none at all came from Pope to King is beyond peradventure. Indeed, in 1878 General Pope declared it was to McDowell that all the orders were sent.

As to King's falling back to Manassas Junction, that was the result of the conference between him and his four brigade commanders, and was vehemently urged upon him as the only practicable way to save what was left of the command after the fierce conflict that raged at sunset. King's orders were to march to Centreville, which was objected to strenuously by Stonewall Jackson's corps, and they were in the majority. The brigade commanders voted for a deflection to the right towards Manassas Junction, General John Gibbon being most urgent, and the following extract from a letter from him to King, also in my possession, gives his views:

"I deem it not out of place to say that that retreat was suggested and urged by myself as a necessary military measure . . . I do not hesitate to say, and it is susceptible of proof, that of the two courses which I considered open to you of obeying your orders to march on Centreville or retreat on Manassas on your own responsibility, the one you adopted was the proper one."

"Having first suggested the movement and urged it on military grounds, I am perfectly willing to bear my full share of the responsibility, and you are at liberty to make any use of this communication you may deem proper."

Charles King,
Captain United States Army.

Government Aid in the Marking of Battle-fields.

THREE members of the faculty of Vanderbilt University recently visited the battle-field of Nashville. They were in possession of an excellent map, upon which all the works, lines, and positions of the two-days' fighting were accurately indicated by a military engineer. They tramped fifteen miles to examine and identify all the points of interest. Windings in the pikes, of which three pierce the field, courses of streams, and bearings of hills and houses were all frequently noted and compared with the map. Inquiries were made of persons living on or near the battle-field, yet the precise fixing of even important localities was, in some instances, impossible. This experience has led me to think that the Federal Government, while participants and eye-witnesses are still living, might devise some simple and inexpensive, but still effective, system of laying off and marking the important battle-fields of the Civil War, so as permanently to aid intelligent investigation by military students and visitors. The persons of whom

mention has been made purpose visiting Donelson, Franklin, Murfreesboro', Shiloh, and Missionary Ridge, thus completing the circuit of the battle-fields of Tennessee; and it is certain, if proper facilities of identification and study were afforded by the Government, that many summer tourists would prefer such excursions to any other entertainment accessible in the South. The expenditure of public money, of which there now seems to be a surplus, would possibly not be greater than that often cheerfully appropriated to the erection of a single custom-house; and the advantages, not only to the general public, but to the future historian, would be incalculable. The changes effected in a few years are surprising. New dwellings are erected, old ones destroyed, fences are changed, woods cleared, pikes and roads opened, ditches and hedges are run, and the topography altered in many ways. Old houses receive new occupants, and these, upon inquiry, are often found in possession of erroneous and impossible traditions concerning the events which took place on the historic ground they occupy. Many of the battle-fields of Europe, I am informed, are so marked with stones that the intelligent visitor finds no difficulty in connecting the battle with the field. Unless steps are speedily taken, on the part of our General Government, to mark the places of the special movements and events of our great battles, the limits and outlines of the fields will soon be lost beyond recovery.

VANDERBILT UNIVERSITY, NASHVILLE, Dec. 21, 1885.

A Statement from the Confederate Commissary General.

GENERAL BEAUREGARD in the November CENTURY (1884) and Generals Johnston and Imboden in the May CENTURY (1885) criticise the management of my department in the matter of supplies for the army at Manassas both before and after the first battle. In the statements of these generals, there is some conflict, but they all concur in making me appear a preposterous imbecile, and Mr. Davis guilty of retaining such an officer. General Imboden in effect charges Mr. Benjamin with suppressing, in order to shield my incapacity, an official report of a board of officers convened by Johnston.

General Beauregard wrote to his aides, Colonels Chesnut and Miles, on July 29, 1861,—the latter read the letter in Congress,—about his vision of capturing Washington, and laid the foundation of the cabal against Mr. Davis, which made the Confederate Government a "divided house." It produced a resolution of inquiry, followed soon by a standing committee, and afterwards by a unanimous resolution, in secret session of both houses, in January, 1865, to appoint a joint select committee to investigate the condition and management of all the Bureaux of the War Department. The session of this committee on commissary affairs was held on January 23, 1865. The investigations of the standing committee, during the war, into my policy and methods were frequent; several were long taking testimony, for one member, H. S. Foote,—who when I was in prison published me as cruel to Federal prisoners,—was ever zealous to attack. Every investigation ended in approval. I have a letter from Mr. John B. Baldwin, chairman of the joint select committee, stating that he had declared in Congress, as the

result of their examination, "that the commissary department of subsistence, under the control of Colonel Northrop, the Commissary General, had been managed with a foresight and sagacity, and a far-reaching comprehensive grasp of its business, such as we had found in no other bureau connected with the army supply, with perhaps a single exception."

The engineer, General Beauregard, neglected his communications, so that "troops for the battle" and "supplies" were "retarded"; but they were at the depot. "Eighteen heavy cannon, called for two weeks before," occupied unloaded cars. Numerous cars were retained as stationary storehouses "for provisions," "useless baggage" and "trunks"; one hundred and thirty-three cars were abstracted by the "military" power from the use of the railroads for two weeks and more before the battle until returned by the Quartermaster-General and Mr. Ashe, the Government agent. There was plenty of lumber available to construct a storehouse. General Beauregard was not "urgent on the Commissary General for adequate supplies before the battle," for there was no ground of complaint. It was *after the battle*, when the vision of capturing Washington had seduced him, that he tried to construct a ground of complaint anterior to the battle.

Beauregard made but *one* demand on me (July 8th, by a telegram which I have) for a commissary of the old service. Colonel Lee was added; no one was removed. On July 6th I ordered Fowle to buy all the corn-meal, and soon after all the bacon he could. July 7th, Beauregard ordered him to keep in advance a two weeks' supply for twenty-five thousand men, and Major Noland was ready to supply *any number* of beeves. The findings of the Board (on which Colonel Lee sat) are incoherent, as stated by Imboden. The interdictions alleged by him are refuted by Colonel Ruffin (my chief assistant), and by all the letters sent officially to me in August, 1861. I have Fowle's detailed report of the rations at Manassas; there was plenty of provision for a march on Washington. If I had removed his commissaries as he alleges, or "interdicted" them as General Imboden states, General Beauregard need not have been hampered, in a country which all the generals have declared abounded in the essentials of food.

General Johnston's comments in the May CENTURY, on the commissariat, are unfounded. He "requested" an increase of provisions which his commissary alone could determine, and allowed the accumulation to go on for twelve days, after he knew that he had more than he wanted. When I was informed, I did what he should have had done—telegraphed the shippers to stop. Two weeks before his move he promised my officer, Major Noland, the transportation deemed sufficient, and of which he had assumed direct control. Empty trains passed the meat which had been laid in piles, ready for shipment. Empty trains lay idle at Manassas for days, in spite of Noland's efforts to get them. General Johnston says the stores of the other departments were brought off. He burned up "hundreds of blankets and shoes, and three hundred new cavalry saddles."

L. B. Northrop.

CHARLOTTESVILLE, VA., December 16, 1885.

CHRISTIANITY AND POPULAR EDUCATION.

THE relation of Christianity to popular education is a parental relation. Christianity has always been the originator and promoter of education. Of the church, indeed, this must be said with some qualifications; for there have been periods when nothing in the world was more frightfully unchristian than the ecclesiastical machine. Christianity consists of the teachings of Christ, and of the life, individual and social, which is based upon his teachings and nourished by communion with him. Christian truth and Christian life were in the world when the ecclesiastical powers were the most corrupt and malignant—hiding sometimes in the fastnesses of the mountains, and waiting for the downfall of their persecutors. Even in these days it is a mistake to identify Christianity with the various ecclesiastical machines; the church often happens to be the very thing that needs Christianizing. If, therefore, it is true that the church at certain periods has shown scant favor to other than theological science, it is nevertheless true that the drift of Christian teaching and discipline has been toward the diffusion of learning.

The uniform testimony of the Sacred Scriptures is of this tenor. The value of knowledge is everywhere insisted on. It is, indeed, asserted that knowledge must rank below love; but if the Scriptures seem to disparage knowledge, it is the knowledge that despises virtue. Every careful reader of the Bible knows that the value of intelligence as the foundation of character and the solid basis of national welfare is taught with iteration and emphasis in both Testaments. Neither is the knowledge thus praised exclusively religious knowledge. The man of the Biblical history most renowned for his wisdom, and most applauded for his pursuit of wisdom, was not conspicuously a theologian, but a man who seems to have mastered what was knowable in his time of the "humanities." This wisdom of Solomon's did not keep him from falling into an abyss of sensuality; but the record does not intimate that his fall was the fruit of his learning; it was rather in spite of his learning. His wisdom is always commended and never censured. The Bible, the Christian's text-book, may be claimed as the friend of learning.

Even in the ages of darkness, when the Bible was not in the hands of the people, the churches and the monasteries kept alive what learning was left in the world. Through all

this period the councils of the church steadily required the clergy to provide gratuitous instruction for the young. Theodulph, one of Charlemagne's bishops, issued the following instruction to his clergy: "Let the elders establish schools in towns and villages, and if any of the faithful wish to intrust to them their children to be taught letters, let them not decline to receive and teach them, but with the utmost care instruct them. And when they thus teach, let them take from them no recompense for their service, nor accept anything from them, except what parents, in the exercise of charity, of their own accord may offer them." This epistle of Theodulph is a fair sample of numerous admonitions addressed during these times, by councils and dignitaries, to the inferior clergy. Charlemagne himself gave orders that schools be opened everywhere "to teach children to read," and that "in every monastery some one teach psalms, writing, arithmetic, and grammar." The great King's zeal for learning is noteworthy when it is remembered that his literary acquisitions stopped short with the art of reading, and left room for a dispute among the historians as to his ability to write his name. The reasonings of his decree show how closely he connects learning and religion; he urges that, just as good conduct is prescribed by a definite rule, so also must teaching and learning be systematically carried on, "that those who seek to please God by right living may not neglect to please him also by right speaking."

The Reformation was itself at once the effect and the cause of a great revival of learning. Erasmus, the hero of the Renaissance, and Luther, the hero of the Reformation, were both apostles of the new education. The right of private judgment implied the necessity of the universal diffusion of knowledge, and both Luther and Melancthon wrought strenuously toward this end. The founders of New England, Protestants of the Protestants, by no means forgot this corollary of Protestantism; their history shows on every page how great was the estimation which they placed upon knowledge, and how close was its relation in their minds with religion. Within thirty years of the landing of the Pilgrims education had been made compulsory in every colony except Rhode Island, and this was done, as their law declared, chiefly with the purpose of circumventing "that old deluder Sathan,"

who seeks "to keep men from the use of the Scriptures by persuading them from the use of tongues."

It is scarcely necessary to trace the close connection between the church and the school in the early New England commonwealths. From these came forth the impulse which has made education universal all over the Northern States of this Union; so that its schools are the earliest care and the loudest boast of every sprouting emporium and every noisy mart; so that the pioneer's axe loses its virgin edge upon the timber of which the log school-house is builded; and the ambitious piles of brick or stone, devoted to the education of the people, rival, in all the centers of commerce, the warehouses and the elevators and the factories.

That the motive of education is, in these latter days, much less frankly religious than it was in the days of the Pilgrims, must be admitted. The reasons given in the town meeting and in the city council, when appropriations are urged for public schools, are not the kind of reasons that would have been suggested in Plymouth or in Salem two hundred and fifty years ago. The reasoned basis of popular education in the popular mind is twofold: it includes philanthropy and self-defense. A considerable number of our citizens recognize the latter as the only admissible ground on which a public-school system can rest. Philanthropy they do not believe in; or, at any rate, they contend that the state has no right to go into the business of philanthropy. But the right of self-preservation does belong to the state; and if popular ignorance threatens its security, and even its very existence, then the state has the right to provide and even to require popular education. That this is a valid basis of state action on the subject, so far as rights go, will not be disputed. Whether the education which proceeds from this as the principal motive is likely to be effective in the development of the highest character in the citizens so educated would be an interesting inquiry.

But the philanthropic motive is present in the minds of many of those who advocate the education of the people. Their desire is not merely to avert a peril from the state, but to confer a benefit upon the pupils. Mr. Mill affirms, in his essay "On Liberty," that the failure to provide for a child "instruction and training for its mind is a moral crime both *against the unfortunate offspring* and *against society*" (p. 204). This is a recognition of the child's rights, and Mr. Mill goes on to say that the state ought to secure to the child his right to education. The love of equal rights, and the disposition to give every human being

a fair chance, is still, let us trust, an influential motive in the minds of those who advocate popular education. And this motive is the fruit of Christianity. Look on this picture, painted by the author of *Gesta Christi*, and ponder his comment:

"Schools are open to all. The rich are forced to give of their abundance for the education of the poor. Not only are common schools open to every class, but higher schools and colleges of learning are provided for the masses. Even laws are made compelling attendance, and provisions are made by individual charity for those who are poor and ill-clad. This is one of the most remarkable fruits of this religion in modern times. It is a forcible distribution of wealth to confer the highest possible blessings on the needy. It is a confession of society that the most ignorant, degraded, and destitute person is a brother of the most fortunate, and must have every opportunity to exert his powers. If one could imagine the proposition made to the archai of Athens to tax the rich in order that the helots might learn to read the Greek classics, or a measure before the Roman Senate to set apart a new revenue for providing teachers for the plebs and the slaves, one could rightly measure the progress of the Christian sentiment of equality in these eighteen centuries."

That popular education, as it exists in this country, is the offspring of the religious sentiment, is matter of history. But, like many another unfilial child, education has shown a strong disposition of late to disown and desert her mother. The tendency has been gaining strength to withdraw education from all association with religion, to eliminate religion wholly from education, and to claim for education all the saving virtues of which society has need. There are those who think that the diffusion of science and literature will prove a sufficient agency for the promotion of the welfare of the state; and that the learning thus diffused not only may be but must be separated from everything that bears the semblance of religion.

I have not mentioned this demand for the entire secularization of our schools for the sake of opposing it at this point in the argument, but rather for the sake of calling attention to a manifest deterioration of public morals which has kept even pace with this secular tendency in education. Twenty-five or thirty years ago most of our public schools were under Christian influences. No attempt was made to inculcate the dogmas of the Christian religion, but the teachers were free to commend the precepts of the New Testament, in a direct, practical way, to the consciences of their pupils; and some of us remember, not without gratitude, the impressions made upon our lives in the school-room by the instructors of our early days. All this has been rapidly changing; and, contemporaneously, it is discovered that something is wrong with society. Grave dangers menace its peace;

ugly evils infest its teeming populations. Pauperism is increasing. The number of those who lack either the power or the will to maintain themselves, and who are therefore thrown upon the care of the state, is growing faster than the population. The cure of this alarming evil is engaging the study of philanthropists in all our cities. Crime is increasing. The only State in the Union that carefully collects its moral statistics brings to light some startling facts respecting the increase of crime within the past thirty years. In 1850 there was one prisoner in Massachusetts to every eight hundred and four of the population; in 1880 there was one to every four hundred and eighty-seven. The ratio of the prisoners to the whole population nearly doubled in thirty years. But it may be said that this increase is due to the rapid growth of the foreign population in Massachusetts. There would be small comfort in this explanation if it were the true one; but it is not the true one. The native criminals are increasing faster than the foreign-born criminals. In 1850 there was one native prisoner to every one thousand two hundred and sixty-seven native citizens; in 1880 there was one native prisoner to every six hundred and fifteen native citizens. The ratio of native prisoners to the native population more than doubled in thirty years.

And this, be it remembered, is in Massachusetts—the State in which education of every kind, public and private, has been longer established, and is more munificently endowed and more thoroughly administered, than in any other State of the Union. Massachusetts expends, through her public schools, for the tuition of every pupil enumerated in her school population, nearly sixteen dollars a year. Added to this public provision is the great array of universities, colleges, academies, and seminaries, amply endowed, far surpassing those of every other State in number and in excellence. What education can do to promote morality has been more thoroughly done for Massachusetts than for any other American State. Nevertheless, the statistics show an alarming increase of the vicious and dependent classes in Massachusetts. There is no room for supposing that the case of Massachusetts is any worse than that of the younger commonwealths. Those who have had opportunities for observing the conditions of society East and West will not be inclined to believe that the morals of the old Bay State are any lower than those of New York, or Ohio, or Illinois. If other States would collect the facts as carefully, and publish them as fully, we should see similar conditions existing everywhere.

Neither is it necessary to draw from these

facts any pessimistic inferences as to the general decadence of society. This retrograde movement, we may well believe, is local and temporary. The causes out of which it arises may be discoverable and avoidable. What they are is a question to which the social philosophers, big and little, are devoting much study. Mr. Henry George has his theory of the increase of pauperism; and since pauperism and crime are closely linked together, the one evil cannot be explained without uncovering the causes of the other. The Socialists, not content to stop at Mr. George's half-way house, go far beyond him with their philosophy and their remedy. The Protectionists have their theory of the case, the Free-Traders theirs, the Prohibitionists theirs. Besides these there are not a few who, in looking more deeply for the sources of these increasing curses, are inclined to lay the responsibility for them at the doors of our schools. If the schools were what they ought to be, they say, these streams of baleful influence would be dried up at their sources, instead of overflowing the land. The only radical cure of these mischiefs is the reform of our educational system.

The explanation last named is partial, and the censure which it implies is too sweeping. If any man believes that popular education is the panacea for all political and social disorders, he must, of course, believe that the present disorders are due to a defective system of education; but one who does not expect the regeneration of society from methods purely educational, will not be so ready to arraign the schools as the authors, by commission or omission, of the social depravity now existing. If the methods of education had been faultless, and other causes which have been all the while operating had continued in operation, we should, very likely, have witnessed an increase both of pauperism and of crime. This accursed harvest springs from more than one kind of sowing, and will not be extirpated by any one kind of implement. The growth of the vicious and dependent classes is due to many causes.

A defective industrial system has something to do with it. The relations of capital and labor are not what they ought to be. The strife between them is unnatural, and it has been fostered by a bad political economy which erects selfishness into the supreme rule of human action. Any one who thinks that it makes no difference what men believe is commended to a careful study of the influence of certain economical theories upon the relations between employers and employed. In cases of this nature temper is a great matter; and the temper engendered by the current

economy is the reverse of Christian. The collisions and conflicts that grow out of this evil temper have produced a certain portion of the increase of pauperism and crime.

Another cause is the massing of the populations in cities and in great manufacturing centers, where multitudes are deprived of the sacred restraints of home, and depraved for the want of them.

The great fluctuations of industry produced by changing fashions and by sudden and brief rages of one sort or another, creating demands for labor that quickly blaze up and are as quickly extinguished, will account for part of it. This shifting, uncertain life that our artisan classes are largely compelled to live is not friendly to morality.

The influence of immigration upon morality is suggestively set forth by Mr. W. T. Harris:

"All parts of Europe and some parts of Asia are sending us their immigrants. Each immigrant brings some peculiar moral habits which clash with our own. The result is that each and all, immigrants and natives, have to learn tolerance. But moral punctilios cannot be trifled with safely. When people are politically compelled to be tolerant of petty customs that they believe to be immoral, there follows a relaxation of genuine morality itself. Even when a false, bigoted prejudice that has rooted itself among the moral virtues is pulled up, the cardinal virtues themselves suffer injury."—*Journal of Social Science*, xviii., 122.

Heredity, too, is a great factor in the production of pauperism and crime. The paupers and the criminals bring forth with great fecundity after their kind, and a careless pseudo-charity has encouraged them to persevere.

Above all, deplore it as we must, it is the historical fact that the rapid increase of wealth in any country is always accompanied by the lowering of the moral standards. The most pernicious class of youth in America to-day is largely recruited from the children of the new rich, who are debauching themselves and corrupting those about them with fearful energy. And the schools are not chargeable with the existence or the mischief of these youthful malefactors. They have little to do with the schools, except to infect them with their own idleness and vice; and the better the schools are, the less likely such pupils are to remain in them for any length of time.

There are reasons enough, therefore, for the deterioration of public morals outside of the school-houses. Against all of these evil tendencies of which we have been speaking the schools, with all their imperfections, lift up a barrier. They promote industry and thrift and self-support. They check, measurably, the increase of crime. Just as they are, they exert a salutary influence upon society.

Nevertheless, it is altogether possible that this depravation of morals is due in part to defects in our systems of education. Our schools have counteracted these evils to some extent, but much less effectively than they might have done. The best possible system of education would not have prevented them all, but it would have prevented more of them. The increase of pauperism and crime would have been less rapid and alarming if our schools had been more wisely organized and conducted.

It may be, therefore, that this unfilial daughter, having learned by experience that she is not sufficient of herself for the regeneration of society, will welcome a word or two of admonition from the mother whose counsels she has of late rather testily rejected. Suffer it she must, if she do not welcome it; for Christianity will by no means abdicate her right to deliver her testimony on this and every other subject that deeply concerns the public welfare.

The first demand that Christianity has to make respecting popular education, is that it be directed toward the formation of character rather than the communication of abstract knowledge. And inasmuch as character is largely developed by work, the intelligent Christian will insist that our public schools ought to give a great deal more attention than they ever have done to industrial training.

It may be supposed that the attempt to make Christianity responsible for such a demand as this is strained and extravagant. Doubtless there is a sentimental sort of Christianity by which "secular" interests of this sort are little regarded, but it is not the Christianity of Christ nor of the apostles. When we reflect that every Jewish boy was compelled to learn a trade; that the Founder of Christianity was himself a carpenter; that the greatest of the apostles maintained himself by the labor of his own hands, and most explicitly laid down the law to the converts in the churches that he founded, "If any man will not work, neither shall he eat"; that, in the frankest contrast with the great teachers of Greece, like Plato and Aristotle, who declared all labor to be degrading to a freeman, the Christian fathers, from the very first, sung the praises of self-supporting industry, and pronounced idleness disgraceful, we readily see that the interest of a genuine Christianity in the industrial training of the young is neither affectation nor afterthought.

The feeling that something ought to be done by the public schools in the way of industrial education has been gaining force for several years. "Mercantilism" has laid its hand heavily upon the common schools; and the training provided by them has largely

ministered to the love of trade. Much of this has been unintentional and even unconscious; mercantilism is in the air, and it insensibly pervades our schools, and our school-books, and the traditions and methods of education. A boy comes out of the grammar school pretty well qualified to be a clerk, but with very little preparation for any of the handicrafts. It begins to be a serious question whether the state ought to devote so much time to the training of traders; whether it might not be wiser to afford instruction that shall turn the minds of the young in other directions also. The great majority of the pupils in our grammar schools will earn their livelihood by manual industries of one sort or another. Is it not well to recognize this fact in our systems of education, and to shape our courses of instruction in such a way that they may serve the needs of pupils of this class?

It is sometimes said that the state owes to its children only the rudiments of a general education; that it ought to equip every citizen for the discharge of his political duties, but that it is not under obligation to teach men trades or professions; that the state is going a step too far when it undertakes to make men lawyers, or doctors, or carpenters, or machinists. The objection is valid. It is not the function of the state to furnish technical or professional training. But there is an industrial training which is neither technical nor professional; which is calculated to make better men and better citizens of the pupils, no matter what calling they may afterward follow; which affects directly and in a most salutary manner the mind and character of the pupil, and which will be of constant service to him through all his life, whether he be wage-worker, or trader, or teacher, or clergyman. The training of the eye and of the hand are important and essential elements in all good education. These elements the state is bound to furnish.

The question immediately arises, how much can be done in the common schools to promote industrial education? Some experienced educators insist that nothing can be done; that no time can be found for such instruction in the already over-crowded curriculum of the common school; that the attempt would introduce confusion; that if anything is done, it must be through the establishment, by voluntary agencies, of separate industrial schools, in which pupils may receive training out of school hours, or after they have completed the common-school course.

To these objections it may be answered that a little heroic surgery upon the swollen curriculum of the common school would be extremely healthful. In the graded schools of

our cities the average pupil who completes the course spends from eight to ten years in studying arithmetic. It must be possible to reduce this time considerably, by the condensation and simplification of text-books. The same may be said of geography and of grammar. Time enough could thus be gained for such purposes, with great advantage to the schools.

It is sometimes proposed that the industrial training of the public schools should be confined to the pupils of the high schools. But this would greatly restrict the advantages of such training, inasmuch as but a small fraction of those educated by the state reach the high schools. Moreover, the majority of the boys who enter the high schools are already strongly inclined toward commercial or professional callings; and the industrial education there offered them would, for this reason, be less welcome to them, and less influential in guiding them toward skilled or productive industries. It would undoubtedly be well to connect an industrial course with the high school; but the greatest benefit of such instruction would be gained by the pupils of the two highest grades of the grammar schools. The average age at which pupils leave the grammar school is fifteen; between the ages of thirteen and fifteen instruction of this kind can be most successfully imparted. This is precisely the age at which boys are apt to be restless and insubordinate; a little manual work in connection with their studies would afford vent to their surplus energies, and prove a valuable aid in maintaining discipline.

The foundation of this industrial training is drawing, which is now taught in many of our public schools, and which ought to be made compulsory in all of them. No branch of study now included in the common-school curriculum is more "practical" than drawing. At the basis of all mechanical work lies the art of mechanical or projection drawing; at the basis of all industrial art lie the arts of design. The man who is to follow any kind of handicraft, or who is to be engaged in the production of any fabrics or articles that have form or color, whether it be spades or shoes, or chairs or wheelbarrows, or wagons or plows, or hats, or harnesses, or houses, needs to have his eye and his hand trained in learning to draw. A number of young men in a machine-shop lately came to the draughtsman in that shop and asked him to give them lessons in mechanical drawing. They were beginning to see, what neither they nor their parents could have been made to understand while they were in school, that no man can be a first-class mechanic in any of the trades who does not know something of mechanical drawing.

The application of art to industry is steadily extending into all departments of work. The commercial value of almost everything that is made is affected, more or less, by its artistic form. The commonest tool or utensil is more desirable if it is shapely and symmetrical. Therefore, the arts of design are constantly coming into play in all mechanical or manufacturing industries, and every workman needs instruction in them.

Even those who are to follow mercantile or professional callings are finding use, continually, for knowledge and skill of this sort, and are often greatly disabled for the lack of it. Who is there that does not need, every month of his life, the power to make an intelligible representation with the pencil of something that he wishes to describe, or of something that he desires to have constructed? A little elementary training in drawing when he was a child would have given him this power; the want of it is a constant source of regret and annoyance. The notion that drawing is a mere "accomplishment," an ornamental branch of education, can be entertained by none but the ignorant. Nothing is taught in our schools the utility of which is more obvious.

The foundation of industrial education is thus laid in many of our common schools through the introduction of drawing. All that is needed is that the work in this department should be more thoroughly done.

In addition to this, instruction should be given in the use of the common wood-working tools, such as the hammer, saw, plane, chisel, and gouge. One of the rooms of every grammar school should be a shop, fitted up with work-benches and the requisite tools; and a capable mechanic should be placed in charge of it, as one of the regular corps of teachers. From four to six hours a week in the shop would be sufficient for each pupil; and the boys of a large school could be divided into classes, so that a single instructor could easily manage them all. In two years of such training, under a competent teacher, the use of these common tools could be acquired, and a practical skill in construction and in the manipulation of materials, which would be of the greatest advantage to all pupils, no matter what callings they might intend to follow, and which would give to many of them suggestive hints in the choice of a calling.

It is probable that to these simpler wood-working tools lathes might sometimes be added, and that the simplest processes of iron-working might also be taught. The girls in the same schools should receive thorough instruction in plain sewing and in ornamental needlework, and might also learn modeling in clay. The details of the plan are yet to be

adjusted; but the need of introducing this kind of instruction into the common schools of our cities is already so obvious that the working plans must soon be forthcoming. In the smaller country district-schools the difficulties would be greater, but there, happily, the need is less. The boys and girls in these schools have plenty of chance for industrial training.

Already the matter has passed beyond the stage of theory, and successful experiments have been made in several places. In connection with Washington University, in St. Louis, is a school for manual instruction in which this plan of giving a broad general training in the various processes of mechanical work has been carried into operation with great success. In this school three hours of every day are devoted to books, one hour to drawing, and two hours to work with tools. The three years' course is about the same as that of the ordinary English high school, with the manual instruction added. In the first year the pupils learn the use of the wood-working tools, including the lathe; in the second year they work at the forge, learning the various manipulations of wrought iron, and also take some practical lessons in molding, casting, soldering, and brazing; in the third year they go into the machine-shop, and are drilled in bench work and fitting, turning, planing, screw-cutting, etc. More than two hundred boys are receiving instruction in this school.

In Toledo, Ohio, a manual training school has been established in connection with the public schools, to which pupils from the senior grammar grade, and from the first year of the high school, are admitted. In Gloucester, Massachusetts, in Boston, and in Montclair, New Jersey, similar schools have been connected with the grammar school, for pupils from eleven to fifteen years of age. The report from all these quarters is highly encouraging. The practicability of combining manual with intellectual training seems to be clearly indicated by these experiments.

The advantages claimed for this combination by Professor Woodward, of the St. Louis school, are briefly these:

- "1. Larger classes of boys in the grammar and high schools. 2. Better intellectual development. 3. A more wholesome moral education. 4. Sounder judgments of men and things. 5. Better choice of occupations. 6. A higher degree of material success, individual and social. 7. The elevation of many of the occupations from the realm of brute, unintelligent labor, to one requiring and rewarding cultivation and skill. 8. The solution of 'labor problems.'"

With several of these anticipated results the present discussion is not directly con-

cerned; but they must all be regarded as beneficial; and the reasons given by this distinguished educator for expecting them to follow are based not only on a sound philosophy, but on a large experience. The fact that the intellectual development of pupils thus trained is not retarded but greatly quickened by the combination of manual work with their studies, appears to be established. The boys and girls of the half-time schools in England, who spend part of the school hours in labor outside the schools, easily keep up with those who devote to their studies twice as much time. And these pupils are generally engaged in laborious and monotonous employments, far less attractive and stimulating than those of the manual training school.

One of the best effects of this method is seen in the awakening of pupils who, in their text-book studies, are dull and incapable, but who find in the manual work something in which they can excel. This puts them on better terms with themselves, with their teachers, and with the school; and the self-respect and hope thus inspired lead them to attack their mental tasks with a better resolution. Professor Francis A. Walker, in an excellent paper read before the Social Science Association, speaks strongly of this result of manual training in schools.

That the school discipline would be more easily maintained under this system, I have already suggested. This must result from "a more wholesome moral education"; and Professor Woodward can tell us how surely this is secured by the industrial method:

"To begin with, I have noted the good effect of occupation. The programme of a manual training school has something to interest and inspire every boy. The daily session is six full hours, but I have never found it too long. The school is not a bore, and holidays, except the name of the thing, are unpopular. I have been forced to make strict rules to prevent the boys from crowding into the shops and drawing rooms on Saturdays and after school hours. There is little tendency, therefore, to stroll about, looking for excitement. A boy's natural passion for handling, fixing, and making things is systematically guided into channels instructive and useful, as parents freely relate. . . . Gradually the students acquire two most valuable habits, which are certain to influence their whole lives for good—namely, precision and method. As Professor Runkle says: 'Whatever cultivates care, close observation, exactness, patience, and method, must be valuable preparation and training for all studies and all pursuits.'"

That the judgment would be educated by such practical lessons; that labor itself would be dignified and elevated; that the skill and facility thus acquired would render him who acquires them more versatile, more fertile in resources, and less liable to be stranded in dull times and when industries are constantly

shifting, are predictions that do not greatly tax our faith. That the salutary effect of the introduction of the system upon the moral as well as the material welfare of the whole country would be clearly visible before many years, appears to me indubitable. The French Imperial Commission, appointed several years ago to examine this question, visited Belgium and studied the effects of the apprentice schools then in operation. At that time fifty-four of these schools had been established in that kingdom, and the commission testifies: "The official reports published in Bruges, in 1863, show that everywhere instruction and habits of regular employment have produced the most successful results in improving the morals, not only of the children, but also of the parents, and that mendicity and vagrancy have almost entirely disappeared from those districts" in which these schools have been founded.

This, then, is the first admonition that an intelligent Christianity must leave with those who direct the policy of our schools. You have been building on a foundation too narrow; you must enlarge your basis; you must learn that character is the principal thing, and that character is the result of a harmonious development of all the powers—of the eye and the hand and the practical judgment and the will, as well as of the memory and the logical faculty; and you must not forget that industrial training affords a discipline almost indispensable to the right development of character.

But if the Christianity whose chief concern is righteousness has a right to reprove our state educators for having omitted to furnish this indirect but most effective method of moral discipline, much more has it the right to rebuke them for their gross neglect to provide direct and systematic methods of moral education. The failure to awaken and develop the moral nature of the pupils in our schools is notorious and disastrous. Moral training has become altogether secondary; the attempt to secure it is but feebly and uncertainly made.

I have before me a consolidated list of examination questions presented to teachers by county boards of examiners in the State of Ohio. This list is said to include "the whole range of the questions sent in [to the State Board] by the examining boards of the several counties," and it undoubtedly presents them in fair proportion also. Running the eye over them, it becomes evident at once that while the ability of these intending teachers to impart instruction on all other subjects is fully tested, there is very little effort made to find out what their purposes and ideas are respect-

ing the moral training of their pupils. Upon theory and practice of teaching there are one hundred and fourteen questions; upon orthography, forty-eight; upon reading, thirty; upon penmanship, twenty-four; upon grammar, one hundred and six; upon arithmetic, one hundred and four; upon geography, one hundred and sixty-two; upon history, nineteen; upon physiology, seventeen; upon civil government, ten; upon book-keeping, ten; upon algebra, eighteen; upon physics, twenty-eight—six hundred and ninety questions in all. Of these, two questions, under the head of "theory and practice," refer to the development of moral character—these two, namely: "Do you teach morals and politeness?"—as if it were optional with the teacher whether he would do so or not,—and, "How would you undertake to cultivate the morals of your pupils?" Now, when the State in its inquiry into the qualifications of teachers makes the ratio of morals to other subjects as two to six hundred and ninety, we could hardly expect the teachers whom it employs to be very thorough or enthusiastic in imparting moral instruction to their pupils.

As a matter of fact, we get a great deal more moral teaching in our schools than this astonishing exhibit would indicate. Many of the teachers recognize their responsibility in this matter, even if the state does not enforce it upon them; and they find ways of impressing the truths of morality upon the minds of their pupils. In their conventions and institutes, the question of moral instruction is often earnestly debated. On the whole, it is rather surprising that teachers should manifest so much interest in this matter, when those who employ them appear to care so little about it. It is not at all to be wondered at that many of the teachers are utterly remiss in this part of their duty, and that the moral education of the young in our public schools is, in general, sadly neglected.

Mr. Harris, in the essay to which reference has been made, points out that certain of what he calls the mechanical virtues, such as punctuality, regularity, and obedience, are taught quite effectively in the discipline of the school. Cleanliness, also, which comes near being a theological virtue, is pretty faithfully inculcated in the lower grades, while the whole regimen of the school ought to be a steady exercise in truth-telling. These are important results, and they are a necessary outcome of the law of the school. For all of this let us be duly thankful. But beyond these are wide ranges of conduct in which children need careful and systematic instruction. The great duties of self-control—the duty of temperance in the indulgence of

all the appetites, of restraining the passions, of ruling the spirit; the social duties of honesty, and justice, and fidelity to trusts, and courage, and honor, and magnanimity, and neighborly kindness, and toleration, and sympathy, and charity; the sacred obligations of citizenship—all these, and many others, ought to be diligently impressed upon the consciences of children in school. The statute of Massachusetts sets this matter forth in large and noble characters:

"It shall be the duty of the president, professors, and tutors of the university at Cambridge, and of the several colleges, of all preceptors and teachers of academies, and of all other instructors of youth, to exert their best endeavors to impress on the minds of children and youth committed to their care and instruction the principles of piety and justice, and a sacred regard to truth; love of their country, humanity, and universal benevolence; chastity, moderation, and temperance, and those other virtues which are the ornament of human society and the basis upon which a republican constitution is founded; and it shall be the duty of such instructors to endeavor to lead their pupils, as their ages and capacities will admit, into a clear understanding of the tendency of the above-mentioned virtues to preserve and perfect a republican constitution, and secure the blessings of liberty, as well as to promote their future happiness, and also to point out to them the evil tendency of the opposite vices."

What this lofty statute demands is not only possible, it is the very first and highest matter to be cared for in every system of education, public or private. With all their other gettings, the children of our schools ought to get, and may get, a clear understanding of these great matters. Doubtless, as I have said, many conscientious teachers endeavor to impress moral truths on the minds of their pupils; but what is done is done in a desultory and uncertain fashion; no systematic attempt is made to develop this part of the child's nature.

It is sometimes denied that morals can be taught from books, and asserted that such teaching is best when it is incidentally rather than formally conveyed. I am not yet convinced that this is true. The objection proceeds upon the theory that morality is something altogether transcendental and mystical, and cannot, therefore, be didactically treated. It is true that what Professor Shairp calls "the moral motive power" is a personal force rather than a formula; nevertheless, there are great truths of morals which are scientifically verifiable; laws which are as well established as the law of gravitation, or the law of the trade winds; laws which can be stated so clearly and simply that the average boy or girl of twelve or fourteen can perfectly understand them. The pupils of our schools need to have these truths put into their minds, in clear statements, that they may be remembered as guides of conduct in coming years.

The law of veracity, for example, with the natural and inevitable rewards and penalties annexed to it, is capable of a perfectly clear statement. This law can be scientifically verified. All the experience of life will tend to its verification. Get it once lodged in a boy's mind, and he can no more get away from it than he can get away from the laws of motion. Now I think it is a great deal more important to get that law fixed in a boy's mind than it is to teach him the process of extracting the cube root, or to instruct him in the law of storms, or the law of ocean currents. I doubt whether many of the pupils of our public schools ever do get that law fixed in their minds. They know, in a general way, that it is wrong to lie; but the eternal reasons for veracity, and the sure penalties of mendacity, they do not understand. To give them these truths in simple propositions; to show them the facts on which these propositions are based; to point out to them the operation of the moral laws, as you point out to them the operation of the physical laws or the physiological processes of digestion — this would be to many of them an inestimable service. They would remember the law; their observation would constantly confirm it; and it would influence their conduct all their lives long.

Precisely the same thing may be said of all the other great laws of conduct. They may be clearly stated, and their natural rewards and penalties indicated; and the state is bound to give this kind of instruction, whatever else it may withhold. To leave so great a matter as this to the teacher's option, and allow him to give moral instruction incidentally, as if it were not a matter of prime importance, is to disparage and degrade the whole subject in a fatal manner. We are bound to dignify it by making it a part of the regular course of study.

Suppose the teacher tells the pupil, casually, these truths of morality of which we have spoken. The pupil is likely to take them as the teacher's individual opinion. If the pupil has great confidence in the wisdom of the teacher, these truths may make a deep impression on his mind; if he has not, they will make very little impression. In any case, they will not come to him as the ascertained and established facts of science, as truth that has been verified by observation and experiment. That is the way in which they ought to come to him. The moral laws ought to be put upon an equal footing, in the pupil's intelligence, with the laws of physics or physiology.

It is sometimes supposed that no effective moral teaching is possible, save that which refers to the Bible as authority. This is a great mistake. Doubtless many of us would rather have the Bible taught in the schools as the text-book of morals — if it could be intelligently taught — than any other book. But this is not possible. And, although no other knowledge of morality can be so good as that which would be gained by a reverent and intelligent study of the Bible, yet a knowledge of the great moral laws and their penalties, sufficient for the practical guidance of men in earthly affairs, can be gained from the experience of men and the study of human nature. The moral laws revealed in the Bible are also impressed upon the nature of man. They were in full force and effect before the Bible was written. As soon as moral beings began to exist in their present relations these laws began to operate. The facts of morality are stated in the Bible because they are true; they are not true because they are stated in the Bible; they were true before a word of the Bible had been uttered. Every law of the decalogue, as my old teacher of morals, President Hopkins, always insists, is a natural law. Surely there can be no objections to teaching natural law in the public schools; and of all natural laws, those which relate to conduct should first be taught by the state. The neglect to provide this kind of teaching is sheer fatuity; every citizen who is a Christian, and who believes that righteousness is the principal thing, is bound to cry out against it, and to demand, unceasingly, that this great defect in our systems of popular education be remedied without delay.

The systematic and intelligent teaching of morals in the public schools would, undoubtedly, accomplish much good. Nevertheless the fact must not be overlooked that truth of this kind, to be most effective, must be vitalized by a genuine religious faith. Religion is the inspiration of all highest morality. And while religion cannot be taught in the public schools, those teachers who possess this faith may, without any dogmatic instruction, impart it to their pupils. "It is for the teachers," says Mr. W. T. Harris, "not to claim to introduce formal religious ceremonies, but to make all their teaching glow with a genuine faith, hope, and charity, so that pupils will catch from them their view of the world as the only view that satisfies the heart and the intellect and the will."

Washington Gladden.

STRIKES, LOCKOUTS, AND ARBITRATION.

HISTORY records numerous instances where different divisions of the same army have by mistake fired into each other in the darkness. Not less sad blunders are sometimes made by labor and capital in those battles which find expression in strikes and lockouts. Labor and capital are each as necessary to the other as the two wings of a bird. Cripple either wing, and the other is useless. Neither labor nor capital can rise alone. In this paper we shall not attempt a dissertation on the politico-economic relations between these interests. We prefer to treat of some of the causes and cures of their troubles, and to deal directly with preventives which may help clashing interests to conserve themselves.

But first consider some of the moral questions involved in a labor trouble where a thousand hands are out of work. Their aggregate daily pay of perhaps one thousand four hundred dollars is a small share of the loss where hunger and cold, sickness and death result. Money values are pitifully powerless to measure that. All this is small, compared to a side of the question usually not even considered — the moral value of being employed. Very often to give one young man or woman honest employment is to save that one, body and soul, and to save the community care and cost. This is vividly illustrated by the well-known story of a friendless girl who, about three generations ago, was thrown upon the world and not cared for. Her children and children's children came to number over a hundred, desperate and dangerous men and women of crime. No record of earth can tell how many a bright young man or woman thrown out of employ by the labor trouble has thus become a center of equally dark and ever-widening circles. For these reasons and such as these, inconceivably great responsibility rests on all concerned in the labor question. It will not do to attempt to hide behind corporate action. Stockholders cannot be too careful of the power vested in the votes their stock represents. A labor cyclone may bring bitter regrets because officers and managers were not made to feel the personal influence of stockholders, exercised by word and letter, and presence at board-meetings. It is not improbable that the storm at Pittsburgh a few years ago, or the more recent telegraph strike, would have been averted if stockholders had been more vigilant.

Capital is probably as often right as labor. Through a blindness hard to understand, labor frequently stands in its own light. Here, again,

individual responsibility in many of the fearful relations above suggested must be assumed by any who in anger, stubbornness, or thoughtlessness start these labor troubles, or fan their flames after they are kindled. That man's heart is not in the right place who is willing on light occasion to "let loose the dogs of war" in a strike; who is not more than willing to favor a peaceful solution. It were better to do our duty in these lines of action in time than, too late, to be rudely awakened from dreams of fancied security by violences perpetrated by mobs made up of the dangerous classes, who prowl like hyenas, waiting to make labor troubles the occasion of looting, violence, and lust. The police know that often those who lead in these times are not so famous for mechanical skill or industry as for recklessness and criminal practices. Not infrequently communistic gatherings are where they originate. Yet these very gatherings, we may note in passing, are not always so intractable as they are supposed to be. Not many months ago, a lady who is president of one of our State Peace Societies quietly went into one of these socialist meetings, and, after listening awhile to their turgid expressions, asked leave to say a few words. She then laid before them a more excellent way. They heard her respectfully, and accepted her advice. This may be a straw showing the direction which can be given to a wind supposed to blow nobody any good. Judicious conference with socialists was thus shown to have a mission. All possible safety-valves should be in action in these dangerous days.

Over-concentration of population in cities and towns is one of the most fruitful sources of evils which find expression in strikes and lockouts. The latter are like the steam-gauge, indicating pressure — not the explosive steam itself. Securing continuance in rural life by those whose home is in the country, and as far as practicable turning others from town life to the country, is the best relief to that pressure. This abnormal concentration is subversive of the best interests of both labor and capital.

Young men enjoying independent life on mountain and prairie farms cannot be told too often, or with too much emphasis, that commercial records show that only three men in a hundred succeed as merchants, while ninety-seven go to the wall. A small proportion of those who go from the country to the city succeed in getting clerkships. Few of these have the grip or opportunity to become merchants, and we have just seen how unen-

viable is the lot of even those who reach that point. A small percentage of the thousands flocking to cities, like moths to a candle, succeed in getting the average net pay realized by men and women on farms. Deduct excess of cost of food, fuel, and more expensive clothing, rents, and the drain of long periods of being unemployed, from the seemingly higher city wages, and there is a heavy balance *per capita* in favor of country life. A much larger proportion become proprietors of homes in the country than in the city, and such proprietorship is a powerful bulwark to both labor and capital.

In proportion as farming is made attractive in scientific and æsthetic points of view, will it retain intelligent youth now engaged in it, and draw others from the city to it. Infusing into it the finish and thoroughness of French and especially Belgian methods will make the small farm sufficient for the support of a family. Practical development of the small farm idea makes it more possible for city life to be exchanged for that of the country. There are a thousand city people who could raise money to buy and work ten acres, where there is one who could buy a hundred acres. Of over three million farms in France, only about ten per cent. exceed five acres apiece in extent. Yet the French farmers were chiefly the people who paid the German indemnity, after the fall of Napoleon III., so quickly as to astound the financiers of Christendom. Sure we are, after traversing France from Calais to the Alps, that we have never seen rural life in Europe in more captivating light than among these people. Forestry is a strong point in making farming attractive. It creates the need of forest engineers, such as are employed abroad. Thousands of young men would soon find work in such capacity, at good salaries, if they would fit themselves for it. They are needed now by counties, states, and railway and land companies. If we consider the proportion who succeed in law and medicine, on a scale commensurate with the idea of those who leave farms to go into these professions, we shall see the ratio is similar to that in merchandising. There are a hundred lawyers and doctors with scanty practice, to ten who can be considered as independent as the average farmer. In proportion as these points are practically comprehended, will there be measurable relief from overcrowded markets, low wages, and poor pay for investment of capital in mining and manufacturing.

It is an axiomatic proposition that there is "more money in peace than in contention." A recent Western lawsuit over a few fifty-dollar calves cost twenty thousand dollars. A

case in Philadelphia, known as "the kitten case," arose over possession of a half-grown cat. It grew into expensive suits and counter-suits, and more costly hate. The president of the Universal Peace Union consented in the latter case to act as a conciliative board of one. He was successful, and so helped to develop a factor in the peace problem of no mean significance. The settlement of "the kitten case" shows how petty strifes may be prevented from growing into larger ones, which in the aggregate constitute much of the sea of turmoil vexing the great labor interests. When people practice peace in small circles, they will do so in large ones. Usually one or both parties are self-deceived by specious ideas of "fighting for the right." They forget, or do not know, that disinterested lookers-on see that the reverse is true. This naturally suggests conciliation and arbitration among the potent preventives of strikes and lockouts, and their *causes*.

During a once threatened labor trouble, Daniel Webster made a speech in the interest of capital. In that speech he said in substance, and said impressively between clenched teeth, "When any man says the poor against the rich, mark him! mark him!" We say, "When any man, rich or poor, is unwilling to settle a labor trouble by fair, conciliatory arbitration, mark him! mark him!" Like the woman in Solomon's time who was willing to have the baby cut in twain, he is presumably in the wrong who is not willing to refer. Conciliation and arbitration — not arbitrary arbitration — have been fruitful of much good in the Old World. Trade guilds used it in mediæval times. In the early part of the present century, Napoleon devised and established the "Court of Peace" under the most perfect system of laws, framed by him to this beneficent end, which were ever enacted. Such courts are still widely and successfully used. Mr. Joseph D. Weeks says of this system of Napoleon: "These laws, with some slight modifications, have continued until the present under the title of '*Conseils des Prud'hommes*.' These councils," says Mr. Weeks, "are judicial tribunals constituted with the authority of the Minister of Commerce, through the chambers of commerce which are established at important trade centers of that country. They are composed of an equal number of employer and working-men members, each class electing its own representative, with a president and vice-president named by the Government. The authority of these councils extends to every conceivable question that can arise in the workshop; not only between the workman and his employer, but between the workman and his apprentice,

or his foreman. There is but one question they cannot settle—future rates of wages; but even this can be done by mutual agreement. Arbitration is compulsory upon the application of either, and the decisions of that court can be enforced the same as those of any other court of law. The workings have been beneficial to French industry, especially by conciliation, by which more than ninety per cent. of all cases brought before these tribunals are settled." In 1847 the sixty-nine councils then in existence had before them 19,271 cases, of which 17,951 were settled by conciliation in the private bureau, 519 more by open conciliation, and in only 529 cases was it necessary to have formal judgment. In 1850, of 28,000 cases, 26,800 were settled by open conciliation. There were at the close of 1874 one hundred and twelve councils in France. In 1878 there were brought before them 35,046 cases, of which 25,834 were heard in private, without a formal trial, and seventy-one per cent. were settled without a public hearing. Of the entire number of cases 21,368 were relative to wages, 4733 to dismissals, and 1795 related to apprentices. In 1883 over 263,000 cases were considered by these commercial tribunals. Of these a less proportion were carried on to the civil courts than were appealed there from lower civil courts. This satisfactory showing falls far short of expressing the great benefits of these councils to French industry, especially in removing *causes* of differences, or in preventing them from growing into disputes. Tribunals similar to those of France exist in Belgium. Their success has been less marked than in France, owing in part to the fact that they sometimes have criminal jurisdiction. The French councils are presided over by lay judges. They are tradesmen, merchants, or manufacturers, and are aided by clerks trained in this law. The claimants appear in person, seldom by attorney.

For over a quarter century, similar but voluntary boards have existed in England. Before the Nottingham system came into use in the hosiery industry, there had been desperate boycotting, also machinery smashing, with brutal beatings and even murders. Mr. Mundella was the prime promoter of the system, and the leading arbitrator under it. The Wolverhampton system was contemporaneous in its inception with the Nottingham, and was used among the builders. Here Mr. Rupert Kettle did good service as the leader. It succeeded better than the other, because its chairman had a casting vote. Pending arbitration under these and the French system work and wages go on.

The frequent and regular meetings of these boards of capitalists and laborers, as *equals*,

have good effects on both classes, or rather tend to obliterate class lines. The meetings are informal, and rich and poor sit around the same table like friends at a social debating club. Meetings being regular prevent delay in settlements. "Delay is dangerous." It causes irritation and makes the parties less and less in a spirit to listen to reason and be influenced by kindness.

The clear-cut, intimate knowledge all parties secure of facts and philosophies connected with their trades is a great advantage gained by these boards. Not only the members of the boards, but, through them, their constituents get information which gives them poise. Thus they all learn salient conditions of their special industry in various parts of the world, prices of labor and material, improved machinery and processes, etc. Delegates of workmen from these British boards are sent to investigate in France, Germany, and elsewhere, and they return and report. Similar methods of settlement have extended to the coal and iron trades, lace, leather, pottery, and other industries.

Selling prices have come to be accepted as the gauge of rates. On these, sliding scales are arranged, which are found to insure reasonably fair rates of advance or of reduction. It has been well said that "the love of justice and fair play that leads to being willing to arbitrate naturally insures abiding honorably by results." Ninety per cent. of the cases brought before the voluntary boards have been satisfactorily settled, and this mainly under the conciliation phases of their operation, before the arbitration stage was reached. All the work in this line in Britain might be said to be done in this voluntary way. There have been provisions for arbitration by law since the fifth year of George the Fourth's reign; but these and some other enactments of that nature have remained as dead letter, with few if any exceptions.

Somewhat extensive and not unsatisfactory arbitration has been tried in the settlement of difficulties in the vast shoe trades of Lynn, Massachusetts. Probably one of the most harmonious efforts in this line was by Straton & Storm in New York city. They lost largely by a strike in 1876. In 1879 they arranged a permanent basis of conciliation and arbitration, which has since worked admirably. That basis was amended in 1880, and has been the model of similar work in various trades. Other arbitrations and their results, in several States of the Union and in a wide range of industries, have become well known through the public press. Some of the States have legal provisions for settlements by reference; and all of them would do well

to take higher, broader ground and more advanced legislation to this good end.

One of the most satisfactory cases of conciliation and arbitration in America was the settlement of a serious strike in the Philadelphia shoe trade, in 1884. This was arranged by Hon. J. M. Washburne, with some coöperation of the Peace Union. About \$7000 daily wages was involved, and what proved to be a cold winter was before the working people. The settlement saved this, with all the peace and comfort, health and morals involved. Not the least of the advantages gained was the formulation of eleven rules, with notes on the same. The value of these rules and notes is shown by their having since settled several strikes in other trades and other States. They were posted up in factories, and the workmen by way of pleasantry came to call them "The Eleven Commandments." They were furthermore made the basis of adjustment of a serious trouble in one of the largest institutions of learning in the country. These rules, with notes on them by Mr. Washburne, are as follows:

RULES ADOPTED BY JOINT BOARD OF ARBITRATION
IN PHILADELPHIA, JANUARY 3, 1885.

Rule 1, Sec. 1. The right of the manufacturer to employ and discharge employees must be acknowledged.

Note: This rule means that the right to employ and to discharge laborers belongs to those who own the business. There could be no other rule. No prudent man would invest capital in business if he could not control it by employing the laborers he thought necessary and proper for conducting it. This is the inseparable incident of capital.

Sec. 2. But if a person discharged claims that he is discharged because he is an active member of the Knights of Labor, by specifying his cause or causes of complaint, in writing, he may bring the matter directly before the Board of Arbitration for a hearing.

Note: In this rule the word "he" includes both sexes. Its object is to prevent persons from being discharged "because they are active members of the Knights of Labor." But if an active member is discharged for any cause other than "because he is an active member," his case stands as that of any other person. When the person discharged claims that the act was done because he is an active member of the Knights of Labor, by complying with the direction of the rule, he may bring the matter before the Board for a hearing; and the Board has the sole right to hear it. The matter must be in writing, in order that the Board may see the exact cause of complaint, and know just what is to be heard and decided.

Rule 2. Each factory is to regulate its own working hours, but in no case shall a day's work exceed ten hours, except in two or three departments, in order to fill orders on time.

Note: Each factory shall say at what time hands shall begin to work in the morning, and when they shall stop, not exceeding the time named in the rule. When extra work is to be done, the manufacturer shall direct it in order to meet the engagement calling for it. But for the extra labor done there shall be extra pay. Business will decide the departments.

Rule 3. Shop meetings to be held only after working hours.

Note: The purpose of this rule is that there may be no interference with business.

Rule 4. Grievance Committee of shops not to meet oftener than once a week, except in case of new employees.

Note: The committee need not meet once a week unless it has business. But for the purpose of ascertaining the condition and standing of persons not hitherto employed in the shop, it may meet as often as necessary.

Rule 5. Pending the discussion and decision of any difference or dispute, there shall be no lockout, strike, stoppage, or cessation of work by either employer or employee.

Note: It is the object of this rule to substitute reason and right instead of violence in whatever form, by either employer or employee. And during no dispute or difference shall the work of any shop or department of it be stopped or interfered with. If the interests of parties cannot be so adjusted and harmonized that the parties can continue the relations of employer and employee, then, according to the real or supposed interests of the parties, they must separate, not in violence, but according to reason. This rule implies that in no case is it necessary to resort to lockouts, strikes, or violent means in any form; it being the office of reason, acting according to the golden rule, to adjust all human interests.

Rule 6. The Grievance Committee of each factory is recognized as the only mode of communication between the employer and local assemblies; but in the event an agreement cannot be reached, the matter in dispute shall be submitted to the Board of Arbitration.

Note: This rule is sufficiently plain without explanation.

Rule 7. There shall be no interference with the employment or wages of hands hired by the week, when the wages are satisfactory to the employer and employee; so that competent workmen may be protected.

Note: Business requires that some "hands be hired by the week," and the wages are paid to the skill of the hand. It is the object of the rule to protect both the laborer and the manufacturer. It is to give to the manufacturer the advantage of skilled labor, and to give to skilled labor a just remuneration. Of course the manufacturer may employ inferior skill, and give it inferior remuneration. This may be important at some times and for some purposes. It is the right of the manufacturer to determine how his business shall be conducted. Capital and labor should each receive its equitable reward. This rule was very thoroughly discussed, and unanimously and heartily adopted. If the wages are not satisfactory, the hand may quit work; and if not satisfactory to the employer, he may dismiss him. With any other rule business could not safely be carried on.

Rule 8. The Joint Board of Arbitration shall consist of seven members from each side, who shall serve for one year, or until their successors are appointed or elected. Five members from each side shall constitute a quorum. A majority vote shall be final in all cases.

Note: Seven manufacturers and seven employees compose the Board. These are appointed by the respective associations. Five members from each side can do business. When, by the sides, there is a difference of opinion, the same number of persons only on each side shall cast a vote. But when the vote is not by sides, all at the meeting may vote, and the majority decides the question.

Rule 9. In case of a tie vote each side shall select a disinterested person, and these two shall select a third person, and their decision shall be final.

Note: In a warm contest both parties might not agree on a third person, and hence the provision of the rule. When the three persons are chosen, the majority vote cast by them shall be final.

Rule 10. The Joint Board of Arbitration shall meet semi-monthly, at such time and place as may hereafter be agreed upon. No complaints shall be considered unless stated in writing, and the causes of complaint are specified and signed by the complainant.

Note: All parties seek to avoid trivial complaints. The rule requires the complaint to be in writing, in order that the person may see it in that form, and that the Board may have something definite before it.

Rule 11. Complaints may be presented to the Board at the first meeting after the cause thereof shall arise, or it will be deemed that there are no grounds for complaint.

Note: This rule is rigorous, and might work hardship if the cause of complaint should arise just before a meeting. But all parties thought there should be no delay. If "an active member" is discharged, he wants a speedy hearing, and he must use diligent means to obtain it. It is improper to introduce stale complaints.

Addendum. If any difference shall arise hereafter, touching any matter not provided for in the foregoing rules, such difference shall go before the Board of Arbitration for adjustment and decision.

A good way to make this method general is for people to use it individually. It can be utilized in family and in personal troubles, so as to quench sparks that kindle fires resulting in separation of families and in deeds of violence and fraud. The idea of reference should be taught in the schools. Children could make profitable as well as interesting entertainment out of exercises in it. Kindergarten Peace Courts could so ingrain conciliation and arbitration into the people, that neither war between individuals nor nations would be thought of, much less tolerated.

No contract of importance should be drawn without a clause providing for reference. Such a clause should be the closing one in printed forms for contracts,—a few lines, either written or printed, stating in substance that if any misunderstanding arises under the contract, the parties to the same, for themselves and their legal representatives, agree to settle it by peaceable reference to disinterested third parties; one (or more) to be chosen by the party of the first part, and the same by the party of the second part, and if they cannot agree, they are to call in an umpire; that settlement to be final in the premises, and binding on all the persons and interests involved. This then becomes a part of the contract, and can be enforced as such. Further, being a contract, it is available under the common law of contracts even in a State where there is no special legal provision for arbitration. Many, if not all, of the chambers of commerce and boards of trade in the great cities have long had standing committees of arbitration, which save their members, and the community at large, untold expense and friction.

The humiliating results often occurring in legal contests, through the awful abuses pos-

sible under the jury system and an elective judiciary, call loudly for some way of relief. The United States Supreme Court, and also several of the State courts, are almost hopelessly encumbered with accumulated work. Arbitration would clear the dockets of much of this surplus, and tangibly check the supply at the fountain-heads of contention.

Not least among the advantages of arbitration would be the prevention of *publicity* to matters which should be kept strictly private. In hosts of cases, too, injustice is suffered through sensitive shrinking from having affairs hauled before the public, with which the public has no concern beyond contemptible curiosity. Many a wreck of family and of fair name might be prevented by this more common-sense way of "courting." Vexatious delays and the expense of lawsuits can to a great degree be done away with by peaceable reference. Many an unprincipled oppressor knows the money is not within reach of his victim to secure redress in the courts; or he knows "the law's delay" will secure his ends. Consequently the saving of *time, money*, and *publicity* by conciliation and arbitration are results the value of which is not easily estimated. The saving of friendships from wreck in the tempests of legal strife is another point well worthy of consideration.

Helping to self-help is a measure potent to prevent labor troubles, and fruitful of large results for good. Capital should help labor to stand alone. Under this head the definition of the capitalist by Smiles, as "merely one who does not spend all he earns," is important. By parity of reasoning, "capital" and "savings" are synonymous; and the mutual interests of capital and labor are promoted by helping laborers to become capitalists. Hosts of mechanics never rise above journeymen's ranks, because they never have enough ready money to start business for themselves. The moment a man has a reasonable prospect ahead of such a change, he becomes conservative. He is not now so likely to be a factor of labor troubles. Twenty-five cents a day, beginning at twenty-one years of age, put either into a savings-bank or an endowment life insurance policy, would give a mechanic at forty years more money in hand than most successful men have had for a start in the world. The drink and tobacco bills of any one of hundreds of thousands of mechanics would easily carry through such a scheme to secure working capital. The endowment is better, perhaps, than the savings-bank, in that it is impossible to withdraw it, and probably lose accumulating capital on some transient scheme before the "independence fund" has reached a sum sufficient to

be effective, or before the man has experience needed to handle his capital wisely. During the last half century this policy among British mill operatives has come much in vogue. One who is laying his course thus finds "birds of a feather flock together." Habits of sobriety and of saving lead the carpenter or the mason to study the higher branches of his trade, and to attention and application, which secure higher wages and less loss of time on spree. So he gains ability to double the ratio of his fund, and probably has, besides, an extra dollar a day with which to buy a home and better food, furniture, and clothing.

Every million men making such use of a dollar a day throw over three times as much into the scale of home consumption of manufactures as the value of the total annual yield of all our gold and silver mines. Under-consumption, far more than over-production, is to-day the lion in the path of our industries. A quarter of the money working-people worse than waste in liquor and tobacco would give more and better and much-needed home comforts for themselves; would set looms and spindles, forges and lathes rolling out a labor anthem pitched to the key of plenty of work and good pay. It would at once create and consume a volume of productions, making a tangible difference in the output of manufactures. It would help both capital and labor to help themselves. Viewed exclusively from commercial and from politico-economic stand-points, the waste of national wealth by the working-people in drink and tobacco causes more of the trouble between labor and capital than all other causes combined. It has richly repaid some English manufacturers to both suggest these points to their workpeople and then help them to plan and execute to the end of carrying them into practice. It would not less richly reward American manufacturers to follow the good example. "Nature abhors a vacuum." This is true in other than material realms. The mill-owner may be sure that his employees, like his children, will be filling up with bad habits unless he helps them to fill up with good ones. If he enters into their plans with *sympathy*, he can lead them in wisdom's ways. It is not enough to provide night-schools. Mere mental education has well been characterized as "making clever devils." Teaching his people morals and habits of thrift will help the employer quite as much as the employee. Thus will more and better work be got by a given wage expenditure.

It is hard to get people to begin, and carry out, system in schemes for saving. Naturally a person not accustomed to saving regularly thinks the weekly earning so small that laying by anything from it is next to impossible.

It does them good to know some facts in this connection; to know that savings-bank records show the largest deposits have not been in times of high wages. The pressure of low wages is found to lead to provident plans and habits. On the other hand, the abandon born of a period of high prices for work has the opposite effect. Further, the largest averages of deposits are not among those paid the highest wages; the principal depositors in Manchester saving-banks, for example, being domestic servants. Consequently, the people want reminding that they need not wait for some time of high wages in the dim future to begin systematic savings.

Trying to ape the rich has kept millions of poor people from where they would ever be able even to begin to live in the style aimed at. This trouble is great in the Old World, but far greater in republican America. The effort of the masses to live beyond their means has created the pressure resulting in many a labor upheaval.

There is no independence, in a secular sense, without liberty and competence. Keeping out of debt and adding something, little though it be, to savings, are the keys to liberty. The man with one hundred dollars ahead, and gaining fifty dollars a year, though earning only ten dollars a week, is better off than one earning fifty dollars a week, but living up to his means. The latter can never earn a home; the former may do so.

There is no better investment for a capitalist than to teach these things to those in his employ. If this suggestion is considered utopian, go with me one hundred and fifty miles north-westerly from London, to a town on the dreamily beautiful banks of the Aire. There you may see what is so much more than has ever been hinted at here, that you will say, like the Queen of Sheba, "The half had not been told." Here is a model town built by Sir Titus Salt, not more for his vast alpaca factories than for his beloved people. As you go about the town, it will seem, as compared with the most highly favored of even New England manufacturing towns, like fairy land. Nearly a thousand cottages have been built for the operatives. These homes are bowered in vines and roses. The streets are broad and adorned with trees. Not common schools alone, but those for teaching art and science, together with public libraries, are there; a spacious and beautiful Protestant church and a charming park also. Here, too, are hospitals for the sick, and baths and gymnasiums for those who are well; a savings-bank likewise, but no place to buy intoxicating drink. These and other pleasant and useful adjuncts the proprietors have provided for dwellers in their

"happy valley," and so help them to rise to a high social as well as mental and moral level. They so identify themselves with their interests that the better soul within is roused. So these people come to know their employers as their true, sympathizing friends, and they heartily reciprocate the friendship. Any one engaged in getting up strikes would not do well to select that town as a theater of operations. It would be hard to find any one among those villagers who would not help drive him out of the town, and do it in a style suggesting that he would better "not stand on the order of his going." If some pessimist was in search of a business enterprise to hold up as an example of small financial profit, this manufacturing Acadia would not be his model. If therefore in this age of Golden Calf worship some keen-eyed capitalist wants to find a first-class business investment, let him establish any kind of manufacturing that has fair margins, and then take his people to his heart in a spirit of Christian philanthropy like that of Sir Titus Salt and his sons.

Saltaire is not the only case of the kind in England. The Crossleys have made almost a rival to it where their carpet-works are located. Several others have done likewise. Mr. Edward Akroyd, M. P. for Halifax, is proprietor of an establishment where the value of a similar policy has been demonstrated. Let us visit it. They are enjoying a gala day, and a spacious hall is occupied by a floral and fruit display. The fruits and a bewildering cloud of flowers are so rich and varied and profuse, that we might suppose the Queen's gardens and the conservatories of patricians had been depleted to realize it all. But no; as you walk around among the workpeople's cottages, you will be surprised at the number and the beauty of the gardens where they nestle. Mr. Akroyd has furnished these happy people with ground for the gardens, and charges them a small rental, the entire sum of which is applied to premiums and repaid them at the exposition we have been visiting. He has also provided these Haley Hill people with high and with common grade schools, library, park, etc., on a scale similar to the ap-

pointments of Saltaire. He has advised and aided them to organize and operate coöperative clubs for procuring food and clothing at wholesale prices. Compare this club work with the stores which American mining and manufacturing companies establish and then compel their employers to patronize, often at ruinous rates. Mr. Akroyd has been especially successful in organizing savings, assurance, and other thrifty enterprises among his people. This habit of systematic saving they find to be to the laborer what the balance-wheel is to the engine. It is a factor of stability of character in matters other than those that are monetary. In fact, it is just the pivotal point on which the wage-laborer becomes a capitalist. It proves what is saved, not what is earned, to be fixed capital. It is a key out of the dark and perplexing labyrinths of trouble between labor and capital which finds expression in strikes and lockouts. Either Saltaire, or Haley Hill, or the Crossley settlement demonstrates that moral and mental culture, coupled with sympathy, industry, and system in economy, are the pillars on which to build a superstructure of kindly and prosperous relations between capital and labor, most beneficial to both.

There are hosts of cases, however, in all ages and countries, to prove that blind greed of gain makes capitalists, and especially corporations, a force with which the laborer cannot harmonize. In many cases coöperation is the scape-valve to give relief here. In a recent strike two workmen found the rapacity of capital, together with the stupidity and stubbornness of their comrades, too much to contend with. They started a small shop, and hired two helpers. Within a year they were making more than four times the fifteen dollars a week apiece which they received as factory wages. In other cases coöperation between capital and labor, in the form of giving workmen a small percentage of the business profits in addition to wages, or stock in the company owned by workpeople, has secured peaceful and therefore prosperous relations. Where there is an honest will for peace, there is a way to it.

Geo. May Powell.

THE writer acknowledges his obligations for valuable material on French and English arbitration, used in this paper, to Mr. J. D. Weeks and Mr. C. D. Wright.

TOPICS OF THE TIME.

The Grant Memorial.

SELDOM indeed does any work of art bring with it responsibilities so grave as those which are involved in our contemplated memorial to General Grant. Not only for the sake of the monument itself, but for the sake of American art and the American people, is it peculiarly necessary that we should move warily in deciding who shall create it for us, and what he shall create, and how.

Art in America is just now in a transitional phase,—which means in a very critical phase. New ideas, new creative impulses, new forces of unmistakable but unformulated vitality are stirring our painters, sculptors, architects, and are striving for the mastery over older tendencies, and also over that intellectual inertia which until lately characterized our public in its relation with things artistic. And this public,—we, the people,—in beginning to shake off our inertia, in beginning to feel that our interests and our children's children's are no less at stake than are the artist's, are becoming anxious to play a more intelligent part in patronage than we have ever played before. Exactly at the right moment we are now given a chance to prove our own growth in appreciation and to stimulate the growth of American art itself. Exactly at the right moment—neither too early nor too late—comes an unrivaled opportunity for us to act with energy, and for our act to have the most potent influence.

Unrivaled indeed our opportunity must be called, and great indeed must be the influence of its outcome. It involves, or should involve, a very lavish outlay and a very ambitious effort; the monument, by reason of its subject, will be incomparably conspicuous; and the subject itself is so rich in the noblest possibilities that success will mean a peculiar triumph, and failure will be trebly sorrowful and disastrous.

Let us think for a moment what is in truth this subject—what it is we must express if the Grant Memorial is to be all it should and to mean all it ought.

THE SUBJECT OF THE MEMORIAL.

FIRST, of course, we must adequately *represent* General Grant in his most characteristic aspect—in his aspect as a military commander. That is to say, we must represent him at full length and on horseback. *Æsthetic* reasons, it may be added, speak as loudly for an equestrian statue as do *expressional* reasons; for the modern world, with its disheartening dress, can never afford to disregard the chance of bringing a horse into the sculptor's scheme.

But our monument must *commemorate* General Grant as well as merely represent him—must record, or at least suggest, all that lies latent in his name and flashes upon the mind as we think or speak it. And this is much more than the fact of his successful generalship—much more than can be expressed by the sole aid of that equestrian statue which might suffice were some other military chief in question. When we think seriously of it, and try to analyze what our artist

should do for us beyond and above the mere portrayal of the figure of a general, we cannot but feel how great was Grant's good fortune, how great is our good fortune, in that he died when and as he did.

Had he died in battle ere his work was entirely done, he would have been for us the leader of the armies of the North, and nothing more. Had he died while chief magistrate, the strife of party would have torn his image in two and clouded his memory for at least a portion of the people. His foreign tour was a fortunate sequel to his activity at home, showing us how he stood in foreign eyes as typical of the greatness and the influence of his country. And still more fortunate was the tragic, the pathetic way in which the stroke of death at last was given. Is it heartless to rejoice that ere he died he met for a moment with reproach of the cruelest kind, and struggled for months with a physical agony as cruel? Not unless it is wrong to be glad that after that reproach followed a burst of popular affection and respect, bringing the country back to an attitude even more sympathetic than it had held when first it chose him President, and to be glad that over his dying bed the South clasped hands with the North, and signed our articles of brotherhood anew. *Euthanasia—a happy death.* From a purely physical point of view the term indeed seems inappropriate. But from a higher, deeper point of view few deaths have been as happy as General Grant's—as happy alike for the dying and for the living. He himself, in the midst of his mortal anguish, felt this truth, and we are dull indeed if we do not feel it strongly. Not often does the good which we are fain to believe lies in and behind all human evil show itself so immediately and so clearly.

It is this, then,—it is the time and the manner and the results of General Grant's death,—which gives us the chance to make his memorial something nobler than a mere portrait of his person; which absolutely lays upon us the great and happy obligation to make it a *national memorial* in a different sense from that implied in a national subscription to defray its cost.

Seldom, be it said again, does such a chance occur, and hardly by any possibility more than once in the life of any one nation. The only similar opportunities which modern times have seen have as their outcome the monument built by the Germans in the Niederwald beside the Rhine, and the monument now building to Victor Emmanuel on the Capitol at Rome. We misconceive the former, for example, if we think of it as a record of German conquest abroad, or of Prussian conquest in Germany. It is a record, rather, that the various peoples of Germany, so long disunited, bitterly antagonistic, actually at war among themselves, and so recently forced together by the strongest sword, had now accepted the brotherhood into which it had compelled them, and so cordially accepted it as to desire a permanent—that is, a great artistic—expression of the fact. That which is the motive of the Niederwald monument, that which still more purely and entirely will be the motive of the Italian monument, is

not the fact of internecine war, but the fact that internecine wars are past and done with, leaving a united fatherland contented in its union.

This too should be the motive of our memorial to Grant. And as the impulse and the opportunity to build it have been given by his death, so also do his character and history afford a text, a concrete theme, that could not well be more felicitous. Nor merely, be it remembered, as they were shown in the closing moments of his life. From the beginning he was patriot first, and soldier only because patriotism compelled; ready for war, but enamored of peace; looking upon conflict as a means and not an end, as a sad and bitter necessity, not "a glorious chance for glory"; rejoicing, not in the conquest of his foes, but in the fact that their conquest would make the land again a single land of friends and brothers. Even before the day of the final surrender, even before the moment when, with a homely simplicity and a touch of emotion that take us back to the pages of Plutarch, he went beyond the written letter of the "terms" and bade Lee tell his soldiers they might keep their horses,— "and take them home to work their little farms,"—Grant will show in the light of history as the friend of the South, and not merely as the champion of the North. Or, to put it more accurately still, history will see that he was first and always a true son of the commonwealth, and then from day to day whatever else the circumstances of each day impelled such a son to be.

These facts were patent long ago to all whose eyes were clear. The words that came to the dying man last summer from East and West and South, the answering words he spoke and wrote, the groups that gathered in imagination beside his bed and stood in person around his bier, did but emphasize and illuminate them; did but give them dramatic voice, palpable, visible, popular expression; did but bring them more entirely within the recording powers of art.

Can we doubt that very much of what they mean must be expressed in this contemplated work of art of ours if it is to be in any adequate sense a *memorial* of General Grant? Or can we doubt that a simple equestrian figure would be insufficient for the purpose? Or even an equestrian figure which, while less simply set before us, would still be the dominant feature to which all else would be subordinated? A mere pedestal, a mere architectural framework and setting, no matter how much enlarged and glorified, would still, if kept within its proper bounds as such, supply no adequate place or space for the suggestion of all we ought to say. Nor would the conception itself be adequately suggestive in general expression—tell as distinctly as it ought that what we had meant to build was a *national monument* enshrining the tomb of the nation's hero.

WHO SHALL MAKE THE MONUMENT?

It is time now to ask: Where and how shall we select our executives, our artists? One part of the answer at least seems clear. We must look for them at home; they must be Americans, and not foreigners. Apart from the fact that the choice of a foreigner would mean a disastrous blow to that native art we are so peculiarly bound just now to cherish, apart from the negation of all proper sentiment which would be implied in such a choice,—apart, that is, from points which are

among the most vitally important,—how could we expect to get from any foreign hand an adequate expression of our theme? It is a theme which needs that the mind should work upon it as well as the hand, and the heart as potently as either. Who but an American could put his heart into the matter? Who but an American could see into the heart of the matter itself? It was well enough (as regards both sentiment and the probability of a good result) to bid a foreigner mold us, for example, his countryman Lafayette, and to accept from a foreigner's hand a personification of that American liberty which is a thing any intelligent human eye can see and understand. But a memorial of General Grant—a great national monument! This must be given into American hands, or we shall fail in our part of the task, and shall have no right to look for aught but failure in the artist's.

But among Americans, how shall we select? Certainly not, again, in accordance with the pressure of local feeling. Although the monument is to stand in New York, it is not to be built by New Yorkers only or for the benefit of New York alone. No feeling of local prejudice or pride, no feeling that because New York is the metropolis of the Union therefore its artists are the best, or ought to be proclaimed the best, should have a jot of influence in determining our selection of an architect. An American by birth or by such length of residence and sympathy of understanding as transform the foreign-born into Americans in heart and mind—this we must look for, but we should not localize our search more narrowly.*

An architect has just been written; for it can hardly be questioned that we should find our architect first of all, or, at least, should give him the first share in the labor. When architecture must work with other arts and must supply more than a mere background or foundation for their efforts, there can be no doubt that it should take the initiative. The main idea, the plan, the *conception* must be the architect's; and then the putting into final shape, the elaborating in idea as well as in actual execution, should be his and his brother artists', working together and in harmony or intent.

WHAT KIND OF A STRUCTURE?

ERE now we choose our architect, we should have some distinct idea with regard to what kind of a structure he should give us—distinct, but not necessarily very detailed, and certainly not so dogmatic that he will be bound and hampered.

In certain cases we may best honor an honorable memory by a charitable or beneficent foundation of one sort or another. But in this case we may surely give the honor simply and solely as such; our pot of costly ointment may be poured out as a tribute to sentiment only, a homage to ideas alone. For once we may be intellectual, æsthetic in our aims, and not utilitarian in any other sense than as our work of art shall be useful for the cherishing of noble ideas and sentiments in the generations which will follow in the land. What we should ask our architect for is a dignified and beautiful building, as truly monumental in intention as in effect; some fair and stately structure which shall have as its heart the tomb of General Grant, and as

* We say this, be it noted, notwithstanding our personal belief that New York alone could afford us artists in every branch competent to do the work we shall require.

its most conspicuous ornament his figure, and which shall give ample room and fitting place for the depicting (or the suggesting in typical, ideal ways) of those memories and meanings which have been hinted at above.

It is needless to say that they have only been hinted at, not fully catalogued. It is needless to point out, for example, that we can hardly think of Grant without thinking of Lincoln too, or express the meaning of his life without remembering the share he played in the great act of Lincoln's life—in the abolition of slavery. And what other men before and beyond Lincoln himself are not hereby suggested in their turn! Does the theme seem too extended and the scheme an over-ambitious fancy? Not if what we want to do is the whole of what we ought to do with this marvelous opportunity, or the very best we might. And, it may be added, we need not of necessity aim at immediate completeness. We want our structure now and the tomb and the statue; but the rest may be left to come when it can. Come it undoubtedly will if the first steps be rightly taken. There is nothing which so encourages the giving and the creating of works of art as the knowledge that a splendid receptacle is waiting for their advent. Our receptacles for monumental art are not very numerous or very attractive, and, as a rule, they are identified with local and not with national pride. Such a national home and haven of art as this monument might be made would do incalculable service in the encouragement of American art—to-day and to-morrow and through many future years as well.

This aim, together with the presence of the tomb, may seem, in a climate such as ours, to prescribe extended covered spaces; especially as there is no reason why other forms of art should not be brought into play as well as the architect's and the sculptor's. There is every reason, indeed, why the contributions of all others should be desired; not only that the influence upon American art may be as wide as possible, but also because certain things can better be expressed by the painter or by the worker in glass, for instance, than by the carver of marble or the molder of bronze. The theme gives ample intellectual verge and opportunity for every art to play its interpretative part therein; and the structure should perhaps supply the due material space and opportunity for all.

Certain precedents, hallowed by age and by artistic value, unavoidably suggest themselves if we try to define our wants a little more narrowly still. Mediæval example points to church or chapel as the form such a memorial should wear. But to build a civic monument ecclesiastically would hardly be appropriate to the mental attitude of to-day. (There is no need to discuss whether this attitude be right or wrong; it is simply facts as they are that we must deal with.) Or would it, again, be appropriate to erect an example of that triumphal arch which from Roman days to these has so often been resorted to for the commemoration of military service? Would a triumphal arch give us space to say all we ought to say, or give us a fitting station for the tomb? And would its accepted symbolism as a type of military conquest be in keeping with just this hero militant of ours and with just those ideas which his monument should convey? It is a very beautiful form undoubtedly, and perhaps its symbolism might be so transmuted as to express that national

unity which is the prime fact we wish to place on record. Moreover, it is a very *safe* form—one with which it would be difficult to produce a failure of the most distressing sort. To say this is undoubtedly to say much in its favor; and yet, as undoubtedly, we want to do something more than not go distressingly far astray. We want to tread in the best possible path and to reach the best possible goal. And perhaps something different from either of these traditional devices would serve our purpose best—something more purely *civic* in expression than, on the one hand, a triumphal arch, or, on the other hand, a mortuary chapel. But in any case (as has been said) it must be something neither prosaic in effect nor utilitarian in intention.

THE QUESTION OF STYLE.

AND now we are brought to the very interesting and important question of *style*. To choose our architect wisely will mean, of course, to choose one who can build intrinsically well; but, also, one who will be likely to build in harmony with the prepossessions of his countrymen at large. For to make the monument as helpful in its influence upon our art as possible, to make it as worthy an example of that art as possible, we must undoubtedly make it truthfully expressive, not only of its particular theme, but also of national artistic preferences and impulses *if such can be discovered to exist*.

It is plain, therefore, that the question of "style" cannot be decided theoretically or on pure æsthetic grounds alone. We must approach it, so to say, experimentally. We must study all the works of every kind and fashion we have built, pick out those which are most excellent, and then compare them very carefully—with an eye not for their details of difference, but for any broader signs of agreement (in execution or intention, in effect or aim) which may possibly lie beneath those details. We cannot hope to find proof of anything which is as yet to be called a national *style*; but perhaps we shall find indications of a nascent national *taste*, and if so they will be enough to guide us. But, be it added, we must seek them by the light of careful chronological data, for we have moved very fast of recent years, and it is important to distinguish between tendencies that are dying out and tendencies that are growing.

The general belief perhaps is that, no matter how carefully conducted, such a search will be made in vain. But this general belief is founded largely upon our ignorance of what has recently been done in architecture throughout the length and breadth of the land, and somewhat upon our ignorance of architecture itself—our inability so to read its language as to see what has been aimed at no less than what has been achieved, and to mark main lines of agreement beneath surface variations. A more widely extended and careful survey seems to show that there are certain manners of architectural speech which we are beginning to prefer above all others, and which appear in more of our recent good results than do any others. These are the manners which emphasize the *round arch* in preference to the lintel or the pointed arch.

This assertion may seem too confident, but indeed it is not. More and more as each year goes by (and a year may mean a good deal in rapid times like ours)

we show a preference for round-arched methods of construction; sometimes for those of ancient Roman parentage, much more often for those which developed in the earlier days of the Italian Renaissance, and still more often, perhaps, for those which grew up in the intermediate centuries—for those which are called the Romanesque.

Had we examined the matter in a superficially theoretic way, a round-arched architecture might have seemed the last that was likely to appeal to us. Neither the most conspicuous examples of current work abroad nor our own descent in blood and speech might have seemed to lead us to it. But even a theoretic inquiry seems to point in its direction if made in a less superficial way—if made upon the data given, not by our origin, but by the degree to which we have grown to differ from our nearest European cousins and more nearly to resemble certain southern peoples; not by our speech, but by our present social and political condition; and especially by that climate which has done so much toward molding us, and must do so much toward molding our architecture too. It was said above, indeed, that we should not depend for guidance upon *any* theorizings. Yet if they are not too superficially made, and if they seem to tend toward the same outcome as do experimental inquiries, we may at least respect their confirmatory voice.

For example, while we need not and cannot agree with a recent writer (whose text was also the Grant Monument)* in his opinions upon the status and the character of our art to-day, we may gladly cite the fact that he gives his vote for the round arch. He decides, theoretically, that it is what we *ought* to want, and the fact is valuable if those signs are trustworthy which seem to show that it is what we *do* want.

Still more valuable is the testimony of so serious and well-qualified a theorizer as the English historian Freeman, when he tells us that he thought in advance of his visit to our country that a round-arched style might possibly best suit our climate and best suit ourselves. And highly valuable is the fact that this speculation of Mr. Freeman's was changed to a belief by what he found already existing on our soil.† Had he written to-day, moreover, instead of some years ago, or could he even look to-day through the pages of our professional journals (where the very best work of the very best hands is not always illustrated, but where the general tendencies of our art in all quarters of the land may be deciphered),—could he see as clearly and know as thoroughly as those who are to control the erection of our monument ought to know and see,—then it is very certain that his words would read with still greater emphasis.

Nor should we forget to note, and as a very important point, that in using the round arch, whether in its Romanesque or in its Renaissance variety, we do not in our best examples use it either stupidly or foolishly. We do not use it conventionally, in an imitative, slavish, cold, and lifeless antiquarian fashion; or recklessly, fantastically, to the destruction of all artistic harmony and expressional truth. Study these best examples (they are neither few nor hard to find nor

by any means identical), and we shall see that it is used freely, flexibly, and sensibly, in accordance with modern ideas and in deference to the needs of individual cases; that it is used in combination with other elements drawn from other sources, and yet in such a way that it governs the general expression and there is no disharmony, no effect as of patchwork and piecework in the result. Of course all the examples in which it is used are not similarly excellent. But a good intention is often plain even when the outcome has patent faults; and to confess failures and discrepancies is only to confess again that we have not yet a national style. It is by no means to deny that we have already a budding, promising national *taste* which points in the direction of the round arch. This is surely enough to guide us in our present quest, unless similar evidence of a similar degree of strength can be cited to show as wide-spread a taste pointing in some other architectural direction; and, it may confidently be said, there is no chance of this. Nor need we be deterred from falling in with the taste which prefers the round arch by any slightest fear that a design based thereupon could not most adequately and beautifully give us just the sort of structure we want or just the opportunities we need for the employment of all the arts that can be allied with the builder's.

If all these things be true, then we should undoubtedly select some architect whose natural affinities tend in the direction of the round arch, and whose practice has given him a key to its resources; and, moreover, one who has been used to employing it in monumental work—that is to say, of course, not necessarily in such commemorative monuments as the one we now desire, but in work where dignity, beauty, and expression have been of prime concern.

And so with those other artists who must help and supplement the architect: we should try to choose such as are able not only to work intrinsically well, but to work well for monumental purposes and in the expression of other than strictly "realistic" intentions; for grandeur of conception and ideality of treatment will be prescribed by many portions of our theme at least. It is not only that simple representation—a simple record of facts as they actually occurred—would very often, with our modern dress, be monotonous and unlovely to the eye; such treatment could not fully express the potency of those facts, their inspiration, their results, their inner meaning. The spiritual side, the heart of the matter should be laid bare, and not its shell alone portrayed; and to reveal the heart of such a matter needs the help of that higher, deeper, subtler kind of art which for the want of a better term we are content to call *idealistic*. The artist, if we can find the right one, will know how to employ it rightly—will not fall into conventional allegory, dreary, meaningless metaphor, but will preserve human, historic life and truth while illuminating them with the light of imaginative sentiment.

This is not the place to explain how certain it is that we *can* find the right artists if only we search wisely. To explain the present condition of our art, to point out its recent successes and gauge their prophecies in relation to our present subject, would involve the citing of many examples and the discussing of many names; all of which might savor, perhaps, of special pleading. No more, therefore, can here be said than that if we

* "Style and the Monument," *North American Review*, November, 1885.

† *Longman's Magazine*, quoted in the *American Architect*, February 24, 1883.

want such service as has been indicated in the preceding pages, or any analogous service, or service of any noble kind whatever, our hope of getting it may rest on good foundations. We have artists in every branch who might do all that has been suggested here, and do it well; whose existing work we might be eager to match against the best work of any European country, excepting only France. Nor need we blush to think of a comparison with the best work of France itself in such an example as our monument may be, if we give them for once a chance to do their very noblest. We may prophesy of the Memorial with hope and confidence, and base our prophecy not upon vague dreams of what we might produce if our art were something other than it is, but upon a knowledge of what it already is and of what those who produce it can undoubtedly achieve—if we select the best among them, and then help with intelligent sympathy and a generous hand.

THE FAME OF GRANT AND OF LINCOLN.

If it needs anything more than the thought of our own possible profit to make us resolve to be careful, wise, and liberal in this matter, we may remember how conspicuously we shall be acting in the eyes of the outer world. The inception of our monument will be followed abroad with keen and critical attention. Its eventual shape will be pictured in every illustrated sheet for the benefit of stay-at-homes, and, before all our other works of art, will attract the feet of those who cross the water. Whatever we build, it will be everywhere known and will be everywhere accepted as the great typical example of American art.

Perhaps we do not realize how emphatically this will be the case—do not realize how high above all contemporary Americans General Grant has stood in the interest of other lands. Lincoln's is the only figure that could possibly have come into rivalry with his. But Lincoln died long ere foreign interest was to as distinct a degree as it is to-day a sympathetic (or at least a respectful) interest, while Grant lived long enough to share in the reaction that has followed upon the old antagonism, and to concentrate much of the new-born sympathy upon his own person. If a monument to Lincoln were in question, foreign interest would be far less pronounced, and, moreover, far less intelligent. No European, be he even an Englishman, can quite understand Lincoln or the whole of the reasons why his memory is dear to us.

The chief of a great nation in the throes of a great civil war, who ruled, not like a Prussian king, according to his own or his immediate counselors' ideas of right and of expediency, and not like an English minister, according to the dictates of a parliament merely, but as the executive of the nation at large in a truer sense than man ever did before; who ruled with his finger on the people's pulse and his ear at the people's heart, feeling thrills and throbs quite imperceptible to others; who waited patiently till they were perceptible to him beyond the possibility of mistake, and then acted with decision and persisted with tenacity; who seemed to lead, and in overt acts did lead in truth, but who *executed*, none the less, just what the people, half unconsciously, wished to do and were incapable of doing save through a hand as sensitive and strong as his; a chief who ruled thus amid difficulties and dangers of the

most tremendous and of the most subtle sorts, yet who sat day after day, year after year, with his door open to all comers and his sympathy awaiting all; as eager to help individuals as to help the nation; as responsive to the trouble of the humblest citizen as to the trouble of the state; the father of his people at once in the widest political and in the most intimate personal sense,—this and very much more than this was Lincoln. How indeed should he be understood in lands where *to rule* means something so different?

But with Grant the case stands otherwise. A great organizer of armies, planner of campaigns, winner of victories—this is easily enough understood in any country; perhaps not exactly in all of its significance as applied to General Grant, but yet nearly enough for at least a great part of our debt to him to be felt with sympathy. And thus, as he himself during his foreign tour stood in the eyes of Europe as the symbol of his country in her hour of reunion and reinstatement in the great family of nations, so his monument, whatever we may make it, will assuredly stand as the type of the highest his countrymen can wish to do in art and the very best they can accomplish.

RESPONSIBILITY FOR FAILURE.

If it is anything less than a noble type, the fault will not lie with our art. It will lie with the public, with *us*; because those who directly control the matter will be assumed to represent the public, and *will* represent it—either as expending lavish popular gifts and putting into execution clear and sensible popular wishes, or else as showing, by poverty of material resource and wrongfulness of artistic act, that the public has been without enthusiasm and without vital or intelligent desires. If it is anything less than a noble type, our art will suffer shame and injury; but the responsibility, the sin, will rest with the committees in charge and with us whose representatives they are.

Good Signs on the Lecture Platform.

DR. HOLLAND used to deplore the change that had come over the lecture system, a change which he attributed to the lecture-bureau, which of late years has come into vogue. In the number of this magazine for March, 1871, he deprecated the appearance in lecture courses of men of inferior talent, mere amusers of the public. "Some of them," he said, "have been either pushed or invited into nearly every lecture course, until sensible men have become disgusted, and have given up the lecture as a thing that does not pay. The good lecturers have been cheapened by association with their inferiors in gifts and aims, and the 'lecture system' has degenerated into a string of entertainments that have no earnest purpose and minister to no manly and womanly want."

Dr. Holland's picture of the contemporary lecture platform was by one who knew well what he described. It is encouraging to note, however, that during the last few years there have been signs, not perhaps of a revival of the lecture system of twenty or thirty years ago, when men as earnest as Emerson, Phillips, Beecher, Chapin, and Holland, and men of the literary position and oratorical force of Curtis, Mitchell, and Bayard Taylor were among the principal lecturers,—

not, we say, a revival of just the same system as was at that time in vogue, but of a new system showing an increasing willingness on the part of the public to listen to instruction from scholarly and distinguished men, and showing, also, a widening of opportunities for the exercise of a high grade of ability in this direction. In the East and in the West courses of lectures are constantly being arranged, where one man will take up a theme and himself continue it to its completion. The historical lectures of Fiske and Freeman, the astronomical lectures of Langley, the literary-historical lectures of Gosse, the course on etching by Seymour Haden, are cases in illustration of the tendency we speak of.

The detached addresses in different parts of the

country by such men as Matthew Arnold and Canon Farrar may be said, indeed, to be rather in the line of the "star-lecture system," but the substance of these "star" lectures, nevertheless, was in each case the farthest from trifling or temporary.

We are not objecting in these remarks to the merely amusing "platformist," if his performance is thoroughly good of its kind. Men should have the opportunity of laughing,—but it is important that they should laugh not only well but wisely. The danger was, at one time, that nothing but syllabub would be wanted or offered—though it was in the nature of things that so debilitating a diet, even if entered upon, could not last forever.

OPEN LETTERS.

The Tinkering of Hymns.

IT is interesting to notice how public opinion, in cases of literary epidemic, splits in two directions at the same moment, and then the same old sentiments stand confronting each other, and the same old issues are banded to and fro in the familiar disputes. And Christian people, amiable and excellent as they are, are no exception to this observation. At the present moment, praise services having become popular in the various congregations, and so the criticism of hymns having grown to be in some degree necessary, the question is discussed rather sharply whether any one has the liberty to alter the compositions of a poet whose name has already been received into honor among the churches. Some writers and many speakers are declaiming against, and some others for, the practice, which at any rate is old and established.

The trouble is, that so many of the disputants are familiar with only the collections which they may have happened to use in their early life. What they learned as the true versions of hymns and psalms it is very natural they should suppose are the original work of the author, and what they find elsewhere they believe to be changes as unauthorized as they are unwelcome to themselves—unwelcome because they break up the old associations, if indeed they do not confuse the memory, while they are trying to sing with the heart and the understanding.

It might be well at some time to restate with wide illustration the general principle upon which the church at large has, through many years, proceeded in the shaping of hymns for use in worship. It is in some cases better to return to the author's own language; in other cases it is preferable to retain the changes which popular sentiment has accepted. Some one who has been patient enough to count has told us a startling tale; namely, that in one collection there are 697 changes in 345 versions of psalms; in another, there are 1336 in 774 most noted hymns. No wonder there is objection made to such wholesale work.

But is any one ready to insist that the compilers must reproduce Cowper's and Newton's, Watts's and Wesley's and Doddridge's hymns, with all the crudities and mistakes those composers made? Are the declaimers in earnest? Do they want to sing "On Jor-

dan's stormy banks I stand," now that some years of use has made them familiar with the alteration needed by the fact that Jordan's banks never were stormy? "On Jordan's rugged banks I stand"; do they really want this restored? Do they wish to have everybody taught to say "Thus the blind Bartimeus prayed," instead of "Thus blind Bartimeus prayed"? Do they decidedly prefer "fav'rites of the heavenly King" to singing "children of the heavenly King"? All these are alterations, however, and most tasteful Christians have thought them felicitous; shall they be repudiated?

Then there are some changes of a more extensive kind. How would a modern singer relish a return to the figure of Toplady, precisely as he used it, in one verse of our familiar "Rock of Ages, cleft for me"—

"Whilst I draw this fleeting breath,
When my eye-strings break in death?"

After singing the grand alterations made by John Wesley years ago—

"Before Jehovah's awful throne,
Ye nations, bow with sacred joy!"—

does anybody actually desire to return to the weak lines of Isaac Watts—

"Nations, attend before his throne,
With solemn fear, with sacred joy"?

The real fact is, almost all criticism of the critics is insincere. Public writers and speakers in conventions seem to be resisting vandalism in variations; what they are doing is witty and often wanton.

Now and then it happens that a criticism is urged which shows a misunderstanding of the whole point at issue. The critics complain of changes, where there is only adherence to the author; and grow violent over the "tinkering," when what they really want is to make it. Let a little story serve for illustration. Some years ago, when the artless compiler of one of the modern hymnals was sitting in his study, a good brother in the ministry entered, and seeing his occupation, namely, an orderly selection for the choir on the succeeding Sunday, immediately started a complimentary conversation on the merits of the book.

"I like your collection," he said, "because you have courage and taste enough to resist this tinkering practice; you give the hymns accurate and honest as their authors wrote them." The humble singer was per-

fectly aware how the dialogue would end, and mischievously inquired for some particular lyric as an illustration. With a becoming measure of confusion at the sudden demand, the critic specified the one beginning, "There is a fountain filled with blood." And he continued: "Everybody claims that as in the original; you got it right at the start; some of them spoil it—absolutely run it out at the end." On further inquiry, it appeared that what was wanted was that the final stanza in particular should remain untouched. "Now Cowper—he was a poet; would you ever find him closing with such an insignificant couplet as this—

"When this poor lisping, stammering tongue
Lies silent in the grave?"

Turning to the hymn, the compiler caught glimpse of a fact which might be embarrassing. The last verse did end in just that criticised way; hence his collection was open to the grave objection. "Now," continued the triumphant critic, pressing his point without suspecting anything of the author's anguish, "some of them have changed the places of the first two and last two lines—actually changed them! It seems as if William Cowper would turn in his grave to read it. You know how he ended the hymn with a burst of confident hope and exhilaration." So, with a befitting shout and gesture, the enthusiast rendered the lines:

"Then in a nobler!—sweeter!—song,
I'll sing thy power to save!"

There was nothing to do now but to hand the orator the book; and when he discovered that he had praised the taste and skill which stood uncorrupted and brave to do a righteous thing—which was not done, he looked unutterable things at the culprit. But all the apology the humiliated compiler had to offer was, that Cowper wrote it as he printed it, and "Cowper—he was a poet," as had been remarked. But now came the swift reversal of judgment, and the adroit relief. After one hesitating moment, the man exclaimed: "Well, I declare! so you have it in the other way after all! But my way is better, a great deal better in every respect; it is more poetic, as I am a living man!"

That is to say: first, he praised a book for having steadily resisted all temptation to tinker; then he gave an illustration of tinkering as a fine art, which proved not to be tinkering but fidelity; in the next place, he sturdily stood up for a decided instance of impertinent tinkering in a popular hymn; and at the end he made it perfectly clear that, if he should become a compiler, he would tinker to his heart's content; for what his own taste preferred was better, far better, "as he was a living man!"

Since which period of discipline, this compiler has been unable to divest his mind of the thought, that many critics who assume to be amiably exasperated by the tinkering of hymns would be unamiably exasperated if the hymns were not tinkered when they had a chance at them.

It is difficult to conduct such discussions with seriousness, so picturesque are the poses in logic, and so comical is the confusion of results. The whole question is outside of logic; for men are never argued out of what they were not argued into. These changes are matters of taste and sentiment; hymns are creations of art, and so are hymnals designed for real use by the people of God in their worship. It is to be under-

stood that such heavy oburgations as these quoted are not intended to do harm; they appear to be passionate because they are imagined to be impassioned. The only way to deal with them is to meet the facts with pleasantry of exhibition, and then all of us go on singing.

These stories will be incomplete without the mention of an interesting scene in the General Assembly of the Presbyterian Church, as it was reported in the journals. In the course of debate, one of the members took occasion to comment on a verse of the hymn beginning, "Nearer, my God, to thee." He became so droll that loud shouts rang out in the serene air which that calm and dignified body generally breathes; "Take the platform! take the platform!" So the bright brother stood, a master-critic confessed, before the gathered sobriety of the land. And now he tore things to pieces. "Look at this perversion! instead of an exquisite image, 'Though, like a wanderer, daylight all gone,' we have this absurdity, 'Though, like a wanderer, the sun gone down'! Who was the wanderer? Was it the sun, or the author, or was it perhaps Jacob? [Laughter—notes the reporter.] Where had this wanderer gone down to? Did the sun particularly like that wanderer? [Roars of laughter—says the reporter.] And this in the place of an original line, as one of nature's poets gave it to the church and the ages,—'Daylight all gone'!"

Ten feet away from the smart speaker sat one of the oldest hymnologists in the land, looking over at him with an expression of amusement and perhaps wonder, as he saw him, like a beetle, sticking himself on a pin without the help of a naturalist. For he knew that what such people criticise is almost inevitably the true reading, and what is offered in its place is the "tinker." So he understood from habitual observation, that when men talk spitefully against alterations, it means that they would have altered the lines if they had had the chance. It was not at all the author's reading they wanted, but their own. As the gifted authoress wrote the hymn, the line stood, "The sun gone down"; and that was what the platform orator was making such fun of.

Charles S. Robinson.

Shall the Federal Government give Aid to Popular Education?

I NOTICE with great satisfaction that the Senator from New Hampshire has again introduced into the Senate his bill to "extirpate illiteracy"; and that a similar bill, differing somewhat in the details, has been presented to the House of Representatives by the Honorable Mr. Willis of Kentucky.

So the grave question is again presented to the people and their representatives, whether traditional doctrinaire interpretation of the Federal Constitution shall be allowed to prevent the wisest appropriation of money ever asked from the Federal Treasury. I use the words carefully when I say the "wisest appropriation," for in my humble judgment *nothing* can do so much to bind the sections in loving fellowship, to cement a more perfect union, and to establish firmly our republican institutions to all generations, as the appropriation of money by the Federal Government to enlighten the people of those States which cannot do this necessary work for themselves. The

question is one of such vital importance, and one concerning which so much ignorance and misinformation are prevalent, that I beg your leave to give in very few words the facts and arguments, *pro* and *con*, which were presented in the great debate in the Senate, and which must determine its settlement.

Has the Government of the United States the constitutional power to make such grant of money from the Treasury to aid in the education of the people?

The majority of the statesmen composing the last Senate of the United States answered this question in the affirmative. Some of them, as notably Mr. Jones of Florida, found the power newly conferred by the amendments to the Constitution as interpreted by the decisions of the Supreme Court. But the larger number, following the lead of the present Attorney-General, felt no need for the amendments to the Constitution to enable Congress to make this appropriation. They are satisfied that Congress had this power "before the recent amendments were ever adopted or even dreamed of." They adduce decisions of the Supreme Court,—by which it is plainly laid down from the very beginning that Congress has had and has exercised the power to contribute toward the education of citizens of the new States, and they declare that in no instance has its constitutional right to do so been questioned. And precedents in number are quoted to show that this contribution has not been exclusively of public land, over which particular kind of property it seems that Congress has a peculiar power, other and different from that "other property of the United States" included with the "public land" in the clause of the Constitution conferring this control. "Since the war six millions of dollars, not in land but in money, have been appropriated by Congress to colored schools in the South; and within the last fiscal year Congress appropriated four hundred thousand dollars with which to educate the Indian children at Hampton and Carlisle." This last is the testimony of Mr. Voorhees of Indiana.

Now, then, under what warrant were these appropriations made? Clearly under that to "provide for the general welfare," under which money has been lavishly expended to set up a great Agricultural Bureau, to ornament Washington city with flower-gardens, to cure sick calves in Kansas, and even, it may be supposed, to send visiting statesmen to one and another State of the Union to help the electors to do their duty. Clearly it is now settled, by continuous precedent, as Mr. George of Mississippi pointed out, that "Congress may appropriate money not intended to carry out any specific grant of power, but solely to provide for the general welfare of the United States."

And does not the great illiteracy of the Southern States affect the general welfare of the United States? Let us look for a moment at some of the statistics. *One voter in seven in the whole United States cannot write*; and of those who can a very large number can only with great difficulty sign their names.

Further, of these illiterate voters nearly three-fourths are in the sixteen Southern States, which same States contain only about one-third of the entire population; and these same States are least able to bear the great burden of educating their people. The valuation of property *per capita* in those States is only \$155, while in New England it is \$661, in the Middle States \$473,

in the Western States \$334, and in the territories \$211. But, on the other hand, statistics show that in their poverty and desolation they are striving mightily to lighten their own darkness, for the ratio of the school tax to the total tax is in these Southern States 20.1 per cent., while in New England it is 20.2 per cent., in the Middle States 19.5 per cent., in the Western States 26.6 per cent.

Senator Blair says that the South pays annually about \$14,000,000 for education; but he adds that \$33,000,000 would be needed to put the children of the South upon an equality of privilege.

Is there not, then, a cause why the general Government shall help to remove this dark blot of illiteracy, as a means of providing for the general welfare?

And now a word in reply to the further question, would such Federal donation be wise and expedient? would it help or hinder the desired result? Some gentlemen, both North and South, have thought so. The Senator from Kansas expressed the opinion that to give such aid would destroy all voluntary local effort to maintain a public school system. He was obliged to admit upon question that the millions of acres of public lands given to Kansas schools had been a small benefit in the days of infancy, albeit that now the proceeds of these lands furnish only about one-eleventh part of the school appropriation. Why shall like assistance to the infant struggles of the young South paralyze her efforts? Why shall it not rather help to enable her some day to tax herself for this purpose as Kansas does?

I confess that I cannot but feel angry when it is suggested that the people of the South are seeking to cast upon the Federal Government a burden which they can and should bear. Their history denies such suspicion, and the superhuman efforts since emancipation, efforts to the honesty and the success of which all bear witness, deny the charge. But they are persuaded that unaided they cannot do effectively this work which is necessary for their own well-being and the well-being of the whole country; this work which was put upon them by the Federal Government. They know better than others can the direful threatening of disaster which this work left undone portends. Therefore, they come not as suppliants asking alms, but as the children of one family asking that from the common treasury, to which they contribute a large part, shall come the means to help them accomplish their own welfare and the welfare of the Republic.

Grant that there are difficulties and dangers encompassing the bestowal of this aid. These are guarded as carefully as may be in the wise plan proposed. The rights of the States are sacred, and may not be invaded. True; and only in the view of the eye that is sentinel against a foe is there invasion in the coming of brothers with their gifts. "Timeo Danaos et dona ferentes." I believe that the dear old battered quotation was paraded in the Senate, and I was not surprised, for the senatorial supply of classical quotations is, to say the least, limited. But fearing "the Greeks," the enemies of my country, and most of all when they come as gift-bringing courtiers, I do not fear my own brothers, the children of my own mother, the inheritors with me of the treasures of freedom. They are as interested as I am that this treasure shall be guarded safe; and

therefore they come only that their power may be added to mine for its protection. Why shall I be afraid?

Yes, the bill comes from New Hampshire as a measure of peace. Well says Mr. Voorhees of Indiana, it "should be received with grateful approbation by every lover of his country." I believe that the people of the country need only to be informed as to the need, the due regard of all rights in the remedy proposed, the constitutional power in this regard exercised by Congress from the very beginning, and with one voice the citizens of America will demand that the whole power of the Republic shall be exerted to educate every American, because so, and only so, can "truth and justice, peace and happiness, religion and piety be established among us for all generations." Educate the people, educate the people; for only so can you provide for the general welfare and guarantee a republican form of government to every State, and to the glorious Union of the States.

T. U. Dudley.

LOUISVILLE, KY., Jan. 26, 1886.

The Tool-House.

MANUAL training, instead of a mere accessory, is now most happily becoming recognized as an indispensable department of education. Says Prof. John Fiske, in his remarkable little book, "The Destiny of Man": "In a very deep sense all human science is but the increment of the power of the eye, and all human art is the increment of the power of the hand. Vision and manipulation—these, in their countless and indirect and transfigured forms, are the two *coöperating* factors in all intellectual progress." The difficulty with education in the past has been the divorce of these two factors. Words instead of things, the abstract instead of the concrete, the complex instead of the simple, generals instead of particulars, have been crammed as intellectual aliment into the unfortunate little ones, whose mental stomachs have been totally unequal to the reception of such inappropriate materials. The result has almost invariably been repletion or marasmus.

It is hard enough for adult brains to grasp the subjective unless aided by the objective. For the child it is impossible. Hence the absolute need of the training of head and hand together, or, what is the same thing, object-teaching. Hence the growing advocacy of the kindergarten and its logical complement, the tool-house or manual-training school. The theory underlying them is very simple, viz.: that ideas depend on facts, and that to acquire facts the development of the senses is essential. We all know how eager is the observation of all healthy children, how they love to experiment and contrive. The new education takes advantage of these keen proclivities, and grounds the young in knowledge through the continual application of knowledge.

"When his *hand's* upon it, you may know
There's go in it, and he'll make it go."

By this method education becomes a matter of self-instruction and self-development, rather than of tutoring unwilling minds with the force-pump of pedagogic authority; and the result is simply a revolution—and a most peaceful and beneficent revolution—in youthful education. In place of the old picture of "the whining school-boy, creeping like snail unwillingly to school," the pupil greets his classes almost as he does

his games. On the principle of "milk for babes, meat for grown-up men," the teacher's rôle is to recognize the evolution of the child's intelligence, and supply mental diet according to the natural sequence of the successive stages of growth. The pupil's faculties will absorb such provisions as readily as the digestive organs assimilate appropriate food.

The general result is a well-rounded being in head, hand, and heart. The scholar, instead of having wasted his leisure in skylarking and mischief-making, has found his recreation in constructive work; his senses and his muscles have been developed together; he is the possessor of various handicrafts which may forever stand between him and the poor-house; his school life, instead of a weary drag, has been a pleasure, and cheeriness becomes a second nature; he has learned the great lesson of the dignity of labor, and a consequent sympathy with the workmen throughout the world, while love for the little republic of the school teaches him love for the larger republic of his country. In one word, the self-made scholar comes forth the self-made man, ready to meet life in all its exigencies, and enjoy it in all its graces.

I am glad to see that such schools are springing up everywhere both for the children of the poor and of the rich, and I sincerely hope they may multiply and become soon a requisite part of our common-school education.

Courtlandt Palmer.

Lobbying and its Remedy.

IN her novel, "Through One Administration," Mrs. Burnett incidentally shows the evil side of "lobbying" in Congress. Lobbying means "the addressing or soliciting members of a legislature with a view to influence their votes." If this is done for an evil purpose or aim, the practice and its effects are evil, but what if the purpose be good? How about the lobbyings of Professor Morse to get Congress to establish his telegraph from Baltimore to Washington? Or the submarine telegraph, the Pacific railroad, the life-saving service, and the civil-service reform? Yet none of these was, nor ever would have been, established but for the "addressing and soliciting members with a view to influence their votes." If the practice is employed only to favor good projects, its effects will be good. To have made the book effective against lobbying, the wickedness of the scheme to be lobbied was a necessary ingredient. There are some subjects on which senators and members may with propriety be enlightened. They cannot know everything. This can be done only by "addressing and soliciting members." This is lobbying. But there was no other way to bring the project of the Westoria lands to the attention of Congress; and supposing it to have been a good project (and the contrary is not shown), there is nothing wrong in the conduct of Richard Amory, except the envelope and its contents, to be given to Senator Blundel. That evil results from the practice is evident, and I do not wonder at Mrs. Burnett directing in a measure the moral of her story against it. There are more ambitious and selfish schemes proposed than good ones.

The remedy is with Congress itself. Let it relieve itself from all pressure and importunity on the score

of private claims against the Government by sending them to the Court of Claims for trial and judgment. Almost every European nation does this, and has for many years. In England all claims against the crown which would be the subject of an action between man and man are sent to the courts for trial and judgment. Let Congress prohibit, for their own protection, its members from attending to the *private* business of their constituents, whether political or otherwise, thus leaving every senator and member free to devote his entire time and ability to general legislation. The mass of private bills (there were ten thousand and seventy-six bills and joint resolutions introduced at the first session of the past Congress), and the amount of private business thrust upon each member, are such that if he attends to them his energy and strength are, day by day, exhausted before he can approach general legislation.

Then, as senators and members may properly ask instruction and advice on many subjects, let them provide a legitimate mode of obtaining it. Establish the committees into a sort of congressional court, divided into as many branches as necessary, with daily sessions to be held in the committee rooms, with jurisdiction over certain bills or projects, and give to every person showing the necessary interest therein an opportunity to be heard either by himself or by a system of congressional attorneys; the details could be easily arranged. Let him *then* lobby—*i. e.*, “address and solicit members with a view to influence their votes”—as much as he may be able, but prohibit his doing so on any other occasion. Make the senators and members as free from private or secret solicitation as are the judges of the Supreme Court. This cannot be done now, for no other means has been provided by which a suitor can reach the ear of a senator or member.

T. W.

Lobbying in England.

THERE is nothing in England that exactly corresponds to the American lobby.

Pecuniary claims against the Government, if contested by it, are adjudicated upon by the law courts in a proceeding called a petition of right. Occasionally they are raised by way of resolution in Parliament, and in that case a select committee may be granted to investigate them; but this happens very rarely, and does not seem liable to abuse. If a committee, after hearing evidence, should report in their favor, it would be almost a matter of course to satisfy them.

The bills which are called in England private bills are those introduced by railway or other companies or by public bodies to enable works of public utility to be constructed,—such as the bills empowering a railroad company to acquire lands compulsorily for the purpose of making its road or enlarging its stations, or perhaps to run its trains over the road of another company. Similarly, municipal corporations often apply for bills enabling them to open new streets, or construct docks or water-works or gas-works—objects sometimes sought also by private corporations. Every such bill is, in both Houses of Parliament, referred to a committee, usually consisting of three or four members only, and is there argued by counsel for the promoters and opponents, who call witnesses in support of their respective cases. If it is unopposed, an official called the Chairman of Committees (Chairman of the

Committee of Ways and Means) has the duty of examining it to see that it conforms to the general principles laid down regarding such bills. The conduct of these bills is undertaken by a class of persons called parliamentary agents, who are regularly admitted to this professional work much as attorneys are, and who employ the counsel, and get up the evidence to be submitted to the committee.

As a private bill committee is deemed to be a sort of judicial tribunal, any solicitation of, or attempt to use private influence with the members who sit on it is forbidden, and regarded as a serious breach of propriety. Doubtless it is occasionally done, but only to a small extent, because a member known to have been affected in this way would lose caste, even if the inducement brought to bear on him was only the desire to gratify a friend, and had nothing corrupt about it. Most members would hesitate to speak, to a fellow-member about a bill on which he was sitting to adjudicate, lest it should be supposed they wished to warp his decision; or if they did speak, would merely ask him to consider it carefully from some particular point of view which they might wish to put before him. Some few men are less scrupulous, but on the whole there is no serious objection to the committees of Parliament as tribunals, except the fact that, being often ignorant of engineering and other such questions, they are sometimes bamboozled by a clever counsel into an unfortunate decision, and that the expense of a contest before them is far too heavy. Their fairness is scarcely ever impeached.

Occasionally, but not more than ten or twelve times in a session, a private bill is opposed in the whole House of Commons upon second reading or third reading. This happens if it raises some question of public interest, as, for instance, if it proposes to give unusual powers to a municipality, or to allow a railroad company to acquire common lands, or to inflict some hardship on a neighborhood. The question is then debated in the whole House and settled by a division, which is generally in favor of sending the bill to a committee, or if it has been already passed by a committee, of giving the third reading. Some lobbying goes on upon these occasions, because members generally know little about the matter. Members who are friends or opponents of the bill ask other members to vote with them, and the parliamentary agents in the lobby sometimes accost a member they happen to know, and beg him to support their bill. Such influences, however, though cases might be cited where they have acted badly (on members of a low stamp), seldom determine the division, which depends rather on the speeches made and on the view which the majority is inclined to take of the question of general policy involved. If a member of the Cabinet, for instance, the Home Secretary or President of the Board of Trade, intervenes to present the view of the Administration, his intervention is usually decisive; and a speech from the Chairman of Committees has also a good deal of weight, because the mass of members, knowing nothing of the matter, welcome any official direction.

The above remarks apply generally to the House of Lords. Bills are opposed in the whole House of Lords less than in the Commons, and the opinion of the Chairman of Committees (Lord Redesdale) counts for more than that of his compeer in the Commons.

We are not quite satisfied with our system in England, because these committees take up a good deal of the time of members, because their decisions are apt to be uncertain, and because the legal proceedings before them, fees of counsel, cost of witnesses, etc., involve heavy expenses to the parties; but there is a remarkable absence of corruption—remarkable when one considers the magnitude of the pecuniary interests involved. The judicial character of the proceedings, and the fact that any member voting corruptly would be suspected by his colleagues who had listened to the evidence along with him, have kept up a high standard of purity. There is therefore no class of professional lobbyists, the parliamentary agents being really attorneys doing legal work in a legitimate way; and there is no other difficulty in getting any scheme passed than that of convincing four or five men, whose duty it is to sit and listen with fair though often ignorant minds, that it is a scheme for, or at any rate not against, the public interest, and therefore entitled to legislative aid.

LONDON, 1885.

* M. P.

Senator Boutwell's Plan.

IN January, 1875, Senator Boutwell introduced in the U. S. Senate "A Bill to provide for the Organization of a Bar of the two Houses of Congress," the special features of which were that there should be organized a body of competent persons who might appear as attorneys before committees of Congress, or

at the bar of either House, if so authorized. At the beginning of each session of Congress a committee of six, three members from each House, should be appointed, with authority to admit persons to the bar, hear complaints, and suspend or expel members for incapacity or misconduct. Any member of the bar attempting to influence the action of Congress would be held guilty of misconduct. No one unless a member of the bar of the court of final jurisdiction in the State or territory in which he resided, or of the Supreme Court of the District of Columbia or of the United States, should be admitted to practice, or appear before committees of either House, except in his own behalf or in behalf of a friend, and only authorized attorneys might ask compensation. Any person giving or receiving compensation for the purpose of influencing the action of Congress or any committee would be held guilty of a misdemeanor, and punished, if proved guilty.

EDITOR CENTURY.

"Hybridization."

INQUIRIES having been made in regard to the place where the experiments in crossing wheat and rye were performed, which were described in *THE CENTURY* for January, it may be well to state that all the plants were grown near River Edge, Bergen County, New Jersey. The work was all performed by Mr. E. S. Carman, of the "Rural New Yorker."

BRIC-À-BRAC.

Discarded.

LAST night I lay on her breast,
To-day I lie at her feet;
Then to her heart I was pressed—
Must you now put your foot on me, sweet!

Ah, lightly as possible, pray—
Grace for your red rose of last night!
No doubt I look faded to-day;
But are *you* quite so fresh in this light?

And—need there is none of that tear,
For I lie quite exposed to the dew—
Did it never occur to you, dear,
That the flower may have wearied of you!

Charles Henry Webb.

Uncle Esek's Wisdom.

THERE is just about humility enough in the whole world to supply one man with what he needs; and pray, what are the rest of us going to do?

I CAN find plenty of people who can improve every line I have ever written, who can't write one good one of their own.

THE world don't ask to be instructed; they simply ask to be amused and cheated.

GRATITUDE pays all our debts.

PRIDE is located half-way between vice and virtue, and a little of it won't hurt a saint, and a good deal of it often helps a sinner.

DON'T forget this, my boy: there are ten thousand ways to miss the bull's-eye, and only one way to hit it.

WHAT a man can't prove never ruined any one yet; it is what he can prove that makes it hot for him.

THERE are lots of things in this world we can't explain, and that is just what makes the things we can explain the more certain.

REPENTANCE is a commodity always in market. The purchaser names the price for it; lucky for him if he doesn't name the price too high.

I DISCOVER this difference between indolence and laziness. Indolence is a disease of the soul, laziness of the body.

If we knew the exact value of things, we should be comparatively free from envy.

THE great struggle of life is first for bread, then butter on the bread, and at last sugar on the butter. This is the best any of us can do.

ALL cunning men are dishonest, or will be the first good chance they get.

THERE are two things that everybody thinks they can do better than any one else—punch the fire, and edit a daily paper.

WE make our own destinies. Providence furnishes the raw material only.

REVENGE is a barren victory at best; its spoils are remorse.

I DON'T believe in special providences. When a mule kicks a man, and knocks him anywhere from eight to twenty feet off, I don't lay it to the Lord; I say to myself, That man got a little too near the mule.

THERE is pedantry in all things. Any man who loads up a double-barrel gun to kill a cockroach with, is a cockroach pedant.

WHEN a man begins to travel around the world on his religion, I am as afraid of him as of a three-card-monte sharp.

MY dear boy, don't begin a fight, but once begun stay to the finish, and pick up the fragments.

Uncle Esek.

The Truth About It.

"SPRING," sang the poet, "budding Spring."

Alas! the boughs were bare;
He was himself the one green thing,
For ice lay everywhere.

"Hail, Spring, with breezes soft and sweet."

The Spring returned his hail;
There came a shower of snow and sleet
Upon a wintry gale.

"Sing, merry birds, in bush and tree."

He read the almanac;
The birds were wiser far than he,
And did not hurry back.

"Spring, gentle"—here he ceased to sing.

Let the sad truth be told:
The while he sang of balmy Spring,
He caught an awful cold.

Mrs. M. P. Handy.

A Cure for Heroics.

THEY drift along a summer lake,
And talk about whatever chances,
And little confidences make
About their soulful fears and fancies.
They half suspect that life is vain,
Despite its comforts incidental,
For he is in his Harvard strain,
And she is slightly sentimental.

He.

Would I had been a bold Baron
In the old dim days of yore (said he),
In my castle grim on Weser's rim,
Where my father lived before (said he),
With armor old and portraits young
Of grand-dames fair around me hung,
And coffers of gold, galore (said he).

The Baron held a skillful rein,
And smote with a mighty arm;
No mocking question vexed his brain,
And saved the foe from harm.
His sword the ward of his feudal lord,
His conscience, of the Pope,
The Baron gayly ranged abroad,
To end his days in hope.

O sturdy men of eld! (said he),
Ye strove, and gained the mastery.
With will remorseless, conscience free,
At heart a child's simplicity.

I would I were that Baron gay
To part with weary self (said he),
To shock these pondering schemes away,
This sordid toil for pelf (said he).
The boar to chase, the foe to trace,
Death-dealing open blows to give,
Life's sophist sphinx no more to face.
Ah, this, methinks, would be to live!

She.

Would I had been a bowered ladye
As my true love rode by (said she);
In days of old were hearts of gold,
For selfish ends too high (said she).
And as abroad to death he rode
I had spent nor tear nor sigh (said she),
As page my steed I had bestrode,
Perchance for him to die (said she).

A wretched age of gain and greed
We live in, void of higher creed;
A narrow life, a failing strife
To rise above our level earth:
Our tender faiths are put to knife
Within the hour that gave them birth.
We women eat our hearts (said she),
For lack of loyal love and faith.
Ah, could my knightly dream but be,
Then he and I might welcome death.

* * * * *

So sorrowed they in youthful prime
(It must have been a pleasant woe,
So sure to meet its cure in time)—
They wedded five good years ago.

He faces gaunt "Cui bono?" doubt
With manful buffet, if it come;
For faith in man and faith in God
Shall come of faith in wife and home.

Her pathway lies in pleasant light,
Her baby on her breast is lying;
And she has found her knightly dream—
But now she never dreams of dying!

Martha Wolcott Hitchcock.

To Frederick Locker.

I MEET thee not by yonder lea,
Where fruited fields are waving;
But Mincing Lane and Battersea
Have meanings fresh and sweet to thee,
Thou poet of the paving!

A grass blade from the gardener's plot,
A crannied wall-flower peeping,
Are more to thee than meadows shot
With daisies white and clover spot,
And wild brooks in their leaping.

'Tis London 'with its eager pace
That never rests nor tires,
The deep heart of its commonplace
Touched into tenderness and grace,
That most thy muse inspires.

And that great world, too oft a bore,
Despite the joys that wreath it,
In thy melodious, dainty lore
Bespeaks the ancient charm it wore,
The good that's underneath it.

Edward F. Hayward.

Burning the Love-letters.

ASHES to ashes, dust to dust,
When life has quit the mortal frame.
When Love is at his last, we must
Burn thus, with flame to flame.

Walter Learned.
